Division K. — We here have two cases of bibliographical economy. 1. The near incidence of a great festival obliged the compiler of the primary document to raise his 1842 necessary letters to an even multiple of 380, and this he did by giving St. John's Day (Mur. Greg., 99) an "Ad vesperas" and "Ad fontes" of the value of (96+122=) 218 letters, and by inserting a Preface of 225 letters into the last mass of the series. 2. Gregorius Dialogus, in his turn—instructed, probably, by Sergius I., in whom the June feast of St. Leo had its origin—when incorporating the mass of St. Leo into his new redaction of the missal, was, from the same cause, in want of some 335 letters of "padding." These he procured by writing out in full the Secreta of the first mass, his predecessor having been satisfied with a necessary word or two,† and in adding to the last an "Ad vigilias in nocte" (*ib.*, 102) of 230 letters. The materials, therefore, which lay ready for Alcuin's use were these :—

	I.		II.
St. John Bapt.: First Mass	266		105
From the following	8		
By γ: 379=	274		105
St. John Bapt.: Second Mass	433	218	
Fourth Sunday	334		
SS. John and Paul**	430		
St. Leo, Pope			421
Vigil of SS. Peter and Paul	371	225	230
By α: $6\times380\frac{5}{6}=2285=$	1842,	443	
By γ: $8\times380\frac{1}{2}=3041=$	1842,	443,	756

We have seen that if the Libellus as known to us represents the *ultima manus* of Alcuin, he cannot have so arranged his components as to give the Epiphany the distinction of a fresh page. Careful examination shows that the Nativity of the Baptist suffered a like indignity. Alcuin was content, though not perhaps finally content, to make St. Peter's day his first starting-point after Whitsunday, as he had already been content to make the Purification of St. Mary his first starting-point after Christmas; and this he did by making a net deduction of precisely four pages from the intervening eight-and-twenty which had gone to the equipment of Divisions I and K; for, by the requirement of my hypothesis, he superseded or suppressed the 4267 letters of nine doubly allotted masses and the doubly allotted Oratio of a tenth, replacing them by 2753 (=4267 − 1514) letters. Thus :—

† This is, I think, unquestionable. See fol. 96 of the Canterbury Missal.

Ember days: 539, 406, 1064 (I. lxxxiii.: 134)	2009
Four Sundays: 377, 322, 268, 334	1301
SS. Cirinus, &c. (II. xxi.: 133)	405
St. Vitus (II. xxii.: 136)	385
V. of SS. Peter and Paul (II. xxix.: 143)	167
	4267

Ember days: 459, 395, 863	1717
One Sunday:	271
Four *aliæ* (99): 99, 128, 173, 228	628
V. of St. Peter (101)	137
	2753

In other words, he found (7607+3401=) 10648 (=28×380$\frac{3}{7}$) letters, but left (10648−1514=) 9134 (=24×380$\frac{7}{19}$) letters, or, as when dealing with Division G, the value of two *terniones*. Division H, as we have just seen, retained in an intervening *ternio* the same value as before.

MARTIN RULE.

P.S.—In my communication to *The Athenæum* of last January 7th the values I gave to the masses of St. Gregory's first Sanctorale often differ, if but slightly, from those of the same masses in the present reconstruction. In that instance it seemed reasonable to assume St. Gregory's technicalities of titulation, inflexion, and spelling to have been those which he has transmitted to us through the Canterbury Missal; in this instance I assume the technicalities of his seventh and eighth century successors to have been identical with those observed by Alcuin.

'LADY FANSHAWE'S MEMOIRS.'

Pinner, N.W.

I NOTICE that Mr. Lionel G. Robinson, in calling attention to the fact that Miss Beatrice Marshall, in her recent edition of 'Lady Fanshawe's Memoirs,' had not clearly stated her indebtedness to the old edition published some seventy-five years ago, says :—

"It is true that Mr. Allan Fea, to whom the illustrations are due, does mention Sir H. Nicolas by name, but not in a way which would suggest that it was his work which Miss Marshall has reprinted."

May I point out that in the following extract, which I quote from the notes I have added to the illustrations, I thought it would be clearly understood that, as Miss Marshall speaks of the "following Memoir first published in 1830," my brief allusion to it would be sufficient. These are my words :—

"Comment at various times has been made upon the inaccuracy of the printed Memoirs, but judging from a personal inspection of the original there appear to be but few serious errors. It must, however, be pointed out that the editor, Sir Harris Nicolas, only used a copy of the Memoirs which was made from the original in 1766 by Charlotte Colman, Lady Fanshawe's great-grand-daughter. The editor's transcript, though made ten years later, was not published until half a century afterwards (*vide* preface of 1830 edition)."

I may add that only at the eleventh hour I was called in to illustrate the book and add a note about the pictures, and draw up the pedigree at the end of the volume, the reprint having already been set up in type.

ALLAN FEA.

WITH regard to Mr. Lionel Robinson's remarks on the reprint of the 'Fanshawe Memoirs,' may I be allowed to say that I am not responsible for any part of the book, except the introduction. This I was asked to write when I first drew the publisher's notice to the charming memoirs with which I had long been familiar. But I was not asked to edit the work, as might naturally be supposed from the title-page, therefore I cannot in fairness be blamed for omitting to acknowledge my indebtedness to Sir Harris Nicolas. I was quite in ignorance that his introductory memoir and notes were to be reproduced in the new edition till I saw th volume in print. BEATRICE MARSHALL.

Literary Gossip.

Mr. A. T. Quiller-Couch ("Q") has collected and revised several of his stories which have appeared in *The Illustrated London News*, and has included them, with the one which formed the Christmas number of *The Graphic* in 1903, in a volume which will be published by Messrs. Smith, Elder & Co., with eight illustrations, on the 24th of this month, under the title 'Shakespeare's Christmas, and other Stories.' By arrangement with Messrs. Smith, Elder & Co. the book will be published on the same date in the United States by Messrs. Longmans.

'The Scottish Parliament: its Constitution and Procedure, 1603–1707,' by Prof. Sanford Terry, will be published in the autumn by Messrs. MacLehose & Sons. Except in its broadest outline, no attempt has been hitherto made to elucidate the constitution and procedure of the Scottish Parliament at this period. Prof. Terry shows that its development in constitutional powers and processes after 1640 was very rapid, and by 1707 it had brought itself, both as a chamber of debate and of legislation, to a reasonable level of procedure with the English Parliament of the day.

In the early autumn will be issued from the De la More Press a volume by Mrs. Marriott Watson, entitled 'The Heart of a Garden.' Among the many books relating to gardens which have appeared during the last few years there are not many which make any literary appeal. Mrs. Marriott Watson's book is, however, written primarily from the literary point of view, although it also contains much information useful to amateur gardeners. It may, perhaps, best be described as romantic. It will be profusely illustrated, and contains a number of poems.

The September number of *The Independent Review* will contain an important article on 'The Separation of Church and State in France,' by M. Émile Combes, the ex-Premier. To the same issue Dr. Charlton Bastian is contributing a paper on 'The Nature and Origin of Living Matter,' which is in some sense the first fruits of his forthcoming work on the subject, and is of special interest in view of the attention that has lately been paid to the question of spontaneous generation. From Mr. G. M. Trevelyan there is an article on Dr. Brandes's recent volume, entitled 'Poetry and Rebellion,' while Mr. Algar Thorold writes on 'The English and French Churches in Fiction.'

Mr. Unwin has just arranged to publish a new novel by Miss K. L. Montgomery, author of 'The Cardinal's Pawn' and 'Major Weir.' It is entitled 'Love in the Lists,' and may be described as a comedy of errors played out in a Swiss summer *pension*.

Prof. W. P. Ker has collected various essays which have appeared in reviews and other quarters, and will publish them through Messrs. Macmillan & Co. in a volume entitled 'Essays on Mediæval Literature.' The papers treat of Early English prose, the similes of Dante, Boccaccio, Chaucer, Gower, Froissart, and Gaston Paris.

In *Chambers's Journal* for September Libau is described by Albert Kinross, one of the few journalists who has visited that Baltic port. Mr. W. Roberts, in a paper on 'Shakespere Autographs,' tells all that is known upon the subject. Lieut.-Col. Andrew Haggard, D.S.O., describes 'The Land of Olive Oil,' as the result of a visit to Lucca. Dr. Andrew Wilson shows 'How our Senses Deceive Us' in a paper on that subject. A paper by Miss J. T. Wilson on 'Deer-Stalking in Scotland Sixty Years Ago' includes some recollections of Christopher North.

Mr. T. F. Thiselton-Dyer, the author of 'Old English Social Life,' is engaged on a work on 'The Folk-Lore of Women.' It will be published by Mr. Elliot Stock very shortly.

By the death last month of Mr. Jacob Chester Chamberlain, New York and other large cities in the United States lose one of its best-known bibliophiles. Mr. Chamberlain was an electrical engineer by calling, but his passion was book-collecting, and at the time of his death he was the owner of one of the finest collections of American first editions in existence. He laid the foundation of his library by purchasing some years ago Mr. Beverly Chew's choice series of American first editions, and since then he has been an extensive buyer at all the important auction sales and by private treaty. The recent Hawthorne exhibition at the Grolier Club owed much of its completeness to loans from Mr. Chamberlain's collection. His Whittier collection is generally admitted to be the finest extant, including, as it does, a spotless copy of 'Moll Pitcher,' in the original blue-paper wrappers, and many other items of great rarity.

The interesting library of Governor Samuel W. Pennypacker is to be sold by auction at Philadelphia by Mr. S. V. Henkels, during the coming autumn and winter, and promises to be one of the most important of its kind dispersed within recent years in the United States. It contains, for instance, the largest collection in private hands of books printed by Benjamin Franklin, and also a large number of important documents and letters written by him. The Washington items are headed by an autograph diary kept by George Washington. The library is also remarkable in that it is said to contain the largest known collection of early Pennsylvania imprints, among them the Saur Bible, the first printed in America in any European language. Early almanacs and early American magazines and newspapers will be further features of this sale.

The Nation, of New York, for August 3rd, has an interesting note on 'J.-J. Rousseau and the "Yellow Peril,"' by M. Salomon Reinach. He points out that

"nobody seems as yet to have remarked that the first to prophesy the 'yellow peril,' and even the present war, was Jean-Jacques Rousseau in his little-read 'Contrat Social' (chap. viii.): 'L'Empire de Russie voudra subjuguer l'Europe, et sera subjugué lui-même. Les Tartares, ses sujets ou ses voisins, deviendront ses maîtres et les nôtres; cette révolution me paraît infaillible.' Voltaire laughed at that passage, and upbraided Rousseau for writing like the author of a popular almanac."

The recent Anglo-French manifestations of sympathy and friendship have already called into existence a new journal, *L'Entente Cordiale*, a "Franco-English weekly journal" at a penny. It is edited by M. Louis Liger, jun., in English and French, and its offices are at Dunkirk. It is an excellent little paper, which deserves success.

Messrs. Maclaren & Co. announce that they will issue this month a shilling edition of 'The House of Sin,' by Marcelle Tinayre. It will be interesting to see if the talented author has anything like the vogue in this country which she has attained across the Channel.

The death is announced of Prof. Alexander Melville Bell, "vocal physiologist," in his eighty-seventh year. He was inventor of "Visible Speech," author of many works upon speech, elocution, stenography, and editor of a highly popular work, prepared for the use of elocutionists, known as 'Bell's Standard Elocutionist.' Alexander Melville Bell was born in Edinburgh in 1819. From 1843 to 1865 he lectured on elocution in Edinburgh, at the University and at New College; and in 1865 was appointed Lecturer at University College, London. In 1870 he removed to Canada and became Professor of Philology at Queen's College, Kingston, and in 1881 he went to Washington. He was widely known as an elocutionist, and his Shakspearean readings were famous in the United States. His son, Mr. A. Graham Bell, was inventor of the telephone; a brother, David Charles Bell, was a teacher of elocution in Dublin.

Messrs. Gowans & Gray are publishing, in a style uniform with their "Pocket Anthologies," 'The Hundred Best Poems (Lyrical) in the Latin Language,' selected by Mr. J. W. Mackail.

C. H. M. writes:—

"In your notice of the 'Practical Spanish Grammar' in your last issue you ask whether it is a fact that a Latin wit said that for the Spaniards *vivere* was the same as *bibere;* adding that, if so, we have a case of unconscious reminiscence in Scaliger's epigram, which you quote. Surely this epigram, 'Haud temere antiquas,' &c., is by Martial, and he is the Latin wit meant."

The vacation courses in English, French, and German for British and foreign students, organized by the Vacation Courses Council of Edinburgh University, have been well attended, and in every way successful. Amongst the lecturers have been Mr. Gregory Smith, Prof. Kirkpatrick, Dr. Henry Sweet, Prof. Paul Morillot of Grenoble, Herr Pastor Reimer, Dr. Julius Freund, Mr. A. A. Jack, Prof. Henry Gay of Toulouse, Prof. G. Witkowski, and Prof. Viëtor. Prof. Kirkpatrick has borne the main burden of the arrangements for the course.

The death in his sixty-fourth year is announced from Olsberg, near Cassel, of Julius Stinde, the creator of the immortal Frau Buchholz. In the volumes dealing with her adventures, the life of the Berlin middle class, with its joys and sorrows, its interests and amusements, is depicted with a vividness and humour which recall Dickens. Stinde's range of character is,

XUM

however, very limited, and he confined himself to a particular class of Berlin society. He was a fairly prolific writer, but his remaining works are little known, and the final volumes dealing with the Buchholz family are uninteresting.

SCIENCE

Address to the British Association for the Advancement of Science, delivered at Cape Town, 1905. By Prof. G. H. Darwin, President. Part I.

Prof. G. H. Darwin, the President of this year's meeting of the British Association, which has just assembled at Cape Town, has already made an innovation by dividing what should have been his opening address into two parts. Of these, the second will not be delivered until the assembly reaches Johannesburg, which it is expected to do on August 30th. The first was duly spoken at the opening meeting on Tuesday last, and a reprint of it is now before us. As he himself suggests, filial piety almost demands that the address should deal with the question of evolution, or, as he puts it, "with the attempts which have been made to formulate evolutionary speculation," and his position as Plumian Professor of Astronomy, together with his published work on the tides and other celestial phenomena, lead him naturally towards one particular branch of them. The various questions of evolution in the heavens—or, more specifically, of how sun, stars, and planets came to be and whither they are going—form, therefore, the object of his discourse, and will, we understand, be dealt with in detail in the second part. In the first part he contents himself with indicating the broad lines on which such theories should be constructed.

At the beginning he sets himself to consider what a scientific theory should be, as to which he does not differ greatly from M. Henri Poincaré and his brother Lucien:—

"The test of a scientific theory lies in the number of facts which it groups into a connected whole; it ought, besides, to be fruitful in pointing the way to the discovery and co-ordination of new and previously unsuspected facts. Thus a good theory is in effect a cyclopædia of knowledge, susceptible of indefinite extension by the addition of supplementary volumes."

But he warns us, as explicitly as the distinguished Frenchmen just named, against attaching a too exclusive or blind faith to any such theories with regard to his particular subject. "In every case," he says,

"the evolutionist must form a theory for the facts before him, and the great theorist is only to be distinguished from the fantastic fool by the sobriety of his judgment—a distinction, however, sufficient to make one rare and the other only too common."

He even tells us that good may sometimes be derived from the consideration of theories apparently inconsistent:—

"Hardly any theory is all true, and many are not all false. A theory may be essentially at fault and yet point the way to truth, and so justify its temporary existence. We should not, therefore, totally reject one or other of two rival theories on the ground that they seem, with our present knowledge, mutually inconsistent, for it is likely that both may contain important elements of truth. The theories of which I shall have to speak hereafter may often appear discordant with one another according to our present lights. Yet we must not scruple to pursue the several divergent lines of thought to their logical conclusion, relying on future discovery to eliminate the false and to reconcile together the truths which form part of each of them."

Having thus cleared the way by warnings which, though familiar enough of late to scientific ears, have yet, it appears, their value when addressed to a popular audience, Prof. Darwin goes on to consider the influence which the theory of natural selection "first formulated by my father and Wallace," has had on speculations concerning the origin and future of inanimate nature. Although, as he confesses, speculations of this kind are much older than those which concern life, he thinks that they have been "profoundly affected" by Darwinism, and that it is due chiefly to this that the "origin and history of the chemical elements and of stellar systems now occupy a far larger space in the scientific mind than was formerly the case." In proof of this he mentions that so long ago as 1873, Baron Carl du Prel published his book on the struggle for life in the heavens ('Der Kampf um 's Dasein am Himmel'), which Prof. Darwin seems to consider was partly inspired by his father's discovery. But it may be remarked in passing that the Baron du Prel's conclusions were arrived at principally on *à priori* grounds, and that his book was but another example of the truth that mystics rush in—sometimes with success—where the scientific fear to tread. To most physicists, at any rate, it will seem that Prof. Darwin is here putting the cart a little before the horse, and that it is the late discovery of the mutability of the elements rather than any biological theories which have led us to revise our views on the genesis of matter.

However this may be, Prof. Darwin next proceeds to unfold his main thesis, which is apparently that in forms of matter, as well as in forms of life, it is the stable configuration which persists. In doing so he makes use of an illustration drawn, not from physics or biology, but from politics, because, as he says, "we all understand, or fancy we understand, something of politics, whilst the problems of physics are commonly far less familiar to us."

"In the world of life," he says,

"the naturalist describes those forms which persist as species; similarly the physicist speaks of stable configurations or modes of motion of matter; and the politician speaks of States. The idea at the base of these conceptions is that of stability, or the power of resisting disintegration. In other words, the degree of persistence or permanence of a species, of a configuration of matter, or of a State depends on the perfection of its adaptation to its surrounding conditions. If we trace the history of a State we find the degree of its stability gradually changing, slowly rising to a maximum and then slowly declining. When it falls to nothing a revolution ensues and a new form of government is established. The new mode of motion has at first but slight stability, but it gradually acquires strength and permanence, until in its turn the slow decay of stability leads on to a new revolution."

In this parallel, if we may venture upon a guess, something like a return to catastrophic theories of the cosmos is foreshadowed, and our conjecture is strengthened by an *obiter dictum* of Prof. Darwin's to the effect that he doubts whether biologists have been correct in looking for a continuous transformation of species, and whether slight continuous changes, occuring during a long period of time, followed by sudden transformations or extinctions of species, may not be the rule.

Thus we are led to consider the question of stability, which Prof. Darwin is inclined to think the most valuable property for any form, corporeal or cosmical, that means to be successful in the struggle for existence. In studying this, he first turns to the structure of the (chemical) atom, which has lately been dealt with at some length in *The Athenæum* (see Nos. 4040 and 4041). As might have been expected, he accepts as sound what has been called the electronic theory of matter, according to which the atom consists of a very large number of negative electrons, or corpuscles of negative electricity, revolving at great speed round a core, or within a globe, positively charged. The mechanism by which they are held together is, he confesses, "hypothetical"; but he mentions, with great respect, "a mechanical or electrical model" of the atom suggested by Prof. J. J. Thomson. Although he does so only in general words, it is plain to any one acquainted with the subject that he is here referring to the floating magnets of Mayer, which are sufficiently described in the numbers of *The Athenæum* just mentioned. The conclusion that he draws from this is,—

"It appears that there are definite arrangements of the orbits in which the corpuscles must revolve, if they are to be persistent or stable in their motions. For the purpose of general discussion, which is all that I shall attempt, you may take it that the number of corpuscles in such a community is fixed; and we may state that definite numbers of corpuscles are capable of association in stable communities of definite type."

This leads him to the further inference that

"an infinite number of communities are possible, possessing greater or lesser degrees of stability.....We are thus led to conjecture that the several chemical elements represent those different kinds of communities of corpuscles which have proved by their stability to be successful in the struggle for life,"

whence he comes to the conclusion that the chemical elements have not existed for all time, and will not be eternal, as he puts it, "in the future." The instance of radium is, of course, invoked as that of an element in which we can see the process of disintegration and spontaneous rearrangement going on absolutely under our eyes.

Here, then, we must leave Prof. Darwin for the present, and until he delivers the second part of his address, which will, no doubt, deal with the possible evolution of stars and worlds upon some such lines as are here faintly sketched for the chemical atom. We postpone any detailed criticism of Prof. Darwin's address until this is in our hands, but it may be as well meanwhile to remind our readers that Prof. Thomson's suggested model of the atom is by no means universally accepted as corresponding to anything in nature, and that, as Prof. Darwin himself somewhat enigmatically puts it, its inventor "would be the first to admit that

his model is at most merely a crude representation of actuality."

The development of polytechnics and similar institutions has called into existence a number of text-books designed for evening students who can only devote some six or seven hours a week to the subject, and who, naturally, do not want their mental pabulum to be too severe, coming, as it does, at the end of a day spent in a works or office. Radcliffe and Sinnatt's *Systematic Course of Practical Organic Chemistry* (Longmans & Co.) belongs to this class. In mapping out their course the authors were limited in two directions—by the requirements of various examining bodies, and by the necessity of including only short experiments. Within these limits the authors have produced a text-book useful alike to teachers and to the class of students for whom it is intended.

SOTO.

On p. 183 of your issue of the 5th inst. there are some remarks on the expedition of Hernando de Soto, which is referred to in the book entitled 'Great American Explorers.'

The name of the explorer should be written "Soto," and not "De Soto." To write the latter is as erroneous as it would be to refer to Guy de Maupassant as "De Maupassant." In both cases, when the names are written without the Christian name, the particle should be omitted. If your reviewer wants confirmation of this statement in regard to Soto, let him open either of the few authorities he quotes, and on almost any page he will find phrases such as "dijo Soto," "entonces Soto llamo à los Indios," or the like. Your reviewer seems to have fallen into an inaccuracy *re* his authorities. He states that Rodrigo Rangel was the private secretary of Soto. Oviedo, the historian of the Indies, expressly says he was a "soldier who served in the cavalry." Moreover, as far as I know, Rodrigo Rangel's narrative is only preserved at second hand—namely, by Oviedo, who incorporates it in his account of Soto's expedition. Thus, Rangel can in no wise be termed a contemporary authority.

Again, your reviewer (or the writer of the book) goes out of his way to repeat the old sneer at the "imagination" of the "Inca Garcilasso de la Vega." If it is the writer of the book, he should have known that this attitude dates from the Spanish writers of the seventeenth century, who, one and all, abused the Inca, because he, as the son of an Indian princess, took the Indians' side. I cannot see what grounds the writer has for saying that Garcilasso took his facts from Gonzalo Silvestre, for in his preface he especially says he had them from two Spanish soldiers, whom he mentions by name. R. B. Cunninghame Graham.

Science Gossip.

We have received the Report of His Majesty's Astronomer at the Cape of Good Hope to the Secretary of the Admiralty for 1904 (2*d.*).

The date of the discovery of the new small planet by Dr. Götz was the 26th ult., not the 27th, as announced last week. Nos. 489, 504, and 505, discovered in 1902, have been named Comacina, Cora, and Cava respectively. No. 511, which was found in 1903, has received the designation Davida. Two new ones (possibly also a third, which may, however, be identical with a previous discovery) were visually detected by Dr. J. Palisa at Vienna on the 27th and 30th ult. respectively.

It was stated in our 'Science Gossip' on the 5th inst. that it appeared probable from early calculations that the seventh satellite of Jupiter revolved round the planet in a retrograde direction. No. 82 of the *Bulletins* of the Lick Observatory has since appeared, giving the completed result of the discussion of the orbit by Dr. F. E. Ross, and from this it appears that the satellite's motion is direct. The period amounts to 265 days in length.

Prof. M. and Herr G. Wolf have found that a star in Virgo is subject to variation in its photographic magnitude, though the optical rays show scarcely any change. It will be reckoned as var. 78, 1905, Virginis.

Madame Ceraski, examining plates taken by M. Blajko at the Moscow Observatory, has discovered that a star in the constellation Cepheus is a variable of the Algol type. Its normal magnitude is about 9½, from which it sinks to the twelfth; the period is not yet known. This star is to be reckoned as var. 79, 1905, Cephei.

The volume of the 'Connaissance des Temps' for the year 1907 has recently been received. It is the 229th of the series, the first having been issued by Picard in 1679. Many important modifications and additions have been from time to time introduced into it, especially under the superintendence of the present editor, M. Lœwy. But most of the data on which the ephemerides in the present volume are based remain as in the preceding year. Some very useful tables are prefixed of the elements of the orbits of the planets, satellites, and periodical comets, the last being arranged in two lists of those which have been seen at more than one, and at only one appearance. There will be a total eclipse of the sun (total only in Central Asia, where its duration will not exceed two and a half minutes, and not visible at all in Western Europe) on January 13th, an annular one (almost confined to South America) on July 10th, and two partial eclipses of the moon; also a transit of the planet Mercury over the sun's disc on November 14th, the whole of which will be visible over the greatest part of Europe and the whole of Africa. The extensive table of geographical positions (longitudes, reckoned from the meridian of Paris, and latitudes) forms a very valuable feature at the end of the 'Connaissance.'

FINE ARTS

Ivories. By Alfred Maskell, F.S.A. (Methuen & Co.)

The range of time and place over which this interesting work travels is very great. From prehistoric days to the present, and from every quarter of the world, the author gleans a series of examples to illustrate his remarks. It is a notable fact that ivory, and the cognate, bone, have at all times and among all peoples been selected as a medium for the representation of artistic endeavours. The discoveries in the Dordogne seem to be the earliest, and exhibit the most primitive attempts of prehistoric man in an artistic, or rather imitative, direction. Among them the author sees a piece of reindeer antler which is carved to resemble the fore part of an ibex, with a "life and understanding of art which a sculptor of the finest period might envy"; on another, incised drawings of a group of reindeer, with characteristics true to nature, and so forth. But their beauty of design clashes with the apparent inability of modern "savage" people to produce anything better than the travesties scrawled by modern children on walls and pavements, and indeed raises in the cautious mind of the archæologist some suspicion of their genuineness. To find carved bone and ivory satisfying modern canons of the beautiful, while almost every other relic of domestic use is of the most primitive and rudest kind, is, to say the least of it, paradoxical. What a contrast between these objects "drawn by the hand of a genius," and "conceived with the highest feeling of delicacy and restraint," and the rude pottery, weapons, and a thousand other things of perhaps even later date! Are we seriously to believe that the genius who could produce such "perfection in modelling" and "absolutely clever and artistic sketching" was not able to get nearer to the designs he saw on the gold coins of Greece than the barbarous imitations which we see on the gold coins of Early Britain? The ivories of Nineveh and ancient Egypt, as preserved in the museums of Europe, testify to the development of the work succeeding the early manhood of the world. The handle of an Egyptian box, carved in the form of a woman, and dating back to thousands of years before our era, bears witness to an appreciation of that which the artist has judged to be supremely beautiful for six thousand years, and which still holds an undisputed sway in every art workshop and studio. Assyria has yielded many very beautiful examples of ivory carving, some in which coloured materials and gilding have been employed, in combination with the ivory, to enhance the beauty of the object, and the modelling and drawing excite the highest admiration for their charming proportion of design and the details which make up the characteristics of the native art. Of all this Mr. Maskell naturally has much to say, and has said it well, as an antiquary should, and illustrated it with good plates that are really indispensable for the right understanding of the text.

Consular diptychs and other classic ivories of Greece and Rome next claim attention, *longo intervallo*, though nothing is said here of Jewish ivories of the times of the kings and David, nor of those mentioned by Ezekiel and Amos, perhaps because they are no longer extant. That ivory was prized in Palestine is manifested by its mention in the Apocalypse. The author's chapters on the diptychs are of the highest interest. These objects, which date from about the middle of the third century of our era, can in some cases have their date accurately determined, and thus they afford criteria for the antiquity of other objects of art. Their beauty, their diversity of design, and wonderful charm will strike the student at once, and they yield to none of the later ivories, whether of Europe or the East, in any of the details which go to constitute the finest and most valuable class of antiquities. Early Christian ivories and those called Byzantine appear to derive their existence from much the same sources, and possess numerous affinities of treatment as well as of technique. Here, again, the author is thoroughly conversant with his subject, and has selected many fine examples for reproduction in his numerous illustrations. Statuettes, croziers, diptychs, triptychs, pastoral staves, and nearly every object included in the inventory of church accessories which could possibly be con-

structed of this material appear to have been thus made, and in every case the maker has succeeded in creating out of what must be an exceedingly difficult medium to work some of the most beautiful objects the Middle Ages have bequeathed to posterity. The names of many of the artists who produced these priceless pieces have been preserved, and it may be truly said that a complete history of art, from the prehistoric age to the twentieth century, with a range only limited by man's presence on earth, could be written from the study of ivory alone. The marvel is that the material, which is to be procured in but a few localities, should have been selected by so many artists, in divers places and in different circumstances, for the display of their achievements. There is a class of chessmen and draughtsmen which is particularly interesting for its antiquity, and indicates the almost universal prevalence of the noble game of chess. Danish, Icelandic, and Anglo-Saxon ivory "men" testify to its ancient standing in Northern Europe at a very early date. A set, or part of a set (now in the British Museum), found on the island of Lewis, one of the Outer Hebrides, in 1831, by a labourer digging in a sandbank, forms the subject of a learned dissertation by the late Sir Frederic Madden, in the *Archæologia*, and some of these, with other examples from Eastern and Western sources, have been made the subject of illustrations in this work.

The chapter devoted to Spanish and Portuguese ivory sculpture might have been longer. In these specimens Mr. Maskell sees a peculiar style of mixed art, in which there is a predominance of Oriental feeling, called Hispano-Moresque, and finds it difficult to account for the changes and transitions through which the Arab influences passed, and to give dates with precision. Mention is made of the boxes and caskets of this style, of the crucifixes attributed to Alonso Cano, of religious statuettes of the seventeenth century or later, and of the remarkable objects brought recently as trophies of war from Benin. The celebrated ivory 'Virgin de las Batallas,' preserved in the Royal Chapel of S. Fernando of Seville, has, unfortunately, escaped the author's notice. This is Spanish of the thirteenth century, 43 centimetres (=16·97 in.) in height, and represents the Blessed Virgin seated on an octagonal seat, bearing on her knee the Infant Saviour, whom she supports with the left hand. Each figure of this statuette wears a crown of silver gilt, which ornaments, although ancient, do not appear to be the original ones. There are holes which indicate that this ivory was fixed by means of an iron cramp to the bow of a saddle, and thus carried by a warrior into battle, in order that, in the height of the combat, he should not be parted from the beloved objects of his Christian worship, a pious practice used in olden days in Spain. It has been conjectured, probably with accuracy, that this relic signalizes the presence of a new style in Spain, and the separation from Byzantine influences, which were so long a dominant characteristic in the arts of that country.

India, Persia, Arabia, and China and Japan, in turn, furnish themes which Mr. Maskell has turned to good account, with the result that his handsome book overflows with points of interest, showing everywhere the depth of his researches and extent of his observation. His list of ivories of which he has given a notice, or to which he has made reference, with a table of their origin, date, dimensions, present owners, and other details, ought to be exceedingly useful to students and collectors, and we are glad to note that the book also includes a copious bibliography, lists of sculptors in ivories whose work is known or to whom certain things are assigned, and other class lists. These, with the copious index, make up a monumental book, which is certainly the best extant which deals exclusively with ivory objects. We may say, in conclusion, that if the "Connoisseur's Library," of which this is a single specimen, keeps up the character shown here, Mr. Cyril Davenport, of the British Museum Library, the general editor, will have done a real service to the literature of art.

William Hogarth. By G. Baldwin Brown. "The Makers of British Art." (The Walter Scott Publishing Company.)—Hogarth's fame as a painter has always been somewhat obscured by the greater popularity of his prints. In his own time the latter sold in very considerable numbers, while many of his pictures were only disposed of for very low prices by a complicated lottery system. His most characteristic creations, whether pictures or prints, are, moreover, apt to be regarded primarily as enforcing some truth, or attacking some vice or phase of folly, rather than for their technical artistic qualities. This is due in part to his essential modernity and practicality of mind. He was a moralist and reformer, as strenuous and fervent as Charles Reade—*e.g.*, in the prints of 'The Four Stages of Cruelty' and 'Gin Lane.' It is, however, even more due to his possession of a supreme gift of narrative composition. As he himself says, "I wished to compose pictures on canvas similar to representations on the stage." So entirely is this aim realized, that our interest centres primarily in the fortunes of the characters, and only in a lesser degree in the consideration of the processes by which they came to be there. The painter's art has tended to efface itself. A description of any of his narrative pictures or prints commences, "Once upon a time" as naturally as it does with those of Carpaccio; and as with the one the setting of the story is shown by all the accessories to be Venice during the Renaissance, so with the other the tale is told in Georgian London, and in the telling of it there is enshrined the record of the fashions of the period in dress and demeanour, of its follies and its enthusiasms, of its domestic interiors and of the architecture to be seen in its streets. Each is a master of narrative—the one sought his themes in the fairyland of Christian legend; the other was a realist, who depicted the common occurrences of life.

By virtue of these genre pictures, and the engravings by which their stories became widely known, Hogarth has been deemed to belong almost as much to literature as to art. His early work in book illustration for 'Hudibras,' and subsequently for 'Don Quixote,' lends support to this view. 'The Two Progresses,' the 'Marriage à la Mode,' the "Election" series, and 'The Times of Day' reveal an outlook on life substantially resembling that of the early novelists. Had Fielding's genius ever found pictorial expression, such would have been its utterance.

This real connexion with literature — to the existence of which tribute has been borne by the eulogies of Lamb and Hazlitt, and indirectly by the strictures of Reynolds—has been, in effect, further emphasized in Mr. Austin Dobson's well-known work. This is partly, perhaps, on account of the very felicity with which the artist is there represented in that eighteenth-century *milieu* which Mr. Dobson has the secret of recreating. It forms, perhaps, the chief merit of Prof. Baldwin Brown's concise yet, within its necessary limits, really admirable monograph that it shows very clearly how much of Hogarth's artistic work is left out of account in this estimate. His work in line as a political satirist stands apart by itself; his reputation was so great that it was almost deemed an honour to be lampooned by him. His sacred figure subjects, compositions in "the grand style," formed no inconsiderable portion of his artistic output; and his portraits, more than any of his genre pictures, foretold the distinctive line of excellence of English painting.

In attaching a somewhat greater importance than some former biographers to the first of these divisions, Prof. Brown does the painter's work no more than justice. It was here that the severance of his upbringing from the great traditions told most detrimentally, for here his native realism was curiously timid and hesitating; yet we may claim for the figure of the Good Samaritan in the picture at St. Bartholomew's Hospital a Rembrandtesque sincerity, and Pharaoh's daughter in the picture at the Foundling Hospital is gracefully conceived, the rendering of the drapery especially being admirable and the flesh tints soft and harmonious. The chorus of depreciation which greeted the 'Sigismunda' at the time of its completion was probably as much due to the fact that in it Hogarth had abandoned the *métier* with which his contemporaries had come to associate him, as to outstanding demerits in the work itself, though Hogarth's powers were then declining.

How both the extent and the quality of the artist's pictorial achievement have been generally underestimated may be inferred from the fact that "in almost every case, save in that of the satirical prints, the engraving was preceded by a picture." When, as not infrequently happens, differences exist between the two, it is because the detail of the engraving has been conventionalized. Hogarth lived by the proceeds of the sale of his engravings, and this very fact enabled him to preserve his independence in the use of the brush. Now that Hogarth's genius has won tardy recognition in his specific work of painting, the tendency, according to Prof. Brown, is rather to exalt unduly his technical dexterity. In the desire to avoid falling into the same error, the author seems, indeed, to err on the side of restraint in his appreciation of Hogarth's work in portraiture. We incline, with certain reservations, to the more eulogistic estimate of Prof. Muther. With Hogarth there disappears "that Van Dyck-like elegance which had become the mode." His work is simple, robust, and vigorous, and this both in finished work, such as the superb 'Capt. Coram,' and in such triumphs of swift characterization as 'The Shrimp Girl' and the Jacobite laird Simon, Lord Lovat.

There are no vexed questions in Hogarth's life. He was always at work, and the record of it is uneventful. The only incidents which can be termed dramatic are the runaway marriage, the French visit, which terminated in his arrest at Calais, and a few violent quarrels with political opponents. Consequently the biographical part of the present work, though always lucid and succinct, presents few, if any, remarkable features. We would remark, however, that the deduction of Hogarth's "quiet assurance of his own worth," from the fact of his having eloped with the daughter of Sir

James Thornhill, ignores too completely the influence of impulse in such actions. Hogarth's marriage was an entirely happy one, and justification of it is, therefore, unnecessary. It had been, as he tells us, by the works of his father-in-law at St. Paul's and Greenwich that he was inspired to attempt the monumental style in painting. The influence was not of long duration. In the genre pictures, as in his portraits, he reveals his natural kinship with the Dutch masters. "At the best a Hals in the making," is Prof. Brown's estimate of 'The Shrimp Girl.' "It has," he says,

"ease and freedom, and a sure grasp of the form that the sweeping brush-strokes accuse without insistence, but it lacks the commanding strokes of the greater master."

Temperate and just is his remark concerning the Dutch genre masters:—

"For absolute certainty of drawing and a precision of handling that never falls into the fault of hardness, they are from the executive point of view in a class by themselves. It is a high honour for Hogarth that he can be brought into comparison with them. It would be absurd to claim him as their peer."

In humour Hogarth is nearest to Teniers and Jan Steen. There are also a certain daintiness and softness in the youthful types of the English painter which show the influence of Watteau. Notice, for instance, 'The Lady's Last Stake,' now in the possession of Mr. Pierpont Morgan, and the women of the tavern picture in 'The Rake's Progress.' The figure of the youthful rake in the first of the series has something of Watteau's brilliancy and smoothness of execution, and a faint suggestion of the airy *insouciance* of the 'L'Indifférent' in the La Caze Collection in the Louvre.

The types of Jacques Callot, which according to Samuel Ireland were probably his first models, often recur, as Prof. Brown observes, in the earlier engravings, and the same influence may also be observed in many of the grotesque figures in the backgrounds of the "Election" series and of 'The Rake's Progress.' Less direct was Hogarth's debt to the Italians. He posed as the antagonist of their influence, and uttered a certain amount of unreason about the "black masters," though it should be remembered that it was at works of the decline that his strictures were chiefly aimed. In this connexion we may cite the remark recorded by Mrs. Piozzi, wherein, after comparing Johnson's pre-eminence as a talker with that of Titian in painting, he added, "The connoisseurs and I are at war, you know, and because I hate them they think I hate Titian—and let them."

In Charles Lamb's famous essay Hogarth is likened to Shakspeare. His picture of the 'March of the Guards to Finchley' would of itself justify the comparison. There is no pomp or pageantry in the march as he conceives it. It is full of those natural incidents which form the accustomed prelude to the realities of war. The various groups of soldiers, women, and camp-followers carousing, embracing, and bidding each other good-bye, have indeed something of the spirit which animates Falstaff and Doll Tearsheet and Bardolph. Hogarth desired to dedicate the plate to George II., but as that monarch was incensed at the painter's insolence in having represented several of the guardsmen as the worse for liquor, the artist had to seek another patron, and the print in consequence is dedicated to "his Majesty the King of Prusia [*sic*], an Encourager of Arts and Sciences." It was on this occasion that George II. uttered the classic remark: "I hate *bainting* and *boetry* too! Neither the one nor the other ever did any good."

We have dealt with the subject, perhaps somewhat to the exclusion of the letter, of Professor Baldwin Brown's monograph. It makes no appeal to the specialist, but forms an admirable introduction to the study of Hogarth as painter. It contains very full descriptions of and data concerning all the more noteworthy pictures and prints, and an interesting note upon the early authorities for the biography. In consideration of the brevity of the book, the topography of London in Hogarth's time and at the present day is treated with somewhat disproportionate detail in a part of a chapter and a section of the appendix. Hogarth was, however, essentially a Londoner, and his backgrounds form an invaluable record of the London of his day.

Old Cottages, Farm Houses, and other Half-Timber Buildings in Shropshire, Herefordshire, and Cheshire. From Photographs by J. Parkinson, with Descriptive Notes by E. A. Ould. (Batsford.)—As the eighteenth century was dawning Paul Sandby and others issued such works as 'The Virtuosi's Museum,' containing "select views" with short descriptive letterpress, while some half-century later appeared such works as Calvert's 'Picturesque Views in Staffordshire and Shropshire.' Both of these books contain views from the same part of the country as that before us; but a comparison shows not only how completely the technique of illustrations has changed, but also how much taste has improved. For instance, the earlier books of views rarely went outside "seats" of the nobility and gentry, while the drawing was often inaccurate and almost entirely wanting in detail. Now, however, as in the book before us, the houses chosen for illustration are homesteads hidden away in villages or among fields, and they are reproduced not merely for their quaint beauty—though that of itself would be sufficient reason—but also for the sake of interesting details of construction, the accuracy of which is secured by photography. The title-page sets forth that the book consists of a hundred collotype plates of half-timbered buildings in the three counties of Salop, Hereford, and Chester, from photographs by Mr. J. Parkinson, who describes himself as "Architectural Woodworker." These are, almost without exception, well-executed views of houses, with notes on special points by Mr. E. A. Ould. These notes are mostly short and to the point; but some of the conclusions expressed in the introduction may be regarded as open to doubt. For example, the author accounts for the few existing cottages dating earlier than 1550 by saying that the ravages of the Black Death rendered the building of new cottages unnecessary, and further that before the Reformation most of the labourers on the land were accommodated in conventual buildings and outhouses, or beneath the roofs of the great landowners. As a matter of fact, very few cottages, in the modern sense of the term, have come down to us even from the latter half of the sixteenth century and the first half of the seventeenth. Many of the half-timbered houses of that period are cottages now, but almost all were built not as dwellings for the labourers, but for the smaller gentry and yeomen, and for prosperous tradesmen, and their large increase during the period in question was due not to growth of population so much as to growth of national prosperity and a greater appreciation of the comforts and conveniences of life. The plates of the book are badly arranged. Plate xl., which, according to the index, should be 'The Old Rectory Eardisland,' is not to be seen in its proper place, and appears, without any note of explanation, as a frontispiece, while the 'Back View of Marton Hall,' described in the text as plate xci., should be plate lxxxix. The series opens with four views from 'The Town of Shrewsbury,' but there is an error in the description of every one of them. Two of these errors are of little or no importance, being only 'Butchers Row' instead of 'Butcher Row,' as correctly printed in the letterpress; but the other two have no excuse. Plate iii., described as 'A Pair of Houses in the High Street, Shrewsbury,' really depicts two houses which are in Frankwell, beyond the Welsh Bridge, and at least half a mile from High Street; and plate iv., described as 'The Court House, Shrewsbury,' is a picture of the Gatehouse which gave entrance to the now modernized Council House, which occupied so conspicuous a position in the later mediæval history of the town. We turn to plate x., and find the name given to it is 'A Cottage at Clevedon'; but though we are well acquainted with the county of Salop, it is news to us that it possesses a Clevedon, nor have we been able to trace such a spot in any gazetteer. Such mistakes rather spoil a book which otherwise has many points of excellence.

ARCHÆOLOGICAL NOTES.

M. Paul Toscanne, who appears to be a pupil of M. Ledrain at the École du Louvre, has published a small book on 'Les Signes Sumériens Dérivés' which seems worthy of attention. His contention is that, if we wish thoroughly to understand the cuneiform texts, we must seek under the form in which they have come down to us the underlying ideograms or hieroglyphs in which the original language was written. To do this it is necessary to free the characters from the explanatory or modifying signs afterwards added to them, and he devotes the present volume to a study of the signs read *gunu* which were added to certain syllables with what has been hitherto supposed to be merely an intensifying effect. He thinks, however, that in some cases the Sumerians used the *gunu* to make up complex ideograms to express ideas more elaborate than could be denoted by simple hieroglyphs. It is difficult to give instances without the use of cuneiform type, and even of a specially drawn pictorial script, for which reason, doubtless, the book is published in autograph. It should be noted that the octogenarian Assyriologist M. Jules Oppert seems to think well of M. Toscanne's theory, and in a characteristic preface speaks of the author as showing "une honnêteté qui le distingue de quelques-uns des assyriologues."

There is now exhibited in the galleries of the Louvre the statuette—perhaps about a third the size of life—representing Gudea, of which the body was discovered by de Sarzec and the head by his successor, Capt. Croz, in circumstances already detailed in *The Athenæum* (No. 4038). An examination of the monument leaves no possible doubt that the head and the body were originally connected; but what principally strikes one about it is the extreme disproportion of the two parts. M. Heuzey, as before noted, thinks this due to a convention of the Sumerian sculptors, whereby the head alone was treated as a portrait, the base of the statue being looked upon as merely a *tabula rasa* for the reception of inscriptions. However this may be, the likeness between this and the statue known as No. 1 in the Cairo Museum is extraordinary, and leads to the conclusion that it must be the result of conscious imitation. In the Egyptian instance it is not the base, but the shoulder of the statue which receives the inscription, consisting in this case of the hawk-names of three of the earliest known Egyptian kings. The comparatively huge head does not seem, therefore, capable of explanation on M. Heuzey's theory.

The publication of the cylinders of the same King Gudea has been begun by M. Thureau-Dangin, and the first part, containing some hundred pages, is already published. It is devoted to the transcription into Latin characters and the translation of the cylinders known as A and B, in which Gudea describes the building of his famous temple at Lagash to the god Nin-girsu, and its dedication. Beginning with the scene in heaven when Bel decrees the foundation of the temple, they go on to relate how a dream was sent to Gudea, the meaning of which was explained to him after a

long prayer, here given, to Nina, the "royal diviner of the gods." Then comes the detail of the building, which is represented as being designed by the gods throughout, and the installation of the god in his temple after a festival which lasted for a week, and during which, it is expressly said, all distinctions of rank among the worshippers disappeared. It does not seem that we must take the remark at the conclusion that the temple has been built "in heaven and on the earth" so seriously as to suppose that a model of it was supposed to exist in the abode of the gods, although the words would perhaps bear this construction. Father Alfred Loisy, who reviews the volume for the *Revue Critique*—rather a change of policy this—thinks that the court assigned to the god of lieutenant, counsellor, musician, singer, architect, and so on, down even to shepherd, donkeyman, and gardener, may afford means for the reconstruction of the household of a Sumerian king. This is possible, but by no means certain. The translation is made with all the care and accuracy that we have a right to expect from M. Thureau-Dangin, and is accompanied by a commentary, grammar, and glossary.

The first part of the second volume of 'Le Musée Egyptien' is also out, and keeps fairly up to the high level of its predecessor. As this last dates back to 1890, it may be as well to remind the reader that it aims at reproducing in somewhat luxurious form the most striking Egyptian monuments which do not appear fully elsewhere. Among the seventeen plates here given, two of the most striking are those of the statue of Mentuhotep discovered at Deir el-Bahari in 1901 by Mr. Howard Carter. M. Maspero, who writes the accompanying description, reminds us that he at first attributed the statue, on grounds that he now sees to have been insufficient, to Mentuhotep I., but that Dr. Naville's and Mr. Hall's subsequent discoveries have convinced him that the person depicted is Mentuhotep V. He has a very curious theory to account for the fact that the bust of the statue is carefully worked, and that the strong, keen face looks as if it must have been an excellent portrait of the living model, while the lower part of the figure is not only clumsy, but does not even coincide with the Egyptian canon of proportion. M. Maspero's explanation is that the statue was for use at the Heb-sed festival, where the king was exhibited to his subjects at the top of a staircase in imitation of the god Osiris, and that, seen from below, the figure would appear in drawing. He also thinks that the statue was put in the tomb where it was found, in default of the corpse, Mentuhotep being either slain in battle or assassinated. This may be; but was not the whole purpose of the Heb-sed ceremony the exhibition of the deified, but living king, for adoration; and is there any evidence that he was ever replaced by a statue?

M. Revillout has published in the *Revue Égyptologique* a full translation from the demotic of 'The Romance of Petibast,' from which he seeks to prove, among other things, that the twenty-second, or Bubastite dynasty, founded by the Biblical Shishak or Sheshonq, was of Asiatic origin, and connected with those "Ethiopians" who, according to the Book of Chronicles, invaded Judah in the reign of Asa. M. Revillout, who is seldom without some quarrel on his hands, this time falls foul of the Viennese scholar Dr. Krall, of whom he speaks in incontinent terms.

General Frey, who was, if we recollect rightly, the commander of the French contingent in the expedition for the relief of Pekin, has published a small book in which he seeks to show that the Annamites must be descended from the Egyptians, because both nations used hieroglyphs, and the signs are in many instances the same. Had the gallant officer carried his researches into ancient scripts a little further, he would have found, we believe, that all pictographs portray, for the most part, the same objects, the number of things at the disposal of archaic man for use as symbols being apparently strictly limited. Thus, the eye, the hand, the disc of the sun, and the crescent of the moon can be found nearly everywhere.

M. Victor Henry has contributed to the *Revue Bleue* another popular article, this time on the inconsistencies of Buddhism. He has no difficulty in showing that the state of ethics disclosed by some of the Jatakas, for instance, is very different from the pure morality taught in other Buddhist writings. But surely the same inconsistencies might be found in any other religion which either outgrows the early stage of civilization which gave it birth, or adopts, as in this case, the legends of an older faith.

Fine-Art Gossip.

An important addition has just been made to the permanent collections of the City of Birmingham Art Gallery, through the generosity of Mr. J. Palmer Phillips, who has presented an important example of the water-colour art of Samuel Palmer. It was exhibited at the Society of Painters in Water Colours in 1877, under the title of 'Tityrus restored to his Patrimony.' This drawing was included in the exhibition of the artist's works held by the Fine-Art Society shortly after his death in 1881, and is from the collection of Mr. George Gurney, who lent it to the Winter Exhibition of the Royal Academy in 1891, and to the Guildhall show in 1896. The donor also gave some little time ago a fine landscape study by Peter de Wint. Other recent additions to the gallery include a large water-colour, 'The Derelict,' by Henry Moore, R.A.; and good examples of William Hunt and George Barret.

Mrs. R. H. Stevenson, daughter of Cadell, Scott's publisher, has lent to the Scottish National Portrait Gallery Sir John Watson Gordon's portrait of Sir Walter Scott, executed in 1830. There are now eleven portraits of Scott in this collection. A portrait of Dr. Norman Macleod, by Tavernor Knott, has also been added to the gallery, as well as a bust of Allan Ramsay, the portrait painter.

Collectors will be interested to learn that the library of Cruikshank items, archæological works, mezzotint engravings, pictures, &c., formerly belonging to the Egyptologist T. J. Pettigrew, librarian to the Duke of Sussex, will be sold on the 23rd inst., at their galleries in Conduit Street, by Messrs. Knight, Frank & Rutley.

The leading members of the Ministry of Fine Arts in Paris are actively engaged on the project of erecting a suitable monument in the Champs Elysées to the great French artists who constitute the Barbizon School. Every one is in accord with the proposal—the Minister himself and the City of Paris more particularly. The difficulty will, perhaps, lie in the form in which such a monument should take. It must, as a matter of course, include statuettes of such men as Corot, Théodore Rousseau, Millet, Jules Dupré, and Daubigny; but there are so many others whose names will be put forward that the committee will have no easy task to arrive at a final judgment. It is agreed, at any rate, that the new monument shall be erected in the neighbourhood of the Grand and Petit Palais.

We are glad to hear that the Paris Musée Carnavalet, which is so rich in Parisian souvenirs, is soon to have an adequate printed catalogue of its contents. M. Alcanter de Brahm, the secretary of the Carnavalet, has finished the catalogue *sur fiches*. In this form there are about 5,000 items, which will be methodically classified. Nearly all the Parisian museums and libraries are very ill supplied with printed catalogues, and if that of the Carnavalet proves worthy of the outlay, perhaps it will be an inducement to the authorities to proceed with the others.

The Director of the French Archæological School at Athens, M. Holleaux, reports the finding of three leaden vases filled with ancient coins at Delos. In the largest are 300 four-drachmæ pieces so well preserved as to suggest that they never were in circulation, but were sent to Delos straight from the mint in the vases in which they have now been found.

MUSIC

Βιβλιοθήκη Μαράσλη. 260 Δημώδη Ἑλληνικὰ Ἄσματα ἀπὸ τοῦ στόματος τοῦ Ἑλληνικοῦ λαοῦ συλλεγέντα καὶ παρασημανθέντα ὑπὸ Γεωργίου Δ. Παχτικοῦ, Φιλολόγου καὶ Μουσικοῦ. (Athens, Βιβλιοπωλεῖον Καρόλου.)

This is another sheaf from a rich harvest, ready for the reaping, but if not reaped likely soon to rot in the fields. Much has been done in collecting the traditional literature of Greece, mostly by the Greeks themselves; but they generally lack critical training, and almost universally are without a knowledge of phonetics, so that their work is not altogether to be trusted. In the book before us, for example, there are unmetrical lines, and there are mistakes of transcription due solely to the compiler's knowing too much. He knows that an enclitic in ancient Greek throws back the accent upon a properispomenon, and consequently he writes (p. 4) *τὸν μαῦρόν του* which is not to be pronounced in modern Greek. What he actually heard was *τὸ μαῦρο του*, but he is too learned to write it. On the same page *μ'* is written twice, when a syllable must have been pronounced, probably *μου*. So, again, he writes *καὶ* before vowels and consonants alike, although the metre often shows that the particle was pronounced *ky* (or, perhaps, *chy*, if we may trust our own memory). We see at once, then, that this is not a phonetic transcription, but a transliteration into the normal forms of the songs which were heard by the compiler.

This, however, does not impair the value of the book in other directions. To begin with, a large number of songs given here are printed for the first time. So the editor claims, and we believe justly, for we have examined a large number of collections without coming on them. They have been collected from natives of a great many parts of the Greek world, whom the editor has been able to meet, because he lives in the centre of the Greek world, Constantinople. These are Asia Minor, Thrace, Macedonia, Epirus, Albania, Crete, Cyprus, the Greek mainland, the Propontis, and several isles of the Archipelago. The editor has been engaged on his work since 1888. He has taken reasonable care in details; thus the names of his authorities are supplied. The editor has also kept a record of their ages, which, however, he has not published. But he tells us that not seldom men and women of seventy or eighty years old describe their songs as taught them by their grandfathers and great-grandfathers, which would take back the record for two cen-

turies. We shall consider later the internal evidences of age.

The second point of importance in this work—and here it is almost unique—is the preservation of the airs to which the songs are sung. In listening to the church music of Greece we have felt that its strange character might be due to a tradition going further back than the birth of modern music; and if we might argue on *à priori* grounds, it is reasonable to expect that it was not unconnected with ancient Greek music. As we have heard Christian congregations in India singing translations of English hymns to their own native airs, so we may suppose the fathers of the Church were wise enough to use national airs for singing their hymns. We are credibly informed that two Catholic scholars are at present investigating the subject of church music—the one in the Latin Church, and the other in the Greek; and that by no means the only evidence for historical connexion are the names of Lydian, Dorian, and Phrygian still used to designate certain of these modes. In the airs before us there is a distinct resemblance to those we have heard in Greek churches. They are very peculiar, and often not at all pleasing to the English ear; their keys do not answer to those which we are used to, and their intervals and accidentals are strange indeed. One of the favourite intervals, also common in Chinese music, is from F sharp to E flat; the scale is that of G with E flat, instead of E natural. At least, that is the scale as reduced to our notation; but we have serious doubts whether most of these airs can be reduced to our notation accurately. The number of possible notes in the octave was greater in ancient music than in our own, the intervals being sometimes less than a semitone; and we are inclined to think that a violin or some other stringed instrument is necessary to reproduce the Greek airs. We must also add, in honesty, that Greek singing is very unpleasing, especially when sung with a loud, screaming falsetto, as it so often is.

One serious fault we must find with the transcription of the text: the compiler does not always reproduce what he hears. For instance, misled by the analogy of ancient Greek, he writes (p. 4) ὁ μαῦρός σου, τὸ μαῦρό του; but since the circumflex tone has disappeared from spoken Greek, all the accents being merged in stress, such a group is now unpronounceable. Μαῦρος σου (more accurately μαύρος σου, with acute) is right, as the metre shows; μαυρός σου would be possible to pronounce, but not what is given. On the same page we have κόρη μ', where κόρη μου is necessary to the metre; and, conversely, other lines have too much, although it is not always easy to say what should be read. As an example, take No. 23 (p. 28): several lines are unmetrical, but may be made metrical by slight changes. Thus, in l. 12, μόν' for μόνον would set matters right; and the last word of 5 should probably be χαλάνει, not χαλανεῖ.

Whether these errors are due to a defective ear, or to the use of traditional spelling, it is impossible to say; but one thing is certain—that the verses as recited were metrical. The reciters often do violence to forms, compressing or expanding them, but they always conform to the metrical scheme. We must insist on this point, not from a love of fault-finding, but because we hope it may be remedied in the succeeding volume. Apart from this, considerable care has evidently been taken to reproduce the dialectic forms accurately, and the wide range of the selection makes it very instructive to the student of modern dialect.

We do not propose to discuss here the contents of the songs, which are of a very varied character. They contain much that is interesting, and much that is beautiful, and they keep a high level of excellence, since popular songs represent the survival of the fittest. The pointless and the insincere are eliminated when poems depend for their existence on being remembered. It is a pity that many of these songs are incomplete — a natural drawback when they are collected from a limited number of persons. But we are most grateful for the book, as we are for all honest attempts to collect what must, with the march of what is called civilization, soon for ever disappear.

An Elizabethan Virginal Book. By E. W. Naylor. (Dent.)—This volume is described as a "critical essay on the contents of a manuscript in the Fitzwilliam Museum at Cambridge," the treasure, in fact, which until recently erroneously bore the name of 'Queen Elizabeth's Virginal Book.' Our author believes that its size, even in its published form, has prevented students from giving it the attention which it deserves. Then, again, there are many who find such old music difficult to understand, and therefore difficult to interpret in the right spirit: forms, tonality, ornaments, everything is antiquated. Mr. Naylor, by the way, hopes that Mr. Barclay Squire, whom he describes as "the author of the Preface" to the printed edition of the Fitzwilliam manuscript, will accept his thanks for the valuable information which forms part of his second chapter. But why did he not first ask permission of the authors? He names only one; but the work was edited by Mr. J. A. Fuller Maitland and Mr. W. Barclay Squire, as Mr. Naylor afterwards states, but only in a foot-note.

Our author feels that there are subjects of which he has only skimmed the surface; but he has written to interest students, not specialists. There is enough information to make serious readers wish for more, and this kind of book is an incentive to study the music itself.

England, about the beginning of the sixteenth century, was ahead of other countries as regards the variation form, which, says Mr. Naylor, "was brought to its climax of possibility three centuries later, by such a man as Brahms." That this composer wrote many fine variations—notably those for orchestra on a Haydn theme—none will dispute, but Beethoven in that branch of musical literature has not as yet been surpassed.

Morley already in 1597 remarked that Galliards were evolved from Pavans, and our author notes that Bull—not, however, in the Fitzwilliam volume, but in 'Parthenia'—carried the principal of unity even into the Prelude, and thus presented us with "a real suite of three pieces which have a vital connexion one with the other." This is, indeed, an early and notable instance of such a thing. We are reminded that 'Parthenia' was published in 1611, "before Bull fled to the Netherlands," which reads as if Bull conceived the idea before he became subject to foreign influence. But he had travelled through France and Germany ten years previously. The idea of thus connecting three pieces may therefore possibly have been borrowed. Bull has, however, the benefit of the doubt. We are told that it "would be possible to rewrite the history of music from 1550 to 1620 on the material which we have in the Fitzwilliam Book alone." The fact, however, that Frescobaldi—to name only one composer—is not represented in it shows that this statement is exaggerated. There are other passages which seem to us open to question. But the volume as a whole is interesting and instructive; moreover, it is the first book on the subject, and therefore welcome. It contains many musical illustrations, and there is a capital index.

Musical Studies. By Ernest Newman. (Lane.)—The greater number of the articles in this volume have already appeared in various periodicals, but here they are considerably altered, and some almost rewritten. We recently referred to M. Tiersot's statement in *Le Ménestrel*, to the effect that when—in a letter to Liszt in 1852—Wagner spoke slightingly of Berlioz's 'Benvenuto Cellini' he could not have known a note of the music. Mr. Newman has formed the same opinion. "The dates of performance and of publication put any such knowledge on his part out of the question," he remarks. But Wagner saw a good deal of Berlioz during his long stay in Paris, 1839–42. Is it not possible, or even probable, that the composer may have shown Wagner the score of his opera? The article on Berlioz may be somewhat extravagant in its estimate of the composer, but we much prefer such a view to the cold attitude adopted by some writers.

The article on 'Programme Music' is interesting, but calculated to provoke criticism. The subject is bound to do so, since the term itself is differently understood by different musicians. There is another article, 'Richard Strauss and the Music of the Future,' which is equally provocative. The last sentence sums up pithily, if not pleasantly, the writer's opinion of the composer's latest tone-poem: "The 'Symphonia Domestica' I take to be the work of an enormously clever man who was once a genius." Up to that symphony Mr. Newman considered Strauss the "creator of a new order of things in music." Our author is a clever and thoughtful writer, and even those who differ from him will respect his frankly expressed opinions.

Musical Gossip.

The Council of the Sunday Concert Society announce that they have arranged for the Sunday afternoon concerts to be resumed at Queen's Hall on October 1st, and to be continued for a period of twenty-six weeks—until March 25th, 1906. The orchestras engaged for the season are the Queen's Hall Orchestra, under the direction of Mr. Henry J. Wood, and the London Symphony Orchestra, under the direction alternately of Sir Alexander Mackenzie and Sir Charles Stanford. Mr. Wood will conduct the first concert, on October 1st, and Sir Charles Stanford will have charge of the London Symphony Orchestra on the following Sunday.

The Concert Club's second season will open on Sunday, November 5th. Twelve concerts will be given at Bechstein Hall under the direction of Señor Fernandez Arbos, chamber and orchestral works being performed on alternate Sunday afternoons.

Herr Fritz Kreisler, the violinist, announces a recital at Queen's Hall on Saturday afternoon, September 30th; and Mischa Elman will give a recital of violin music in the same hall on Tuesday afternoon, October 17th.

The sixth series of Chamber Concerts in Lord Leighton's studios will be held this winter on Thursday afternoons, beginning on November 9th. The Kruse, Wessely, and other able quartet organizations have been engaged. The soloists will include Madame Haas, Miss Katherine Jones, Madame Le Mar, Dr. T. Lierhammer, Mlle. Ella Spravka, Miss Adela Verne, and Miss Ydèn. The Leighton House Committee is very strong, and includes a number of representative people. Mr. Otto Goldschmidt is the chairman of the musical arrangements.

At the Crystal Palace, on September 30th, will be held the sixth annual brass band festival. Seven competitions have been arranged, and 1,750*l.* will be offered in prizes.

Engelbert Humperdinck is said to be putting the finishing touches to his new opera, 'Das Wunder von Köln,' the libretto of which was written for him by Herr Rainer Simons, director of the Jubiläums-theater, Vienna. It is expected that the work will be produced during the coming winter, either at the Volksoper, Vienna, or at the Court Opera, Munich.

On September 28th or 29th Ernst von Possart, appearing in one of the *rôles* in which he has achieved fame, will take his leave of the Munich stage. The new and long-expected staging of 'Der Freischütz' will be shown to the public a few days previous to this farewell, and after this the intendant of the Munich court theatres will lay aside his director's wand. Next year he will open a "Possartschule," a training-school for those who intend to embrace the dramatic profession.

Dr. Henri Viotta, under whose direction two performances of 'Parsifal' were given by the Wagner Society at Amsterdam, has written an article in *Cæcilia*, of which he and Mr. S. Van Milligen are editors, entitled 'Bayreuth en de Amsterdamsche Wagner-Vereeniging.' He justifies his conduct in giving 'Parsifal,' and quotes various writings of Wagner to prove that it would have met with the approval of the master himself. As for Bayreuth, he prophecies its downfall, unless, instead of blindly following tradition, it keeps pace with the times, recognizes the improvements in costumes and stage appliances made since Wagner's death, and selects artists for its festivals solely on the ground of merit.

Rubinstein founded two prizes, each of 200*l.*, for which competitions were to be held every five years—one for pianists, the other for pianist-composers. Mr. Backhaus, as stated, won the piano-playing prize; but the jury did not consider any of the works produced of sufficient importance to win the other. Among the candidates, France was only represented by three pianists and one composer-pianist, and there was no one of British birth. The jury, under the presidency of M. Léopold Auer, included MM. de Lange, S. d'Eksner, de Pouchalsky, Presmann, R. von Perger, Hollander, Nicolaïeff, Otto, and various professors of note.

A festival, probably under the direction of Dr. Joachim, will be held at Bonn next year, May 22nd to 24th, in memory of Schumann, who died close by, at Endenich, fifty years ago.

Le Ménéstrel of August 14th, referring to the new opera 'Faust,' to be shortly produced at Düsseldorf, mentions that Berlioz's 'Huit Scènes de Faust' were published in 1828, and that in 1832 Wagner wrote seven vocal pieces to words from Goethe's 'Faust,' which, marked as Op. 5, are preserved among the Bayreuth archives.

DRAMA

Dramatic Gossip.

Mr. Henry Arthur Jones will visit America for the purpose of bringing out at the Hudson Theatre, New York, about the middle of October, a four-act play of serious interest, the heroine of which will be taken by Miss Virginia Harned, the original American exponent of the Dancing Girl. Mr. J. D. Beveridge will play a leading part. The scene of the novelty is laid in England, in which country its production was originally contemplated.

As a matter of courtesy between managers—or shall we say chivalry?—Mr. Beerbohm Tree has postponed his promised production of 'The Merchant of Venice' until Mr. Bourchier's revival of that play has run its course.

Mr. C. W. Somerset promises on the 28th inst., at the Princess's Theatre, Manchester, a new adaptation of 'The Woman in White,' in which he will play Count Fosco. There is a prospect of the ultimate transference of the piece to London.

The run at Wyndham's Theatre of 'What the Butler Saw' has been prolonged, and a new house, to which it can be removed when the present theatre is no longer available, is being sought.

'The Shadowy Third,' a four-act play by Mr. H. A. Vachell and Mr. Horace Wyndham, founded on the novel of the same name by Mr. Vachell, is promised at the King's Theatre, Glasgow.

'Duke's Son,' a novel by Mr. Cosmo Hamilton, is being prepared for the stage by the author and Mr. Seymour Hicks.

So far as regards London the past week has been entirely void of dramatic novelty. The production by Mr. Weedon Grossmith at the Comedy Theatre of his comedy 'The Duffer' will constitute a break in the month's monotony. Such other novelties as are designed for immediate production are musical.

A hitherto unknown play by Tolstoy, 'The First Brandy Distiller,' will shortly be published in a German translation.

To Correspondents.—C. B.—J. B. B.—G. M. T.—F. H. C.—E. A. G.—T. R. M.—received.

F. W. R.—R. A. (Spain)—W. M.—Many thanks.

LITERATURE

The Victoria History of the County of Cumberland. Edited by James Wilson. Vol. II. (Constable & Co.)

THE second volume of 'The Victoria History of the County of Cumberland' maintains the high standard of the previous issues of this comprehensive scheme. The Cumberland editor has constructed a readable and careful treatise on the general ecclesiastical history of the county, together with particular notices of the various religious houses. Mr. Wilson supplies good reasons for accepting the general tradition which ascribes the evangelization of Cumberland in the sixth century to the agency of St. Kentigern. The state of the Church of Cumbria between the Danish inroads of the ninth century and the Norman Conquest remains, and will probably always remain, a puzzle. From the time, however, when the district of Carlisle was added to the English dominions by William Rufus in 1092, the story of the ecclesiastical establishment becomes clear. In 1133 the canons of Carlisle, by licence of King Henry and by decree of Pope Innocent, elected Adelulf, their prior, first bishop of the new see of Carlisle, and he was consecrated by Archbishop Thurstan at York.

With the dawn of the fourteenth century came the beginning of that long-drawn war between England and Scotland which lasted, in a more or less regular fashion, with but rare intermission, for about three hundred years. The frequent raids and invasions of the Border territory were a sore trouble to diocesan as well as civil life:—

"The bishops of the period in question were sometimes military commanders, mostly north-country born, often natives of the county, not unfrequently cadets of great feudal families. Some of them, like Halton and Kirkby, controlled the garrison of Carlisle Castle, and, not content with acting on the defensive, went into Scotland more or less in a military capacity, at one time as diplomatists to effect a peace, and at another to carry fire and sword into the enemy's territory. Bishop Kirkby was held in particular detestation by the Scots for commanding in person on various expeditions in 1337, and the enemy was not slow in retaliating on the bishop and all his belongings. A visit to the bishop was the feature of almost every Scottish invasion. They sacked Rose Castle again and again, killed his deer, and emptied his fishponds. Nearly all the bishops before the Reformation were employed in the adjustment of diplomatic relations and the arrangement of truces between the two kingdoms, and sometimes little thanks they got for their pains."

It is somewhat singular that one result of the frequent episcopal troubles through the Scottish raids seems to have escaped Mr. Wilson's notice, namely, the establishment of a bishop's residence for Carlisle diocese in a place so remote from the Border as Melbourne, in Derbyshire. Here bishops on two or three occasions obtained licence from the Bishops of Coventry and Lichfield to hold ordinations when the Scots were in possession of the cathedral priory and the palace of Carlisle.

It is interesting to note that there was no attempt to secure complete ritual uniformity in the churches of Cumberland until the promulgation of the Book of Common Prayer in the sixteenth century. The Uses of either York or Sarum were employed at the discretion of individual incumbents.

Mr. Wilson, like every one else of common sense and fairness who has examined the sixteenth-century documents at first hand, is full of distrust and scorn for the alleged *comperta* of Cromwell's monastic inquisitors, the notorious Doctors Legh and Layton. Legh was a native of Isell, in Cumberland, and Layton was also north-country born. In their petition to Cromwell begging for the post they state that they knew

"the fassion off the countre and the rudenes of the pepull,"

and that through

"oure frendes and kynsfookes dispersyde in thos parties ther ys nother monasterie, selle, priorie nor any other religiouse house in the north but other doctor Lee or I have familier acquayntance with it."

From a study of their movements, Mr. Wilson is convinced that these men could have given only a few days to the visitation of all the numerous and sometimes important houses of Cumberland and Westmorland:—

"It is absurd to suppose that the commissioners had any intention to make a *bonâ fide* report on the condition of individual monasteries. There was no time to hold a serious investigation, and there is no evidence that any court of inquiry was held or witnesses called.....It is manifest that the statutory reasons for parliamentary action were fraudulent, and that the court party had got up the alleged irregularities for the purpose of passing the Bill through both houses."

The post-Reformation history of the diocese is set forth with much fairness of judgment, and after an exceptionally interesting fashion.

The political history of the county, covering about a hundred pages, is also the work of the editor in conjunction with Mr. R. A. Allison. The geographical position of Cumberland, wedged in between the Pennine Mountains and the Solway Firth, accounts for most of its exceptional history, particularly as it was still more isolated by being cut off from Scotland by that long arm of the sea which leaves but a few miles of outlet towards the north. Hence it became the scene of continuous conflict from the very dawn of written history. A helpful map, which does much towards elucidating the mediæval story of the county, shows at a glance the tumultuous character of several centuries of Cumberland life. It is a chart of castles and fortresses, of a frequency and strength, in proportion to area, such as no other county possessed. They extend from Bewcastle, Liddel, and Askerton in the north, to Millom in the extreme south. They are thickest round Carlisle, Bowness, and Penrith, but extend right across the district, from Workington in the west to Melmerby in the east. In this helpful map the castles of the twelfth century are differentiated from the castles, peels, and fortified houses and churches of the fourteenth century by distinguishing symbols, and those of the fourteenth, in their turn, from those of the sixteenth century.

The section on the industries, which has fallen into divers hands, is at once thorough and interesting. Here, again, the maritime position and the natural features of the county are mainly responsible for the occupations of its inhabitants, both ancient and modern. The continuous indentations of the seaboard are favourable to fishing industries, especially salmon breeding. On the other hand, the nature of the geological formation has caused the upper strata to be richly stored with iron, lead, silver, copper, plumbago, and particularly with coal. All these minerals were worked considerably from remote times; but the winning of coal by mining has only been accomplished in our own days.

The salmon fisheries have an early record history. Fishing liberties in the Eden were granted by Henry I. to the priory of Carlisle; by Ranulf Meschin to the monks of Wetheral, before 1120, in the same river; and by Alice de Rumelli to the priory of St. Bees, about 1140, at the port of Whitehaven. Frequent charter privileges of a like character were also granted, both to religious houses and civilians, in the thirteenth century. Annual grants of salmon out of their own waters, as distinct from grants of fisheries, were not infrequently made by particular lords to religious houses. Thus Thomas, son of Gospatric, gave to Calder Abbey twenty salmon yearly at the feast of St. John Baptist; and Patric, his son, bound himself and his heirs to give to St. Bees fourteen salmon a year, namely, six in Lent before Palm Sunday, and eight at the feast of St. Peter ad Vincula. Nor must these gifts be confounded with the tithe of fish caught by nets or otherwise, which was generally claimed by the Church. One of the many curious customs pertaining to the old Cumberland fisheries was the

extraordinary measurement for the width of the fish-gap, or free passage, which had always to be left in mid stream. It was to be wide enough for the passage of a sow with her five little pigs. This measurement, which sounds exceedingly vague, was laid down in an elaborate judgment of assize at Carlisle in 1278. The same measurement is again gravely cited in a plea at Newcastle of the year 1293, before the itinerant justices, against the monks of Wetheral for contracting the fish-pass in the Eden.

Sports, ancient and modern, are for the most part graphically dealt with by a series of writers, including the Lady Mabel Howard, Mr. G. W. Hartley, and the editor. Cumberland had its almost distinctive sports, such as foulmart hunting and sweetmart hunting, the former being the pursuit of the polecat and the latter of the pine-marten. Matches in which dogs follow a trail laid for them are another distinctive feature of the north country.

Mr. Nisbet deals well at the end of the volume with the more recent features of arboriculture under the head of 'Forestry'; but the references to the old royal forest of Cumberland, or Inglewood, are sadly inadequate. On this subject there is ample material, hitherto unused, in our national records to make a large and interesting book.

The illustrations form a marked feature of this volume; they are pertinent and good. Mr. William Hyde contributes an artistic general view of Carlisle. There are three plates of episcopal seals and portraits of two bishops. The portraits of Sir John Lowther, Bart., and of that distinguished Whig John Christian Curwen, illustrate the latter part of the political history. There are also several illustrations pertaining to the industries; but the one that will most please antiquaries is a good reproduction of the vigorous outline drawing of the defence of Carlisle by Sir Andrew de Harcla against the Scots in 1315, which appears on a charter of Edward II. to the City of Carlisle.

The Church's Task under the Roman Empire. By Charles Bigg. (Oxford, Clarendon Press.)

These four lectures should be read as a companion volume to Mr. Dill's two books. They are equally valuable, if not more so. Written with an ease of style which at times almost disguises the author's profound knowledge, and with a charm which rarely falls to the lot of scholarly writers, the volume will not answer, but it will help towards the answering of, the question which is at the bottom of all ecclesiastical and very much general history: What is the real difference that Christianity has made in history?

As Dr. Bigg says, the task of the Church

"was not to improve, but to remake the foundations of education, politics, and morality. It was a gigantic task, not yet completed after nearly two thousand years of effort."

It is with this, the task of the Church in its earlier stages, that Dr. Bigg is mainly concerned. On some points he corrects current notions, as, for instance, in regard to religious belief:—

"It is sometimes thought that there was much religious infidelity under the Empire, but this is hardly true, except perhaps in the first century, which was in many respects a peculiar age."

Perhaps, however, the most valuable part of the book is the account of Mithraism and the worship of Isis. He regards the former as the best and most elevating of all the forms of heathenism known to have existed in "the Empire." He points out some of the ideas, and even rites, which the system had in common with Christianity, but adds that, while

"Mithraism was so like Christianity that it no doubt helped to open the door for its advent, at the same time it was so unlike that there could be no peace between the two."

In regard to the teaching of brotherhood which it inculcated, Dr. Bigg pertinently remarks that "what Seneca prated about, and Epictetus preached, they made a living reality." On the other hand, Dr. Bigg shows that Mithraism was unlike Christianity, and like the cult of Isis, in being in no sense an exclusive religion, "but admitting other gods inside its Pantheon." To the plausible but untenable position of Mr. Robertson in his 'Pagan Christs,' which makes the Christian cult merely Mithraism with the names altered, Dr. Bigg lends no countenance. On the other hand, certain of his remarks will perhaps serve as an explanation of the way in which writers with a bias like that of Mr. Robertson have come to their theory.

We cannot forbear quoting the author's remarks upon gnosticism, which are most opportune in existing conditions. He points out how the gnostic, like the modern, was perturbed by the problem of evil, the nature of the will, and the moral difficulties of the Old Testament, and goes on:—

"All these are serious problems, as oppressive now as they were in the second century. The mistake of the gnostic was twofold. They are scientific problems, and he approached them not in the spirit of Greek science, but in boundless confidence upon the inner light. Again, what the Christian called a doubt the gnostic took for a certainty, and thus what the Christian regarded as a certainty became to the gnostic necessarily a most formidable doubt."

He maintained that the world was "the work of an evil creator, and all things beautiful and good rose up instantly in protest. This is the inevitable lot of all systems of pessimism, agnosticism, or atheism."

Lastly, we feel bound to draw attention to the preface, which is in many respects the most valuable part of the book. After a discussion of the conditions of historical judgments, and the desire of each religious community to have scholars, but always scholars speaking for their brief, Dr. Bigg goes on to speak of the difference between heathenism and Christianity, and declares this to be found in the doctrine of vicarious sacrifice — that is to say, in the Passion of our Lord. This is its *differentia*:—

"The old gnostics called the Cross 'Horos,' the Boundary or Dividing Line. The gnostics were a curious people, but they were right here. On this side of the Cross all history is, or ought to be, a different thing to what it is on the other; and every one who carries the Cross, in so far as he carries it, is a better citizen, a better philosopher, and a better man than he would have been otherwise."

We quote this because it indicates a change in the attitude of the most thoughtful theologians. For the past thirty years, at any rate since the influence of Westcott became predominant, it is the Incarnation which has been the starting-point of nearly all fresh and original religious writing. There are not wanting signs—and Dr. Bigg's words are among the number—that this tendency is giving way, and that there is a reversion to the older habit of treating more centrally the doctrine of the Atonement, in some form or other. Creighton remarks upon the danger of putting this into the shade, in the way that sometimes has been the case; and we think we are in this respect at the beginning of a new epoch, or rather that it was begun by the Hulsean Lectures of Archdeacon Wilson.

The Novels of Mrs. Aphra Behn. With an Introduction by Ernest Baker. (Routledge & Sons.)

A curious fate has been that of Aphra, Afra, Aphara, Ayfara, or, according to a humble "peticion" to Charles II. written from gaol, Fyhare Behn, dramatist, romancer, poet, and, incidentally, Government spy. The Astrea of Pope, the first English female writer to live by her pen, and, according to Oldys—likely, from his bibulous habits, to be an authority on the subject—the introducer into England of milk-punch, she has left behind her, apart from her published or acted works, few trustworthy memories. Her origin is a matter of dispute. According to accepted biographies, she was of aristocratic birth and surroundings, her father, whose name was Johnson, member of a family established in Canterbury, being a relative of Lord Willoughby, by whose interest he was appointed "lieutenant-general of Surinam and six-and-thirty islands." For this parentage there seems to be some foundation, since it was on a voyage to the West Indies, for the purpose of entering on the duties in question, that Johnson died. In common with the rest of her family, Aphra settled in Surinam, where her adventurous career began. As though she had not names enough—and most, if not all, of the variants assigned her were accepted and employed by herself — the appellation Astrea, bestowed upon her by her admiring contemporaries, was advanced by Langbaine as her real name. It was not until the 6th of September, 1884, that the accuracy of the accepted biographies was called seriously into question. In *The Athenæum* of that date appeared a letter from Mr. Edmund Gosse, to whom is due the memoir in the 'Dictionary of National Biography,' chronicling the discovery, in the register of Wye, in Kent, of an entry of the baptism, on the 10th of July, 1640, of Ayfara, daughter of John Johnson, a barber, and of Amy his wife. On the strength of this notice Mr. Gosse assumes that the alleged parent was a more distant relative whom she called father. If we accept this theory for what it is worth, the question is suggested whether the relations between Lord Willoughby and Aphra, if parental,

were necessarily legitimate. It is possible that an investigation—were the matter of sufficient importance—of the records of Surinam or Dutch Guiana might throw some light upon it.

On the cession of Surinam to the Dutch, Aphra, who had lived at St. John's Hill—the best house in the colony—returned to London, where a few years later she married Behn, a Dutch merchant, through whom she is said to have gained admittance at Court. In 1666, after his death, she was sent as a secret agent to the Netherlands. Returning thence when on the point of contracting second nuptials, which, however, fell through owing to the death of her lover, she was wrecked, losing her entire property and narrowly escaping with her life. The secret which in the course of her flirtations she had surprised, of the intention of the Dutch to sail up the Thames and burn the English ships in the Medway, was derided at Court; her applications for a payment she had well earned were refused; she appears to have been lodged in gaol for debt, and found herself compelled to seek a living by her pen. The tragedies with which she approached the stage were unsuccessful, and it was not until she produced comedy after comedy, licentious in intrigue and coarse in dialogue, but possessed of a certain measure of vivacity and spirit, that she won recognition. During a literary career which lasted for something under a quarter of a century, she acquired the intimacy of Dryden, Killigrew, Tate, Otway, and the wits of the day; and when in 1689 she died, owing to the ignorance of her physician, she found a resting-place in Poets' Corner, Westminster Abbey, where on a slab of marble her name may still be read. The irony of fate thus pursued her to the end, and the woman whose name, not too justly, has become a byword, "in such state doth lie" as has been vainly demanded for more than one of the greatest poets of following centuries.

It was at Surinam that Aphra made the acquaintance of Oroonoko, the African prince whose adventures she narrates in the best-known of her romances. How much of the story she tells is fact, and how much fiction, is as doubtful as are most other things connected with her life and proceedings. The novelist was credited by her contemporaries with intimate and dishonouring relations with her hero, a gratuitous and wildly improbable suspicion, for never surely did an amorous woman depict a successful rival in colours so bright as those bestowed upon Imoinda, the inspirer of Oroonoko's passion and the sharer in his fate. Seven years after Mrs. Behn's death the story of Oroonoko was dramatized by Thomas Southerne, who afterwards expressed his regret at having coupled so touching a theme with comic scenes of extreme coarseness. Southerne's tragedy was thrice amended or imitated, a pale and colourless rendering by Dr. Hawkesworth being lukewarmly defended by Dr. Johnson. From one or other of these dramatizations the popular idea, if such can be said to exist, of Oroonoko is drawn. The fable itself—we leave the reader to accept the word in whichsoever sense it commends itself to him—belongs wholly to Mrs. Behn, and to her is due the credit of finding in a fugitive African slave a subject for romance at a period when the choice by Shakspeare of a Moor as a hero was being seriously rebuked. That there is a basis of fact in the story of 'Oroonoko; or, the Royal Slave,' will not be seriously disputed. The narrator claims to have been an eyewitness of the deeds she recounts, and asserts:—

"What I could not be witness of, I received from the mouth of the chief actor in this history, the hero himself, who gave us the whole transactions of his youth."

She states also that she had had presented to her a set of feathers such as were converted into dresses, adding, what is credible enough, that she gave them to the King's Theatre. "It was the dress of the Indian Queen, infinitely admired by persons of quality, and was inimitable." A costume of the sort is characteristic, it might be supposed, of the aborigines of the island rather than of the African importations, with whom they had nothing in common except experience of European treachery, cruelty, and deceit. It is the Indians of whom Mrs. Behn speaks, rather than Africans, when she says that such is their respect for truth, and ignorance of falsehood, that when the English Governor, who had pledged himself to meet them, failed either to come or to send a message, they mourned and fasted for the death which alone could, as they assumed, have caused his absence. Oroonoko himself is described as a black, a perfect ebony or polished jet, with eyes "the most awful that could be seen," a nose "rising and Roman," and a mouth firmly shaped, and with no signs of the thick lips of the negro. His sentimental adventures may be assumed to be in part imaginative, but his death in circumstances of revolting cruelty, after heading a servile revolt, has nothing that offends probability.

Mrs. Behn is, then, to be credited with being among the first to denounce the horrors and atrocities of slavery. Had the whole of her novels been as simple and direct as this story they would have taken a permanent place in literature. The more serious of them are, however, extravagant in action and commonplace in style. Most of them bear traces of foreign—probably Spanish—influences, and some must be accepted as translations. Those which are of unmistakably home growth are, like the comedies of the author, more noticeable for licence than for any other quality. In 'The King of Bantam,' which is the most original as well as the most amusing, the action is placed in a world such as we meet with in Wycherley, and the story exhibits the manner in which people represented as perfectly worthy and estimable and of established position plot successfully to extort from a rich and foolish dupe a portion for a deserving but dowerless maiden. Were anything new to be said concerning the immorality prevalent in Restoration times, justification for it might be herein found.

With the life and writings generally of Mrs. Behn it is superfluous to concern ourselves. Her plays, a further reprint of which would be welcome, constitute her chief claim to literary rank. A few of her poems have won recognition. Her "Love in fantastic triumph sat" is in the best of recent anthologies; and one or two other pieces, such as her elegiac verses on Waller, have won recognition. Mrs. Behn's unsavoury reputation is warranted. It is probable, however, that less would have been heard concerning her delinquencies, had Scott's story concerning the old lady who borrowed her novels, and was shocked with what had once given her pleasure, been less widely circulated. Mr. Baker's introduction deals with the plays rather than the tales, but is adequate. The edition of the tales is popular rather than scholarly, but we are grateful to Messrs. Routledge for their enterprise in giving us this and other "Half-Forgotten Books." We do not notice the species of memoir or apology, by a devoted female admirer, which seems to have accompanied some editions, and which, little trustworthy as it is, has great interest, and is principally responsible for the views that subsist as to the novelist's life. A bibliography of Mrs. Behn's writings would have been a welcome addition to the reprint, which a facsimile of early title-pages and the like would have brought up to modern requirements. Mrs. Behn and Ravenscroft, like herself a dramatist, lived on terms of literary and domestic intimacy. To what extent they collaborated is a matter into which it is now presumably too late to inquire.

Quittons la Méditerranée et la Mer de Chine. By Capt. Sorb. (Paris, Chapelot.)

The book which we notice appears at the same moment as the second volume of the report of the British Royal Commission on the food supply of the United Kingdom in time of war, containing the minutes of evidence. These two most interesting publications defend, upon some main points, diametrically opposite views; but there is a good deal that is common to the French writer and the English witnesses.

The volume of which we have placed the title at the head of this article expresses a view looked upon in France as heretical. French official policy continues to contemplate local naval defence for Indo-China, and continues to be mainly based upon the theory that a powerful fleet, having Toulon for its headquarters, and assisted from Corsica and from Tunis, should form the mainstay of naval France. Our author, on the other hand, agrees with the official school only in the desire to menace the main routes of British trade from the bases Brest, Dakar, and Diego Suarez, or British Sound, in Madagascar. In this respect he comes into sharp conflict with the witnesses before the Food Supply Commission. His main doctrines are, however, unassailed, and seem to us better founded than the French official views. He will be criticized by Frenchmen on his assumptions, but the fact is that in a single-handed war against Great Britain a fleet so conspicuously inferior as that of France cannot make sure of anything. The best course is that least certainly doomed to failure.

The only alliance for either belligerent which our author takes into consideration is that between the United Kingdom and

Japan. He mentions our need to think of Germany; of the part to be played by Italy he says nothing. If, however, the French are virtually to retire from the Mediterranean in time of war, Italy may be tempted to embark upon a policy which may lead to further complications, if not to actual extension of belligerency. Our author takes no account whatever of the rights of neutrals; he assumes that the Mediterranean route to India could not be employed by us if the French torpedo-stations on the Morocco frontier and near Biserta were active. But there is deep water along the coasts of Spain and Italy, and the route which would be followed would lie almost entirely in Spanish territorial waters from Gibraltar to Port Mahon, whence our ships would run to the Sardinian coast, and thence again to the north coast of Sicily. While within reach of torpedo attack they would be in Spanish or Italian territorial waters. To attack them there would be a breach of neutrality. These considerations upset the whole of our author's commerce-destroying policy so far as the Mediterranean is concerned.

Nevertheless we are inclined to agree with him that we have hitherto counted on being able to bring out the Toulon fleet to its destruction by menacing Tunis, or inciting insurrection in Algeria, and that his policy of not letting a great French fleet be locked up in the Mediterranean has much to recommend it if England rather than Italy is to be the enemy. We also agree with our author that the main object of our enemy should be "a landing in the British Isles and the taking of London, centre of British life and activity, and heart of the nation."

The writer of the volume does not exaggerate the perfection of the position of his three favourite stations, and especially of Brest. He warns his countrymen of the necessity of defending the western islands of France against the possibility of their capture by a British expeditionary force, but shows an unworthy sensationalism in repeating an absurd rumour that we have standing contracts with the shipping companies for embarking troops at Southampton for the occupation of Ushant. On the negative side we are wholly with him as to

> "the impossibility of defending Indo-China and of maintaining our free communication with Algeria, inasmuch as our Mediterranean fleet, at present solely intended to ensure that freedom, is thus destined to be destroyed."

It is on the positive side of his proposals that he falls short. The chances of the taking of London are small, even with alliances to which he makes no allusion, and so, according to the British Admiralty, are the chances of serious interference with British trade.

The chief witness on this subject before the Royal Commission was Admiral Sir Cyprian Bridge, who said, "I see very little difficulty in defending our food supply." Prof. Holland, in his evidence, supported the Admiralty opinion by facts which bring out the certainty that if the French Government were to apply the views of Admiral Aube and of our author, France would immediately find herself at war with the United States.

There has recently been complaint by the British Government of the sinking of ships by Russian cruisers. It is proved by the evidence before the Royal Commission that French commerce-destroyers in the Atlantic would not be able to spare prize crews or to reach port with their prizes. Neither could they accommodate on board the crews of many prizes. The French author boldly faces this difficulty by sinking all merchantmen reputed British, and, if necessary, sinking them with all hands. British ships, in the event of war, would be registered in considerable numbers in neutral States, and it is certain that delicate questions with neutrals, demanding careful investigation by prize courts, would at once arise. When the Argentina, Chili, and the United States became concerned, and were met by information showing that the ships in question were already sunk, a state of opinion would prevail throughout the American continent which would sweep away Governments unwilling to declare immediate war against the aggressor, as the United States declared war on behalf of her neutrality, against first France and then England, in the period of the French Revolution.

The evidence on this subject of the late Director of Naval Intelligence was confirmed by the evidence of the President of the Chamber of Shipping of the United Kingdom, who went the whole way with the Admiralty and Sir Cyprian Bridge, as well as by that of the more cautious chairman of Lloyd's, who expects "some captures at the outbreak of war." The mode by which our commerce would be defended is simply put by Sir Cyprian Bridge:—

> "To keep the enemy's commerce-destroyers continuously on the look out for their own safety.....If you hunt the intending destroyer he will not give much attention to your merchant ships."

The same authority graphically explained that if you hunt the fox with hounds, he will not rob hen-roosts while being hunted.

Auction Prices of Books. Edited by Luther S. Livingston. Vol. II. (New York, Dodd, Mead & Co.; London, Stock.)

The second volume of this important work, of which the first instalment was noticed in *The Athenæum* of June 24th last, makes its appearance with commendable promptness, and long before the end of the next book-auction season the collector will be enabled to relegate his formidable array of eighteen volumes of 'Book-Prices Current' to a handy cupboard or top shelf. On seeing more of Mr. Livingston's work we are, however, more and more convinced that it does not supersede Mr. Slater's annual volumes, although it greatly facilitates their use. The chief value of the new publication to dealers and collectors on this side of the water lies, we think, not so much in recording ordinary "bread-and-butter" rarities and their price in America as in giving the market value of little-known Americana. This section, indeed, has been done with a thoroughness which deserves the highest praise; it does not make any very conspicuous show, for the alphabetical arrangement prevents that, but it will be readily found by those who know where to look. Take, for instance, the two entries of John Filson and William Findlay on opposite pages. Of the former's 'Discovery, Settlement, and Present State of Kentucky,' 1784, Mr. Livingston quotes apparently every copy sold at auction in the United States since (and including) 1873, the prices of which varied from 21 dol. in 1873 to 135 dol. in 1891. No copy of this book is recorded in an English sale. The record of Findlay's 'History of the Insurrection in Pennsylvania,' 1794, goes still further back, the earliest being the Rice copy, sold in March, 1870, for 22 dol., and of this book also all the copies here noticed have been sold in America. It is, therefore, in respect of Americana that Mr. Livingston's work will form an indispensable reference-book. But we have noticed one serious omission, that of the very important MS. of L. Dumont's 'Mémoire contenant les Évènements qui se sont passés à la Louisiane depuis 1715,' a presumably unpublished narrative, which realized 116*l.* at the Ashburton sale in November, 1900. As the MS. was purchased by Messrs. H. Stevens, it is now, doubtless, in America, and its omission from this volume is certainly surprising.

Mr. Livingston's second volume extends from Dickens to La Peyrere, there being 580 double-column pages. The Dickens entries occupy seventeen pages. This is the longest, and will probably prove the most frequently consulted, section of the present volume. The entries are arranged in alphabetical order according to the titles, and then chronologically according to the date of sale. To have all these notices of American and English sales focussed from a row of volumes into these few pages at once demonstrates the utility of 'Auction Prices of Books.' But the entries are so severely condensed that—without the aid either of the original sale catalogue, or, failing this, 'Book-Prices Current' and 'American Book-Prices Current'—the prices may, in some cases, prove confusing or misleading. With regard to the novels Dickens issued in parts, the more exacting of the collecting fraternity insist that each part shall be complete, unbound, clean, with all the covers and advertisements. Mr. Livingston's entries do not in all instances convey information of such details, although "Parts" might be assumed to mean that the copy came up to the collector's standard, were it not for the fact that some of the entries expressly state that the advertisements are included. There is, therefore, a general indefiniteness about many of the items which is not altogether satisfactory.

In going through the Dickens section it is very interesting to notice the difference between the prices paid for ordinary copies of his books and for those with presentation inscriptions. There is an undeniable attraction about a presentation copy of a book, even if the author be only a minor poet, and this distinctly personal and familiar element will always prove an important factor in the commercial value of a volume. In the case of Dickens, the value of a presentation copy of a first

edition would seem to be about four or five times as much as that of an ordinary copy. But there are some exceptions even to this rule. For instance, an ordinary uncut copy of 'The Haunted Man,' 1848, sold in December, 1891, for 7*l.*, whereas twelve months later the presentation copy to Mrs. S. C. Hall went for 3*l.* 6*s.*; but as the latter is described as having gilt edges it may be assumed that it was cut down and rebound, and it may, moreover, have been a poor specimen. Some of the works here included under Dickens's name have more than doubtful claims to that distinction, and would figure with more appropriateness under some such title as 'Dickensiana.' 'A Curious Dance round a Curious Tree,' 1860, for instance, is, as was pointed out by F. G. Kitton in *The Athenæum* of September 11th, 1897, not the work of Dickens at all, but was written by W. H. Wills for *Household Words* of January 17th, 1852. 'The Loving Ballad of Lord Bateman,' 1839, too, is among the "doubtful things," as may be gathered from the letter of Dickens's son-in-law, Mr. Henry Burnett, published in *The Athenæum* of December 10th, 1892. Apparently no copy of this little book appeared in the auction-room in 1887 or the three following years. The first here recorded realized 1*l.* 11*s.* on January 14th, 1891; a second one turned up in July of the same year, and this fetched 9*l.*; but the average price for a good copy would seem to be 5*l.* 'Sergeant Bell and his Raree Show,' 1839 (Mr. Livingston omits one "e" from "Raree"), is another work of which Dickens, if he had anything to do with it, was only part author, as may be seen from *Notes and Queries* of October 17th, 1903, Walford's *Antiquarian* of July, 1887, and *The Athenæum* of September 11th, 1897. The first copy to appear at auction realized 9*l.* 10*s.* in August, 1892, whilst a few months later another brought only 1*l.* 13*s.*, but it has since sold for as much as 13*l.*

The Kipling entries occupy nearly nine columns, and comprise material for an interesting article on "book-booms." For several seasons the farce in Kipling first editions was kept up; but when the descriptions "unique," "probably unique," and "excessively rare" proved to be wild imaginings on the part of the cataloguers, the bubble burst. Certain booksellers must have lost heavily in this "wild-cat" scheme, but as it was almost entirely of their own creating, and one which could have deceived only the most ignorant of collectors, they have had to enjoy their own misery in solitude. Here are two instructive examples of rises and falls: 'Departmental Ditties,' 1886, has dropped from 20*l.* 15*s.* in 1897 to 4*l.* in 1900; 'School-Boy Lyrics,' 1881, from 135*l.* in 1899 (the first copy "discovered") to 3*l.* 10*s.* in 1903. Book-buying is, undoubtedly, a very fascinating hobby, but every collector ought to saturate himself with the conviction that everything comes to him who waits. The "fancy" and probably fictitious price of to-day is bound to experience a "slump," and the "unique" copy of a book no sooner appears in the sale-room than others come to light. That, at all events, is our experience.

We have noticed a good many minor defects in this volume. The copy of Gray's 'Elegy' sold on November 20th, 1899, for 58*l.*, should not be described as uncut. The copy of La Fontaine's 'Contes et Nouvelles' sold on May 25th, 1900, for 37*l.* 10*s.*, was not Count Hoym's, as was pointed out in our notice of that year's 'Book-Prices Current.' The example of Keats's 'Lamia' sold on November 18th, 1901, had no half-title, which explains the very low price of 6*l.* 10*s.* at which it was sold. Sir C. W. Dilke did not edit the continuation of Dodsley's 'Old Plays,' 1816, but Charles Wentworth Dilke, the well-known critic, and father of the first baronet. Isaac D'Israeli always, we think, adopted this way of spelling his surname; it was his more famous son who anglicized it, so far as he could, by writing Disraeli. Mr. Livingston thinks that what is good enough for the son is good enough for the father. The compiler has included in the Arthur Helps entry three presentation copies of Queen Victoria's 'Leaves from the Journal of our Life in the Highlands.' The fact that Helps edited the Queen's 'Journal' scarcely entitles him to rank as its author. The arrangement is clearly due to a flight of imagination on Mr. Livingston's part, and it shows, moreover, how unfortunate a thing it is for a bibliographer to possess such gifts.

La Comtesse d'Houdetot, sa Famille, ses Amis. Par Hippolyte Buffenoir. Avec neuf Portraits et Illustrations. (Paris, Leclerc.)

This book is, as the author says, the complement of the work which he published four years ago, 'La Comtesse d'Houdetot, une Amie de Jean Jacques Rousseau' (Calmann-Lévy). M. Buffenoir found that he had by no means exhausted his subject; and he was fortunate enough to obtain from Comte Foy, a great-grandson of Madame d'Houdetot, access to "a whole nest of unexplored documents," including eighteen unpublished letters of Rousseau and seven of Voltaire, besides the will of the Marquis de Saint-Lambert, who stood in so singular a relation to each of them. To English readers the portion of the work devoted to these will be of chief interest. The rest consists of a preliminary chapter concerning the distinguished Norman family of Houdetot, with some particulars about the parents (de Bellegarde) of Rousseau's friend; another dedicated to the Vicomtesse d'Houdetot (daughter-in-law of the principal subject), who died young, leaving poems which were noticed by Sainte-Beuve; and two others devoted specifically to the Countess herself and her other friends, such as Diderot, the Neckers, Franklin, and Madame de Rémusat.

The *pièce de résistance* in the whole bill of fare is, of course, the Rousseau correspondence. Without professing to share the ecstatic feelings of the editor towards the Genevan, we may grant the great interest of his discoveries, and admit that the letters are, on the whole, consistent with the 'Confessions.' We cannot, however, follow M. Buffenoir when he says that the newly found documents throw fresh light upon the relations between the philosopher and the Countess and are to the credit of both parties alike. To us, indeed, it appears that whilst Mr. Morley's praises of the lady and her attitude will be confirmed by a reperusal of Madame d'Houdetot's letters (here printed from the originals at Neuchâtel and placed next their analogues), his conjectures as to the "wearing querulousness" of the other side of the correspondence will be found amply justified now that Rousseau's can be read.

Rousseau declared that Madame d'Houdetot was the only woman with whom he was ever really in love. Unfortunately, the lady's affections were pre-engaged; and despite moonlight promenades and other unusual indulgences, it is clear that she never dreamt of sacrificing Saint-Lambert to the middle-aged friend whose acquaintance she had sought at his own request. Her task was the very difficult one of using her exceptional influence and charm to help an abnormally constituted system to keep its balance, and to prevent, if possible, the most suspicious of mankind from quarrelling with all his friends.

The first ten letters belong to the last three months of Rousseau's residence at the Hermitage, the house lent him by Madame d'Épinay. The approaching breach with Madame d'Houdetot's sister-in-law and with Grimm is foreshadowed in the very first. This matter and constant complaints as to the attempts of the writer's friends to restrain his liberty of action (that is, to induce him to leave the country) are the staple topics, frequently predominating even over the tender-friendship *motif*. It is likely enough that Madame d'Épinay's jealousy of her sister-in-law may have led her to commit the meannesses imputed to her by her quondam friend, and Grimm may not improbably have prompted some of her letters. But these things, as has been said, are "ghostly" to us now, and we are unable to take up the uncritical attitude with regard to them of M. Buffenoir, who, in commenting upon the sixth letter ("un vrai réquisitoire contre Madame d'Épinay"), uses language about the editor of the celebrated 'Correspondance Littéraire' with which Rousseau himself might have been satisfied.

The last eight letters belong to the period of residence at Montmorency which followed. The first of these, a dissertation of some dozen printed pages upon 'Friendship,' excites M. Buffenoir to a high pitch of enthusiasm, and was evidently much appreciated by its recipient. It is certainly a fine example of Rousseau's genius for rhetorical declamation, if scarcely able to challenge comparison with the 'De Amicitia' of Cicero.

At the end of the Rousseau letters, M. Buffenoir appends some interesting notes about the manuscript of 'Julie' (better known to-day as 'La Nouvelle Héloïse') which the author copied for its inspirer. M. Buffenoir has reason to think that this autograph copy (of which we hear much in the correspondence) did not come under the hammer at the sale of the Countess's books in 1813, but became the property of a granddaughter, the Baronne de Bazancourt, and afterwards passed into the hands of a wealthy foreign amateur. An inscription in the handwriting of the first possessor begins thus:—

XUM

"Ce manuscrit fut pour moi le gage de l'attachement d'un homme célèbre. Son triste caractère empoisonna sa vie ; mais la postérité n'oubliera jamais ses talents."

The chapter dedicated to Saint-Lambert contains much that is of interest. If it is inaccurate to say (with a recent English writer) of the soldier-poet that he "robbed Rousseau of Madame d'Houdetot," as he undoubtedly did Voltaire of Madame du Châtelet, it is true enough that his name survives mainly through its association with his two famous contemporaries. To us to-day it may seem singular that he was not only able to remain on friendly terms with the man whose mistress he had stolen and with him who would fain have taken his own, but even passed his old age in the intimate company of the husband whose place he had usurped. But, then, as the Comté d'Houdetot said of himself and his wife, "Both of us had a vocation for fidelity, only there was a misarrangement," and her fifty years' *liaison* was taken as a virtual marriage. A curious picture by Comte Frédéric d'Houdetot, reproduced in the present work, depicts the *salon* of the old Comtesse, his grandmother, at Sannois, in 1802. The family party seated at the card-table is made up of the Comtesse, with Saint-Lambert as her *vis-à-vis*, and her husband and a male friend at the other corners, with the painter and Elisa d'Houdetot, his half-sister, in the background. For half a century Rousseau's friend received here "une société d'élite," which outlived the Revolution, and had its last days chronicled by the graceful pen of Madame de Rémusat, wife of Napoleon's Chamberlain.

Saint-Lambert died in 1803, ten years before the Countess. His will is indeed a notable document. Among the legacies are a medallion of Montesquieu, which had come to the testator through a lady who received it from its original (this went to M. d'Houdetot with an injunction to his grandson to meditate upon the 'Esprit des Lois,' "à qui j'ai appris un peu l'art de méditer"); and a bust of Voltaire (left to Madame d'Houdetot) which had been bequeathed by D'Alembert ("cela le rend plus précieux"). The friends who receive valedictory messages include Madame Blond, whose

"conversation si excellente en tant de manières m'a fait jouir encore des qualités admirables de l'homme qui a reçu le plus de lumières et le plus de vertus, M. Turgot, qui nous a aimés";

Madame de Vintimille, to whom Saint-Lambert leaves a choice of his English books, in default of the collection of Hume's history given him by the author, "mais elle m'a été prise"; and Madame de Beauvau, who received the manuscript of those 'Mémoires' of her husband which, written by the testator, were revised by her pen, and saw the light long afterwards in 1872. The whole will, in fact, forms a sort of magazine of historical friendships.

The seven Voltaire letters are not of cardinal import, though they contain highly characteristic passages. Thus in the first (dated January 3rd, 1770) one reads:—

"Si vous pouvez parvenir à faire jouer la 'Tolérance' vis-à-vis la place où le fanatisme a roué Calas, on n'osera jamais plus persécuter personne. Il est honteux qu'on ne joue pas cette pièce à Paris. On devait cette amende honorable dans la ville où l'on sonna le tocsin de la Saint-Barthélemy."

The third (August 22nd of the same year) addresses Saint-Lambert as "mon très cher confrère en Théodicée et en Académie," and continues:—

"Je suis très malade et très languissant, et il n'y a que vos vers qui puissent me ranimer. Je vous les demande comme un restaurant dont j'ai un besoin extrême."

The fourth, in which Voltaire calls his friend "petit-fils de Tibulle et de Virgile," conveys the information that the grand-niece of Corneille is fond of reading the works of Racine, but has never been able to finish a tragedy of her own illustrious forbear. The writer of the sixth letter (Ferney, January 15th, 1774) expresses his wish to send his correspondent "une 'Pucelle' d'une nouvelle édition, plus correcte, plus châtié, plus voluptueuse peut-être et plus insolente que toutes les autres," adding that it will be rather a big parcel—"de deux bons doigts d'épaisseur." The last of the letters (October 6th, 1777) has a passage fervently exhorting Saint-Lambert to support the candidature of Condorcet for the Académie. "Je crois, en vérité, que si vous réussissez, vous me ferez vivre encore deux ans," is the sentence which clinches the plea. It is, perhaps, the most notable thing in the whole correspondence. Voltaire's wish was not destined to be gratified in his lifetime, for within a year he was dead. Saint-Lambert was one of the three members of the deputation from the Académie which waited on him during his last triumphal visit to Paris.

In conclusion, we must give a word of praise to the illustrations of M. Buffenoir's work. We would single out in particular the frontispiece portrait of "the most harmonious woman of her time" as she appeared in old age, the chromograph reproduction of Carmontelle's portrait of Saint-Lambert, and the heliograph of the painting, attributed to Fragonard, representing Madame d'Houdetot in her youth.

The New Testament in the Apostolic Fathers. By a Committee of the Oxford Society of Historical Theology. (Oxford, Clarendon Press.)

This work is the result of the labours of six members of the Oxford Society of Historical Theology. Each of them takes one of the Apostolic Fathers, and presents a full account of all the passages occurring in his writings which bear some resemblance to passages in the New Testament; and three of them do this for the so-called Second Epistle of Clement, which forms the seventh work submitted to examination. In this part of their task the various contributors have accomplished nothing new. Editors of the Apostolic Fathers have from the earliest times pointed out and often discussed the references to the New Testament, and the theologians who have written on New Testament Introduction have estimated the value of these references for determining the dates of the books. But besides collecting the references, and editing them with great care and full and adequate scholarship, the committee have attempted to determine the amount of authenticity which attaches to them as quotations. They divide their quotations into four classes: "those about which there can be no reasonable doubt," those which reach "a high degree of probability," those which have "a lower degree of probability," and those "in regard to which the evidence appears too uncertain to allow any reliance to be placed on it." Here their labours are somewhat novel, and the question suggests itself whether they have had any success in their new enterprise. They say themselves:—

"The editors are quite aware that their judgments may not command universal assent; but they may claim at least that these judgments have been carefully formed, sometimes after considerable hesitation, by men who are not without practice in this kind of investigation."

In regard to this statement we are compelled to ask where the experts have found the practice to which they refer. The case of the Apostolic Fathers and their relation to the New Testament is peculiar. No long quotation from the New Testament occurs in any of them. The citations are made almost invariably from memory, and are inexact. This description applies even to most of the passages taken from the Old Testament, where the quotation is introduced as such. There is only one book of the New Testament from which an Apostolic Father makes an express citation, naming the author or the work. In such direct quotations it was the duty of the editor simply to inquire whether the words containing the name of the author or book are genuine or an interpolation. The editor has not done this, but has accepted the passages as genuine, though one of them occurs in the Latin form of Polycarp, which many scholars do not regard as trustworthy. In all the other instances the passages are not introduced as quotations, but there is simply a resemblance of short passages in the Apostolic Father to short passages in the New Testament. To determine the amount of probability that such passages are borrowed from the New Testament is an exceedingly delicate and uncertain task, and each scholar would be inclined to form a judgment for himself. The different treatment which the authors of this work give to the books which they undertook is proof that there must be a strong subjective element in the decisions which are reached. One confesses that he is influenced by the date which he assigns to the book which he examines. Most acknowledge that the resemblance may be due to mere coincidence, but they do not attach sufficient weight to this consideration. If they were to select some of our modern authors, such as Tennyson or Carlyle, and make a collection of passages that might seem to be quotations by them or from them, they would come upon singular coincidences, and it is possible that such an experience would have induced them to abandon their attempt. Principal Drummond, who handles Hermas, refers to Lucian as using a rare word which occurs in Hermas, the Epistle of St. James, and in Polycarp, and remarks that this "shows how unsafe it is to infer literary connexion from a mere resemblance of words and

thought." Yet this is exactly what most of his fellow-editors have done.

Then all the editors take note of the fact that there was much oral teaching on the subjects on which the Apostolic Fathers write, and that it is impossible to be certain whether the resemblances come from this oral teaching or from the New Testament. The editors refer to this teaching as catecheses, Christian commonplaces, or tradition, but some lay greater stress on this than others. Thus Dr. Bartlet is ready to find references in Barnabas to the Epistles of St. Paul, though his estimate of the amount of probability is lower than his remarks would lead one to expect; but Mr. Lake, who has examined the Didache, refuses to acknowledge similarity in words as an indication of dependence when the subjects are similar and the remarks ethical commonplaces.

Then the extracts might be made from books that have been lost. The writer on 2 Clement, who treats of the relation of that work to the Synoptic tradition, indicates his belief that Clement in all probability borrowed from an Apocryphal Gospel.

The book is valuable as furnishing an idea of what men competent for the task think of the evidence that may be derived from the Apostolic Fathers as to the existence of the books of the New Testament in the period during which the Apostolic Fathers wrote. But their conclusions will not be accepted, because they are too subjective. The quotations appealed to are not such as to throw any real light on the text of the New Testament or on the date of nearly all the books it includes.

NEW NOVELS.

Vivien. By W. B. Maxwell. (Methuen & Co.)

In reading this agreeable novel one has somehow the feeling that one is walking among familiar faces. One seems to recognize and bow to so many old friends. Here is some one out of Thackeray, and here is a figure from Dickens. Something of Ouida also, and of the author's own mother, Miss Braddon, peeps out of his pages. It is all a queer and not unattractive blend, as if the narrative were an ingenious quilt of colours. And yet the mixture has a sort of individuality. Mr. Maxwell has used old episodes, old characters, old endings, with the freshness of youth and enthusiasm. His chapters are stocked with formal characters and conventional events, but he has worked them up into a rich and flavoursome confection. Where out of Thackeray ought we to find such a man as Col. Shelton, snob, rake, and selfish father, with the manners of a kindly gentleman? And who will not recognize the doctor who befriends the hapless heroine, and whom she inspires with the passion of love? or the would-be seducer, with his Ouidaesque morals? or the proud princess-dowager, to whom the heroine plays lady-in-waiting? or, once again, the vulgar and loose but amiable spinster lady of title, who smokes and is a morphiomaniac? But the composition pleases undoubtedly, and that is due not only to the freshness with which it is treated, but also to Mr. Maxwell's incidental pictures. That of the life in a milliner's shop is cleverly studied and interpreted, and we confess to an admiration for and a belief in the proprietress, Mrs. Wardrop, who certainly ought not to have been assimilated to Mrs. Mantalini by the possession of an adventitious and unnecessary drunken husband. Some day Mr. Maxwell will throw off his leading-strings, and will write not only a pleasant book like this, but also a book of importance. "'Since that damned Jubilee,' cried Mrs. Wardrop, banging the table, 'every mortal thing seems to have gone to the devil.'" Yes, Mrs. Wardrop lives, with her cynicism, her moods, her eye to business, her emotions, and her kindliness. In some ways this study of the milliner's shop may be regarded as the best piece in the book, though there will be some who claim the earlier chapters of child-life as the most convincing. Certainly the first half of the story is better than the last, for in the last we approach very close to sentimental melodrama. It rings feminine, and one almost feels as if Miss Braddon might have written the later chapters. No one save the very young girl will believe that Vivien could be so blind to the bad man's intentions, and no one save the very young girl would believe in the conversion of the Duke. These things are not in human life. The Duke is that speckled demigod much loved of Ouida and other women writers. And Vivien is after a woman's heart. Yet we do not think she should be forgiven for fobbing off on an eminently respectable and worthy suitor a young lady with a past. It seems unduly meddlesome of her, and it has nothing to do with the story. Indeed, she is directly responsible for two matches about which we have the most profound doubts, and which, if Mr. Maxwell had shown elsewhere any sense of humour, we might have set down to the credit of his cynicism. His novel runs to a Dickensian length.

Saint Elizabeth of London. By Lucas Cleeve. (John Long.)

Lady Betty, the Elizabeth in question, was young and attractive, but her strong religious feelings (corresponding with her Madonna type of beauty), amazing innocence, and sad lack of humour separate her from other bearers of the popular feminine name in fiction. Her mother had been divorced, and consequently Lady Betty was led to believe when she became an orphan that it was her duty to marry a rich, mature cad and snob of forty who was a regular Don Juan with women. There is a suggestion of the fascination of such a past for the weaker sex, which, if traditionally true, strikes us here as unpleasant. Lady Betty, it is clear, finds her husband occasionally charming. We do not, and we see no reason to suppose that the final reconciliation of the pair, consequent on her being discovered at night praying in the bedroom of a bachelor who was in love with her, could be permanent. The author works up her sentiment cleverly, but it strikes us as unsound. The position is emphasized by the introduction of one of the husband's notorious loves as the devoted friend of his wife, Saint Elizabeth. German philologists often go to fiction for their English words and idioms. In view of this fact, we regret that clever writers of some experience, like Lucas Cleeve, do not cultivate a better style. We learn, for instance, in these pages that Lady Betty's underlying magnetism "Judassed her whole impassive presentment to the world"; and that her husband "itemised" her needs. A lady indulges in "amphorous chatter." Does the adjective mean "bombastic"? or perhaps it is a mere misprint for "amorphous." Being hardened novel-readers, we are not easily amazed, but the following passage strikes us as wonderful:—

> "When they married, it had been April, now May had awakened around her, dressed in its green knickerbockers."

The description is, we feel sure, novel; but here its merit ends.

The Mother Light. (Hutchinson & Co.)

This novel has the merit of being "up to date" in the subject which it offers to the reader. A young widow who loses her situation as actress and her baby at the outset of the story is persuaded by an old admirer to read the sacred book of his faith, and subsequently to take the position of secretary to "The Mother Light," its foundress, symbol, and centre. This faith might be about thirteen years older than "Christian Science," with which cult it has more points of resemblance than good taste would have permitted. As the Mother Light succumbs to senile decay, the actress is led on to impersonate her, half believing in a miraculous transference of personality, and justifying any possible imposture by the beneficence of the illusions she will help to perpetuate. She falls in love with a pessimistic unbeliever, with the result that the pair narrowly escape violent deaths, but eventually fanaticism impels her to give him up. Sinless worshippers of the "Great All," "The Light," and "The Mother Light" are offered immortality of the body, with youthfulness, health, and happiness in this life and world, while "The Cause" constitutes an extra object of enthusiasm for the hierarchy, as they are endowed with enormous and increasing wealth by their successful appeal—supported by remarkable faith cures—to hysterical persons of more or less education. The author seems to see in the universe only the "clumsy chisel-marks" of blind chance, a view that we do not imagine to be widely prevalent nowadays.

The Assyrian Bride. By William Patrick Kelly. (Routledge & Sons.)

Barcochab, a Hebrew officer attached to the embassy sent by King Ahaz of Judah to Tiglath-Pilezer, falls in love with Shammuramat or Semiramis, wife of the king's cupbearer. The husband being conveniently flayed alive for forgery, his widow flies with Barcochab to Jerusalem, where the "Son of a Star" is made commandant of the garrison. Being much vexed with the idolatrous tendencies of King Ahaz, he foils a spirited attempt by that monarch to sacrifice his son Hezekiah to Moloch, but is led by the ambition of Semi-

ramis into a conspiracy for admitting the troops of Pekah of Israel into the city committed to his charge, and for seating himself on the throne of Ahaz. A sort of by-plot aims, for no particular reason, at placing an image of Baal within the Holy of Holies, and this part is assigned to the "Assyrian Bride," who has remained faithful to the creed of her native country. She is struck with leprosy as the reward of her crime and dies miserably, while Barcochab is arraigned before the Sanhedrin, and only escapes death by the devotion of his father, its president, who literally gives his life for his. An uncle, the mainspring of the conspiracy, is removed by a mad priest of Moloch, and nothing now stands in the way of Barcochab's restoration to his former office, where he does good service to King Hezekiah.

It would be breaking an egg with a steam-hammer to show where the author has borrowed the several incidents of the tale, all of which seem to have done duty elsewhere. The language oscillates between magniloquent phrases taken bodily out of the Bible, and extremely pedestrian colloquialisms. Although a formidable list of authorities consulted is prefixed, the archæological knowledge of the writer is of the slenderest, and he transfers to the Jerusalem of Ahaz the mad spirit of fanaticism and intrigue that flourished there after the Captivity. He is also delightfully ignorant that Mephibosheth was not a name ever borne by an individual, but a sort of nickname, signifying "mouth of shame," invented by the Rabbis to conceal the fact that the original appellation was Mephibaal, or "mouth of Baal," and that it was about the last name by which a pious Hebrew of Ahaz's time would have called himself. In other matters, it is enough to say that the characters generally greet each other with the phrases "Blessed art thou who comest," "Blessed are ye who come," and "Blessed are you who come," indifferently.

Red o' the Feud. By Halliwell Sutcliffe. (Werner Laurie.)

"Rouge gagne et couleur perd." That is distinctly the overword of 'Red o' the Feud.' It is not a novel of the green tables; but this reviewer has been compelled to describe it in a sentence that might have been uttered by a croupier. Red Ratcliffes and Black Waynes meet in a great battle in the house of Wildwater, the Ratcliffe hold; Wildwater is burnt, and every man Ratcliffe put to the sword. But the Waynes—"the courteous Waynes"—have forgotten the women, and one of these, on the night after the defeat, bears a child—a son who is red to the core of him, red of hair, red of heart, red of blood—to carry on the feud. Other Ratcliffe women are in like case with the mother of Red Ratcliffe, as the hero of the story is called, and in secret places of the moor there grows up a tribe of fatherless Ratcliffes, all red as foxes and fierce as vixens, like the youth who is to lead them. There is a pretty love story interwoven with the harrying and hunting of the feud, and an excellently ghastly Ratcliffe ghost—the Lean Man. Also the demon dog or Barguest of the northern world is introduced as an appanage of the Waynes. This strikes the reader as a blunder, for Barguest, Mauthe Doog, Yeth-hound, or Dog of Annwn, as the spectre dog is called hither and yon, is far too wild and terrible a sprite to acknowledge any master but one, and he is the Dark One of Celtic tradition, whom Lowlanders call Old Harry, or, more euphemistically still, the Goodman. However, it cannot be denied that Barguest's appearance makes for an eerie picturesqueness; and on this note the story ends, as it began upon it. The feud is ended in peace, the peace that a moving bog brings with it: all the Red Ratcliffes except Red Ratcliffe, and most of the Waynes except Shameless Wayne, are buried in travelling mire; and the spirits of the two feuds go off as friends together, Barguest fawning upon the ghost of the Lean Man. It is a story of the open air and wide spaces, of naked hearts and primitive passions; a clean and strong story, which Mr. Halliwell Sutcliffe has done well to write.

The White Lady. By May Crommelin. (John Long.)

If this novel of Miss Crommelin's find favour with the public it will show its great heart still turns fondly to the fiction of the wife-heroine immured by the villain-husband, unknown to her sorrowing friends — and the police — in the ancient tower of some stately home of England. The White Lady — the story is purely modern—is the wife of a singular person, a blend of the scientific gentleman, the amateur artist, and the *viveur*. The pressure of these varied pursuits makes considerable havoc with the brain of the gifted being, and, it must be added, with his manners. Minor aberrations are swallowed in his plans for his wife's captivity and her supposed funeral. The *raison d'être* of all this and more is the postponement of the affectionate but virtuous relations between the lady and a tepid Anglo-Indian admirer, and the prolongation of the story. The wicked husband's suicide and the rescue of the imprisoned fair remove all obstacles to the union of hearts. The attentive reader will towards the end note an undertone as of wedding-bells heralding the happiness of at least four persons.

Playing the Knave. By Florence Warden. (Werner Laurie.)

Close facial resemblance and a certain combination of events (including the now popular automobile accident) enable an absconding bank clerk to impersonate for a brief period the consumptive baronet of Nowds Hall. Miss Warden is at great pains to show how little the knave's game is worth the candle, and records days and nights so full of terror that one is mildly relieved when the end comes and a pitiful weakling terminates a career of toil, temptation, and crime by blowing out his own brains. This is a disappointing production. There is ingenuity of incident, but nothing whatever of the mystification one expects from the author—nothing to lure one on in breathless excitement to the final chapters.

The Opal Serpent. By Fergus Hume. (John Long.)

All who retain a partiality for tales of mystery and incident will welcome 'The Opal Serpent.' There are weak spots, from the Scotland Yard point of view, in the development of the story, but the majority will be gratefully content for the interest and amusement aroused by Mr. Hume's dexterity. It is difficult to convey any idea of the plot without doing injustice to the author and the expectant reader. The scene alternates between London and Hampshire, and the actors include a quixotic son of wealthy parents who "cultivates the Muses on a little oatmeal" in a Bloomsbury garret; a certain Krill, *alias* Aaron Norman, by day a second-hand bookseller, by night a brandy-drinking pawnbroker; Deborah Junk, self-constituted guardian and servant to Sylvia, his gentle daughter; and a host of other characters. There is nothing of the supernatural about the opal serpent to detract from the verisimilitude of the action, which goes briskly from first to last.

Bulbul in Search of a Religion. (Daniel.)

Bulbul is an intelligent young Persian, a Parsee, who, failing to find satisfaction in the religion of his own country, comes to Europe to see if he can find what he wants in the precepts and practices of Christianity. In England, at all events, he meets with no success, and his experiences and impressions of London society, and of modern Christianity as practised or neglected in London, told to a complete stranger on board an Ostend boat, are no doubt intended by the anonymous author as a severe skit upon the state of things, social and religious, which prevails nowadays. The narrative is not without cleverness, but the strenuous young Oriental may be allowed to have overreached himself a little in his generalization, after attendance at Herr von Beest's lectures, that the Englishman's creed is "Might is Right," and his god "The Belly and its Members." Readers who may be interested to know in what faith Bulbul ultimately found "peace and joy" are assured upon the last page that their curiosity will be gratified at a later date.

PHILOSOPHY.

Philosophical Studies. By David G. Ritchie, LL.D. (Macmillan & Co.)—All who were interested in the life and work of the late Prof. Ritchie will be grateful to Dr. Latta for the appearance of this volume, in which we obtain glimpses of the author's views on all the principal problems of modern ethical and philosophical thought. Three of the present collection of essays have already appeared in print, while the other three have been compiled from the author's manuscripts. A combination of these materials is particularly well calculated to bring out the chief conceptions which governed his thinking. Such are the independence, insisted upon to exaggeration, of the problems of origin and validity; the distinction between logical and psychological propositions, which he incidentally utilizes for a telling criticism on Mill's now discredited view of the syllogism; the identification of truth with complete consistency in a clear and comprehensive system of beliefs,

and the virtually consequential resolution of the test of "the inconceivability of the opposite" into the law of contradiction; and the attribution of the idea of "ought" to the contrast between the eternal self which is a logical presupposition of the cognition of time and the self of experience. But besides these positive constituents of his teaching, we obtain from the somewhat fragmentary extracts from Ritchie's note-books his conclusions on the central problems of religion and morality. The mind revealed throughout is one honest and fearless rather than subtle in its thinking, influential through its energy and unconventionality. A memoir of an outwardly uneventful life, and an exposition of the general lines of the author's thought, are prefixed by Prof. Latta.

The Life of Reason. By George Santayana. —Vol. I. *Introduction and Reason in Common Sense.* —Vol. II. *Reason in Society.* (Constable & Co.) — These volumes, the first instalment of a series of five — reason in religion, in art, and in science are still to come—challenge attention at once; but it is doubtful whether the initial stimulus justifies itself on further examination. In the first place, the style is unfamiliar and singularly disconcerting to anybody who is anxious to get at the gist of Prof. Santayana's message. Trope and epigram, flaming phrase and pervasive metaphor, so blur the outline of his meaning that impatience gives way at times to absolute exasperation. When we read (p. 54):—

"In these principles [of order and valuation] the Life of Reason is already broached, however halting may be its development. We should lead ourselves out of our dream.....by the promise and eloquence of that dream itself. Otherwise we might kill the goose that lays the golden egg, and by proscribing imagination abolish science,"—

or again (p. 68):—

"The intelligible lies at the periphery of experience, the surd at its core; and intelligence is but one centrifugal ray darting from the slime to the stars,"

it is difficult to acknowledge magnificence, and impossible to maintain sense. Such writing cannot fail to cast suspicion on its contents. When we turn to these we find that Prof. Santayana is the herald of a new era. The age of controversy, he tells us in his introduction, is past; that of interpretation has succeeded. The meaning of this dictum and the nature of his consequently pacific mission are made as plain as is consistent with his style in the first volume, where he traces the growth of reason, characteristically defined as "vital impulse, when it is modified by reflection and veers in sympathy with judgments pronounced on the past." Previous thinkers have been too fastidious, too exacting. They have demanded (vainly, it is true) a valid criterion of truth, questioned the reality of the external world, clamoured for a good independent of happiness. For all such ambitious persons Prof. Santayana has one reply—man is the measure. Truth is "his doxy"; good is a reconciliation between as many of his desires as can be made to harmonize; the external world is—what he cannot help believing in. Thus (p. 85) "validity and truth are ideal relations, accruing to ideas by virtue of dialectic and use." The test of truth, therefore (flung at us in a scornful query directed at Berkeley), is "necessary implication in thought and action." Consequently, when we learn that the author has discovered an external world (and devotes a chapter to 'Some Critics of this Discovery'), we are prepared to find that the proof consists in the undeniable fact that we think of phenomena as things:—

"The notion of an independent and permanent world is an ideal term, used to mark and as it were to justify the cohesion in space and recurrence in time of recognizable groups of sensations.....If we wish to defend the use of such an idea and prove to us its necessity, all we need do is to point to that coherence and recurrence in external phenomena." —P. 8.

For his views on the vital question of the relation of mind and body a reference to the book (chap. ix.) is the only resource. It appears impossible to paraphrase without eliciting nonsense. As to the good, or ideal, he is content with the greatest happiness of the greatest number (p. 257). That happiness must be the good is summarily proved (p. 238) by the incontestable, but hardly relevant assertion that "any system that.....should make it somehow a duty to secure their [others'] misery, would be clearly disloyal to reason, humanity, and justice."

Not much need be said of the second volume, the thread of which is not easy to follow, even with the help of the common plan of each volume supplied in the general introduction and the summary at the end. The "natural bases" and "ideal development" of society appear to be discussed without any very tangible results, except perhaps that God and ideal society belong, like Nature, to the realm of "kindly illusion," the use of which lies in the fact that they "give experience a rational perspective," and "are therefore precious, not only for their representative or practical value.....but even more, sometimes, for their immediate or æsthetic power." It may well be doubted whether the course of contemporary thought will be seriously modified by the present contribution.

The Evolution of Knowledge: a Review of Philosophy, by R. St. J. Perrin (Williams & Norgate), needs nothing more than brief comment. It being proved beyond reasonable doubt that all things are one—namely, motion (see Herbert Spencer, &c.)—the task of the reviewer of philosophy becomes the comparatively simple one of showing by how many yards, feet, and inches the pre-evolutionary thinkers respectively fell short of the goal. The work of measurement has evidently afforded Mr. Perrin considerable enjoyment.

FOREIGN BOOKS.

La Grammaire du Purisme et l'Académie Française au XVIIIe Siècle. Par Alexis François. (Paris, Bellais.) — The history of the French language during the eighteenth century has been admirably traced in outline by M. Ferdinand Brunot in his 'Histoire de la Langue Française.' Dr. François has filled in the detail with special reference to the works and views of the writers on grammar who upheld purism; so that he supplements M. F. Gohin's valuable account of 'Les Transformations de la Langue Française pendant la Deuxième Moitié du Dix-huitième Siècle' (Paris, Belin, 1903). The interesting work before us is an historical introduction to a forthcoming treatise dealing fully with the grammatical commentaries of the Academy of France on classical French authors, including the 'Remarques sur le "Quinte-Curce" de Vaugelas,' which is to be, as we gather from the preface, the first part of a complete history of the language during the epoch selected.

We hope to see the project carried out in its integrity, as Dr. François evinces the capacity and enthusiasm requisite for the successful performance of this useful task. He is not himself more of a purist than one expects a well-read man of good sense and taste to be, but he confirms our impression that the purists of the Académie, though they signally failed in their attempts to arrest the natural development of the French language, yet did their country good service by first reducing the influence of the Court, and then moderating and guiding the emancipatory influences which otherwise during the Revolution might have produced the complete *débâcle* of an idiom still remaining without a peer for ease, grace, and clarity. If they put general literary criticism in the background, and attended mainly to verbal and grammatical points, instead of carrying out the full programme drawn up in 1635, they selected for comment the department of criticism in which their aid was especially serviceable to posterity.

One of the appendixes gives specimens of the commentaries. *E.g.*:—

"'Redoublez au Seigneur votre ardente prière';—Comme les mots 'au Seigneur' ne peuvent être régis ici que par 'prière,' plusieurs ont trouvé l'inversion trop forte."—J. Racine, 'Athalie,' Act V. sc. i. 2.

"'Quel conseil.....croyez-vous qu'on doit suivre?' —Selon quelques-uns, l'exactitude exigeait 'qu'on doive'; mais la plupart on [*sic*] préféré 'qu'on doit.'"—*Ib.* sc. ii. 28.

The phrases "plusieurs," "quelques-uns," "la plupart," at once demonstrate the hopelessness of attempting rigid legislation for a language and account for the Académie's projected grammar having been tacitly abandoned.

Louis Aleman et la Fin du Grand Schisme. Par Gabriel Perouse. (Paris, Picard & Fils.) —There is not in the history of heroism a figure more forlorn and pathetic than that of the President of the Council of Basel. With eyes turned towards the past, in the belief that he was preparing for the future, Louis Aleman galvanized for ten years the revolutionary constitutionalism of Constance, deposed a Pope, and but for lack of funds might apparently have issued triumphant from the struggle with the principle of absolutism in the Church. But "the stars in their courses" fought against him, his ideals were shattered, and, so far from making the Pope the head of a limited monarchy, his activity only resulted in the long triumph of Ultramontane principles, which the last generation saw carried to their final issue.

In a volume which is amply supported by the use of documents, M. Gabriel Perouse describes at length the efforts and the sacrifices of the man who more than Ulysses deserved the titles both of πολύμητις and ταλαπείριος. After a masterly sketch of Aleman's early career, with a detailed account of the administrative machinery of the Apostolic Chamber and an interesting description of his work as Governor at Bologna, M. Perouse enters upon his main task. He relates the beginnings of the Council of Basel in 1431, and shows how largely Aleman's influence was the cause of Eugenius IV. abandoning his first attempt to dissolve the Council. Of the complete change which brought Aleman into thorough opposition to the Pope and prepared for him the Presidency of Basel, M. Perouse offers no adequate explanation. Perhaps there is none.

But the story of the next fifteen years is admirably told. For all, indeed, but students the narrative will be too detailed, and the general reader will find in the terser paragraphs of Creighton all that he requires. For the student, however, M. Perouse's work will be invaluable. It explains better than any other treatise the causes of the failure of the conciliar ideal, and also those of the disaster being so long delayed. M. Perouse makes clear, what was plain to students beforehand, that the length of the conflict, and even the form of the capitulation with the honours of war, were due almost entirely to the amazing personal ascendency of Aleman. His devotion to the conciliar ideal was great; for this cause he was willing to endure insult and attack on the part not merely of Papalists, but also of the mad democrats of the Council with their "rage aveugle d'inopportunité." But this was not enough. Had he not been a man

of untiring energy and unparalleled diplomatic skill he could never have kept the movement alive at all. It was only when his hand was forced by others that he was finally compelled to yield, and even then he preserved a formal statement of his principles which might serve as a text for future constitutionalists; the Council, transferred to Lausanne, elected Nicholas V., and dissolved itself to meet (in theory) again at Lyons. There was no surrender at discretion, and the principle of Ultramontanism was never recognized by Aleman or his dwindling band of followers.

One mistake, indeed, Aleman made — the selection of Amadeus of Savoy as anti-Pope. His main object (apart from the nationalism of a Savoyard) was to make use of the position and riches of the duke. This, however, was the one miscalculation in a clever game, for the duke was above all economical, and cared nothing to advance conciliar principles when they were expensive. In fact, he regarded the tiara almost entirely as a source of family aggrandizement. His ideal of the Papacy was exactly that of the "dynastic" Popes of the next two centuries. In this, as in other matters, Aleman's ideals were shattered by the influx of modern ideas and the increasing secularization of life.

The main grounds of Aleman's failure, however, were different. The Council, instead of being a mere controlling force, desired to become the continuous legislative, executive, and judicial machinery. Government by such an assembly meant mere anarchy; and as the higher clergy gradually deserted, power passed daily to the more *intransigeant* and least educated clerks. Aleman's own reputation was not secure against their attacks; and so far from desiring a strong leader in the Pope, they could only tolerate a *roi fainéant*. All the very worst evils of government by an untrained and ill-taught assembly developed themselves; except as against the Papacy the reforming decrees were a dead letter. And Europe received an object lesson in ineffectual democracy which it has hardly yet forgotten.

Secondly (and M. Perouse points this out more than once), the conciliar ideal was mediæval, the Papalist modern. The real conflict was between the constitutionalism of the Middle Ages, raised to its highest power, and the strong centralized administrative system of the modern Papacy:—

"Tandis en effet que le nonce et la cour de Rome cherchaient à hâter la moderne organisation de l'Eglise la majorité des Pères s'inspirait des principes de l'âge précédent."

And, again, of Aleman himself:—

"Il etait bien un homme du moyen âge; c'est en arrière qu'il regardait; ce n'était pas vers l'avenir, comme il pensait, c'était vers le passé qu'il allait, et ce fut son malheur et sa grandeur."

It is this consideration which gives to the conciliar movement its significance. It was not merely that the nature of post-Renaissance Catholicism was being determined at Basel; the question was wider, and concerned the character not only of the ecclesiastical, but also of the civil state. Absolutism, which was to be the rule throughout Europe, with one august exception, triumphed first of all in the Church. The conflict between Aleman and his enemies was the same as that which—in France, in Spain, in Germany, and within an ace in England—eventually decided itself in favour of a strong monarchy, a ubiquitous administration, and the removal of all constitutional restraints on the activity of the Government.

The dreams of Aleman were noble, but they were the dreams of a vanishing world, unless he saw further even than the twentieth century. He, like his forerunners at Constance, attempted to expand and to apply the "estates-system" of the European kings to the needs of an imperial Church. But their apparent success was only rooted in immediate necessities, which vanished with the election of a new pope. When Aleman attempted to treat as truths for all time the doctrines of Constance anent the superiority of general councils to the Pope, their futility became apparent. This was partly because the Council tried to do much more than restrain wrong-doing, and attempted just what centuries later Mill declared a parliamentary assembly inherently incapable of doing; partly because, even if such incapacity were not the fact, the members of the Council for the most part were untrained in administrative work, jealous and suspicious of genius, and even less able to conduct the business of governing a world-wide community than were the contemporary Lancastrian parliaments able to administer the affairs of a single nation; and partly because the forces of the future were all on the side of despotism and bureaucracy, and for a time, at least, liberty and constitutionalism were to become as obsolete as the crusades, and as ineffectual as the ideas of St. Francis.

Goethes Unterhaltungen mit Friedrich Soret. Herausgegeben von C. A. H. Burkhardt. (Weimar, Hermann Böhlaus Nachfolger.)—In Eckermann's introduction to the third volume of his 'Conversations with Goethe' we are given a brief account of Soret and his intimate relations with Goethe, which lasted from 1822, when he was called to Weimar, down to the latter's death. Soret, who was a man of varied learning and of a singularly modest and attractive personality, was interested in many things that appealed to Goethe, and their intercourse was always of the friendliest description. "Ich glaube der einzige zu sein, der niemals ein Donnerwetter von Goethe bekommen hat," he remarks on one occasion, concerning a scene in which the poet had stormed at Chancellor von Müller with considerable violence. "Of this personal intercourse," says Eckermann,

"Herr Soret frequently made notes in his diary, and some years ago he was good enough to hand over to me a little manuscript compiled from them, permitting me to select the best and most interesting passages and interweave them chronologically in my third volume."

This was done, and a considerable portion of the said volume is thus indebted to Soret's 'Conversations de Goethe,' which were written in French, and have not hitherto been published. At last, however, Dr. Burkhardt has produced in the present volume the complete 'Conversations' in a new and thoroughly revised translation—we note that an edition of the original French text is shortly to follow—and has thereby put all students of Goethe-philology under a deep obligation. For not only do they contain a large amount of new matter, but they rectify a number of small errors and misstatements on the part of Eckermann, whose procedure with Soret's MS. does not appear to have been altogether generous or scrupulous. He certainly seems to have appropriated portions of it without due acknowledgment; he was by no means strictly accurate in dating the conversations, and his translation is not always so correct as it might be. Of course, for the majority of readers, this is not of vital importance. As a matter of fact Eckermann, as was only natural, pulled out most of the plums from Soret's manuscript, and while the new portions contain many noteworthy sayings and observations, they are not, as a rule, of great general interest. Yet we find in them some of Goethe's admirable criticisms—one or two fresh remarks on Scott and Byron among them—several specimens of his inimitable and inexhaustible worldly wisdom, and not a few anecdotes that were well worth recording. Here, for example, is a good dictum of Schiller's, that we do not remember to have met with:—

"Der alte Herr [Goethe] fing an, über die romantischen Schriftsteller und die grossen Effektstücke Scherze zu machen, erwähnte auch die Meinung Schillers, der ihm gesagt habe, um ein volikommenes Theater zu haben, müsse man wöchentlich einmal eine Vorstellung geben, zu welcher Frauen nicht zugelassen würden; doch brauche man es nicht so genau zu nehmen, wenn sie etwa in Verkleidung in die Logen einschlichen. Meine schöne Damen, fuhr er fort, Schiller hatte viel mehr Witz, als Sie gewöhnlich einbilden."

And here is another shrewd observation on the subject of the stage, made by Goethe, who had just been telling Soret how a "Konsistorialsekretär" played the lover in one of his early operettas:—

"Wie! rief ich aus, hatte denn das Konsistorium damals Beziehungen zu dem Theater? — Ohne Zweifel, erwiderte Goethe; beide stehen sich viel näher als man denkt. Zwischen Theologen und Schauspielern besteht eine grosse Verwandtschaft."

Altogether the volume makes a valuable addition to Goethe literature, and Dr. Burkhardt's name is ample guarantee for the excellence of the editorial work.

PREACHERS AND PREACHING.

College and Ordination Addresses. By Forbes Robinson. (Longmans.) — There is no word more abused in the service of a sentimentality that is not far removed from cant than "spiritually-minded." Yet for once this epithet is the only one that serves at all adequately to describe the peculiar characteristics of the man whose remains are to be found in this volume. Forbes Robinson was, as the memoir prefixed makes clear, a man of rare promise and attainments, but of still rarer character. A younger brother of the present Dean of Westminster, Fellow and Lecturer of the same College, he had an influence which was none the less deep for being quiet. He was not well known, save to old pupils, in the outer world, but no one could meet him without being struck by a sort of unearthliness in the man, by his strange absorption in things far away, his deep reverence for mystery. All these qualities come out in the little volume before us. The sermons and addresses fulfil his own maxim:—

"You will cut away long words and needless epithets. You will not employ the superlative degree when you might use the positive. You will practise an austere simplicity of style."

That is the note of these addresses so far as style is concerned. There is no ornament, and not much illustration, though what there is is of the illuminating order. Instead, there is an originality of thought which seems to come from long musing on the unseen world. It is surprising how much insight and teaching are packed into a few lines. We may quote one or two instances:—

"The way to know Christ is to be natural. Remember that naturalness is the exact opposite of irreverence and sentimentality."

Perhaps, however, the author's strange power of subtlety in simplicity is nowhere better revealed than in the sermon with the striking title 'The Family Life of God':—

"Do you ask me, then, where is this home where sin has never entered? And what is the name of the family life where selfishness is utterly unknown? I will tell you. The home is the home of God. The name is the name of the Father, and of the Son, and of the Holy Ghost. The life is the life of God—God is no mere solitary selfish tyrant. God—the Bible says it twice, and our own hearts have said it again and again—God is love—God simply is love. And His name, what is it but the great family name from which all families in heaven and earth are called—the name of a Father and of a Son?"

Both this and a previous essay of great value on 'The Self-Limitation of the Word of God' display that union of deep philosophical reflectiveness and childlike simplicity which was the distinction of the author. The book ought to circulate far beyond his immediate friends.

The Bishop of Rochester's *Sermons at Southwark*, in Messrs. James Nisbet's "Pulpit Library," will, we hope, have a very wide circulation. Dr. Talbot combines in an unusual degree intellectual power and spiritual insight, and he has also a gift of phraseology which makes his writing attractive, *e.g.*:—

"Leisure is only good if it means either rest to make work better, or opportunity to choose better work. If it means only passing your time or pleasing yourself, it ranks, according to Christ's scale, below drudgery."

This is indicative of the whole tone of the book, which certainly ought to be a powerful argument against those who say that Church dignitaries are largely occupied in denouncing the faults, often involuntary, of the poor, and pandering to the selfishness of the rich. The sermons are couched in extremely simple language, but are never other than thoughtful and suggestive. Probably that on the 'Victory of Goodness' is the best worth reading. But as an example of how much can be put into a small space, we quote the following on the subject of inspiration:—

"We believe what is expressed by the word inspired. It has in it a spirit or breath of God. And directly we think of this, we remember the words of Christ about the Spirit, or the parable of the wind: 'It bloweth where it listeth, and thou hearest the voice thereof, but knowest not whence it cometh and whither it goeth.' How many controversies and difficulties and doubts about the Bible would have been spared if men had remembered this; had not tried to describe inspiration by their own theories and rules; and had not insisted that because it was inspired, every word of it must be accurate, and every story in it real history, and all the words and works of its heroes and saints up to a perfect standard. It is inspired, and we feel God's power through it."

We wish these words could be set up in letters of gold on the door of every church and in the cover of every copy of the Bible that is printed.

We have no space to quote more, but we have, we think, shown that this volume is the work of a mind in the truest sense fine, which no amount of work has dulled into inactivity or merely conventional grooves.

A History of Preaching. By Edwin Charles Dargan, D.D. (Hodder & Stoughton.)—This work will be of use to those who like to read history at second hand. The author appears to have done very little original research, but he writes a readable style, and has made use of good sources of information. He is strongly Protestant in his sympathies, and does not, perhaps, altogether understand the life of the Middle Ages. But he makes every effort to be fair, as can be seen in his estimate of Bernard of Clairvaux. We question whether any good is done by isolating preaching from other aspects of Church history, and the author's estimate of its influence is jejune and superficial. Those, however, who desire information on the subject in a volume of moderate compass will doubtless derive great benefit from this work.

A second series of the late Dr. Hort's *Village Sermons*, which comes to us from Messrs. Macmillan, will be very welcome to all admirers of that great man, who united simplicity and even plainness of diction with a power of thought ever active and a freshness which was always stimulating.

OUR LIBRARY TABLE.

The Faroes and Iceland: Studies of Island Life. Illustrated. By Nelson Annandale. (Oxford, Clarendon Press.)—This little book may be best described by a series of negations. It is not a narrative of travel, although the writer has paid six visits to the islands since 1896, most of which he devoted to the Faroes. It contains almost nothing of their history, except an account of the raid on Iceland by Algerian corsairs, and a few extracts from the sagas. It exhibits no ordered survey of the progress and productions of the islands from a social, industrial, or scientific standpoint. In short, in the words of the last chapter, it lays no claim to be a complete account of them, "but rather a collection of essays on subjects connected with their living denizens." The chapters on the Faroes are far the most interesting, for here the author is in sympathy with his subject, and having visited the outlying islands, which are unknown to the modern tourist, he has much to say that is new. The description of the islanders' mode of life, of their fishing and bird-catching, and the chapter on the bird cliffs of the Westman Islands to the south of Iceland make very pleasant reading. But Mr. Annandale's opinion of Iceland is almost uniformly unfavourable. Its climate is such as to "call for employment or else profoundest melancholy." Even the scenery does not excite his enthusiasm. Its glaciers are "tame"; the verdure of its valleys is "the rank growth of swamps." The modern Icelander either boasts inordinately of the glories of his country, past and present (has not the same thing been said of Scotsmen?), or else, in his cups, of which he is supremely fond, he whines that "it is a poor miserable little place, devoid of everything." Mr. Annandale clearly inclines to the latter point of view. He says that the Icelandic ponies (on which Dr. Marshall discourses in a learned appendix) are "the one feature of the country which makes it worthy of a visit." Reykjavik, the Danish capital, is "the ugliest town in Europe"; Akureyri, the true Icelandic capital, is "little more refined." The farmhouses are "airless, filthy, and verminous," scenes of "squalor and ugliness." It is fashionable in the island to "believe in nothing—or rather, to view everything except the greatness and virtue of Iceland with scepticism." Yet Mr. Annandale records the sad fact that travellers are no longer allowed to sleep in the churches — which he calls "a very sensible usage"—because certain "English" (not "British") tourists amused themselves by throwing their boots at the candle on the altar, and so damaged the painting behind it. If we compare Mr. Annandale's indictment of Iceland with the accounts of other travellers, it will seem one-sided and over-strained. Iceland is a poor country; but one can hardly believe that the result of the spread of education in recent years has been "little short of disastrous." The decay of art, which he attributes directly to this cause, may be paralleled among far richer and more progressive peoples; and the success of those who have emigrated from Iceland should surely be put on the credit side of the account. Mr. Annandale evidently prefers the Faroemen, because they are more sober, and have learnt to use the scrubbing-brush. The education of these islanders, he says, has produced excellent results, and has not corrupted their primitive simplicity. Indeed, their chief fault is a staunch conservatism. We must find room for Mr. Annandale's description of the one native reformer of his acquaintance who has seen something of the great world:—

"He has roofed his little house with slates, an example which his neighbours, in spite of his advice, have refused to follow; he has taught his fellow-islanders to boil their fish-oil out of doors; he has never ceased to warn them, quite in vain, of the danger of throwing fish offal and the like into the stream, and then drinking the water below. Yet, when he first heard that ladies commonly rode bicycles in England, he was so astonished that he exclaimed the world would not last long. London to him was so big, so black, and so full of rogues, that he hardly ventured out of his lodgings when he spent a few days there on his way home from Australia."

Ernest Renan. By William Barry, D.D. (Hodder & Stoughton.)—It is curious, to those acquainted with contemporary France, that a Roman priest writing about Renan should be indebted to "M. Armand Dayot for kind permission to include some of the illustrations" of his book. For M. Armand Dayot is known in France not only as the compiler of an excellent series of illustrated books on the Revolution, the Napoleonic era, &c., but equally well as a violently anti-clerical partisan of Renan. The statue of Renan, of which a photograph is reproduced in this volume, was erected at Tréguier in 1903 quite as much as a provocative anti-clerical symbol as a memorial to a great writer, and M. Armand Dayot was its chief promoter. We may say at once that Dr. Barry's book is in no sense a clerical counter-blast in answer to the anti-clerical demonstration which took place in connexion with the erection and unveiling of the statue in Catholic Brittany. Though it is the work of a Catholic priest, it is both moderate and impartial in its tone. But when we have said so much, we have given all the praise that it is possible to accord to the volume. Dr. Barry is a fluent writer, and like many victims of fluency, he writes too much. If he would restrain his pen and devote some of the time he employs in writing to reading and studying the environment of his subjects, he might produce some literature worth having. He has of late turned his attention to France, and in a recent attempt to expound to English readers the ecclesiastical situation in that country, he made the remarkable statement that Jules Ferry was "the pupil" of Gambetta. A typical pendant of that piece of intelligence is Dr. Barry's opinion, expressed in this volume, that

"Renan between 1871 and 1892 disputed, first with Victor Hugo and then with M. de Lesseps, the distinction, whatever it was worth, of being the foremost French celebrity."

Both Thiers and Gambetta—the one for six years of that period, the other for eleven years—enjoyed a much more widespread and resounding celebrity than either Lesseps or Renan. On matters more intimately connected with his subject Dr. Barry is, we fear, equally ill-informed. "To the influence," he says,

"of [Sacy] he owed the decorated coat which all French men of letters rate as highly as English dukes rate the Garter. On April 3, 1879, he read himself into the French Academy."

Had Dr. Barry taken the trouble to inform himself about the costume worn by the members of "the Forty," which he goes out of the way to mention, he would have been aware that he himself had recorded on an earlier page of this volume that Renan, in 1879, had been a possessor of "the decorated coat" for twenty-three years, from the time when he succeeded Augustin Thierry in the Academy of Inscriptions. The palm-embroidered coat, which Dr. Barry compares with the Garter, is not, as he supposes, the exclusive garb of the Académie Française, but is worn by all the members of the Institut de France, who number nearly three hundred. A more amazing blunder follows on the same page, when Dr. Barry makes the following comment on Renan's election to the French Academy:

"Believers were scandalized at this public recognition of a man whose talents had been spent in undermining the Gospel. Dupanloup, Bishop of Orleans, and his early benefactor, gave up his chair as an Academician."

Need we say that there is not a word of truth in the last sentence? Mgr. Dupanloup was dead and buried before Renan took his seat in the Académie Française, and Dr. Barry has actually mixed up Renan with Littré, after whose election in 1871 Dupanloup ceased to attend the meetings of the Academy. What can be said of a Roman Catholic priest who

undertakes to write a chapter of the modern religious history of France, and is ignorant of the life of the great Bishop of Orleans even in its most striking incidents? Dr. Barry's unfamiliarity with all that concerns the French episcopate is such that no one reading his book without knowing his name would suspect him of being a Roman ecclesiastic. The Archbishop of Paris in Renan's early days he styles "M. de Quelen," according to the way of the anti-clericals, who decline to give bishops the title of "Monseigneur." But in the next chapter he correctly calls that prelate's successor "Mgr. Affre." He, however, says that the latter was "martyred on the barricades" in 1848. The term "martyrdom" could no more be applied to the death of Mgr. Affre than to that of his successor, Mgr. Sibour, who was murdered by an interdicted priest. The death of a third Archbishop of Paris, Mgr. Darboy, massacred by the Communards in 1871, might legitimately be called a martyrdom; but that of Mgr. Affre was an accident; and if Dr. Barry had been acquainted with the 'Histoire Ecclésiastique' in use in French seminaries he would have learnt, even from that biassed authority, how the insurgents regretted the gunshot wound, and bore the archbishop back to the palace in the hope that it might not prove fatal.

We have noted a number of other inaccuracies, but we forbear from citing them. Sufficient have been quoted to show that the author has not taken enough pains in the preparation of this volume. It chiefly consists of translation or paraphrase of books within reach of every one, and the moment Dr. Barry essays to be original he falls into blunders. The reason is that he has not made himself master of his subject. The chief utility of a monograph lies in the accuracy with which facts relating to the theme under treatment are presented to the reading public by an expert or specialist. Dr. Barry can write well and intelligently when he chooses, as witness the following passage referring to the publication of Renan's 'Jesus':—

"Dealing with pages hitherto regarded as the Latin of the Mass which only priests recited, while none but the faithful listened, he made of them a French classic, and the least orthodox now read with surprise how beautiful they can be."

The author of these lines ought not to give to the public two or three hundred pages of journalism in the guise of a literary monograph.

The Romance of Lohengrin. Founded on Wagner's Opera. By Bernard Capes. (Dean & Son.) — Mr. Capes has probably had a smoother task than either of his predecessors in the ingenious venture of transmuting Wagner's operas into tales for the drawing-room, for 'Lohengrin' is a straightforward enough story, and is free from the rather misty complications of the 'Ring' dramas. And he has treated the plot with sufficient address, making a number of additions and alterations, it is true, but, on the whole, preserving the quick movement and interest of the original. Our chief quarrel with him is for the manner in which he has thought fit to tell this high romance. Certain literary qualities, of course, one is pretty sure to get from Mr. Capes. He is never commonplace, and his phrasing, for all its exaggerations and distortions, is generally clever, and often shows a real, though somewhat desperate, originality which exacts a grudging admiration. In the present case, however, his vices of style are allowed full play, and almost swamp his virtues. The book is full of unreasonable archaisms, inversions, and affectations, and is perpetually falling into a detestable jig of blank verse that reminds us of Ancient Pistol more than of anything else. On every page we come across sentences like this: "We 'll sweep and strew the path before His coming; discredit hate with love; make truth our policy; subdue, to teach how sweet a lust's forbearance"; and even when he speaks in his own person he must put his reflections into rhythm; witness such saws as "The highest tree 's the one attracts the thunder," or "Such lying arts were best by lies confuted." It is possible that some readers may enjoy this hybrid kind of composition, but we cannot help feeling sorry that a writer of such genuine talent should not exercise his art with more discretion.

La Famille Celtique, Étude de Droit Comparé, by M. H. d'Arbois de Jubainville (Paris, Bouillon), is a very interesting little volume, which begins with the author's autobiography —how it was that he studied law and legal history long ago, and how of late he has been drawn back to the studies of his youth by the discovery of the Code of Hammurabi. It is a long sweep of time from that great Babylonian monarch to Prof. Atkinson of Trinity College, Dublin, whose great service to him the author gratefully acknowledges, referring, of course, to his having provided the five solid volumes of old Irish law with a glossary. But though M. d'A. de Jubainville has spread his net so wide, he has not succeeded in taking very much; and one feels that if this is all that the comparative study of law can do for the Celtic nations, it is not very considerable—at any rate, in point of quantity; for we hasten to say that the book contains one contribution of capital importance. The author appears to have satisfactorily solved the riddle of Irish kindred as divided into the four groups known as "geilfine," "derbfine," "iarfine," and "indfine," consisting of four generations, counting up to the seventeenth man. This has baffled all previous speculation, but M. d'A. de Jubainville has succeeded in analyzing the reckoning, and bringing it into harmony with the conclusions of Leist in his 'Altarisches Jus Civile.' In passing one may say that the book contains some bold etymologies; for instance, who would have guessed that the syllable *nat* in *fracenatan,* "a girl," meant either science or poetry? The interlinear translation of a well-known text touching the *jus primæ noctis* contains a curious misprint. *Comarli arricht leo* is not "avis pour forme à eux," but the "plan that was hit upon by them." Lastly, we may quote the following words, italics, commas, and all, as they stand: "*gavel-kind,* c'est-à-dire 'espèce de tenure.'" Had it not been for the "entente cordiale" we should have said that the author was poking fun, if not at the whole psychology of the English language, at any rate at the whole business of English etymology and the 'New English Dictionary.' In spite of the meagreness of the comparisons with the old Welsh laws, the book is very suggestive reading, not even excepting the latter part, devoted to researches which cannot conveniently be discussed in the pages of *The Athenæum.*

Memoirs of Robert Cary, Earl of Monmouth. Edited by G. H. Powell. (De La More Press.) —It is long since so interesting a book fell in our way. Novel-readers will find here adventures in the Marches as enthralling as any their favourite hero ever passed through, with the advantage of knowing that the local colour is right. Cary was the man who rode to James VI. of Scotland to tell him of his accession; but few think of him as the most successful of Elizabeth's Wardens of the Marches. The editor's work is, on the whole, carefully performed. The boy who likes reading to whom this book is not given has a just right of complaint.

Lawn-Tennis: its Past, Present, and Future. By J. Parmby Paret. (Macmillan.) —This is one of the best-written and most scientific treatises on lawn-tennis that we have yet had, and forms a suitable companion to similar works by Mr. Eustace Miles, Mr. H. W. Wilberforce, and Mr. W. Baddeley.

Under the name of "sphairistike," lawn-tennis in its original form was introduced into this country from India by Major Walter Wingfield in 1874, the laws of the game being drawn up by Julian Marshall, the well-known book-lover and tennis-player, and Henry Jones, the "Cavendish" of whist, who gave the "Cavendish" tennis-poles their name, assisted by his brother, Mr. Daniel Jones.

Mr. Paret developes in detail the true principles of the game at the present time. He is particularly happy on the subject of accurate "timing" and "following through" the stroke in such a way that the speed ultimately attained by the ball is far greater than appears to be the case, greater accuracy of direction being secured than in the instance of speedy impact. Few players "follow through" their stroke sufficiently, and with many this feature is absent altogether. As the author suggests, the use of the gun-barrel well illustrates the force of this theory:—

"The longer the barrel of the rifle, the more accurately will it throw its bullet, because it guides the missile on the proper course longer before discharging it into the air."

The author mentions the importance of the body being bent in accordance with the stroke made. Few writers on lawn-tennis even refer to this, and it may be doubted whether Mr. Paret has given sufficient prominence to it, the fact being that the bending of the body should form part of the stroke, as much as the wielding of the racket itself. Those who are in the first rank as players of any game make their strokes with their bodies in the right position naturally, and cannot generally tell another exactly what they do.

Such exponents are, however, few and far between, and—as in golf, cricket, and even rowing—in lawn-tennis very few players play with their bodies sufficiently, and many use their arms too much. Then, again, the position of the legs for making a given stroke is, with the vast majority of players, entirely wrong. Mr. Paret might well devote more attention to this in a future edition.

One of the first points to remember in connexion with lawn-tennis is that—as in cricket or golf—the body should face the ball in a profile (rather than full-face) direction, and the feet correspondingly sideways instead of facing the direction of the ball's flight. Men who play other ball games, in which an implement of some sort is used for striking the ball, readily understand this, but it is not so with others—especially ladies.

Mr. Paret does well in mentioning the correct way to hold the racket for the forehand and backhand strokes. As he says, the thumb should be placed at the back of the racket as a guide for a backhand stroke, and the forefinger correspondingly at the back for a forehand stroke, the result being an increase in the strength of the stroke in each case.

The safest stroke in the game is undoubtedly the stroke down either side-line. The cut, to produce a twist on the ball, is nowadays recognized as being of little use in first-class lawn-tennis, for there is usually plenty of time and space to allow for its effect; moreover, the speed of the ball's flight is reduced by it. It is a truism that the selection of a good length—*i.e.,* within, at most, 6 ft. of the adversary's base-line—is as much the secret of a successful attacking stroke in lawn-tennis as it is in bowling at cricket.

Volleying must be in the nature of attack rather than purely in self-defence. To quote Mr. Paret:—

"To merely stop the ball, without striking it, or even to relax the grip on the racket so that it gives before the ball leaves it, means to rob the

volley of all its life and snap, and to make a weak return of the stroke."

The successful American tactics of short cross strokes in variation with long base-line strokes are most important characteristics of modern lawn-tennis. The short cross stroke has always the advantage of driving your opponent well out of the court at the side—in a bad position for the next return in any case.

Many players are in too great a hurry to come forward for the purposes of volleying in the single game. With a weak opponent this may be done almost at once, but in first-class play it will lead to disaster. As Mr. Paret puts it:—

"Under modern developments, the truly scientific way of winning at lawn-tennis is to earn a safe position at the net by good ground play, and then to come forward and deliver the *coup de grâce* with a well-directed volley."

The highest art in the game teaches the player how to earn this opening, but he must not force it before the proper time.

The author gives some good hints on tactics and placing; but, in our opinion, he lays rather too much stress on defensive play. Attack, according to our view, should be the main object throughout; for if once a player becomes purely defensive he will never become anything like a first-rate hand—indeed, he will never advance, except in the sense of sureness of return.

Many players would improve their style and winning powers immensely if, instead of always playing in the same way and striving to win somehow, they contented themselves with practising strokes. This can be effected with advantage against a wall, which affords a sure means of repeating the same stroke continuously. Lawn-tennis, sometimes derisively treated as a thing that any one can do, is, like all ball games, a matter of scientific study and experience rather than of great muscular, or even physical, power. The objection to lawn-tennis from a physical standpoint is the fact that, except in the way of balance, it employs one arm only. The objection to it as a general amusement is that it involves a large space of carefully tended lawn. We have noticed lately some foolish attacks on the public schools for not fostering the game, as if it was likely that they could afford enough space to allow many sets, four boys at most, to play. An 18-hole golf-course will next be called for! The purpose of the public schools is not to supply lawn-tennis champions; as it is, they supply far more than could be demanded of them in the way of boys destined to hold the highest places in various pastimes.

The History of the Fife Pitcairns. With Transcripts from Old Charters. By Constance Pitcairn. (Blackwood.)—This account of the family of Pitcairn—a family, as we are told, "of some distinction" in Fife—which for some six hundred years has intermarried with many of the other chief landowners there, is one of those family histories destined to be read with zeal by only the members of the family with which it deals. The writer almost disarms criticism by the humility of her introduction, and so we may congratulate her on her book; but she would have greatly improved it had she had the constant assistance of one versed in the technicalities of Scottish charters, as they are here transcribed in a slipshod manner which robs them of much value. An expert, too, would have saved her from derivations like that of "St. Margaret's Hope."

The Pitcairns have an ancestor mentioned in Ragman's Roll in 1296, and they early acquired lands near Innernethy, Leslie, and Falkland, Pitcairn of that ilk and Forthar being apparently regarded as chief of the family. The writer falls into the common Southern error of confusing a Scottish barony and an English title, and so frequently styles the Pitcairns of that ilk "Lords of Pitcairn," when they were merely lairds. The family intermarried frequently with that of the Lindsays of the Byres, and acquired considerable influence in the time of Robert Pitcairn, Commendator of Dunfermline (here styled "Lord Robert"), who was Secretary of State to James VI., though they could not secure the abbey lands permanently for the family. The Pitcairns still continue as Fifeshire lairds, but they lost heavily during the Jacobite risings of 1715 and 1745. The twentieth laird of Forthar became a Prebendary of Exeter, and so took up his abode in England. Sir James Pitcairn, Inspector-General of Hospitals in Ireland, was his grandson, and an account of him, with many letters of his military connexions the Dalbides, is here printed. A life of the Rev. J. Pelham Pitcairn, with long extracts from his diaries, follows.

The Pitcairns of Innernethy and Pitlour are then treated of, and we come to the more interesting Dr. Archibald Pitcairne, physician and Jacobite poet, of whom an adequate memoir is given. The Pitcairns of Dysart, whence sprang Robert Pitcairn, R.N., who discovered Pitcairn Island in 1767, come next, and then the Dreghorn Pitcairns, one of whom was the mother of Principal Robertson, and great-grandmother of Lord Brougham. The book is handsomely got up, illustrated, and furnished with an index. With more scholarship and less diffuse writing it would have been a more useful family history.

In his *Texte zur arabischen Lexikographie* (Leipsic, O. Harrassowitz), Dr. August Haffner has published three ancient works of great importance to the student of Arabian philology, namely, the 'Kitāb al-qalb wal-ibdāl,' by Ibn al-Sikkīt, and two monographs by the celebrated scholar Al-Asma'ī, who lived in the days of Hārūn al-Rashīd, entitled 'The Book of Camels' and 'The Book of the Creation of Man.' The latter of these is interesting, because it shows that the desert Arabs of the sixth and seventh centuries after Christ had acquired a considerable knowledge of human anatomy, though naturally less extensive and peculiar than their knowledge of the camel. Al-Asma'ī's treatise on this long-suffering quadruped is extant in two widely different recensions, both of which are now edited for the first time. The author has added critical notes and full indexes.

Corpus Scriptorum Christianorum Orientalium: Scriptores Arabici.—Series III., Vol. I. *Petri Ibn Rahib Chronicon Orientale.* (Beyrout, Roman Catholic Press.)—Father L. Cheikho has recently edited the Arabic Chronicle of Peter, generally known as Ibn Rāhib, a Jacobite Christian who flourished in Egypt during the thirteenth century, together with the Latin translation of Abraham Ecchellensis, which he has revised and corrected. The author begins with Adam, and after going through the Hebrew, Greek, and Roman kings, and the Mohammedan Caliphs, brings his work down to the seventy-sixth Patriarch of Alexandria, Athanasius III. (1250-61). The Arabic text is that of a MS., long believed to be unique, which was written about fifty years after the completion of the chronology, and which is now preserved in the library of the Vatican. It is to be regretted that the editor found himself unable to consult the British Museum manuscript, which, though modern in date, contains much additional matter, and would probably have supplied the means of clearing away some textual difficulties.

No. 23 of *The Library* (Kegan Paul) contains an account of the Trevecca Press by Mr. Ballinger, of especial interest to Welshmen. It was at work from 1760 to 1804, its productions being mainly hymn-books, sermons, and devotional works, the most generally interesting being 'A Relation of Apparitions of Spirits in the Principality of Wales,' by Edmund Jones. The head and tail pieces reproduced, built up from type-ornaments, reflect considerable credit on the ingenuity of the compositor. Mr. Barwick gives an interesting account of 'A Day's Work in the Reading-Room of the British Museum,' from which we learn that over two thousand volumes are supplied daily to readers, besides those consulted on the shelves. Mr. Bourdillon writes on the bibliography of 'Early Printing at Lyons' without mentioning M. Baudrier's monumental work on the subject; Mr. Clarke on 'Subsidised Indexing,' lamenting the stoppage of 'The Review of Reviews Index,' and suggesting an amalgamation of it with Poole's as the ideal index of current literature. Mr. Rivers gives an account of a French Utopia, the 'Histoire des Sevarambes,' by Vairasse d'Alais, which made its appearance in English two years before the publication of its French original. Its name is familiar to students of Swift, and Mr. Rivers's account shows that it is well worth an independent study. Other articles are from the pen of Mr. Pollard ('The Rowfant Books') and Mr. Redgrave.

We have received from Messrs. William Dawson & Sons their list of *English and Foreign Newspapers and Magazines for 1905.* This booklet of one hundred pages forms an invaluable guide to subscribers, as the cost of subscription is placed against each paper, including postage for Great Britain and colonial and foreign rates. There is also a classified list of journals under 'Professions, Trades, and Sciences.'

M. JULES OPPERT.

The death of M. Jules Oppert, which occurred at Paris on Monday last, removes another landmark from the older generation of English Orientalists. A contemporary of Birch, Fox-Talbot, Norris, and Rawlinson, all long since dead, he had seen the time when the cuneiform inscriptions were a sealed book to scholars as well as to the public, and when our knowledge of the ancient history of Western Asia was confined to the scanty and often incorrect allusions of Greek authors. In our redemption from this state of ignorance the labours of his youth played a predominant part, and to the last he who was in a very real way "the Father of Assyriology" preserved unquestioned his supremacy in the study to which he had devoted his life. He was always anxious, too, to seek out and recognize rising talent, and no later than last week *The Athenæum* had occasion to notice the help that he had given to one of the latest comers among French Assyriologists. To all lovers of learning his death leaves a void which it will not be easy to fill.

Jules Oppert was born—it is said of Jewish parents—in Hamburg in 1825. He studied first at the University of Heidelberg, and afterwards at that of Bonn, receiving his first instruction in Arabic from Freytag and in Sanskrit from Lassan. Being early attracted by the researches of Grotefend and others into the languages of the trilingual inscription of Darius at Behistun, he published his first work at the age of twenty in the *Zeitschrift der Deutschen morgenländischen Gesellschaft*, to which he contributed an accurate picture of the efforts at its decipherment of Rawlinson, Saulcy, and their fellows. Two years later the publication of his treatise on Persian phonetics ('Das Lautsystem der Altpersischen') brought him fame, and the first use he made of it was to transfer himself to Paris. Here the kindness of Burnouf and Letronne procured him a professorship in German, first at Laval and afterwards at Rheims, and caused him to be attached to the scientific mission under Fresnel which the Imperial Government dispatched immediately upon its establishment to Mesopotamia. Henceforth his position in life was assured, and on his return from Mesopotamia he was presented with full letters of naturalization as a Frenchman. A few years later he gained the great biennial prize of the Institut, was made Professor of Assyriology at the Collège de France, and was elected a member of the Académie des Inscriptions. In 1857, the Royal Asiatic Society having propounded a cylinder-inscription of Tiglath-Pilezer for separate decipherment by any Assyriologist who chose to compete, Rawlinson, Hincks, Fox-Talbot, and Oppert each sent translations, unseen by the others, to the secretary, with the result that when the seals were broken, the versions were found to be virtually identical. From that time the future of cuneiform study, hitherto looked on by many scholars as mere waste of time, was assured, and in the vast development of it which quickly followed Oppert took a leading part. To recount his subsequent exploits in that now fruitful branch of learning would take a volume; but it may be enough to say that nothing henceforward took place in Assyriology without his cognizance, and that no theory had much chance of acceptance without his imprimatur.

Personally Oppert was one of the most charming as well as one of the most erudite of men. Speaking with great fluency and tolerable correctness French, Italian, and English, as well as his native German, and with a memory which enabled him to retain to the last a complete vocabulary of Sanskrit, Persian, and Arabic, besides the more ancient tongues to which he had devoted his life, he was a perfect mine of information to all interested in that East which, even at the outset of his career, was beginning to press itself upon the notice of Europeans. A constant and honoured visitor at the Tuileries, too, he was from the first a well-known figure in the society of the Second Empire, and this gave him a standing in other European countries which even erudition does not always confer. In its youth cuneiform study had to contend with many adversaries which its success has long since laid to rest, and very early Oppert was engaged in controversy with many redoubtable opponents, among whom we may name Ernest Renan. Naturally a fighter, he thus fostered an irascibility which he seldom allowed to remain long dormant, and which did not, as may be expected, decrease with age. Hence his entrance into the many congresses and other scientific meetings in which he lately spent a great part of his time was often marked by exhibitions of temper to which he would have been the last to give way in private. Yet, oddly enough, these displays did but increase the affection with which his confrères regarded him. He was so transparently sincere, and his anger so evanescent, that it never succeeded in arousing any real hostility in the person attacked, and it may be doubted whether, even among those whom he belaboured, he ever made a real enemy in his life. Moreover, he had a pure and disinterested love of learning for its own sake that gracefully distinguished him from some of his opponents, while his commanding position in the learned world put him above all actual concurrence. His odd little figure and energetic utterances will be long remembered with regret by all who knew him.

THE DOONES OF EXMOOR.

In the summer of 1903 a notice appeared in *The Daily Chronicle* of a booklet by Mr. E. J. Rawle, entitled 'The Doones of Exmoor,' from which I gathered that Mr. Rawle believed that the whole, or almost the whole, of the Doone stories had sprung from the brain of Mr. Blackmore in his immortal romance of 'Lorna Doone.' Such a conclusion simply amazed me. I had lived at Luccombe, within the confines of the old Forest of Exmoor, when a small boy, from 1849 to 1851, and Luccombe Rectory was my home from 1856 to 1869, and many a tale of the Doones of Badgworthy were familiar to me from my earliest recollection. I could not resist making an immediate brief reply, though away from home and all references, and a rejoinder appeared in *The Chronicle* of July 9th signed "Sexagenarian." In this letter the names of some of those who used to delight me with Doone tales and legends were cited, and also the fact that I used to retail these blood-curdling stories of the Exmoor outlaws in a school dormitory, with the result that a clever room-mate of mine wove some of these together into a story called 'The Doones of Exmoor,' which appeared in eight weekly instalments in *The Leisure Hour* for 1863. 'Lorna Doone' did not appear until 1869. I further stated that I had a letter from Mr. R. D. Blackmore acknowledging that it was the accidental glancing at the comparatively poor stuff in *The Leisure Hour* that gave him the clue for the weaving of the romance, and caused him to study the details on the spot. I did not then remember that a still earlier printed reference relative to Doone legends occurs in *Fraser's Magazine* for 1857, nor had I then been told of the recital of many of the Doone legends in Mr. Cooper's 'Guide to Lynton,' published in 1853.

Subsequently I obtained a copy of Mr. Rawle's book, and found the scepticism as to these "imaginary beings" quite unconvincing. Nor was I able in any way to accept the extraordinary notion that "Doones" was a corruption of "Danes," and that a series of seventeenth-century adventures, in which guns and gunpowder played an important part, were really accomplished in the days of King Alfred.

Paying my first visit since 1869 to the Somersetshire side of Exmoor this summer, I find the second edition of Mr. Rawle's book on the Doones in circulation. In its pages, although extracts are fairly made from my "Sexagenarian" letter, and abundant reference given to *The Leisure Hour* story of 1863, all the old scepticism is repeated and insisted upon. Mr. Rawle states that his father was born at Oareford in 1805, and his grandfather in 1768, and that they knew nothing of outlaw Doones having infested the district. Mr. Rawle does not, however, state that his father left the district (as I am assured by his relatives) for Bristol in early life, and that he himself was born in that city, and has paid only rare visits to Exmoor. He tells of a visit made over twenty years ago to a deaf old man, verging on ninety, at Cloud Farm, who said he had never heard of any robbers or Doones about Oare till a few years back. Mr. Rawle evidently remains as steeped in scepticism as was the case at the time of writing his first edition. I have therefore made it my business during the last few weeks, during which I have visited each parish in Carhampton Hundred, to inquire as to the Doones in every direction, and of a great number of the older Exmoor folk. In every single case I have met with a more or less indignant surprise that any one who knew the district could possibly doubt as to the reality of a band of Doone robbers infesting the Oare district, and as to the stories of them being commonly prevalent years before Mr. Blackmore wrote his novel.

The general consensus of opinion points to their coming to Somersetshire in the troublous times of the Commonwealth, or in the years immediately preceding, a few of the better-read informants naming the days of Oliver Cromwell or King Charles. Several had always heard that they came as outlaws from Scotland. All gave them a name for malignant cruelty. Two believed that they knew the name Lorna long before the date of the tale (probably a mistake), and the majority were quite certain they had heard of John Red (Ridd), as the great opponent of the Doones; and that he was one of the Reds of Broomstreet, or some other farm in Culbone parish, was maintained by most.

In making inquiries I did my very best to abstain from leading questions, and I have no purpose to serve save a search after truth. If space can be found, I should like to put a little of the evidence I gleaned before the readers of *The Athenæum* in a much condensed form.

John Hancock, parish clerk of Oare, aged seventy-eight, was born at Marwood near Barnstaple. On that side of the moor, stories of the

robber Doones of Exmoor were rife from his earliest recollections. Mothers used to warn truant or disobedient children, particularly if disposed to stay out late, that the Doones would have them. As he got older he knew there were no Doones living, and that they had all perished some time before, but their name was a regular byword. When he came to live at Oare he knew he was coming into the heart of the Doone district, for he had always heard that they used to live at the head of Badgworthy Water. When 'Lorna Doone' came out, there was quite an excitement among the older and humbler people of Oare and the neighbourhood to read it, as they all had known about the Doones all their lives. But he had never heard of "Lorna" and some of the other names before, and quite understood they were "made up." He did wish that Mr. Blackmore had written a second book about the Doones; he always wanted to know what happened to John Ridd after he was married. When the book came out there were several living in the parish who had heard the old Mr. Blackmore preach when he was rector of Oare.

John Pollard, of Porlock Weir, a fairly hale old fisherman of eighty-six, who boasts of being the oldest man in the extensive parish of Porlock, was quite contemptuous at the idea of not having heard of the Doones of Exmoor until a gentleman had written a big book about them. He had lived at the Weir all his life, and could not remember any time when he had not heard tales of the Doones. Who were they? Why, they were a lot of robbers, very bold and strong; they lived a long time ago, and used to go about armed. They stole sheep and horses, and they were not of Somerset or Devon, but came from a long way off and settled down in a wild part of the Forest because the place they had lived in was too hot to hold them. Whereabouts did they live? Well, he had heard the book said Badgworthy Water, but he used always to be told it was at the head of Chalk Water, the next combe to Badgworthy. Chalk Water runs down to Oareford, and when he was a boy he had seen the ruins of the Doones' houses where they had a sort of camp. Had he ever heard of them fighting any one? Oh, yes; why, the Reds of Culbone parish were a strong lot, and there were many of them, and when the Doones took off their sheep there was a great fight, and John Red beat the Doones and killed the biggest of them. That was always the talk. Some said as Rid and Red were all the same name, and there were Rids of Oare, but the old talk was always about the Reds. There were two families of them long ago in two farms above Culbone. There was only one good Doone, and she were a woman called Lorna. John Red married her when she was the only Doone left; so there is a bit of Doone blood in the Reds yet.

Mr. William Gullyford, aged seventy-four, watchmaker of Porlock, who was born at Cutcombe on the outskirts of Exmoor, and has resided at Porlock for over thirty years, was the most interesting witness, as he is a singularly well-informed and well-read man, with decided archæological and ecclesiological tastes. He has a copy of Savage's 'Hundred of Carhampton,' knows well the later topographical works on the district, and has read Freeman's 'Norman Conquest,' with the account of the landing in Porlock Bay, &c., and yet he has such a distaste for fiction that he has never even read 'Lorna Doone.' Early in the "sixties," when residing at Luccombe, at a time when I knew him, Mr. Gullyford was struck with the name of Robber's Bridge as applied to a bridge at Oareford. He inquired of Mrs. Edith Ridler, a well-known shopkeeper in Porlock main street, of an old-established family. This good lady, who died in 1887, aged seventy-nine, had a store of local knowledge. Her information was to the effect that Robber's Bridge was the scene of a great fight between the Doones and the Reds, when the former were almost exterminated; that the Doones were a cruel set of outlaws from Scotland, who had settled on Exmoor some two hundred years ago; that they lived on plunder until the time when they were defeated by John Red and his connexions; and that their stronghold was above Badgworthy Water. Mr. Gullyford often heard of the Doones from others, before even the romance was published. Later on in the "sixties" Mrs. Ridler informed him that a gentleman (Mr. Blackmore) had spent quite a long time with her, asking her all she knew and had heard of the Doones, and putting it down in a note-book, adding that he had told her he was writing a book about them.

Mr. Richard Ridler, the surviving son of Mrs. Edith Ridler, and over seventy years of age, one of the most respected inhabitants of Porlock, whom I remember from the time I was a boy of seven, has been kind enough to corroborate his mother's recollections. Though he has a store of more solid Exmoor literature, chiefly pertaining to stag-hunting, he, too, has never read 'Lorna Doone,' but smiled at the very idea of there being no Doone tales before that book was written. He told how Dr. Kinglake, of Taunton, and one of his daughters, when stopping at Porlock, soon after the book came out, asked him to ride with them and show them the Doone Valley, and how he did so at once, though he knew nothing of the book, but always knew where the Doones used to live.

Mr. Ridler reminded me of a celebrated long run of five and a half hours with the staghounds on October 11th, 1864, when a field of eight (of which he and I are the two survivors) late in the evening followed the stag down Glenthorne Combe, where it took to the sea, and a boat failed to find it in the darkness. After hospitality from Mr. Halliday, we ascended the hill and gained the moors after nightfall. Mr. Froude Bellew was hunting the hounds that day, as old Babbage was ill from a fall. When we gained the top, all save Mr. Bellew were for Porlock 'way, and he asked if any one could take him and the hounds to Whit Stones, whence he could find his way all right. As two of our number, who knew the moor well, turned off on a track in the darkness to guide the huntsman by a short cut to the Exford Road, a jocular cry went up of, "Take care as the Doones don't get you!" All the party laughed at this old joke. It certainly never occurred to any of us to doubt the reality of the bandit Doones of past times, and each one of us, I am sure, would at once have said, if questioned, that their headquarters were at Badgworthy, which we had skirted earlier in the day. The account of this run is given in Mr. Bisset's hunting journal (Fortescue's 'Records of Stag Hunting on Exmoor,' pp. 211-12).

This incident is mentioned because Mr. Rawle (p. 39) quotes from the journal of the famous master of the Devon and Somerset Staghounds (whom I knew well), under the year 1879: "Two stags harboured in the Doone Valley—a new name." From this, the inference is rightly drawn that the name now associated with the valley running down into Badgworthy is of recent origin. There is no doubt, I think, that "Doone Valley" as a place-name was a sequence of the great romance; but the implication that this is in any way indicative of an ignorance of the Doones and their residence is quite inconsequential. The very notion that Mr. Fenwick Bisset had not frequently heard of the Doones in earlier days is, to my mind, a simple impossibility.

It would be irksome to continue to give a *précis* of the evidence of several other old witnesses, all testifying to the early stories of the bandit Doones told them by parents in their childhood; among them are Robert Ketnor, the oldest man in Luccombe, for forty years parish clerk, and William Davis, formerly of Luccombe, and now of Porlock Weir, both beyond seventy.

Collective mention ought, however, to be made of other evidence from Porlock Weir, offered by those who have lived their lives there, as it differs so startlingly from the sceptical views of Mr. Edwin J. Rawle, based on occasional brief visits. It is of the more value, perhaps, in upsetting his theories, as Mr. Rawle is known to or remembered by all those now named.

In addition to talking with several individuals at the Weir, I attended a small parliament of fisher-folk on the stone seat of the quay on the sunny morning of August 10th, attended by Thomas Pugsley, James Pulsford, Thomas Perkins, and William Pollard, averaging in age about sixty. I read extracts from Mr. Rawle's book, and they all expressed astonishment at his disbelief in the almost universal knowledge of the Doones and their deeds, and of their being cleared out or defeated by the Reds, with which they were quite familiar in their childhood. One of them said, "Why, you couldn't find ten men in all the wide parish of Porlock who had not heard of the Doones of Badgworthy when we were boys." Another said to me, "Mr. Rawle might just as well try to make me believe there was never an Acland at Holnicote as that there were not Doones on Exmoor." Among the Doone anecdotes told at this informal parliament, I hope that room can be found for one, which is, I believe, a distinct variant on any that have hitherto been printed. It was told by James Pulsford, who had it from his mother when a boy. The Doones attacked a farm at night, when they knew the master was away; only the mother and a young child were at home. As the robbers broke in, the mother jumped into a barrel of feathers to hide herself, pulling the feathers over her head. The Doones entered the bedroom, and shouted for the mother to tell them where the valuables were; but she remained silent. Then they found the child in bed. One of them seized the little girl, and, stabbing her, exclaimed, "Kill the calf and the cow will howlee." Whereupon the mother screamed out, and, after giving the information as to the stock and goods they desired, was herself killed.

Mr. Rawle lays considerable stress—in support of his contention (p. 21) that the Doones "never had a real existence on Exmoor during the seventeenth century"—on the fact that neither Mr. C. Healey, in his important work on this corner of West Somerset, nor himself when engaged on his 'Annals of Exmoor Forest,' ever found any record of the Doones in "national, municipal, parochial, and testamentary" archives. But what of this? Does Mr. Healey seriously imagine that a set of cruel outlaws, the scourge of the district, would have their wills proved, or be entered, as a rule, in parish registers? It would have been fairer, too, had he stated, when referring to the Oare registers, that they are almost entirely missing, both for Oare and Culbone, in the seventeenth century. I know not if the sessional papers for Somerset are extant for that period. If such is the case, they might with reason be searched for constables' returns, or possible informations.

It is much to be hoped that some one with more leisure than myself, and, if possible, a native of Somerset or Devon, will, after a more categorical fashion, protect the authenticity of the Doone tales from the chilling breath of Mr. Rawle's "higher criticism." Meanwhile, I trust that this small counterblast, of some real value—as each witness cited readily gave me leave to print his name—may somewhat check the wave of scepticism.

J. Charles Cox.

DRYDEN'S 'ART OF PAINTING.'

Bodleian Library, Oxford, August 23rd, 1905.

The article by Mr. Edmund Gosse on Dryden's 'Art of Painting,' in your issue of the 12th inst., contains some very amazing statements. The writer says that in all the puzzling bibliography of Dryden there is no unit more obscure than the original (1695) edition of his paraphrase of Du Fresnoy's 'De Arte Graphica'; that no recent editor of Dryden has, so far as he is aware, been able to refer to it; that Mr. Saintsbury, when preparing his edition of Dryden, was unable to find it in any of our public libraries; that his publisher failed to procure him one; that a diligent search, extended over a long period, left him unable to light on it; that he hoped to come across it in time for the appendix of his eighteenth and last volume, but when he reached that, in the autumn of 1893, his researches were as unsuccessful as ever.

He speaks of the "fact that this original text fell so soon and so entirely into obscurity," and concludes with a remark on the importance of the "recovery of the text of 1695," as if it had ever been lost.

As a matter of fact this same original text of 1695, which, according to Mr. Edmund Gosse, "so soon fell so entirely into obscurity," and which could not be found "in any of our public libraries" (!), has been for years, and is still, on the shelves of both the Bodleian and the British Museum Libraries, and catalogued under Dryden's name as well as that of Du Fresnoy. It has been in the Bodleian at least ever since the year 1738.

Here, all the time that this hue and cry has been made for it, this original 1695 text has been open to anybody who took the trouble to consult the catalogue, and yet, according to Mr. Edmund Gosse, it has been overlooked by editors and publishers, who have ransacked our public libraries for it. Is it another proof that we often inexcusably overlook that which lies nearest to us?

That there may be no further difficulty in finding this original text in our public libraries, here is the Bodleian shelf-mark: "4° A 2, Art. B S." The British Museum press-mark is "78. d. 17."

F. R. Ray.

With reference to Mr. Gosse's article on Dryden's 'Art of Painting' in *The Athenæum* of August 12th, it may be of interest to note that there is a copy of the edition of 1695 in the library of Trinity College, Dublin.

T. K. Abbott.

THE LIBRARY ASSOCIATION AT CAMBRIDGE.

I.

The fifth annual meeting of the Library Association was held at Cambridge in 1882, and on that occasion Henry Bradshaw presided. Upon the invitation of the Town Council and the Library Committee, the visit was repeated this year to celebrate the jubilee of the foundation of the Free Library. The proceedings of the twenty-eighth meeting of the Library Association commenced in the Guildhall on Tuesday last, when the Mayor (Mr. Alderman A. S. Campkin) and the Master of Downing College (Dr. Alexander Hill) welcomed the members and delegates to the town and University of Cambridge. There was a large attendance, including many representatives of the University. The new President (Mr. Francis Jenkinson, University Librarian) was installed.

Mr. Jenkinson then delivered his address, in the course of which he gave an account of the collection of fifteenth-century books in the University Library, and of what Bradshaw did for it. In about the year 1860 it contained something like 830 different works. Some of these had been in the library since the fifteenth century, as, for instance, the volumes of the 'Speculum' of Vincent of Beauvais, presented by Archbishop Rotheram and barbarously mutilated, probably in the sixteenth century. Stimulated by notable discoveries among the books already in the library, Bradshaw soon set to work, and what the University could not afford to buy he himself bought and presented. He was already applying to early typography that natural-history method which was so fruitful in his hands, and which Proctor and others have used after him with so much success. The method may have been due to a little-known Irish entomologist, Alexander Henry Haliday (1806-70), of whom Baron Osten Sacken said "that nothing has ever exceeded the clearness and precision of his general views, as well as his minute and elaborate details." Every word of this might have been written of Bradshaw, who speaks of Panzer as "the one true naturalist among general bibliographers," and Bradshaw himself was a true naturalist, the special subject of his researches being the natural history of books.

The result of Bradshaw's specialization was clearly seen in the case of Holland. The University Library contained 307 books (including fragments) printed in Holland during the fifteenth century. The British Museum, when Proctor compiled his Index, contained 293, the Bodleian 138. The British Museum and the Bodleian had 62 books in common; the Museum had 229 which were not in the Bodleian, and the Bodleian had 80 which were not in the Museum. But the University Library had 152, or 50 per cent., which were neither in the British Museum nor in the Bodleian. The result would probably be the same for Belgium. In choice books the British Museum stood far in the front, but of the early press at Alost neither the Museum nor the Bodleian had one, while the University Library possessed two specimens. Of books printed at Cologne the Museum had 592, the Bodleian 368, while the University owned only about 338. But the proportion of books specially interesting was perhaps relatively larger at Cambridge. The collection was sufficient to enable a beginner to learn the method of studying such books, after which he could pass to larger collections. It had been so carefully selected that the advanced student of early typography coming to Cambridge would almost certainly meet with something to reward him for his trouble. It was a remarkable fact that four great English libraries — the British Museum, the Bodleian, the Cambridge University Library, and the John Rylands Library at Manchester—contained among them copies of every known early quarto by Ulric Zell with only two exceptions. Outside Cologne and the Low Countries Bradshaw kept his eyes open for interesting books. Books with woodcuts had a special attraction for him. Early Bibles—meaning those printed before 1470—form a class of ancient monuments of the highest interest and beauty. Bradshaw knew them intimately; broke them into classes according to their different points of division into volumes, if they were divided at all; arranged them by rubricators' dates; and in general did much minute work upon them. The impetus given by Bradshaw lasted for some years after his death, and by the end of the nineteenth century the collection amounted to 2,200 separate works, or nearly three times as many as there had been forty years ago. The prices of incunabula were now often ridiculously high, but Mr. Jenkinson urged that every library should try to possess a few of them. In these days, when printing was so spiritless and mechanical, the sight of these early books, which show so much freedom and style in type-cutting and ornamentation, substanc and surface in the paper, and lustrous blackness in the ink, may help to remind people that books were not always what most of them are now.

The President was cordially thanked for his address, on the motion of Dr. Thomas Hodgkin, seconded by Mr. P. Cowell.

The first paper on the agenda was entitled 'After Fifty Years,' by Mr. John Pink, who told his experience of the successful working of the Free Public Library at Cambridge during that time. Mr. H. G. Aldis (Secretary of the University Library) followed with an account of the 'Organization and Methods of the Cambridge University Library,' in which he indicated the characteristic features of the library and its organization, especially the system of access to the books on the open shelves and the facilities for borrowing.

The Committee on Public Education and Public Libraries presented their second report through their Chairman (Mr. H. R. Tedder). The Committee were appointed at the Conference on Public Education and Public Libraries held under the auspices of the Library Association at Leeds in 1903. They were instructed to consider all questions relating to the co-operation of public libraries with educational bodies of every description, and submitted a report at the Newcastle-upon-Tyne meeting of the Library Association in 1904, which contained a number of recommendations based upon answers to schedules of questions addressed to public librarians, secretaries of University Extension centres, and directors of public education throughout the country. The Committee had carefully weighed all the evidence and facts previously collected, and submitted the following resolutions, together with a statistical appendix which summarized the information gathered from the various authorities concerned:—

1. In order that children from an early age might become accustomed to the use of a collection of books, (*a*) that special libraries for children should be established in all public libraries, and (*b*) that collections of books should be formed in all elementary and secondary schools.
2. That the principal text-books and auxiliaries recommended by various teaching bodies, including those directing technical studies, as well as University Extension centres, the National Home Reading Union, &c., should be provided and kept up to date in the public library.
3. That the public librarian should keep in touch with the chief educational work in his area.
4. That conferences between teachers and librarians should be held from time to time.
5. That there should be some interchange of representation between the Library and Education Committees.
6. That the public library should be recognized as forming part of the national educational machinery.

The report was exhaustively discussed, and the subject admitted to be one of vital importance to the future of the public-library movement. The report was carried, together with recommendations that library authorities should provide a room in every library for lectures, discussions, &c., and that their librarians should become honorary members of the National Home Reading Union.

Visits to various college and university buildings were paid in the afternoon, and the Master of Downing College entertained the members at a garden-party in the college grounds.

Two lectures, illustrated by lantern-slides, were given at a morning session on Wednesday, in the University Lecture-Room of Anatomy and Physiology.

One part of the session was devoted to bookbinding. Mr. C. J. Davenport lectured on 'Bookbinding and Book Production' with lantern illustrations. Leather was used at an early date for covering vellum and parchment MSS. The ornamentation was effected by small cameo stamps impressed in the leather, without gilding. English bindings of the twelfth and thirteenth centuries were noteworthy in this respect. Fine MSS. were gorgeously covered

in gold and silver, with rich metal work, enamels, jewels, and ivory. On the introduction of printing books became smaller; and gold tooling, although used in the East in the twelfth century, was not introduced into Europe until the latter part of the fifteenth century, and then by way of Venice. This beautiful art rapidly spread all over the Continent, and was introduced into England. Distinctive styles developed themselves in every country. There was a revival of decorative bookbinding in England at the present day, but binders were hampered by the bad paper and the difficulty of procuring trustworthy leather of good appearance. Mr. E. R. Norris Mathews (Bristol) submitted some notes on 'Library Binderies,' pointing out the advantages of having binding executed on the premises, under the control and supervision of the librarian. Mr. Cedric Chivers (Bath and New York) treated the question of 'Library Bookbinding' from the bookbinder's point of view. Discussion on the three papers was opened by Mr. F. T. Barrett (Glasgow) and by Mr. E. Wyndham Hulme (Patent Office), who presented on the part of the Sound Leather Committee of the Library Association their admirable publication on 'Leather for Libraries.'

Mr. J. Willis Clark (Registrary of the University) discussed 'The Evolution of Bookcases,' tracing their development from mediæval times. The progress was threefold. First, there was the lectern system, copied from a church lectern; then the stall system, devised to accommodate a larger quantity of books; finally came the wall system. While chaining was in fashion readers had to be put near a window, and therefore the cases were placed at right angles to the walls between the windows, and the rests for the readers in front of the windows. In England the system appeared in the Bodleian (1612), and was made widely popular by Sir Christopher Wren. Some models were exhibited, as well as lantern illustrations.

The meeting was continued on Wednesday afternoon and on Thursday, when further visits to libraries were made. On Friday there was an excursion to Ely.

'A STUDY OF AMBROSIASTER.'

24, Chalfont Road, Oxford, August 19th, 1905.

For all the kind words in the review of my 'Study of Ambrosiaster' in to-day's issue I am very grateful; but I am compelled to ask your permission to correct some misrepresentations, in justice to your readers, my publishers, and myself. These seem due mainly to cursory reading of the book. (The passages within quotation marks are from the review.)

1. "He has supplied a full collation of Pauline quotations in Cyprian's 'Testimonia' and the two books [*i.e.*, 'Commentaries' and 'Quæstiones'] with the Latin of 'Codex Claromontanus.'" This I have not done. The collation is with those in the 'Commentaries' only (see p. 215). The reviewer has omitted to mention that I have also supplied (pp. 240-57) a full collation of Pauline quotations in 'Lucifer' and the 'Commentaries' with the Vulgate. In justice to Mr. Burkitt, who suggested the plan of the chapter, this ought to have been mentioned.

2. The reviewer supports Ballerini's opinion that the 'Commentaries' are by Ambrose. With his opinion I have been for a number of years acquainted, but readers will perhaps forgive me for omitting to mention it when I point out that I do not know a single scholar who has been convinced by his arguments, though they were published as long ago as 1875. Schanz, in his history of Roman literature, vol. iv. p. 325 (Munich, 1904), says: "Gegen Ambrosius spricht alles, so dass seine Autorschaft als abgethan erachtet werden kann." With him agree Harnack, Zahn, Jülicher, Morin, Brewer, Arnold, and other living scholars.

3. "He allows that it is a collection of 'Quæstiones' which may not all have proceeded from the same hand.....He also thinks that one of the 'Quæstiones' 'looks like genuine Augustine.'" I state distinctly (p. 10f.) that I consider all the [188] Quæstiones are by one author, except the one referred to in the second sentence.

4. I have developed my argument for identity of authorship in four chapters. The reviewer mentions only my second and third arguments, and calls them the first and second.

5. "Mr. Souter argues that if it was the same version that both employed, the authorship of the two works *must* [italics mine] be the same." But the quotation from my book printed above this sentence will show that I merely said a very strong presumption of common authorship would be established, even in the absence of any other evidence. I believe experts will agree with me. Augustine remarks that there were in existence almost as many types of Latin text as manuscripts. A study of Sabatier's great work and the accumulated discoveries of a century and a half tends to bear this out. The case of our Revised Version is not at all parallel.

6. "He has depended *solely* [italics mine] on the collection of words and idioms which he has made for the Berlin [*sic*] Thesaurus, and has not investigated the Latinity of other contemporary writers completely. So far as he has dipped into the subject....." These are pure assumptions. If the reviewer had read carefully he would have found that I reported on the 'Commentaries' for the Thesaurus, not on the 'Quæstiones' (p. 5). When I sent in the completed work to the Thesaurus in September, 1899, I had not read a word of the 'Quæstiones.' Yet about half the chapter to which he refers consists of quotations from that work. In addition there are far more illustrative quotations from the 'Commentaries' themselves for many of these words than were sent to the Thesaurus. Further, these many quotations are now edited from the MSS., none of which I had seen till about two years after the Thesaurus work was sent in. As to my acquaintance with contemporary writers the facts are these. Over five years ago I had already read through, with pen in hand, about a third of the extant works of St. Augustine, and taken throughout very full notes of his vocabulary. My collections, not paraded in the book, are the background of many a statement (see p. 63*f.*), and are at the service of the reviewer or any other person who wishes extracts from them. Within the last two years also I have fully collated with ear and eye a MS. of Augustine's 'De Baptismo.' As to Jerome, I might have depended on Goelzer's classical 'Étude,' but have spent recently (before going to press) about a hundred and fifty hours in the minute study of that author's Latinity. Ambrose I have not neglected, nor other contemporary authors. I have also, of course, had Pancker, Rönsch, Mayor, and others to consult. The reviewer says nothing of my principles or my use of asterisks.

7. "In a note written subsequently he mentions other words that might have added to his list, and asserts in regard to them, 'These are all favourites with Aug[ustine].'" Here again the reviewer has been careless. The note referred to is clearly indicated as having reference to p. 148, l. 19, where I am dealing not with words found in my author, but with words absent from him. The list of (thirteen) favourite words of Augustine is given as a list of words *absent* from Ambrosiaster.

I have to apologize for troubling you with this letter, but think that, before reviewing the product of five and a half years' unrelenting toil, a reviewer might have taken more trouble to be sure of his facts.

Alex. Souter.

'LADY FANSHAWE'S MEMOIRS.'

The circumstances under which this volume appears are not made clearer by the letters published in your last issue. Although it is stated on the title-page that the 'Memoirs' are "edited" by Miss Marshall, that lady disclaims any such responsibility. On the other hand, Mr. Allan Fea, who "undertook" the illustrations, states that, "judging from a personal inspection of the original, there appear to be but few serious errors" in Sir Harris Nicolas's edition of 1830. Are we to infer from this remark that Mr. Fea has had in his possession the original manuscript, of which Sir H. Nicolas had only Miss Colman's transcript? If so, why did not Mr. Fea claim the editorship? and, what is more important, why did he not point out the "few serious errors" to which he vaguely alludes?

What, however, is of more serious importance is the apparent course of procedure adopted by the publishers. So far as can be gathered they simply reprinted, without a word of acknowledgment, a volume of which the copyright had expired; obtained a preface to it from a lady, without informing her whence the memoirs were obtained, leaving to the illustrator to give the clue, if so disposed.

Lionel G. Robinson.

Literary Gossip.

Mr. Theodore Watts-Dunton's new novel, 'Carniola,' will be published during the autumn, in England and America, by Messrs. Harper & Brothers. The story is laid partly in England, partly in Venice, and partly in Hungary. Although, like 'Aylwin,' it is a love story, it is much more various in its pictures of life than that very popular work.

Messrs. Hutchinson & Co. will publish shortly 'A Life of Queen Henrietta Maria,' by Miss Ida A. Taylor, author of 'A Life of Lord Edward Fitzgerald.' The history of the queen is related with the detail rendered possible by the copious memoirs of the day, and the collections of contemporary documents. The life of the "Reine malheureuse"—to give her her self-chosen title—will occupy two large volumes, and will be copiously illustrated with portraits from contemporary paintings.

Mr. Unwin will publish this autumn a volume likely to have considerable importance as an historical document. It contains the memoirs of the late Dr. Thomas W. Evans, Court Dentist to Napoleon III. Dr. Evans enjoyed intimate relations with the Emperor, and the impression which he gives of his character—an estimate very different from the conventional one—is based upon close observation during many years and in very varied circumstances. Several chapters of this work relate how the Empress Eugénie, on her flight from the Tuileries after Sedan, sought refuge in Dr. Evans's house, and how her secret flight to England was made in his charge. The volume has been edited by Dr. Evans's friend, Dr. Edward A. Crane.

Mr. Hugh Clifford, C.M.G., contributes to the September *Blackwood* an article on 'Time and Tobago,' which recalls the stirring history of the island. The number also contains a sketch by Mr. Joseph Conrad, entitled 'Her Captivity'; 'An Irish Festival,' by Mr. Stephen Gwynn, which describes

XUM

the tenth annual assembly of the Gaelic League; 'Lord Curzon, Lord Kitchener, and Mr. Brodrick'; 'Cottage and Farmhouse Lodgings'; and 'A Study of the Russo-Japanese War: IX. The Battle of Hei-kou-tai.'

The September number of *The Dickensian* will contain the first part of a bibliographical study of the literature relating to 'Edwin Drood,' under the title of 'The History of a Mystery,' by Mr. G. F. Gadd; 'Dickens's Instinct for Reform,' by Mr. Walter Crotch; 'Through Whitechapel with Dickens,' by Mr. B. W. Matz, illustrated; 'The Scene of the Bagman's Story,' by Mr. Hammond Hall; and other articles of interest. The frontispiece will be a reproduction of a painting of the "Bull Inn," Whitechapel, whilst the cover will be a reproduction of the original one to 'Little Dorrit.'

We are sorry to notice the death of David Binning Monro, Provost of Oriel, in Switzerland on Monday last. Dr. Monro got his First Class at Balliol, was Ireland Scholar in 1858, was duly made a Fellow of Oriel, and became Provost in 1882. His 'Homeric Grammar' (1891, second edition) is his only book of importance, but it is one of the landmarks of classical study, and gave him a world-wide reputation. He was not a good speaker, having all the reserve and shyness of the scholar; but he was an excellent man of business, and did a good deal of work on Oxford boards. His stores of learning were always at the service of other men; his endowments were various and extensive, his broadmindedness of a character seldom found in an eminent specialist.

His Highness the Aga Khan, G.C.I.E., who is a personage in the Eastern world as the spiritual head of the Ismaili Mohammedans, has written an article on 'The Problem of Indian Defence.' It will appear in the September number of *The Nineteenth Century and After*.

The venerable Rajah of Nabha, who by right of age may be regarded as the secular leader at the present time of the Sikh race, has just published a pamphlet in Gurmukhi entitled 'An Inquiry into the Sikh Religion.' The publication has been called forth by the recent removal of the images from the precincts of the Golden Temple at Amritsar, and the Rajah strongly disapproves of the conduct of the enlightened Sikhs in connexion with the matter. Indeed, he charges them with disregarding the fundamental teachings of the Gurus. His advice to those of his faith is to follow the Sikh religion as originally promulgated by its founders, and to abstain from introducing innovations.

Dr. A. H. Keane writes on the 19th inst. concerning the Malagasy language:—

"In to-day's *Athenæum* (p. 237) it is stated that Malagasy is 'a Malayo-Polynesian rather than an African tongue.' Put in this way the statement is somewhat misguiding, since Malagasy is in no sense 'an African tongue,' but a typical Oceanic (Malayo-Polynesian) form of speech. This I have clearly shown in 'Man Past and Present' (pp. 250 *sq.*) and elsewhere, and, again, recently in *East and West* (July, 1905). As this excellent Indian periodical is not yet very widely circulated in England, I may be permitted to quote the following passage from the article 'Race and Speech,' where the subject is dealt with:—

"Absolute linguistic uniformity is not merely the dominant but the exclusive note [in Madagascar], and all these strangely diversified populations are of one tongue, spoken with but slight dialectic differences. Now this is not an African tongue, some Bantu idiom from the neighbouring continent, as might be expected, but a typical Malayo-Polynesian form of speech, whose affinities are to be sought in Malaysia, in the Philippines, in Melanesia, and all over the Pacific Ocean."—P. 790.

At Bath a tablet will be unveiled on Saturday, September 2nd, commemorating three poets who were connected with the city, Crabbe, Bowles, and Moore. The tablet will be placed on the Royal Literary Institution, and the ceremony will be performed by Prof. Huchon.

Mr. W. S. Crockett writes from The Manse, Tweedsmuir, concerning his book on Abbotsford:—

"*The Athenæum* reaches even this somewhat remote glen. May I be permitted to point out to your reviewer (to me by no means unkindly): (1) That Lockhart himself is my authority for the 'Cristal Nixon' reference. I am at one with your reviewer that the comparison between the rogue Nixon and 'honest Tom Purdie' is perplexing, but see 'Lockhart,' vol. vi. p. 171 (Jack's 'Edinburgh Edition'), and 'Redgauntlet.' (2) In, I think, 'The Letters of Dickens,' the incident common to Scott and Thackeray will be found. (3) The constant tradition has been (for what it is worth) that Queen Mary's head was actually painted on the day following her decapitation. Scott obtained the picture from a Prussian nobleman, and gave credence to the story. (4) My Montrose sword inscription is absolutely correct. Like your reviewer, however, I am unable to translate it. It was my intention to devote a short chapter to the Abbotsford Library. In the event of a new edition, this may be done."

When we laughed lately at French "printers' errors" we did not intend to include among habitual offenders that admirable newspaper *Le Temps*. But within a few days the bright literary article signed Pierre Mille contained a double reference to the poet Burns as "John Burns."

The death in his sixty-seventh year is announced of the eminent historian Wilhelm Oncken, Professor of History at the University of Giessen. He was the author of a number of valuable works, among them 'Isokrates und Athen,' 'Athen und Hellas,' 'Die Staatslehre des Aristoteles,' 'Oesterreich im Befreiungskriege,' &c. His exertions called into existence the great history 'Allgemeine Geschichte in Einzeldarstellungen,' which he wrote in conjunction with thirty other scholars, and to which he contributed as his share 'Das Zeitalter Friedrichs des Grossen,' 'Das Zeitalter der Revolution, des Kaiserreichs und der Befreiungskriege,' and 'Das Zeitalter des Kaisers Wilhelm.' His books enjoy great popularity. Oncken was a member of the Reichstag during 1874–6, and attached himself to the national liberal party.

At the monthly meeting of the Board of Directors of the Booksellers' Provident Institution held on Thursday week last, the sum of 110*l.* was voted to fifty-eight members and widows of members. Four members were elected, and two fresh applications for membership were received.

The Festival Dinner of the Newsvendors' Benevolent Institution will take place at De Keyser's Royal Hotel on Tuesday, October 31st, instead of the 24th, as previously announced. Sir Horace Marshall will preside, and it is hoped that the news trade in all parts of the United Kingdom will be represented.

Among recent Parliamentary Papers is an Account of Receipts, &c., of the Royal University of Ireland (½*d.*).

SCIENCE

The Geology of South Africa. By F. H. Hatch and G. S. Corstorphine. (Macmillan & Co.)

Many a hammer, in recent years, has been at work on the rocks of South Africa, and many a pen has been busy with the description of its geology. This activity has been a consequence of the remarkable development of the mineral resources of the country, to which it has in turn powerfully contributed. State geologists have issued official reports, whilst local amateurs of divers nationalities have scattered their papers among various scientific journals. It is by no means easy, however, to co-ordinate the materials thus accumulated. Even the stratigraphical nomenclature often presents a difficulty. A writer in Cape Colony, for instance, may use one system, and a writer in the Transvaal another. The student is therefore under no small debt to Dr. Hatch and Dr. Corstorphine for having condensed the available matter, and presented the correlated results in the form of a volume which offers, within moderate compass, a fairly complete picture of the geological structure of South Africa.

There is no question that the writers are admirably qualified for the work to which they have addressed themselves. Dr. Hatch was formerly petrologist to the Geological Survey of this country, and for many years has been a mining engineer of high reputation in the Transvaal, whilst Dr. Corstorphine held for a long time the position of Director of the Geological Survey of the Cape Colony, and is now a mining geologist connected with an important corporation in South Africa. Both, too, have contributed by their own researches to our knowledge of South African geology, so that they write with the authority of original observers.

The oldest known rocks of the country consist of a great series of slates, quartzites, schists, and granite, to which an Archæan age is here attributed. Such an attribution is probably correct; but it must be admitted that there is little or no proof of contemporaneity with Archæan rocks elsewhere. Over these ancient rocks, and separated from them by a great unconformity, comes the Witwatersrand system, probably the most important strata in South Africa, since they include the great series of gold-bearing conglomerates in the Transvaal. It is in the "Main Reef series" that the riches of the Rand are chiefly concentrated. The conglomerates consist of pebbles of white or smoky quartz, with occasional fragments of slate and chert, embedded in a quartzose matrix, so firmly cemented that

the rocks break indifferently across pebbles and matrix. Where the conglomerate is fresh it carries iron pyrites in fine grains and crystals, with little pellets of marcasite, often regarded as pebbles, but probably, in most cases, concretions. The gold is usually so finely divided as to escape detection by the unaided eye. The average yield of this auriferous conglomerate, or "banket," is less than 10 dwts. per ton, yet such is the perfection of modern methods of extraction that ores of even lower grade may be profitably worked.

The question naturally arises, How has the gold got into the banket? The miner, so long as he gets the gold, may not, perhaps, concern himself about its origin; but to the chemical geologist this is a question of absorbing interest. According to our authors, the theory which best satisfies all the conditions of the case is that of infiltration subsequent to the sedimentation of the conglomerate. They assume that the metal was reduced from auriferous solutions which percolated through the rock, after it had been laid down, though perhaps before final consolidation. The precipitation of the metal seems to have been determined by certain local conditions, for gold is not present in all the conglomerates, though the solution would probably filter through all alike. Possibly the reduction was effected by means of pyrites, or, in certain cases, by carbonaceous matter, which may have been present in definite zones. No doubt the permeating solution was very dilute, but, whatever its character, the question remains, Whence did the solution obtain the gold? To that question, however, no satisfactory answer is vouchsafed.

It must be conceded that, on the whole, the infiltration theory seems more satisfactory than any of the other hypotheses which have been advanced. In the early days of mining on the Rand, it was often assumed that the conglomerate represented an ancient gold-bearing gravel, or alluvial deposit, derived from the mechanical disintegration of pre-existing quartz-lodes; the conglomerate was regarded, in fact, as a fossil "placer." Against such a view, however, is to be set the fact that the gold is virtually confined to the matrix of the conglomerate. Moreover, it is associated with various minerals of secondary origin, and, though very finely divided, is pretty uniformly distributed through certain beds. All this favours the view of infiltration. Indeed, it is not difficult to imagine the golden waters streaming slowly through the interstices of the partially solidified rock, and to suppose that in some parts of the route the passage was free, but that, as the solution coursed along other sections of the subterranean highway, it encountered certain precipitants which demanded toll, so that it had to yield up more or less of its riches, and pass on in an impoverished condition. It is the garnered gold, representing these precipitates, that now constitutes the wealth of the Rand.

Another subject of popular interest discussed in this valuable volume is the character of the diamond-bearing deposits of South Africa. The authors give an excellent epitome of our knowledge of this subject, though we believe they have not had such practical acquaintance with diamond-mining as with gold-mining. Those who are apt to fancy that diamonds are limited in South Africa to the neighbourhood of Kimberley may be reminded that diamond-carrying "pipes" have been found over a very wide area, not only in the Cape Colony, but also in the Orange River Colony, and of late years in the Transvaal. But though we now know many diamond pipes, and these scattered so widely that they occur under varied geological conditions, the authors are obliged to confess that "no definite conclusion has yet been reached as to the mode of origin of the pipes." And with regard to the origin of the peculiar mineral which confers value on these pipes still less is known. Theories, it is true, are not wanting, but of positive information we have none. No one is bold enough to say that he yet knows what processes of subterranean chemistry have been able to fabricate a piece of pure crystallized carbon like that of the Cullinan giant, weighing more than a pound and a quarter, which was unearthed last year at the Premier mine in the Transvaal. Let us hope that the present visit of the British Association to South Africa, by bringing so many distinguished men of science into the heart of the diamond country, will lead to some light on this obscure yet fascinating subject.

Messrs. Hatch and Corstorphine have added greatly to the value of their work by two geological maps, printed in colours, one a map of the Transvaal, the other of the whole of South Africa. They append also a very useful, though admittedly incomplete, bibliography.

MINING AND ENGINEERING.

Annals of Coal-Mining and the Coal Trade. Second Series. By Robert L. Galloway. ('Colliery Guardian' Company.)—The first series of this elaborate record gave the history of coal-mining and the coal trade from the earliest times down to the period of the Select Committee of the House of Commons on Accidents in Mines in 1835. The present volume carries us over the next fifteen years only, to 1850, when the Coal Mines Inspection Act was passed. About half of the closely packed chronicle now issued was first printed week by week in *The Colliery Guardian*, but the rest is new. As in the previous series, the amount of information collected is enormous, and, to those interested in the subject, of great importance. The decade and a half dealt with was marked by extraordinary activity in the coal and iron industries, due to the simultaneous development of steam navigation and railways. New pits were opened in every coal-field. Those once in the hands of private owners were worked on a larger scale by great joint-stock companies. The steam coal district of Northumberland was virtually opened out for the first time. The bare and almost uninhabited tract of magnesian limestone bordering the Durham coast became covered with thickly populated colliery villages. The invaluable anthracite and semi-anthracite of South Wales, of which so much is heard just now, began to yield its smokeless fuel to commerce. The numbers of coal-miners in all the British coal-fields increased by leaps and bounds. There was much success, but there were, at the same time, many losses. Trials were made not always where coal existed, but sometimes where by no possibility it could be found. Many are the cases given by Mr. Galloway of wild-goose chases of this kind, as at Bruton, in Somersetshire, Bagley Wood, near Oxford, and at Bexhill, in Sussex, where the Duchess of Dorset spent and lost, it is said, ten thousand pounds. One such attempt is thus described by him:—

"But the most curious case was that of the Northampton Union Coal and Mining, who went about their work in a spirited and enterprising fashion, and deserved a better fate. The joint-stock company was formed in 1836.....with a subscribed capital of 18,000*l.*, in 6,000 shares of 3*l.* each, on the strength of a report made by two experienced colliers from Staffordshire, that coal could be obtained within one and a half miles of the town of Northampton, as good as any in Staffordshire. A tract of 50 acres was leased, men were engaged from the coal counties, and sinking commenced; and in the spring of 1837 a large steam engine was erected, which, on being set agoing, was christened 'The Wonder.' About Christmas, 1838, the shaft had been carried down to a depth of about 900 ft., at an expenditure of 11,534*l.* 9*s.*, and everybody was on the tip-toe of expectation. The opinion was general that Mr. Whitehouse, the superintendent, had bored through a vein of coal 7 ft. thick. Those who were not fortunate enough to hold shares, we are told,.....blamed themselves for their folly; those who held them began to calculate upon the great source of wealth they would one day enjoy; many purchased shares at 6*l.* premium. One of the largest shareholders made a bet of 100 to 5 that a waggon-load of coal, dug out of the company's pit, would be exhibited on the market hill on a certain Monday; and many other bets were laid. A large dinner is said to have been nearly provided at the Peacock; a carriage and four bands of music ordered; waggons painted blue; and horses proffered to draw the coal into the town. But, alas! instead of the triumphant consummation so confidently anticipated, to the consternation of everybody the brilliant bubble suddenly burst. It was discovered that a cruel hoax had been perpetrated. The workmen, fearing the consequences, betook themselves to flight; and on their arrival at Birmingham wrote a letter, confessing that, in the absence of Mr. Whitehouse, they had themselves introduced into the boring the coal which had been found."—P. 19.

Anecdotes such as the above are not numerous in this book. The bulk of the volume is taken up by graver matters. For with the increase of coal-mines in size and number danger to life unfortunately more than kept pace, so that many chapters are virtually mere registers of terrible explosions and other accidents. Further chapters, less harrowing, are devoted to the efforts made by the legislature and by scientific men to combat the dangers of the pits and to lessen the hardships of those employed in them. New methods of winning the coal, adequate ventilation—by fire, by steam, or by various mechanical appliances—safety lamps, safety cages, safety hooks, &c., and many other improvements are duly noted and described, all tending slowly to that state of things which obtains at the present day, when, of all workmen in Britain, the collier underground is, if statistics are to be believed, perhaps the least in danger of his life.

We trust that Mr. Galloway will continue his laborious chronicle. His 'Annals' will some day prove of the greatest value as *matériaux pour servir* in the hands of an historian with a gift for condensation and selection. An excellent portrait of John Buddle, the eminent mining engineer, and a few other illustrations (there might have been more with advantage), are a welcome relief among the 400 pages of solemn entries.

The Physics and Chemistry of Mining. By T. H. Byrom. (Crosby Lockwood & Son.)—This is a class-book intended for the many persons who are nowadays candidates for certificates as colliery managers or who are preparing for the examinations in mining held by the Board of Education and County Councils. It is therefore a cram book—not by any means a bad one of its kind, but written for a definite purpose, namely, the satisfying of examiners in certain examinations. All such books suffer from the same limitations. They supply a pressing demand for physic in tabloids. The

young people for whom they are written want certain qualifications, and they are reluctantly prepared to undergo a minimum of reading in order to obtain them. They are not willing to take the time and trouble necessary for the acquirement of sound principles of physics or chemistry, but they think a certificate worth *some* disagreeable reading. This minimum is here provided for them much in the usual form. 'Magnetism and Electricity' are dismissed in fifteen pages, 'The Methods of Analysis of Coal' in ten, and so on. The best expositor living could not do much in such circumstances. One can scarcely demand of the author more than clearness of statement and freedom from errors. Mr. Byrom satisfies both these conditions, and no doubt most of the buyers of his volume will be grateful to him for the homœopathic nature of his instruction. A collection of likely questions is of course to be found at the end of the book.

Tools for Engineers and Woodworkers. By Joseph Horner, A.M.I.Mech.E. (Same publishers.)—Although there is necessarily a good deal of the descriptive catalogue in a work of this kind, yet this one is so well put together, its brief descriptions are so clear, and above all the endless varieties of tools enumerated are brought to one's notice in so logical an order, their classification is so essentially scientific, that it may be regarded as in a sense a finished monograph of one phase of evolution. Without meaning to do so probably, Mr. Horner has produced a book which, in its own special department, does for the smaller instruments of wood and metal workers very much what General Pitt-Rivers did for prehistoric arms and implements. His section on chisels, for instance, takes us from the Palæolithic celt or axe—the oldest of all tools—to the palstaves, tanged and socketed chisels and gouges of the Bronze Age. It leads us thence, through all the many forms of adze and modern examples of this great group, to the planes, hand-chisels for metal-working, chisel-like tools for metal-turning and planing, and lastly to the Fox-trimmer, reamers and milling cutters, and other shearing and staggering tools, being intensely interesting when read from this point of view. It is a study in development, in gradual adaptation of means to end, in the production of varieties and in the survival of the fittest. Other chapters deal in the same intelligent manner with all the other classes of tools — saws, files, gimlets, bits, augers, drills, taps and dies, punches, hammers, caulking, moulding, and modelling tools, spanners, wrenches, braces, and what not. Section V. discusses hardening, tempering, grinding, and sharpening appliances; and Section VI.—the last—in ten chapters, is a complete treatise on tools for measurement and gauges for testing. The author's remarks on this portion of his subject are very good. The gradual substitution of the gauge for the rule or compasses in modern practice is strikingly shown and accounted for. "Old methods," he tells us,

"survive, and must do so, but they become more deeply invaded by the new. It is not that the fitting of parts is more precise than was possible of old, but that now it is both precise and positive, while the old was exact only. This is the result of the invasion of the gauges."—P. 332.

We do not quite understand what Mr. Horner means when in the above quotation he contrasts "exact" with "positive," but this is the only ambiguity we have met with in his excellent and most practical manual. It should be added that the volume is capitally illustrated throughout, and very well produced.

BOTANICAL LITERATURE.

The Vegetable Garden. By M. M. Vilmorin Andrieux. English Edition published under the Direction of W. Robinson. (Murray.)—The original work, entitled 'Les Plantes Potagères,' was published in 1883. It was the production of the lamented Henry de Vilmorin, who combined, to an unusual degree, scientific accuracy and foresight with wide practical experience. His work at once took its place as the most authoritative and complete treatise on culinary vegetables in existence. This position it still maintains. We are, therefore, glad to see a reissue of the English edition prepared under the direction of Mr. Robinson. In the editor's preface allusion is made to our shortcomings in the way, first of cultivation, then of marketing, and lastly of cooking. We may leave the growers to defend themselves, if they think it necessary, but we need not be experts to recognize our defects in the matter of markets, whilst as to the cooking of vegetables we must all admit the justice of Mr. Robinson's criticism. Another point we may allude to—one not mentioned in this book, if we mistake not—is the extraordinary conservatism of British gardeners and their unwillingness to make trial of any but the ordinary well-known kinds, even when the opportunity is offered them. Japan and China, for instance, could furnish us with many vegetables almost unknown in England, and countries nearer home, such as Italy, could supply our kitchens with delicious produce unfamiliar in English kitchen gardens. How many years it took to induce cultivators to grow, and consumers to purchase, rhubarb, was a matter for comment among our immediate predecessors; and we have ourselves a present instance in the slow progress made by the so-called Chinese artichoke, better known, perhaps, by its French name of Crosnes. This, by the way, is included in the edition before us, though it had no place in the original work. Every one interested in vegetables and salads should procure this book, and those botanical students interested in such questions as variation, selection, hereditary transmission, and the like, will find it an encyclopædia of carefully recorded facts.

Carnations, Picotees, and the Wild and Garden Pinks. Written by several Authorities, and edited by E. T. Cook. (Newnes.)—This is one of the "Country Life" series, and presents all the amenity of appearance that characterizes those publications. As for the text, it deals with the history of the carnation and with the several categories of this favourite genus. On so well-worn a subject there is little fresh to be said, the less so, perhaps, because the experts who have contributed to this volume are well known by previous publications, and as frequent contributors to the gardening press. It is satisfactory to see a protest against the childish practices of exhibiting the flowers throttled with a cardboard collar, and of "dressing" the blooms so as to give them a formal symmetry, which, to say the least, is unnatural and artificial. Carnations are so popular at the present time that this book, with its pretty illustrations, is sure of a welcome from lovers of the genus Dianthus.

Trees: a Handbook of Forest Botany for the Woodlands and the Laboratory. By H. Marshall Ward.—Vol. III. *Flowers and Inflorescences.* (Cambridge, University Press.)—This is the third instalment of the comprehensive work on forest botany planned and executed by the Cambridge Professor of Botany. It would seem as if the work was intended primarily for those foresters who have had no previous training in the "institutes" of their profession, but have been left to pick up a knowledge of the conformation of trees as they proceeded with their practical work. In conformity with this plan we have, in the part before us, details relating to the inflorescence and to the parts of the flower which it would have been better to acquire at school or in college. Armed with this preliminary knowledge, the forester should be enabled to apply it at once to practical purposes. Such a man does not need in his daily work the details relating to the development of the flower, the differentiation of sporogenous tissue, the division of nuclei, or the formation of the embryo-sac. The botanical student will, indeed, be delighted to get in short compass all these details, from the pen of a master hand, but we question whether the forester proper will be equally appreciative.

On turning to "Part II. Special" we find details relating to the principal trees, wild or cultivated, in this country. These details are, of course, accurate, and the only defect we can see in them is the needless prolixity with which they are presented to the reader. For instance, no fewer than ten or a dozen lines are expended on the "diagnosis" of the Gymnosperms. By following the practice of the great masters of systematic botany, such as Bentham, the Hookers, the De Candolles, Asa Gray, and others, who, in describing plants, adopted the methods of Linnæus, these ten or a dozen lines might have been reduced to at least one-half. In this way brevity and clearness would have been gained. The identification of the willows is so peculiarly difficult that we are glad to see that the author has devoted much attention to the subject. The value of his classification and grouping can only be adequately tested in actual practice, but a mere inspection suffices to show how greatly the student's labours will be facilitated. Among the poplars we miss any mention of the Lombardy poplar, which deserved a place in this book as much as many others that are inserted. The hop hornbeam is also omitted, doubtless for some good cause; but it is not so easy to find the reason for placing the butcher's broom (Ruscus) between the mistletoe and the crowberry (Empetrum). This arrangement is startling, though no doubt it is in accordance with the artificial plan laid down by the author. The juxtaposition of the ash (Fraxinus) and the wild clematis is almost as great a violation of natural affinities. These groupings, however, may be consistent with the author's plan, and are not intended to represent genealogical relationships. The book has evidently been compiled with great care, it is well illustrated, and is furnished with a glossary and a copious index. Its value, then, to the student, forester or other, is beyond question.

Manual of the Trees of North America, exclusive of Mexico. By Charles Sprague Sargent. (Constable & Co.)—Those who have had occasion to consult the monumental work entitled 'The Silva of North America' will rejoice in the publication of this manual. In the eight hundred and odd pages of which it consists will be found a condensation of the text of the fourteen folio volumes of the previous publication. Of course, the large plate illustrations are wanting, but in their place we have 642 illustrations by Mr. C. E. Faxon. These, though small, are very characteristic and helpful.

Each species is described separately, the character of its wood noted, and the geographical distribution indicated, in the masterly way of which we have had so many examples in Prof. Sargent's other publications. The plants are arranged according to the system advocated by Engler and Prantl, and for their more ready determination analytical keys are provided. These are helpful to the student, no doubt, but it is the author himself who profits most in their compilation. They represent the outcome of the study of the material at his disposal, and supply a faithful record of the peculiarities observed by him; but so great is the amount of variability among plants that it is probable that the specimens studied by some other observer will not fit conveniently into the tables provided for their reception. The well-trained botanist knows these pitfalls, but the novice, till taught by experience, is apt to rely too implicitly upon these artificial aids. Be this as it may, Prof. Sargent has here produced an admirable descrip-

tive account of the trees of the North American continent. There may be—there are sure to be—differences of opinion as to the limitations of the species and varieties here mentioned, and as to the names which should be appended to them, but in a masterly work such details occupy relatively a very unimportant place. A glossary and index add materially to the value of the book.

Science Gossip.

For the benefit of those who can observe the eclipse of the sun next Wednesday only in England or other places not within the line of totality, it may be interesting to note that the sun will be in the constellation Leo, a little to the east of the sickle, the star Regulus being a few degrees to the north-west of him. The planet Mercury will be still nearer the sun in a south-westerly direction from him, and so near inferior conjunction as scarcely to be visible even with a telescope; Venus, which will probably become visible to the naked eye, being at the time in the constellation Cancer, and further from the sun to the north-west, not far to the south-east of the bright stars Castor and Pollux.

Sir William Christie and Mr. Dyson arrived at Sfax, in Tunisia, on Wednesday, and Messrs. Crommelin and Hollis (also of the Royal Observatory) landed at Palma, in Majorca, on the same day, in preparation for the solar eclipse.

The death is announced, at the age of seventy-eight, of Dr. T. R. Thálen, Professor of Physics at the University of Upsala, and well known amongst astronomers for the part he took in the great map of the solar spectrum, initiated by the late Prof Ångström. The Rumford Medal was awarded to Prof. Thálen in 1884 for his researches on spectrum analysis.

A small planet was discovered by photography at Arequipa in August, 1901, which is remarkable for the great eccentricity of its orbit, exceeding that of any other known planet, and comparable to those of some of the short-period comets. It was afterwards numbered 475, and named Ocllo. This object was sought for in 1903, and a planet was found near its place, but proved to be another new one. Observations made in April, 1904, have recently been published in *Circular* No. 101 of the Harvard College Observatory; but these also, according to Dr. Strömgren's calculations (*Ast. Nach.* No. 4041), prove to be of yet another stranger. Three photographs, however, of the veritable Ocllo were obtained at Arequipa last June (*Harvard Circular* No. 103) which will afford the means of determining its orbit with considerable accuracy and render its loss at any future time improbable, notwithstanding its great faintness. As the name is neither classical nor modern, it may be mentioned that Ocllo was the name of a queen of the Incas, fabled to have been a daughter of the sun, and it is therefore considered an appropriate designation for a planet discovered in Peru.

Among Parliamentary Papers the Report of the Fishery Board for Scotland: Part III. Scientific Investigations (3*s.* 1*d.*) is of high interest in its bearing on the life-history of fish and lobsters.

FINE ARTS

Rome and its Story. By St. Clair Baddeley and Lina Duff Gordon. Illustrated by Aubrey Waterfield. (New York, the Macmillan Company; London, Dent & Co.)

Books about Rome are so numerous nowadays that each new-comer is naturally confronted with the question *Cui bono?*—"For what sort of reader are you intended?" And we are afraid that the present candidate is in difficulties about an answer. Yet it is gorgeously arrayed, so far as pride of print and wealth of illustrations go—over 140 pictures (many of them coloured) to 370 pages of text is a liberal outfit—and at first sight the attention is favourably aroused. But, unfortunately, a closer scrutiny reveals shortcomings, and such shortcomings as are very dear at a guinea.

Mr. St. Clair Baddeley, who is concerned with the first part of the work ('Ancient Rome'), has made himself familiar with its surviving monuments and ruins, and has lived among the archæologists and excavators; but his Latinity is extraordinary, and his English is often uncertain and sometimes unpleasing. We cannot think that Virgil wrote

His ego nec metas rerum, nec tempora pons (p. 67),

nor regard "Meridius est" (p. 36), "decursiones funebri" (p. 100), "deverticulæ" (p. 103), "Pons Æmilii" (p. 50), "luciferens" (p. 78), as the utterances of Roman lips; and it is pretty certain that Agrippa was not "Curator Aquarum" in A.D. 33 (p. 26). English is elastic enough in all conscience, but no one with any respect for his mother tongue can tolerate such sentences as the following:—

"Seated upon a throne between two lions (tokens, again, of the wilds and forests of Phrygia), beneath her feet, as an Earth-Goddess, is found the 'Suppedaneum,' or footstool, symbol of earthly sovereignty" (p. 86);

or such horrors as "Mausolei" (p. 102).

Part ii. ('Christian Rome'), the work of Miss Duff Gordon, is not exempt from similar criticism, though we certainly like its style a good deal better; still, even from a lady we cannot accept "splinths of verde antico" (p. 160), "twelfth of the Kalend of May" (p. 199), "Regnante Pontifex Maximus" (p. 295), "*chef d'œuvres*" (p. 328), "tapesteries" (p. 359), "Die and Deæ" (p. 361), nor the following announcement:—

"The Romans, according to the legend, gave him the name of Augustus, because the victory had taken place in the month of Sextilis, and ordained that every August the whole city should rejoice in commemorating his triumph."—P. 163.

The book is certainly diffuse. The first part makes little effort to be connected or historical; and the second, though following something like a chronological plan, lacks compression and clearness. An account that stops short at the sack of 1527 cannot honestly be entitled the story of Rome. If pens, paper, and patience were exhausted at that point, that is none of our business. Rome has had a history—an important and interesting history—since the middle of the sixteenth century, and a book of such proportions as this ought not to leave the reader stranded.

The illustrations are of three kinds—reproductions of water-colours, photographs of paintings and sculpture, and pen-and-ink drawings. The coloured pictures are uneven in quality; some are distinctly beautiful and effective—for example, the Arch of Titus, and the Capitol from the Palatine—but not a few are badly blurred in the printing. Moreover, they are unequal in value, for several of them (*e.g.*, a summer drink-shop, a Roman wine-cart, a fruiterer) are much too modern for a book that stops short, as this does, nearly four hundred years ago. Throughout the illustrations ought to be set in closer proximity to the part of the book to which they are supposed to refer. The little black-and-white drawings in the text are generally good and useful, but we regret to see that Mr. Waterfield's first head-piece gives a familiar Greek frieze of Corybantes to represent 'The Salii Dancing.' We could gladly have spared some of the coloured illustrations in exchange for a good two-colour map indicating the topographical relationship between ancient and Christian Rome. The plan of the Forum and Sacra Via is too minute to be of practical use. The index is inadequate.

We fully admit the difficulty of the task to which the writers have addressed themselves; but we cannot consider that their contribution to the literature of a great subject maintains the honour of English workmanship, or satisfies the needs of "the unleisured traveller" referred to in the preface. "Unleisured" does not necessarily mean "unlettered," for most travellers of to-day, however hurried, take some trouble to read about what they are to see or have seen, and the English scholar who could furnish his countrymen with a really comprehensive, accurate, readable, and companionable volume on Rome—the thing is not impossible—would confer a boon and win a reputation. Τὰ καλὰ τῷ ὄντι χαλεπά.

Fine-Art Gossip.

We regret to hear of the death of M. William Bouguereau, the eminent French artist, who had been seriously ill for some weeks past. M. Bouguereau, who was born at La Rochelle in 1825, and received his art training from Picot, first exhibited at the Salon in 1845, and in 1846 carried off the Grand Prix de Rome with 'Zénobie trouvée sur les Bords de l'Araxe,' whereupon he started for Italy, where he remained for some years studying art. His career was almost one long series of successes, in spite of the fact that he remained to the end uninfluenced by the various new movements in art. His pictures have always been in great demand, more particularly in France and the United States, and his output during the last sixty years has been enormous. He decorated many churches, notably Ste. Clotilde and St. Augustin in Paris, and various religious establishments as well as private houses of wealthy Parisians. He was elected a member of the Academy of Fine Arts in 1876, and was one of the founders, as he has been one of the moving spirits, of the Société des Artistes Français. His polished academicism and his prettiness are too well known to need detailed criticism. His goddesses and cupids are "faultily faultless," and to the modern artist with serious ideals represent a convention in which he cannot take a great interest.

A correspondent writes:—

"I should like to say a word or two about the death of Simeon Solomon, which took place on the 14th inst. Sad as it is to refer to the waste he made of his life, it would perhaps be sadder not to record that it had its foothold of promise as rich as any from which a young artist ever started. Belonging to a gifted artistic family, of which the brother who painted 'Waiting for the Verdict' was the best known, the lad's even more notable talents furnished him with straight admittance into art circles, and his progress was looked for with every affectionate

hope and confidence. His bent, indeed his belief, was towards the Pre-Raphaelite School; but the school was new-born then, and it led the practisers in it to lose their balance at times by being too scholastic; and when Solomon, at the far end of the fifties, exhibited a cradled 'Moses' at the Royal Academy, several critics condemned him as one who had taken the step that was just too far. The sting of this censure was much alleviated by the good nature of Thackeray, who, in one of his *Cornhill* 'Roundabout Papers,' bid 'young S. S.' rally himself from the storming and hold his own; and when in a following year the painter's larger canvas of 'Habet' was hung on the walls—this showing the Roman amphitheatre, with its gorgeous display of architecture, costume, attitude, spectators' enthusiasm—a high place for the new candidate for recognition seemed to be secured. It was, and was retained for a time, but then—a stain. Solomon possessed an Oriental sensuousness, colour and music had a fascination for him; and, whether unwittingly under the influence of this or of real intent, early in the sixties the story went that he had strayed beyond what law allowed, and in the pain of the hearing he passed out into the silences which all felt to be the best. From this cloud of acute distress, with its inevitable shadows, events show that he had no power to emerge. The artist was gone. And of what was left it is only needful to say that it led to his death under the circumstances hinted at during the inquest on his remains. He was of very small stature, the characteristics of his race prominently set upon his face. Probably a little overspoiling, dealt out by those who had a right to hope much from him, led to some affectation he had in manner which irritated older artists; but he was the source of his own downfall, for had not his case been hopeless, endlessly disappointing, there can be no doubt that the limitless generosities of his co-religionists would have helped him to reinstatement, would he only have let it be so."

The Antiquary for September will contain, among others, the following articles: 'Letters from a Westmorland Man in London, 1719–34,' by Mr. S. H. Scott; 'A Quaint Corner of Nottingham,' by Mr. George Fellows, illustrated; 'Prehistoric Pile Structures in Pits in South-West Scotland,' concluded, by Mr. L. McL. Mann; 'The Cathedral of the Peak,' illustrated; and 'The London Signs and their Associations,' continued, by Mr. J. Holden MacMichael.

The death occurred on Tuesday at Newbury of the well-known architect Alfred Waterhouse, who was born in 1830. Starting his profession in the Manchester firm of Lane & Alley, he continued his studies in France, and later in Italy. He set up for himself as an architect at Manchester in 1853, and in 1859 secured success by his design for the Manchester Assize Courts. These were in the Italian Gothic style, and it was as an exponent of modern Gothic that he made fame and fortune for so many years. His buildings as a whole maintain a high level of accomplishment, being nearly always dignified, but they do not represent the ideas of distinction prevalent to-day. He was a master of detail, and one of the most successful users of brick and terra-cotta, which at his best he employed with great ingenuity. He did not always achieve simplicity and harmony in his bigger designs, which suffered from over-elaboration. The Owens College, Manchester, the Town Hall, and many other buildings in the same place, were his work; also the Royal Infirmary and University in Liverpool. In London his most familiar designs are, perhaps, to be seen in the Natural History Museum at South Kensington, St. Paul's School at Hammersmith, the National Liberal Club, and University College Hospital. His work in Oxford and Cambridge colleges is respectable, but in no way remarkable. Waterhouse was made A.R.A. in 1878, and R.A. in 1885, and had of late years withdrawn from private practice.

MUSIC

Musical Gossip.

The eleventh season of Promenade Concerts at Queen's Hall began last Saturday evening. Mr. Henry Wood, the conductor, included in the programme several favourite works from the repertory of the band. Amongst these were the Overtures to 'Tannhäuser,' 'Zampa,' and 'William Tell,' and Liszt's Second Hungarian Rhapsody, while in place of the Operatic Fantasia, hitherto performed at the commencement of the second part of each concert, Grieg's 'Peer Gynt' Suite was given. The playing of the band throughout the evening was notable for verve and precision, and the conductor's indications were closely followed. Vocal pieces were contributed by Miss Lillie Wormald and Messrs. Lloyd Chandos and W. A. Peterkin. On Tuesday evening Mr. Wood brought forward Max Bruch's latest orchestral work, a Suite on Russian Folk-Tunes (Op. 79 b), which was produced at Barmen last autumn. There are five movements, the first, in the nature of an introduction, being of solemn and impressive character. The most interesting is the fourth, a Funeral March, in which themes not in themselves remarkable are treated with notable skill, the orchestration being rich and ingenious. Towards the close a solo violin is used with good effect. A brisk movement, styled 'Tanz,' precedes the Funeral March, while the Finale, fiery and picturesque, exhibits brilliant scoring. On the same evening Sybil Keymer, aged twelve, played the solo in Mendelssohn's Violin Concerto with neatness and freedom, but her command of expression is as yet strictly limited.

The Moody-Manners Opera Companies begin their autumn engagements shortly, the principal company appearing at the Opera-House, Leicester, the second troupe at the Theatre Royal, Birkenhead. Among the singers will be Madame Fanny Moody, Madame Clementine de Vere, Mlle. Zélie de Lussan, Mr. Joseph O'Mara, Mr. Magrath, and Mr. Charles Manners.

The Carl Rosa Opera Company contemplates a season that will extend over eight months, and include almost every town of importance in the United Kingdom. It is proposed to make several additions to the repertory of the company.

Mr. Charles A. E. Harriss, of Ottawa, who was occupied for two years in organizing the cycle of British Festival Concerts given in Canada during the spring of 1903, which Sir Alexander Mackenzie went out to conduct, is now paying a brief visit to England, with the object of arranging a Canadian Festival Concert in London next May. He proposes to include in the programme his two new choral works, the 'Coronation Mass Edward VII.,' specially composed for the British Festival tour, and a choric idyll, styled 'Pan,' composed for the farewell state concert to Lord and Lady Minto in Ottawa last November.

The thirty-second annual festival of the London Church Choir Association will be held in St. Paul's Cathedral on Thursday, October 26th. The music will include a new setting of the 'Magnificat' and 'Nunc Dimittis' by Mr. Montague F. Phillips.

Madame Albani has denied the recently published report that she intends to retire. Her engagements for the next eight months include a tour in Canada, her native land.

Miss Maude MacCarthy is engaged for a series of fifty concerts in the United States during the winter 1906–7, under the management of Mr. Hugo Görlitz.

Les Charmettes, in which the furniture, tapestry, and pictures have not been touched since it was inhabited by Madame de Warens, has been purchased by the town of Chambéry from M. Demarié, inheritor of the property from his maternal grandfather, who acquired it in 1810 from a canon of the diocese of Avignon. In the little *salon* on the ground floor stands the old spinet on which Jean Jacques Rousseau loved to play.

M. Gabriel Dupont, whose opera 'La Cabrera' won the Sonzogno prize, is setting to music a libretto by M. Henri Cain based on M. Jean Richepin's 'La Glu.'

The sudden death of the baritone Soulacroix is announced. Born in 1851, he studied at the Toulouse Conservatoire. He sang for eight years at the Monnaie, Brussels, and after that at the Opéra Comique, Paris. The last *rôle* he created was that of the Prior in Massenet's 'Le Jongleur de Notre-Dame,' produced at Monte Carlo in 1902. During his thirty years' artistic career he received many honours, but what he prized most was the medal given to him by the Government for the courage and sang-froid displayed by him at the terrible fire at the Opéra Comique, whereby many lives were saved.

In No. 8 of *Deutsche Arbeit* (1905), published at Prague, Ernst Rychnowsky mentions the *Jahrbuch der Tonkunst in Wien und Prag* of 1796, soon after the publication of which there appeared a *Patriotisches Journal* containing an anonymous notice of Beethoven, which had escaped the Argus eye of Thayer. The writer accuses Beethoven of merely aiming after originality, without possessing it, and of exaggeration in his playing and in his composition; and he adds, "He appeals to our ears, but not to our hearts, and on that account he will never be for us a Mozart."

PERFORMANCES NEXT WEEK.

Mon. to Sat. Promenade Concerts, 8, Queen's Hall.

DRAMA

THE WEEK.

Comedy.—*The Duffer: a Play in Four Acts.* By Weedon Grossmith.

The new piece with which Mr. Weedon Grossmith begins what must be regarded as an intercalary season at the Comedy differs from the works in which that actor is ordinarily seen by putting in a claim to serious interest. In this alteration is found its chief defect. The attempt, indeed, to secure for its hero a species of sympathy to which he is nowise entitled illustrates a weakness of our stage. As an exponent of arrogant, assertive, and rather blatant vulgarity Mr. Grossmith has not his equal. A certain measure of pathos pervades at times his impersonations. So unconscious of his own defects, and so incapable of being other than he shows himself, is the little wretch he depicts that one is more disposed to pity than to condemn. That the actor should seek to enlarge his method and broaden his art is permissible enough. This should be done, however, by essaying a new line of parts rather than by tinkering with the old. In the selection of his title Mr. Grossmith shows that he means once more to turn to account his established reputation. In an art school, in or around which the action of his piece moves, he is known as "The Duffer." So insignificant is his work that his associates add grotesque accessories to his designs, treating them as street urchins treat the posters that are within reach of their destructive hands. So conceited is he, moreover, that he fancies himself a lady

killer, and, in spite of his absolute insignificance and impecuniosity, makes serious proposals to every woman who smiles upon him or laughs at him. Here is our arrant little snob of past times. The actor of to-day cannot, however, be content thus to repel public sympathy. We live in days when Richard III., Shylock, and Rip van Winkle are accorded humanizing influences, and we are prepared to contemplate and discuss the whitewashing of Iago. Robert Iles, accordingly, the centre of Mr. Grossmith's play, and the Duffer of the title, begins to mend. He is not quite such a duffer after all—then he is not in the least a duffer. After a time he is the greatest painter of his season—an Admirable Crichton—a man to equal whom in artistic and moral respects we may go back in vain to the great schools of the Middle Ages or the Renaissance. Another than he has carried off the year's prize, is the gold medallist, and is being sent out to study at Rome. It is, however, on the strength of the Duffer's work that this triumph has been accomplished, and the Duffer is too magnanimous to let the truth be known. A young lady—who, though stooping to the not very dignified position of painter's model, is of gentle birth—makes open and ultimately successful advances to him; Lady Amelia, the duke's daughter, is penitent and almost heartbroken over her flippant rejection of his suit; and a picture-dealer, contrary to the wont of these gentry, coming to purchase some of his works, tells him that he is a great painter. Thus raised to the skies, the Duffer remains preposterous, but ceases to be funny. All Mr. Grossmith's cleverness fails to reconcile us to this union of Hyperion and the satyr. There is ingenuity in portions of the conception, and a scene suggestive in some respects of 'The Light that Failed' is effective. The whole, however, is not diverting. Mr. Grossmith's opportunities are limited by the restrictions he has placed upon himself; but he acts cleverly, and is amusing at the outset. Miss Gertrude Kingston plays admirably as Lady Amelia; and Mr. Lovell, Miss Rita Jolivet, and Miss Beryl Faber are seen to more or less advantage.

PLAYS AND PLAYWRIGHTS.

The Shadow of the Glen and *Riders to the Sea*, by J. M. Synge, two one-act plays, lately added by Mr. Elkin Mathews to the "Vigo Cabinet Series," are an outcome of the recent attempt to form a national Irish theatre. Both have been acted at the Molesworth Hall, Dublin — the former on October 8th, 1903, the latter on February 25th, 1904. Their exponents seem to have been amateurs. Their fame has, at least, not extended to this country, and the heroine of 'The Shadow of the Glen' had for interpreter a female (presumably), with a name no less baffling to Saxon ears than Maire Nic Shiubhlaigh. The chief attribute of both pieces is designedly, no doubt, a species of gloom we are taught to regard as Celtic, and both have a local colour which renders them impressive, in spite of the occasional *naïveté* of the incidents. Out of such beginnings an Irish drama may well come, and a Saxon mind even is struck with the difference between the characters now presented and the stage Irishmen it has been hitherto told to accept. In 'The Shadow of the Glen' the stage opens on a widow, still youngish, watching in a cottage in which her husband lies dead. A tramp, now a frequent character in Irish plays, enters and asks for a cup of new milk. Instead of this he is bidden to partake of the whisky put out for a wake, in which he is the only participant. Naturally much surprised, he declares:—

"I've walked a great way through the world, lady of the house, and seen great wonders, but I never seen a wake till this day with fine spirits, and good tobacco, and the best of pipes, and no one to taste them but a woman only."

Now the supposed corpse is shamming death in order to try his wife, and the piece ends when, after seeing her embraced by his destined successor, the peasant rises and turns her permanently out of the house. In her accepted exile she is chivalrously accompanied by the tramp, while the corpse cheers his loneliness by sharing with his wife's lover the materials provided for his wake. Grotesque this undoubtedly is, but it is vivid and impressive, and derision is the very last thing that presents itself to the mind. We are not sure that the work, slight as it is, does not approach greatness.—'Riders to the Sea' is more conventional, but not less fine, and has the air of a dramatized Breton legend. In a cottage on the west coast of Ireland, the mother is describing the manner of death of four out of her six sailor sons with a sort of faint prevision that the sea, greedy and inexorable, is calling for the only two remaining. One is already being tossed up by the pitiless waves, and the other has left her to face his doom. The closing scene, when she learns of her loss, has something of the solemnity of Maeterlinck with the substitution of realism for mystery: "They're all gone now," says the bereaved woman,

"and there isn't anything more the sea can do to me.....I'll have no call now to be up crying and praying when the wind breaks from the south, and you can hear the surf is in the east, and the surf is in the west, making a great stir with the two noises, and they hitting one on the other. I'll have no call now to be going down and getting Holy Water in the dark nights after Samhain, and I won't care what way the sea is when the other women will be keening."

But we must pause. If the Irish theatre is to give us much work of this class, we hope to be accorded a share in its inception and execution.

L'Avocat Patelin. Translated by Samuel F. G. Whitaker. (Fisher Unwin.)—In translating for the English public the famous farce of 'L'Avocat Pathelin' Mr. Whitaker has selected, in place of the fifteenth-century 'Pathelin,' the three-act adaptation of L'Abbé Brueys, produced at the Comédie Française on the 4th of June, 1706. The original, first printed with a date on the 20th of December, 1490, and frequently reprinted in editions mostly of extreme rarity, is recognized to this day as the *chef-d'œuvre* of French farce. It is, indeed, in regard of story and characterization, the best-known work of the mediæval secular theatre, and is in its line as much of a masterpiece as is in another 'Everyman,' the production of which it probably anticipated by some years. 'La Comédie des Tromperies, Finesses et Subtilitez de Maistre Pierre Patelin,' as in time a work known at first simply as 'Maistre Pierre Pathelin' came to be called, is of unknown date and authorship, and has been conjecturally assigned to Villon and most of the principal writers of the epoch. Its theme, that of a sharp lawyer finding himself the dupe of a client cunninger than himself, was used in the 'Dialogue de Maître Tubert et d'Antroignart' of Eustache Deschamps, otherwise Morel, a contemporary, and was a favourite subject of succeeding farce. In the original, which is virtually in two parts, there are but five characters: Pathelin, a swindling and impecunious lawyer; Guillemette, his wife and ally in his frauds; Guillaume, an imbecile, but close-fisted *drappier*, whom he does out of the cloth for a suit of clothes; Thibaut Agnelet, otherwise le Bergier, whom Guillaume prosecutes and Pathelin defends on a charge of sheep-stealing; and the judge before whom the case is tried. Guillaume, in the second portion, which is much the better, while stating his case against Thibaut, keeps mixing it up with that against Pathelin, whom he recognizes as having obtained possession of his cloth. This confusion of the two leads to the repetition by the judge of the now immortal phrase "Revenons à nos moutons." The way in which Thibaut, at the prompting of his advocate, evades payment for the sheep he has stolen is by shamming idiotcy, and in answer to every question bleating like a sheep. Pathelin is hoist with his own petard, since after Thibaut has avoided all responsibility for his crime he maintains his attitude of stupidity, and answers with the same cry of "Bé! bé!" every application of Pathelin for money. In fitting for an early eighteenth-century public this primitive and admirable piece Brueys, who for once seems to have dispensed with his constant associate Palaprat, worked on what were then conventional lines, providing Pathelin with a daughter Henriette, who is in love with and beloved by Valère, the son of Guillaume. A happy termination is accordingly reached when at the close Guillaume is coaxed or coerced into signing a contract between the young people. Thibaut, now called Agnelet, is also provided with a mistress of the soubrette type named Colette. By this hybrid piece, in which it is difficult to trace any of the merits of the original, 'Maître Pathelin' is still known on the Théâtre Français.

Mr. Whitaker's notion of translating this work consists principally in distorting language that would be much more effective if simpler. Phrases are constantly employed such as "Something have I learnt that contents me not," "Thou wilt no more mutton take," and so forth. Had ordinary methods of speech been adopted a fair idea of Brueys's farce might have been conveyed. Some of our societies for the performance of early drama might do worse than produce this work, the influence of which might well be amusing as well as educational.

Mr. Whitaker's introduction supplies a moderate amount of information concerning a play all but unknown to English readers. Long extracts from the original are given, under the date 1474, in the 'Histoire du Théâtre François' of the brothers Parfaict, vol. iii. pp. 167 *et seq.*

Dr. Armyon's Wife (*Die Wappenhaense*). By Paul Oskar Hoecker. Adapted from the German by C. Ainsworth Mitchell. (International Copyright Bureau.)—So characteristically German in sentiment and action is 'Die Wappenhaense' of Herr Hoecker, that the employment of any means which will commend it to English tastes and fit it, as is presumably intended, for the English stage may be pardoned. It may be doubted whether those to which Mr. Mitchell has resorted are the best calculated to the end in view. To aim at retaining the spirit of the original rather than the letter is natural and expedient. Before substituting English for German characters and transferring the scene to London and Windsor, it would have been well to ascertain if the action was suited to the new environment. It is with the consent of the author that the alterations have been made, and that a Yorkshire or a cockney accent is substituted for the slang of German medical students or the dialect of a Berlin charwoman. To a small section of English playgoers 'Die Wappenhaense' is known, in consequence of its production by the German company at the Royalty Theatre on December 1st, 1903. It is a painful work, inspired, like much German drama, by Ibsen, and gives an animated picture of a species of Bohemianism which it would be difficult to parallel at the present day in England. Dr. Armyon himself is conceivable in any age or country. A weak-minded, obstinate sot, incapable of any form of self-control, he lets all opportunities pass, fails to keep the most important appoint-

XUM

ments, and kills his patients by sending unqualified assistants to attend to the most serious cases, while he continues a course of reckless debauchery, and, after ruining a fine practice, compels his wife to quit her home, taking with her their only child. This is well conceived, and with more competent treatment might lead to a work worthy of Balzac. But all here is coarse and vulgar, and the contemplation of endless potations inspires nausea. For this, of course, the author, and not the translator, is responsible. We doubt, however, whether any rowdyism is to be found in England corresponding to that of Armyon's associates, and the scenes in which the partners of Armyon's revels intrude upon and insult his wife are inconceivable as well as unpleasant. If, as may be supposed, the object of the dramatist is to show the reverse of the picture of the joy of living, it would have been better to leave the scene in Berlin, where potations, if more incessant than in England, are less harmful. The intrusion amidst domesticities of scenes of bibulous, almost orgiastic revelry inspires no conviction. The wife's complaint at the end of the fourth act, "I'm so unhappy! so unhappy!" recalls an utterance of Mélisande in 'Pelléas and Mélisande,' which, when delivered on the English stage, stirred the public to amusement not wholly divested of ribaldry.

Iconoclasts: a Book of Dramatists. By James Huneker. (Werner Laurie.)—That is a convenient if not specially significant classification which includes under one heading celebrities such as Ibsen, Strindberg, Becque, Hauptmann, Sudermann, Hervieu, Gorky, Duse and D'Annunzio, Maeterlinck, Villiers de l'Isle Adam, the Princess Mathilde, and Mr. G. B. Shaw. In what sense any of these is to be regarded as an iconoclast we know not, nor can we easily tell what is the special object of their joint or individual attack. Mrs. Grundy, with whom all of them are more or less at disaccord, is the object of no avowed cult, nor is so remarkable a combination necessary to shake her formidable, though somewhat discredited sway. It may perhaps be assumed that Mr. Huneker, having written for *The New York Sun* a series of articles on the best-known dramatists of the day, has assigned them a collective title chosen rather for its piquancy than its appropriateness. It is as a musical critic that Mr. Huneker is best known, and it is as such he has written on 'Anarchy in Art.' The methods that have won recognition when applied to Chopin and Strauss seem less successful when transferred to Sudermann and Mr. Shaw, and his present volume, instead of possessing the simplicity with which his earlier utterances have been credited, consists of an attempt to read into well-known works forced significances, and to employ concerning them words which darken counsel. A special object of the writer's admiration, Ibsen, who is characterized as "The Individualist," comes first in order, and occupies the most space—one hundred and thirty-six pages out of four hundred and thirty. Concerning Ibsen we are told things the full significance of which we fail to grasp. We are thus informed, almost at the outset, that

"the Ibsen plays are character symphonies. His polyphonic mastery of character is unique in the history of the drama; for, as we shall presently show, there is a second—nay a third—intention in his dialogue that give forth endless repercussions of ideas and emotions."

Of his technique we learn that it

"is rather tight in the social dramas, but the larger rhythms are nowhere missing. The most artificial of art forms, the drama, is in his hands a mirror of many reverberating lights. The transubstantiation of realities is so smoothly accomplished that one involuntarily remembers Whistler's remark as to art being only great when all traces of the means used are vanished."

Whistler's axiom appears nothing more than a reassertion of the *ars est celare artem*.

"The grandiloquent silhouettes of the Romantic drama, the mouthers of rhetoric, the substitution of a bric-à-brac mirage for reality, have no place in Ibsen's art."

This is satisfactory no doubt, though we fail to grasp the full extent of our gain:—

"In Ibsen there rage the thinker, the artist, the critic. These sometimes fail to amalgamate, and so the artistic precipitation is cloudy."

Of the departure from her home of Nora Helmer Mr. Huneker is moved to say:—

"Nevertheless that slammed door reverberated across the roof of the world, and not over the knocking at the gate in 'Macbeth' was there such critical controversy."

Now of like "tall" and unavailing "talk" there is a superfluity, and there is a strange and strained employment of modern literary cant. "Banal"—why not "commonplace," its translation and equivalent?—occurs as frequently as "poncif" in the writings of a romanticist of 1830. All dissent seems to be "anarchic." We have phrases such as "In all the conflicting undertones of his temperament and intellect, Ibsen has maintained his equilibrium," and such graces of style as "The play seems a trifle out-moded to-day." "We sense the beauty, but are uncomfortable in its presence." Mr. Huneker has sometimes a message if he will deliver it more intelligibly; he is, moreover, well informed so far as regards the modern school of writers, but he studs his criticisms with gems of thought not always very scientifically cut. Concerning that quaint and interesting individuality, Villiers de l'Isle Adam, he says, "He was poor, always poor, and poverty makes extraordinary bedfellows." If Mr. Huneker would abandon his strain after originality and epigram, and would be content to be natural and reposeful, his chances of enduring success would be better.

Dramatic Gossip.

The first event of the autumn season will consist of the revival at His Majesty's on September 4th of 'Oliver Twist.' The 5th will witness at the Adelphi 'Dr. Wake's Patient,' the 6th 'On the Love Path,' at the Haymarket, the 7th 'The Prodigal Son,' at Drury Lane, and the 9th 'Dick Hope' (as is elsewhere said) at the St. James's.

The autumn season at the Court will begin on September 11th with a revival of 'John Bull's Other Island,' which, after a run of six weeks, will be replaced by 'Man and Superman.' Early in the new year 'Capt. Brassbound's Conversion' will be given, with Miss Ellen Terry in the part of Lady Cicely Waynflete.

Mr. St. John Hankin's new play, 'The Return of the Prodigal,' will be given at the Court Theatre on the afternoon of September 26th.

Mr. and Mrs. Kendal will reappear at the St. James's on September 9th in Mr. Ernest Hendrie's 'Dick Hope.'

The opening by Mr. Seymour Hicks of his new Aldwych Theatre is fixed for December 19th, when a revised version will be produced of 'Blue-Bell in Fairyland.'

The new piece with which Mr. Forbes Robertson will, as it is anticipated, open La Scala Theatre on September 16th, is temporarily called 'Morven,' which is, of course, suggestive of Fingal. Among the various and rather fluctuating schemes of the new management is one for the revival of 'The Winter's Tale,' with Mr. Robertson in his old part of Leontes, and Miss Gertrude Elliott as Perdita.

'An Angel Unawares,' the promised novelty of Mr. Robert Vernon Harcourt, is, after preliminary trials in Liverpool and Birmingham, to be produced by Miss Fanny Brough at Terry's Theatre on September 12th.

In October 'Mr. Hopkinson,' with a new exponent of the hero, will return to Wyndham's Theatre.

'On the Quiet,' by Mr. Augustus Thomas, which is to be produced at the Comedy on September 25th, will have a preliminary run of a week at Cardiff.

'The Sword of Gideon' is the title chosen for the new piece of Mr. Henry Arthur Jones, shortly to be given in New York.

MISCELLANEA

VERSES TO THE AUTHOR OF 'THE HEPTAMERON.'

53, York Street Chambers, Bryanston Square, W.

An error in the British Museum Catalogue was the occasion of my making an interesting discovery the other day. Under the name of Margaret of Valois, queen consort of Henry IV., King of France, I found a cross-reference to some Latin verses written in honour of Margaret of Valois by the three noble ladies Anne, Margaret, and Jane Seymour. When the volume was brought to me, I discovered that the subject of the verses was Margaret of Valois, the author of 'The Heptameron,' the sister of Francis I. and the grandmother, not the wife, of Henry IV. The book is entitled

"Le Tombeau de Marguerite de Valois, Royne de Navarre, faict premierement en Disticques Latins par les trois Sœurs Princesses en Angleterre. Depuis traduictz en Grec, Italie, et François par plusieurs des excellentz Poëtes de la Frace.

"Avecques plusieurs Odes, Hymnes, Cantiques, Epitaphes, sur le mesme subiect."

At the foot of the title-page I read that the book was published:—

"De l'imprimerie de Michel Fezandat et Robert Gran Ion au mont S. Hilaire à l'enseigne des Grans Ions et au Palais en la boutique de Vincent Sartenas.

"1551. Avec Privilège du Roy."

The date 1551 is in itself a proof of the error in the Museum Catalogue, for Margaret, Queen of Henry IV., was not born until 1553.

I am, however, grateful to this error for having caused me to make the acquaintance of a delightful little book, which illustrates the scholarship of the Renaissance, and especially that of the Renaissance women. For here are the Latin verses of three English ladies considered by French scholars to be worth translating not only into French, but into Greek and into Italian. Each Latin verse is followed by several versions, one in Greek, one in Italian, and two or three in French. The French versions are by various contemporary poets, the best known of whom is Joachim du Bellay. The accomplishments and attractions of the Ladies Seymour are set forth in an address at the beginning of the book, where they are praised as possessing the beauty of Helen, the honesty of Thirme, the mind of Socrates, the language of Homer, and the "bien escripre de Cranne leur Precepteur."

The volume is dedicated to Margaret of Savoy, who is described as the niece of the subject of the verses, which is a further proof that they do not refer to Margaret, Queen of Henry IV.

Margaret of Savoy was the friend and patron of Joachim du Bellay and of Ronsard, whose ode in honour of the Ladies Seymour appears in this volume.

The confusion in the Museum Catalogue is not uncommon. It is explained by the fact that during the course of one century the House of Valois was distinguished by three princesses, all named Margaret, all learned, all writers of verse. Two were Queens of Navarre, and each of the three was known both as Margaret of France and Margaret of Valois.

Winifred Stephens.

LITERATURE

The Boy and his School. By Robert L. Leighton. (Murray.)

THE head master of Bristol Grammar School has given us an original and valuable criticism of modern education. 'The Boy and his School' is, beyond doubt, the best contribution to the study of education we have read during several years past. The Board of Education might learn much from it; local authorities should ponder it; teachers and parents will find it a sane guide through the present chaos of secondary education. The writer has had a long experience of secondary teaching, and has evidently devoted himself to close observation of its many problems. Consequently he argues with remarkable cogency, though he is very cautious and deferential in coming to conclusions. All is hard common sense: there is no conscious ornament of rhetoric or humour; and yet there is not a dull page in the book. Incidentally it furnishes the best answer we have yet seen to the contentions of Prof. Armstrong and his "heuristic" followers. Mr. Leighton cries "hold" to the reformers, and asks them how they can regard themselves as fit for constructive work when they are necessarily ignorant of the factors involved in the problem.

We shall here attempt a brief sketch of Mr. Leighton's argument. Schooling, which is too commonly confused with education, is really concerned with less than 30 per cent. of the whole effect produced upon the mind by educational forces. All kinds of environment—national, social, and individual—may thwart schooling, yet these forces are mostly ignored even by our educational enthusiasts. How important in individual environment are the general bodily health, eyesight, and hearing of the pupil, and the quality of the teacher and his teaching! Yet, in spite of the real importance of these, it is nearly always assumed that something like 90 per cent. of the total effect of schooling is caused by this or that subject being chosen for teaching. The importance of the parts of the curriculum is to-day vastly overrated, and hence we have champions of various subjects clamorously advertising the merits of their particular studies and methods as specifics for all educational evils. Mr. Leighton urges with reason that the friends of education must try to lift educational discussion to the level of sound logic, and the first step must be to observe and classify facts. He suggests a classification under three heads: (1) the facts of the individual pupil—personal facts; (2) facts of environment; (3) facts of schooling. Certainly this seems to be a good working classification. Personal facts do not often admit of material modification, but the facts of environment do admit of very great modification. Facts of schooling will fall into their proper place when once the other two classes are observed and arranged with tolerable fullness and accuracy. Mr. Leighton proceeds to deal with these three headings. We need not follow him into the details of personal facts, but there are many of these which should be considered as disqualifying a boy from getting his due share of benefit from a secondary school. Stupidity and idleness are subdivided into nice variations, which, at least to the teacher, are of great importance. Here Mr. Leighton draws some plain inferences, which, with all deference, we commend to the Board of Education. Has the Board faced the fact that "secondary education is something which a large part of the population is either incapable of receiving or has no desire to receive"? Yet the fact is that secondary schools, in receiving pupils who are incapable of doing the distinctive work of such establishments, are most seriously clogged in their progress by having to sacrifice the able and industrious to the idle and stupid.

In dealing with facts of environment the writer properly emphasizes their vast importance. He protests against the excessive demands nowadays made on the schools by the public—demands from which results "the overloading of time-tables, which has made our schooling of less value than it was forty years ago." The schoolmaster's business is to furnish his pupils' minds with "a solid nucleus of systematized knowledge, full and accurate within its limits, so far as human knowledge is capable of fullness or accuracy." If parents would be content with this we should not hear so much of ridiculous demands and equally ridiculous attempts to teach in class general information, a mental asset very valuable in itself as stimulating variety of activity, but only to be supplied with success by what Mr. Leighton calls the "unofficial agencies."

He goes on to sketch what he considers would be a favourable environment for a child of good average capacity, naturally giving the first place to the mother, whose main business it must be to inculcate originality, observation, and Christian charity while the child is in the nursery. It is on the point of environment that boarding schools are chiefly deficient, through their lack of variety and so of mental stimulus. The great majority of boys do not profit much by books or laboratories, but rather by practical experience, which should therefore be as extensive and varied as possible:—

"But instead of gaining such wide experience boarders live a cloistered life, secluded and protected as far as possible from the sources of infection, physical or moral, which are so numerous in a wicked and insanitary world."

Mr. Leighton is not slow to draw the inference that the good public day school has great advantages over any boarding school.

Coming to his third heading, 'Schooling,' Mr. Leighton wisely premises that the school must first of all realize its limits. What is the object which the school should help the pupil to attain? and what is the kind of help it should afford? It is clear that nothing the secondary school can teach is worth teaching for the sake of its direct and visible "earning capacity":—

"All it can do is to give the pupil some practice in certain habits, part moral and part intellectual, which are essential to the achievement of any useful work, be it great or small."

It should teach the habit of duty, furnish a course of gymnastics for the faculties of observation, memory, and logic, and carry the pupil so far in at least one subject that his acquaintance with it may be capable of serving him as a standard of comparison. It is in this last requirement that secondary schools may be said to fail almost completely. This failure is brought about mainly by the overloading of the time-table to a pitch at which the subjects probably become mutually destructive. If we are to abate such a grotesque excess, we must discover some principles on which to base a rational selection. We cannot say categorically that certain subjects produce certain habits, but we can ascertain that they tend to produce certain habits, if we set about our investigation in a thorough and cautious manner. Mr. Leighton next demolishes, satisfactorily to the present reviewer, the alleged superiority of experimental science over Latin and Greek as a teacher of observation and sound induction. Moreover, the phenomena with which the study of Latin and Greek are concerned—namely, thoughts and their accurate and clear expression—are likely to be always with us in the ordinary business of every-day life. As compared also with the modern language, scientifically or unscientifically taught, the old classical training, tested by the power it has to benefit those who cannot carry it very far, comes out, according to our author's verdict, superior to any of its newer competitors. His belief is that intellectual capacity is very rarely special, but is specialized by habit. To evict Latin and Greek to make room for this or that other subject can be no real "reform," because such action is really irrelevant to the evils which call for a remedy. Unfortunately the Board of Education has only one apparent

XUM

remedy, tinkering at the curriculum, and this is bound to be ineffective.

The general trend of Mr. Leighton's essay is thus seen to be destructive; but it is necessarily so. However, it will have done a great deal if it causes thinking men to accept facts alleged, even on what is apparently the highest authority, with extreme caution. Provisionally we may conclude that Latin is the most practically useful of school subjects; but the true gymnastic effect of different studies cries aloud for patient investigation, which must be based on a revised method. The proper men to do this are obviously schoolmasters, and professional organizations, such as the Head Masters' and Assistant Masters' Associations, should be able to supply the machinery to co-ordinate the efforts of individuals. Everywhere it is recognized on the one hand that people are enthusiastic, on the other that they are ignorant, about secondary education. In patient study of educational problems on some such broad and comprehensive lines as Mr. Leighton suggests lies, we believe, the way to progress in English secondary education.

The Works of Lucian. Translated by H. W. Fowler and F. G. Fowler. 4 vols. (Oxford, Clarendon Press.)

LUCIAN has never come to his own as a master of style and satire. We know singularly little of his life beyond what can be gathered from his own writings, and what we do know is obviously coloured by prejudice directed against one who was an impartial mocker of many creeds and superstitions. Two or three such masters of joyful clarifying scorn stand out in the world's history, who are on the side of good sense, if not of the angels, doing as large a work, may be, as martyr-flames and trenchant swords, though one less palpable to the average eye. We are sure that the world is better for its Voltaire, its Swift, its Carlyle. But none of these appeals to us as lovable, and the class of satirists, as a whole, is tainted with suspicions of personal spite, constitutional melancholy—the qualification, in fact, of promoting light, but by no means sweetness. With Lucian almost alone it is not so, for we do not find the lack of feeling discovered by the translators whose work is before us. He is pre-eminently delightful to read, whatever his subject may be. He is amused, not resentful—critical, but not intolerant. He stands aside contemplating the game of life, proffering the smile which, perverted into a sneer, would perhaps have been more immediately fashionable, but in no wise more illuminating. He shares, of course, with those who say things gracefully the vulgar accusation of not meaning them, or, indeed, meaning anything at any time; but we see no ground for supposing that he had no serious convictions, because such do not appear in his published works. The fact that the seer and the prophet usually possess no sense of humour is not to their credit—rather a serious diminution from their human quality. Gaiety, in this country at any rate, is always under suspicion; and it is forgotten that the maker of Falstaff has done incalculable good by that single character, which was beyond the scope of the author of 'Paradise Lost.' We know nothing to Lucian's discredit, though it is clear, we think, that he shared Erasmus's dislike to being the martyr of a reformation, and might have sacrificed orthodoxy, if there had been such a thing, for the sunny side of life's way. We think of him as what one would call a scholar and a gentleman of his time, though without a trace of the dullness often associated with that estimable combination. He did not, like some very great writers, make a name through the charm of his egoism; he was not buried in his own virtue like his contemporary Marcus Aurelius, but he wrote Greek as if he was born to it. He may almost be styled a slang Plato. "Glib," we have heard him called, but it was almost a compliment, since the speaker had devoted many years to the crabbed and incoherent gravity of Marcus. The emperor and the satirist shared some opinions — indifference to worthless popular judgment, and the resolution to stop "short of the sweating point," as Marcus puts it in the one passage which has a touch of modern slang. Marcus, says Renan, in his brilliant but largely perverse study,

> "understood but one thing perfectly—duty. What he lacked was the kiss of a fairy at his birth, a highly philosophical matter in its way; in other words, the art of yielding to nature and gaiety, an art which teaches us that *abstine et sustine* is not everything, and that life must include 'laughter and enjoyment' as well."

The fairies were abundantly kind to Lucian; they gave him gaiety and the gift of expression, for want of which many prophets and teachers lack a hearing. Lucian might have quoted the saying of Democritus that life without a festival is like a long road without an inn. Marcus, like Tolstoy, is for high hours and exceptional temperaments. Lucian is for the world, essentially for no particular time or public, and therefore as much modern as ancient. We may claim for him

> "the undeniable merit of representing certain aspects of contemporary society with a force and accuracy not even rivalled by any other writer,"

but this is safe, cold praise. His style and manner are something apart. The present reviewer has often fancied that in his case, as in Meleager's, there was a meeting of Syrian and Greek elements which produced rare distinction, a priceless vintage of which the secret has never been since revealed. Late, abominably late, in the roll of Greek literature from the foolish scholar's point of view, this delicious pair call for recognition in the histories, the schools, and colleges which neglect them. Lucian has been added tardily to school-books, and must have, one thinks, an amazing effect on boys accustomed to moan and groan over the parasangs of Xenophon, but we have yet to see any English edition of the complete Greek Anthology, in which Meleager's work shines as "apples of gold in pictures of silver."

The Greek Anthology could never, perhaps, have a wide appeal to the ordinary public, but we do not see why that large and respectable body should not enjoy reading Lucian as set forth by Mr. and Mrs. Fowler. Their translation is decidedly good; they have ventured on some daring modernisms, but these we can tolerate if only lightness is secured. We are no pedantic opponents of the present, like Dr. Jasper Mayne, who published his translation of Lucian in 1664, and complained in his dedication to the Marquis of Newcastle of persons who "do defile the English tongue with *republick* words." And we find in the version before us that freedom and ease of style which are essentially Lucian's. The translators are adept at finding a neat English idiom to fit the Greek. Our only complaint is that they split up the sentences rather too much, and occasionally leave an impression of jerkiness which the original does not suggest. They have clearly taken pains, too, to appreciate the *nuances* of the Greek. With Homer and much Greek tragedy at his finger ends, Lucian had naturally a tinge of high poetical diction in his style, which shows up humorously the mockery of his gods, heroes, and courtesans. This element of serious style has been introduced in the translation of No. XXIII. of the 'Dialogues of the Dead' without warrant. Perhaps Mr. Fowler thought that the presence of Persephone justified a poetical touch, but it is not in the original picture, and the end of this same dialogue sinks to most banal English.

Lucian's work in the way of dialogue has had many followers. In his 'Reply to the Man who called him a Verbal Prometheus' he lays just claim to the novelty of the combination of comedy and dialogue, though he adds here and elsewhere that novelty in itself has no great merit. We think it fair to give a passage of some length showing the powers of our translators. The dialogues are each signed separately "F." and "H.," but the translators are equally good, and show little difference in style. Here is part of the fourth 'Dialogue of the Dead' between Hermes and Charon. They are settling up accounts for an anchor and other things. We take up the dialogue at the last items:

> *Her.* Caulking-wax; nails; and cord for the brace. Two shillings the lot.
> *Ch.* They were worth the money.
> *Her.* That's all; unless I have forgotten anything. When will you pay it?
> *Ch.* I can't just now, Hermes; we shall have a war or a plague presently, and then the passengers will come shoaling in, and I shall be able to make a little by jobbing the fares.
> *Her.* So for the present I have nothing to do but sit down and pray for the worst, as my only chance of getting paid.
> *Ch.* There is nothing else for it; very little business doing just now, as you see, owing to the peace.
> *Her.* That is just as well, though it does keep me waiting for my money. After all, though, Charon, in old days men were men; you remember the state they used to come down in—all blood and wounds generally. Nowadays a man is poisoned by his slave or his wife, or gets dropsy from overfeeding—a pale, spiritless lot, nothing like the men of old. Most of them seem to meet their end in some plot that has money for its object.
> *Ch.* Ah! money is in great request.
> *Her.* Yes; you can't blame me if I am somewhat urgent for payment.

All that is given here being of good quality, we are sorry that there is not more. On the title-page will be found the legend

that the 'Works' are "complete with exceptions specified in the preface." Turning to the preface, we find, before the 'List of Omissions,' a note that in "a very few other passages some isolated words and phrases have been excised; but it has not been thought necessary to mark these in the text by asterisks." Omissions occasionally are necessary for a decorous Western audience, but we strongly object to their not being marked in any way in the text. The list of whole chapters or pieces omitted includes seven of the 'Dialogues of the Gods,' one of the 'Sea Dialogues,' two chapters of 'The True History,' the 'Lucius sive Asinus,' three of the 'Dialogues of Courtesans,' the 'De Dea Syria,' the 'Philopatris,' the verse including the 'Epigrams,' and the curious little tragic play on gout. Four philological pieces, which "almost defy translation," have yet been successfully rendered here; but we must say that we think some of the omissions disclosed above are indefensible and highly regrettable. It is true that both Dindorf and Jacobitz regard the 'Lucius' as spurious, but we are not convinced by their reasoning; and the piece, from its close connexion with the 'Metamorphoses' of Apuleius, has a special interest. The 'Philopatris' has been long dismissed by scholars, English and German, as of later date than Lucian's day, but the 'De Dea Syria' is admittedly genuine; it is a document of high interest for the study of religion; it has been already translated into English —*e.g.*, by John Carr at the end of the eighteenth century. It is much more important than the 'Lexiphanes' or 'A Purist Purized,' and more interesting, we should think, to the general reader.

For thatreader the 'Introduction' is clearly intended. It is a grave disappointment to the expert, who is merely referred to Croiset's 'Essay on the Life and Works of Lucian,' a book of great charm, it is true, but a book which exhibits the French quality of brilliant but hardly sound inference from insufficient data. We might surely expect that the translators would give their reason for the omissions mentioned above, and would exhibit the results of some personal research into Lucian's style and vocabulary; but their work is admittedly a *réchauffé* of Croiset. In the section on 'Lucian as a Writer' the authors remark that "they have no pretensions whatever to the critical faculty," and we cannot say that the scholar or other intelligent person who wishes to place Lucian will get much from their gossipy array of quotations and allusions, which do not seem to go to the root of the matter at all. Commonplaces abound with otiose illustrations. We read, for instance, that Lucian

> "has no respect for authority. Burke describes the majority of mankind who do not form their own opinions as 'those whom Providence has doomed to live on trust'; Lucian entirely refuses to live on trust; he 'wants to know.' It was the wish of Arthur Clennam, who had in consequence a very bad name among the Tite Barnacles and other persons in authority."

It is odd to find the position of a great writer like Lucian explained by means of an entirely undistinguished and banal character in the works of Dickens. But, after all, the general reader will like this, and he, of course, is chiefly considered nowadays. We hope he may be encouraged to proceed by lighting on this page of the 'Introduction,' for he will find plenty of good sport, and things wittily said, which might have been written with an especial eye on the present age. Lucian will exclaim for him about "all this talk concerning actors," tickle him with a trenchant article on wealthy and illiterate book-buyers, tell him how to behave at a festive party or how to write history, or show him religious charlatans of the same sort as those who are over-advertised by a press greedy for sensation.

The fourth volume contains a useful list of notes which will make all allusions clear to the reader who does not know classical mythology and biography. Thus it begins with Plato's 'Academy' and ends with 'Zopyrus.' References to the original sources of information are not added, but all that is essential for the ordinary reading of Lucian is put concisely. The volumes are attractive in print and appearance, as may be expected, but we do not think the list of notes just mentioned is sufficient to excuse the absence of an index of names and persons. That we demand from everybody and expect from classical scholars, who ought to know the value of quick and accurate reference.

The Complete Golfer. By Harry Vardon. (Methuen & Co.)

IF the present generation of British amateur golfers are on the whole inferior to their predecessors—which is the opinion of many besides the author of this volume — it certainly is not for want of scientific treatises on the game by those best qualified to give instruction. We need only mention the names of Mr. Horace Hutchinson, Mr. G. W. Beldam, and J. H. Taylor. The latest contribution to the literature of golf will be read with unusual interest as being the work of one who is not only original in his methods and fascinating in his style, but also perhaps the most finished and graceful player that has ever lived. In the case of those who do anything supremely well there is always a curiosity to learn how they began doing it. Vardon tells us that he started, "a bad boy of seven," to carry clubs for some English golfers who had laid out a course on the common land of his native place, Grouville, a small village in Jersey. Very soon he and his mates were playing golf themselves. His first club was a stick of thorn wedged into a roughly trimmed piece of hard wood of the tree called lady-oak. With this primitive implement and a big white marble, locally known as a "taw," the future champion won his earliest victories on a course of four holes, each about fifty yards long. "Many of our best matches," he says, "were played in the moonlight. The moon seemed to shine more clearly at Jersey than in England, and we could see splendidly."

Although the chapter entitled 'The Way to Golf' contains much excellent advice to the beginner, we are not convinced that a slow process of tuition for several months under the eye of a professional is the only right and desirable method of learning golf. In the first place, comparatively few can afford the time and money which Vardon's prescription demands. The ordinary man does not regard golf as the chief business of life, but simply as an exhilarating sport; and is not this the more wholesome view? Let him strive to lower his handicap by all means. Let him seek professional tuition, if he likes, or study 'The Complete Golfer,' where it will encourage him to find that Harry Vardon never took a single golfing lesson from any one, and that his style is purely the result of watching others play, and copying them when he thought they made a stroke in a particularly easy and satisfactory manner.

Coming to technical points, Vardon strongly recommends his own overlapping grip, an innovation for which a great deal may be said, since it converts the two hands, which sometimes are apt to thwart each other's movements, into a single engine working harmoniously towards the desired end. He combats with sound reasoning the ancient maxim that the club should be held lightly in the right hand and tightly in the left. He also denies that approach shots should be played with the wrist, observing that "there is no such thing as a purely wrist shot in golf—except on the putting green." These are but a few specimens of the originality which is so marked a feature of his play, and which makes his exhaustive discussion of the various strokes surprisingly fresh and illuminating. Most of them have long been familiar to every golfer of the first class, but we may specially refer to one which we have never had the good fortune to see accomplished in actual play—"the follow-through shot"—because a controversy has recently arisen as to its legality. This stroke is made on the putting green, when the player's ball is very close to the hole, and that of his opponent lies on the edge of it, blocking the way. The object, as Vardon explains, is to knock the opposing ball right away over the hole, and to follow through with your own and drop in. It is, in fact, the application to golf of the follow-through stroke in billiards. That it is contrary to the letter or spirit of the rules governing the former game cannot be maintained, and there does not appear to be any reason why those who have mastered it should not reap the reward of their exceptional skill.

The book fully deserves its name. Room is found for almost every topic of interest to golfers, and the author wins our sympathy and respect by his unfailing good sense and good humour, as well as by the modesty with which he expresses his opinion. We are glad to note that he puts in a plea for the old-fashioned foursome, and condemns as "a kind of mongrel mixture" the new four-ball game which has come into vogue of late years. On crowded greens, at any rate, it causes justifiable irritation, particularly when, as often happens, the offenders are far from being expert. Vardon has much to say concerning the vexed question as to how courses should be laid out. He considers the links of the Royal St. George's Club at Sandwich to be the best in the world, then Prestwick. Many who, like the present reviewer, learnt their golf at

XUM

St. Andrews, will be disappointed with the verdict, "a good course generally, but its bunkers are badly placed." The old order changeth, with a vengeance! Is this the result of the American invasion of rubber-cored balls?

In view of the fact that Vardon is once more taking part in a big match for money, the following remarks will be read with interest:—

"The sightseers of golf ask why there are no such matches now. I think it is because golf professionals have to work too hard for the money they earn, and they do not care for the idea of throwing it away again on a single match. They do not receive large 'benefits' or gate-money, as do professionals in other branches of sport. So they deem it best to be careful of their savings. Besides, such matches tend to create bad feeling among the players, and we professionals are such a happy family that we distrust any scheme with such a tendency. Moreover, golf at the present time is a delightfully pure game, so far as gambling is concerned—purer than most others—and such matches would very likely encourage the gambling idea. That would be a misfortune. I contend that, after all, for the best and fairest and most interesting trial of strength there is nothing like a good tournament where each player has to test himself against all comers. Every man plays to win, the golf is generally good, and what more is wanted?"

We cannot bring this notice to a close without heartily congratulating the author on having written a most profitable and entertaining book. He mentions in the first chapter that he very often played truant from the little village school, sometimes for three weeks at a stretch:—

"Consequently my old schoolmaster, Mr. Boomer, had no particular reason to be proud of me at that time, as he seems to have become since. He never enjoys a holiday so much in these days as when he comes over from Jersey to see me play for the Open Championship, as he does whenever the meeting is held at Sandwich."

We do not know how far Mr. Henry Leach, of whose invaluable services an acknowledgment is made in the preface, may be responsible for the style of this book, but some credit is assuredly due to Mr. Boomer, who must now be prouder than ever of his pupil. 'The Complete Golfer,' it should be added, contains a large number of excellent photographs of Vardon, illustrating the different strokes of the game.

Lynch-Law. By James Elbert Cutler, Ph.D. (Longmans & Co.)

THE origin of the common expression "Lynch law" has been hard to discover. Attempts have been made to trace it back to that stout-hearted Lynch, Mayor of Galway, who tried, condemned, and executed his own son for murder in the year 1493. But it is clear that the modern expression for what was previously known as "club law" or "summary justice" originated in America towards the close of the eighteenth or beginning of the nineteenth century. The 'New English Dictionary's' earliest quotation is taken from an American life of Patrick Henry, and dated 1817. It says:

"The origin of the expression has not been determined. It is often asserted to have arisen from the proceedings of Charles Lynch, a justice of the peace in Virginia, who in 1782 was indemnified by an Act of the Virginian Assembly for having illegally fined and imprisoned certain Tories in 1780. But Mr. Albert Matthews informs us that no evidence has been adduced to show that Charles Lynch was ever concerned in such acts as those which from 1817 onwards were designated as 'Lynch's law.' It is possible that the perpetrators of these acts may have claimed that in the infliction of punishments not sanctioned by the laws of the country they were following the example of Lynch, which had been justified by the act of indemnity."

Dr. Cutler, in his learned and interesting account of the operation of Lynch law in the United States, has gone thoroughly into the question of how it got its name. He brings to general notice a new piece of evidence, quite independent of the sources on which the philologist has hitherto been content to draw. This is in Col. William Martin's 'Narrative of Frontier Life,' which was prepared in 1842 for Dr. W. C. Draper, and is now in the Draper MS. Collections in the Library of the Wisconsin State Historical Society. It has been printed by the Southern Historical Association, but is still virtually unknown to lexicographers, and Dr. Cutler has done good service in giving it wider publicity. Col. Martin writes as follows:—

"In those times [the last quarter of the eighteenth century] there were a great many bad men settled along the frontiers, who by their thefts annoyed the country greatly, insomuch that the people entered into combinations to suppress them, and formed companies called regulators. They formed in military style, with officers, &c. They also organized a court and appointed some three or four of their aged, discreet men judges to try criminal causes, award punishments, &c. The company would bring up suspected fellows, and the court would try them. But they seldom extended punishment beyond whipping and driving them from the country, sometimes making them pay for property stolen when they had the means. This method of breaking up combinations of rogues was first set on foot by Col. Charles Lynch, of Bedford county, Va., where I was raised. He and my father were acquainted..... This plan was started some seventy or eighty years ago. The measure seemed to be called for from the situation of the country at the time. And it has been practised more or less in the settling of new countries from that time until within a few years past, since the laws operate with more efficiency. The authorities generally connived at it from the necessity of the case. And perhaps nowhere has it been more common than in Tennessee. Lynch at first punished with thirty-nine stripes, taking, as I suppose, Moses for his model. And this was for a great while called Lynch's law, meaning all unlawful whipping. Any of the old men now in the South and West can tell the meaning of Lynch's law."

Dr. Cutler carefully discusses all the evidence which he has brought together in his second chapter, and his conclusion may be accepted as final. It was Col. Charles Lynch, of Virginia, from whom the name now universally given to "summary justice" was derived. In the absence of all contemporary evidence, we shall never be quite sure how his name came to be chosen from those of the numerous local magnates who identified themselves with the suppression of rowdyism. One is inclined to think that the sound of the name of Lynch—so expressive of short and sharp methods—had something to do with its general acceptance. Possibly, as has also been suggested, the name of Lynch's Creek in South Carolina contributed to the usage of the phrase "Lynch's law." Be that as it may, Lynch law, as it is now called, is an established name for a method of punishment which has been known in all ages and places where the statute law is suspected of inadequacy in design or slackness in execution.

The greater part of Dr. Cutler's valuable work consists of an investigation into the history of lynch law in the United States. In common with the vast bulk of educated opinion in the civilized world, he holds that the prevalence of lynching in the Southern States is a serious blot upon the administration of the Great Republic. There is, indeed, no escape from the dilemma—either the laws against certain forms of crime are not adequately enforced by the State authorities where lynching prevails, or the people of these States are in the habit of murdering citizens whom the ordinary law does not consider liable to capital punishment. Either way you look at it, this is not the kind of thing that an American citizen can desire to have said of his country. There is plenty of evidence that the best Americans are keenly alive to the stigma thus cast upon a large portion of their fellow-citizens. In the brief but forcible preface which Dr. Sumner, of Yale, has contributed to this book, he puts the case in a nutshell:—

"It is not admissible that a self-governing democracy should plead the remissness of its own agents as an excuse for mob-violence. It is a disgrace to our civilization that men can be put to death by painful methods, which our laws have discarded as never suitable, and without the proofs of guilt which our laws call for in any case whatsoever."

In an unsettled country, where the ordinary law has not established its authority, there is some reason for the adoption of lynch law as a substitute. The "vigilantes" and "regulators" have done much good service to the community in frontier districts, and it is to their credit that they have usually been glad to hand over their irregular powers to a constituted authority whenever it showed itself capable of maintaining that social order which is a necessity of life to all civilized mankind. But the lynchings which continue to take place in the Southern States have no such justification. It is not seriously pretended that their victims would be likely to escape from the legal authorities, nor that popular sympathy with their crimes would deter a regular jury from convicting them. The sole excuse ever put forward for these lynchings, with their attendant circumstances of horror and barbarity, is that they are directed against the sexual offences which negroes commit against white women. It is contended in the South that the legal punishment of such offences is not an adequate deterrent, and that the demoralization to the whole community caused by the public burning alive of the offenders is compensated by the terror which such executions inspire in the coloured population. Dr. Cutler, whilst showing by statistical tables that lynching does by no means chiefly deal with cases of this nature, admits

that they afford, if not a justification, at least an excuse for mob-violence:—

"Not that guilty negroes frequently escape conviction in the Southern courts, or that they fail to receive punishment to the full extent of the law, but rather that the law and its administration seem utterly unsuited to the function of dealing with negro criminals. A judicial system adapted to a highly civilized and cultured race is not equally applicable to a race of inferior civilization; and the failure to recognize this fact and act upon it, by making special provision for the control of the negro population in the Southern States since slavery was abolished, is a fundamental reason for the disrepute into which legal procedure has fallen as regards negroes accused of offences against the whites."

Legislation against lynching, as he points out, is of little or no use, since it remains a dead letter in the present state of public feeling. Lynching is essentially a part of the colour question which weighs so heavily on the United States. Such justification as it can have is derived from the inadequacy of the existing law to deal with a particularly odious class of offences, made possible by the close contact of the black race with the white population. In conjunction with the natural tendency which a democracy like that of the United States has to take the law into its own hands, where the citizen of an older polity would content himself with a constitutional agitation for its amendment, this state of things has led to an interpretation of the right of the people to execute justice, which is properly regarded as a national disgrace by all who do not live within the districts where it is thought to be a necessary evil. Dr. Cutler's learned and unimpassioned review of the whole question is of great value to the sociological or legal student, and should afford a sound basis for action to those American reformers who desire to see the epidemic of lynching suppressed by the only permanent remedy—the elimination of its cause.

L'Enseignement des Lettres Classiques d'Ausone à Alcuin: Introduction à l'Histoire des Écoles Carolingiennes. Par M. Roger. (Paris, Picard.)

IN this goodly volume of some four hundred and eighty pages Dr. Roger has given an account of classical teaching in France during the period from the close of the fourth century to the end of the eighth. To narrate the fortunes of classical learning in Europe was too vast a subject, so the author wisely confined himself to Gaul and the British Isles. He opens with a double bibliographical index, one part of which enumerates the ancient sources, while the other gives a list of modern books and articles dealing with the subject. His work is divided into twelve chapters. The first three chapters are occupied with the teaching of classical literature in Gaul between 350 and 600. The fourth and fifth discuss the attitude which the Church in Gaul and the Church in general showed to the classics as an instrument of religious education. The remaining chapters contain a detailed and valuable account of classical teaching in Ireland and Great Britain during the period under discussion. The last chapter, on classical education in Gaul in the seventh and eighth centuries, is followed by some concluding remarks and an index of personal names. Such is a brief outline of the contents. We will attempt an epitome of the results, and afterwards offer some criticisms.

At the opening of the author's period State schools were in existence in Gaul, at which a good classical education could be obtained. The poet and statesman Ausonius of Bordeaux has left a good many references to the rhetorical school of that city. The programme of studies at such a school was in all essentials the same as that which Quintilian sketched in the closing years of the first century A.D., and included *grammatica* and *rhetorica*, the explanation of the best poets, and the later training for the position of lawyer or statesman. Two causes contributed to the overthrow of this system. The empire itself, under which it had grown up as the indispensable preparation for a political career, was breaking up. Conversions to Christianity among the nobility were becoming more and more common, and caused searchings of conscience about many things, education included. Two strong forces pulled in opposite directions—the pagan conservatism of teachers and the asceticism of monks like St. Martin of Tours. The teachers might have held their own in the fifth century but for the political upheaval. The barbarian rulers could not as a class be expected to have much enthusiasm for Roman higher education, and learning began to decline. There is a dead artificiality about most of the literary productions of that age. Classics were still studied by some, but to little profit. The evidence we have points to the extinction of public schools and the restriction of teaching to the private houses of the teachers. In the sixth century we see the absolute ruin of classical study. Such education as existed was either religious or entirely elementary; and this, too, in spite of the fact that several of the great fathers had advocated a liberal education. The Church was either too preoccupied or too lazy to follow St. Augustine, and found it easier to adopt the point of view of St. Jerome. The former had laid it down that for the proper understanding of Scripture a classical education was necessary, in this following Tertullian, though both were alive to possible evils in this course. The Church turned a deaf ear to his counsels. The origin of the Christian schools in Gaul is wrapped in darkness, and there is no evidence that liberal arts were taught in them. In the sixth century Pope Gregory the Great discouraged those Christian teachers who devoted too much attention to grammar. The lives of saints who lived in that age contain hardly any references to a secular education. The learned among them knew the Church fathers, but not the earlier writers. Gaulish education had, indeed, fallen on evil days. The counsels which had been neglected in France bore some fruit in Italy, where literature flourished longer. The Government was sympathetic, and the schools prospered. Amongst their products were Ennodius, Boethius, and Cassiodorus. It is very doubtful whether St. Benedict actively encouraged liberal arts, though one would like to believe he did, seeing his followers have done so much to preserve ancient literature. There is no doubt, however, about Cassiodorus, who wrote the 'Institutiones Divinarum et Sæcularium Litterarum,' one of the most valuable books of the early Middle Ages. He carried out in practice the teaching of St. Augustine. In Spain, Isidore of Seville did much for what may be called the encyclopædic side of classical education, by collecting from many authorities definitions of obscure terms, &c. With this he joined a strange, perhaps hypocritical, indifference to the authorities themselves. It seems a strange contradiction that it was in those parts of the world where Rome had little or no external influence that most was done for classical education. In Ireland a Roman army had never set foot; in Great Britain Romanization seems to have been very slight and sporadic. Yet it was in these countries that an interest in liberal arts arose and flourished, all the more seemingly on account of the separation—geographical, political, and ecclesiastical—from the Continent. There are two views as to the origin of Irish culture. Either it was introduced by Christianity from the British Church, which was in contact with that of Gaul in the fourth and fifth centuries, or the germ of classical culture was received by the British and Irish Churches in the fourth century, but did not develope at once, being retarded perhaps by the influence of Western monachism. The Irish and British had no fear of the Olympian gods, and no suspicion of rhetoric, so that letters found among them a better home in which to flourish than Gaul. The actual degree of their culture has been often exaggerated. The 'Hisperica Famina' are, from a literary point of view, poor productions, and there is no evidence that the Irish acquaintance with Greek was widespread. In fact, such knowledge of Greek as remained was probably due to the teaching of Theodore and Hadrian, who were connected with the Roman mission to England. It is from about the middle of the seventh century that evidences of unusual learning begin to abound in England, and we have the grand succession Aldhelm, Bede, and Alcuin. The account of the work of these and other Englishmen is the fullest and most detailed we know. Ireland and England repaid in the sixth and following centuries the debt which they had incurred to the Continent in earlier times. Irish settlements abounded in France, the Rhine valley, and North Italy. Britain became the educator of the Continent, and the whole movement culminated in Charlemagne's selection of Alcuin to carry out his educational policy.

It has been impossible in this short *résumé* to do justice to the varied contents of M. Roger's volume. He has repeatedly gone into the most irksome investigations in search of the truth, and has spared no pains to attain the most probable conclusions. He has a well-developed critical faculty, and has exercised a healthy scepticism where other writers have gone beyond the evidence. If the work is not always interesting, it is no fault of the author's. His arrangement is excellent, and his style clear, if somewhat cold. We are grateful

for a flash of humour at the expense of Sidonius (p. 76 f.):—

"Il reste au poète une cinquantaine de vers pour exprimer sa pensée; la seule excuse de ces interminables digressions, c'est que Sidoine n'avait rien à dire."

The bibliography contains over three hundred items, which are obviously well known to the author. The omissions are few. Under 'Cæsarius' (p. x) reference should have been made to the appendix to Augustine's 'Sermons' (Migne, xxxix.), and Dom Morin's articles in the *Revue Bénédictine*. We have now, too, the Abbé Lejay's recently published articles in *Revue d'Histoire et de Littérature Religieuses*. The Vienna edition of Lactantius, Richardson's rather than Herding's edition of 'Jerome De Viris Illustribus,' the new works of Jerome in 'Anecdota Maredsolana,' vol. iii., Mason's 'Mission of St. Augustine to England,' and Gaskoin's 'Alcuin,' should have been mentioned. The list of misprints could be greatly extended; but in view of the mass of careful annotation the book is printed with wonderful correctness. On p. 99, n. 2, a lost MS. of St. Maximin of Trèves is mentioned as irrecoverable; a search at Ghent might be rewarded with success. On p. 115 (nn. 7 and 14) it may be remarked that "vis" as nom. and acc. pl. is found in Lucretius, and that "canones" was spelt "cannones" in Gaul (see C. H. Turner's 'Ecclesiæ Occidentalis Monumenta'). On p. 191 the author seems to cast suspicion on the authenticity of Seneca's 'Controversiæ,' on what grounds we do not know. On p. 242 "fundamen" as classical should be excluded. In the discussion of the mystic interpretation of Scripture (p. 384) St. Jerome is unjustly left out; the anagogic and tropologic senses are recognized by him in his Old Testament commentaries. As we take leave of this masterly work we can confidently recommend it as likely to hold the field for many years.

NEW NOVELS.

Driven. By Margaret Watson. (Fisher Unwin.)

This is a tale of English village life in the days of extreme poverty and high prices for food which immediately preceded the repeal of the Corn Laws. The men of the story are mostly labourers, whose wages ran from 6*s.* to 8*s.* a week, when bread was 1*s.* 4*d.* for the quartern loaf, and bacon was 1*s.* 6*d.* a pound, and farmers growled over 80*s.* a quarter for their wheat. To-day, with the quartern loaf at 5*d.* or 6*d.*, bacon at 6*d.* a pound, and wages at 16*s.* a week, for the sons and grandsons of the men in this story, we are told that the exodus from the country into the towns is caused by the fact that the land no longer offers a decent or tolerable livelihood to the man of the labouring class. Truly times have altered, and universal education has enlarged our ambitions, if it has not greatly enlarged our understanding of that in life which is worth having. Whatever may be said of our knowledge, our industry, our loyalty, our faith, our morals, or our manners, no critic can deny that our requirements are infinitely more numerous than those of our grandfathers. 'Driven' may, perhaps, be hurriedly dismissed in some quarters as melodrama in a rural setting. Indeed, like many another excellent piece of fiction, from eighteenth-century masterpieces down to 'Rhoda Fleming,' this tale is melodramatic. But it is certainly not a masterpiece. Here we have no hints of latent genius, nor any notable marks of brilliancy. Here are no remarkable cleverness, and nothing to suggest the future popularity of one of the "largest circulations." But we find a good, honest story, told simply and with workmanlike straightforwardness, of English village life as lived in the earlier half of last century. The writer displays the pitiless forces which drove the hero to dishonesty, under very great provocation and temptation; his punishment; and the good fate he earned by the practice of his native honesty and goodness after expiating his one step aside. The characterization and the dialogue are adequate, and the background is capably sketched in. The story has an atmosphere, too.

The Terror by Night. By James MacLaren Cobban. (John Long.)

This story keeps the sense of mystery and terror going well. Two victims are disabled by one mysterious hand:—

"In both cases the attack was evidently made through a window—and a window, mind you, so situated that you would think only a bird could reach it; in both cases the same peculiar kind of viscous mark or stain was left on the window-sill; in both cases the victim was found lying on the ground beneath the windows."

The quotation suggests Sherlock Holmes, and a slavish imitation of that eminent practitioner in crime is introduced. The end solves a further mystery concerning some Oriental jewellery. On the whole, if by no means original, the book is a good specimen of the sensational story, and, as might have been expected, much better written than the average narrative of the sort.

Tommy Carteret. By Justus Miles Forman. (Ward, Lock & Co.)

This story is fundamentally unsound, superficially clever, and for the most part entertaining. It is the tale of a young old beau, incorrigibly given to flirting, and his son Tommy. They were old Tommy and young Tommy, and they were wealthy Americans of good family. Old Tommy robbed a fellow-citizen of his wife's honour, and barely escaped the house of his victim without being seen by the wronged man. He was heard, and his handkerchief, conveniently crested, was picked up under the window. The husband concluded that his enemy must be young Tommy, and young Tommy—by virtue of his belief in the family saying that "Carteret never failed Carteret"—allowed the mistake to pass, and stood to take the husband's revenge, after the manner favoured by Ouida in the yellow-backs of our youth. He submitted to a preposterous scheme of revenge, involving his own banishment into remote parts, where he cultivated grotesque hallucinations and entanglements with strange women. But the novelist is benevolent, and held a better future in store for young Tommy than that gentleman's small share of plain sense usually earns for a man in real life. As has been said, most of the book is entertaining, though its motive is fundamentally unsound. Mr. Forman has a lively style, and writes with spirit and crispness. His reflections are superficial, but set forth with a kind of plausible smartness which makes them agreeable reading for an idle hour or two.

The Tenderfoot. By W. J. Sheppard. (John Long.)

This is a story of Australian bush life, exploration, and adventure among savages. There seem to be two well-defined classes of Australian fiction: that which is distinctly clever, inclining to the exotic, and apt to be painfully pessimistic, and that which is cheery, optimistic, simple to the point of banality—in fact, the reverse of clever. The great middle way of sanity and sound craftsmanship is comparatively unexplored ground to the Australian writer of fiction. And this, perhaps, will not surprise those who know anything of Australian life, with its many tendencies towards pessimism for the thoughtful, and happy-go-lucky, cheery vegetation for the unthinking. This novel of Mr. Sheppard's has a rather misleading title, since "tenderfoot" is a word pertaining to life in the far west of America, and not used by bushmen in Australia. The youth to whom it here refers is an English "new chum," who does most of the things expected of his class when it appears in Australian fiction. The love interest is purely conventional, and so is the whole plot; the characterization, if such it may be called, is of the ready-made order. Some care, however, has been given to the pictures of the remote parts of the bush, and to the customs of the aboriginals. For this reason, and for its general and wholesome simplicity, the book may find favour among youthful readers.

A Highland Web. By L. H. Soutar. (Edinburgh, Morton; London, Simpkin, Marshall & Co.)

This web is not of intricate texture. One Sir Charles Deane, who has made a fortune in cloth-weaving on a large scale, receives the usual commercial reward of a baronetcy, and naturally marries a lady of birth. Lady Edith and he are obviously selected to pose as amateur Highlanders, and it is at their shooting-box in the North that the story opens. Among the guests is another baronet, who is also "an Anglican priest." Sir Philip causes his hostess some anxiety by falling in love with Ena Macleod, the fair daughter of a small laird in the neighbourhood. Her father, a crofter's son who has made money in Australia, is a bigoted Free Kirker of the Highland type. It is conceivable that he should wish his daughter dead rather than married to such a mass-monger as the smooth Southron ecclesiastic, but less probable that he should maintain the reputation and functions of the "Men," as the evangelists of the end of the eighteenth century and beginning

of the last were emphatically called. From what one has read of them one would say their great gift was preaching, and their achievement the vitalizing of Protestant Christianity among a population not long emerged from Romanism. Men like Macdonald even made many converts in the Irish-speaking parts of Donegal. In this as in some other matters the writer's knowledge of the Highlands seems somewhat superficial. The characters, however, are not ill drawn, old Macleod himself being a speaking and typical portrait. Ena's priestly lover had never heard of a "minister" till he came to Scotland, and he opines that the harshness of Highland religion dates from the days of the persecution of the Covenanters. With such confused notions of history it is no wonder the writer makes her educated heroine talk Lowland Scotch, and her mother actually *wrie* it, "meenister" and all.

One of a Mob. By Nat Gould. (John Long.)

THIS is a straightforward story, without any literary pretensions, by an author who seems to have established himself sufficiently to command a circle of readers and a reputation for sporting stories. These two facts should render unnecessary any words of commendation here—and serious objection there is none to make. The writer has had opportunities of studying a certain kind of life in Australasia (not Australia alone), especially among persons connected with horses, horse-racing, gambling, and their concomitants, and he employs his knowledge to purpose in a somewhat commonplace way. The very title of his book betrays him; for the "mob" referred to is a collection of wild horses, and "rounding up the mob"—that is, hemming them in so as to drive them into a paddock where a selection may be made—is the beginning of the real "business." Money is dealt with on the writer's usual scale of liberality, as are pretty girls, of whom three lead to love-making of a prosaic description. There is a ruffian, of course, and he is the chief actor as well as victim in the only—or almost only—unpleasant scene—and a very unpleasant scene it is—in the story. But, of course, he meets with his deserts and perhaps more; for the writer's moral tone, if we are a little blind to his views, indicated if not proclaimed, of betting and gambling, is unexceptionable. And so we may leave him to his particular following.

VERSE, OLD AND NEW.

A RECENT addition to "The Red-Letter Library" (Blackie) is *A Sixteenth-Century Anthology*, edited by Arthur Symons, which is of unusual excellence. Mr. Symons, in his note at the end of the volume, explains that he has made no attempt to be representative, but has, in his selection, set himself to choose the poems which seem to him the best, and we may add that his taste and research in poetry are both highly commendable. The Earl of Surrey finds no place here, and Sir Thomas Wyatt is represented only by the verses beginning:—

> Madam, withouten many words.

Campion, on the other hand, gets something like the prominence which is his due, upwards of forty of his lyrics being included. The peculiar merit of the book lies in the number of poems it contains which have been hitherto frequently neglected. Among the anonymous selections are many songs, some quaint and some beautiful, such as "I saw my Lady weep," "If fathers knew but how to leave," and the jovial cynicism of

> Ha ha! ha ha! this world doth pass
> Most merrily, I'll be sworn;
> For many an honest Indian ass
> Goes for an Unicorn.
> Farra diddle dino;
> This is idle fino,—

which will be new to a large section of readers. For the rest, there are, of course, Shakspeare's songs and some of the Sonnets, and selections from Spenser, Sidney, Marlowe, Raleigh, and the other great names of a great period, while the introduction is short and unobtrusive, but pertinent. Without doubt this will be found a pleasant book for a holiday.

Preludes and Symphonies. By Oliver Grey. (Routledge.)—It needs a poet of force and inspiration in these days to write concerning the spring, for the less-inspired are apt too closely to imitate each other and those who have gone before; and further, there are few subjects which give so many opportunities for being commonplace. Mr. Grey has chosen the spring for his principal theme, with love, of course, for its companion; but we cannot conscientiously admit that he is the poet required, or that he has, to any great extent, avoided the snare we have referred to. His verse is considerable in bulk, and he possesses a facility which is almost dangerous. It may be that he is unwise in taking Herrick for his model, for, unless the imitator has something of the quality of the master inherent in him, the imitations are likely to be very flat. That he can, on occasion, prove himself to be a disciple not all unworthy, the following lines in 'Songs of the Seasons,' called 'Christmas Roses,' will show:—

> Christmas roses, pure as snow,
> Delicate as hoar-frost rime,
> Yet with golden hearts aglow,
> Shining in your virgin prime,
> Fair as charity you show
> In the churlish winter time.
>
> Maids were ye in days gone by
> To the cloister dedicate,
> There to wither, wane, and die;
> But, for pity of your fate,
> Into flowers of January
> Changéd was your cold estate.

But, unfortunately, the other 'Songs of the Seasons'—with the exception, perhaps, of 'The Magic of May,' which contains some pretty description of Oxford and Godstow—are, for the most part, the usual conventional fancies, pleasantly expressed, it is true, but in danger of becoming wearisome for the lack of any arresting thought. 'The Tale of the Tree,' a series of poems based on the memories of a wych-elm two hundred years old, is fresher both in theme and treatment. Several of the 'Classic Fancies' also are happily conceived, particularly that addressed to "Lilian learning Greek," and called 'The Magic Grammar.' We quote the first three stanzas:

> This dull Grammar holds the keys
> To the realms of poesy;
> Glimmering cities, fairy seas
> Sleeping 'neath a summer sky.
>
> Music sweeter than the birds
> In the amber morning make,
> Or the bells of upland herds,
> From its dusty depths shall wake.
>
> Tragedy, and Comic Muse
> At the mazy syntax' end
> Wait for you, and you shall choose
> One or both to be your friend.

The poem continues with a more detailed description of the hidden treasures of the Grammar,

> We shall hear the talking oaks
> In Dodona's leafy shade;
> Sip the crystal stream that soaks
> Through the green Castalian glade,

until at the last stanza we dip suddenly down into commonplace moralizing:—

> But, though things of beauty die,
> Noble deed and great endeavour,
> Sanctified by poesy,
> Live within the heart for ever.

'A Dream of Bath' is also above the average, but it, too, is spoilt at the close by a moralizing stanza of the sort quoted.

In the two succeeding divisions of the volume—'The Book of Belle Marquise' and 'Moods and Measures'—we hark back again to love and the seasons, roses and "azure seas"; while the sonnets, which conclude the book, are pretty in a slight way.

The author is master of his metres, and his verse is cultured, indicating extensive reading rather than depth of thought; and here and there are little affectations, such as

> Among the apple blowth
> Love bade us follow;

and the unnatural use of the word "ruth" in

> So wisely to avoid such ruth
> Fate keeps you safely under latch,

and, again, in

> Scarce marked the ruth upon the grass
> Where June's red petals fell.

For the rest, the lyrics are pleasant, in that the craftsmanship is unimpeachable; but such pleasantness, if it stand alone, will soon pall.

Indian Love. By Laurence Hope. (Heinemann.)—These poems are of a piece with the former work of the author of 'The Garden of Kama' and 'Stars of the Desert'; that is to say, there is little novelty in the presentment of her favourite theme—the East. It may well be that readers whose hearts are there can never feel satiated with rice-fields and jungles, the champa tree and the datura, tom-toms and "the odour of sun-warmed fur"; but to the Western mind such things, though pleasant enough for a while, being exotic, are apt to become a burden if there be not some variety of treatment or thought to save them from dullness.

The intent of the present volume is indicated in the following lines:—

> When tents are pitched, and work is done,
> While restful twilight broods above,
> By fresh-lit lamp, or dying sun,
> See in my songs how women love.

And the songs deal, for the most part, with the loves of women—dancing girls, temple girls, and the like—often expressed with a singular lack of restraint which may be, indeed, Oriental.

In this last book the passion is beginning to seem forced, the colour is fading. It would seem that the vein which the author worked successfully was nearing exhaustion. That her limitations were self-imposed is shown by such a poem as the following. It is called 'Rutland Gate':—

> His back is bent and his lips are blue,
> Shivering out in the wet:
> "Here's a florin, my man, for you,
> Go and get drunk and forget!"
>
> Right in the midst of a Christian land,
> Rotted with wealth and ease,
> Broken and draggled they let him stand
> Till his feet on the pavement freeze.
>
> God leaves His poor in His vicars' care,
> For He hears the churchbells ring,
> His ears are buzzing with constant prayer
> And the hymns His people sing.
>
> Can His pity picture the anguish here,
> Can He see, through a London fog,
> The man who has worked "nigh seventy year,
> To die the death of a dog?
>
> No one heeds him, the crowds pass on.
> Why does he want to live?
> "Take this florin, and get you gone,
> "Go and get drunk,—and forgive!"

XUM

This is good, though the theme is not new, and it shows that jungles and palanquin-bearers were not the best sources of the author's inspiration. At her best she had singular force and passion, as her tragic death by her own hand suggests, of which we spoke on October 29th, 1904.

The Voyageur, and other Poems. By William Henry Drummond. (Putnam.)—This volume contains more of the French-Canadian verse with which Dr. Drummond has made us familiar. The *patois* is certainly possessed of a subtle charm, which makes it the fitting—indeed, the best—vehicle for describing the childlike and simple natures with which the poet deals. The life of the people, their intense love of home and home ties—contrasted effectively with the American attitude in 'Yankee Families'—their contented philosophy of the "All's for the best" type, are again set forth in a series of delightful poems. Perhaps the first, 'The Voyageur,' which gives its title to the book, is also the best, though, by reason of its very simplicity, it does not lend itself readily to quotation. There are some particularly pleasant stanzas called 'The Family Laramie,' of which we quote the first as a fair example of the lightness of the author's touch:—

> Hssh! look at ba-bee on de leetle blue chair,
> W'at you tink he 's tryin' to do?
> Wit' pole on de han' lak de lumberman,
> A-shovin' along canoe.
> Dere 's purty strong current behin' de stove,
> W'ere it 's passin' de chimley-stone,
> But he 'll come roun' yet, if he don't upset,
> So long he was lef' alone.

There is much humour, too, in the poem called 'Pro Patriâ,' which describes the response made by a "habitant," settled on "de State Vermont," to the call to arms, at the outbreak of the war with Spain.

It is only when the author forsakes his *patois*, and writes in the English tongue, that he lays himself open to serious fault-finding. 'A Rainy Day in Camp' is the title of some verses which, coming as they do between two charming *patois* lyrics, pull the reader up with something of a shock. They are frankly amateurish, and the author has not even taken the trouble to make his lines run smoothly, which might, in a small degree, have compensated for a reference to "Jupiter Pluvius."

> A rainy day in camp, what an interesting collection,
> In this magazine so ancient, of items small and great,

might be regarded with tolerant amusement if met with in the visitors' book of some remote hotel. Another English poem, 'Canadian Forever,' is in the nature of a patriotic song, but lacking in distinction; while that called 'Home' is marred by obscurity, though the diction is certainly an improvement on the lines last quoted. It is a pity that the charm of the book should be spoilt for the want of a little discrimination.

Sonnets and Songs, by A. T. Strong (Blackwood), shows a scholar who is in touch with the outer world gracefully at play. Mr. Strong excels at the ballade and rondeau, though we do not think his Sapphics—or anybody else's for that matter—a success. However, the translations from the Greek, Latin, and French are generally effective—in particular the gay grace of a song from Alfred de Musset is happily caught. Mr. Strong has a good vocabulary, and on the whole is free from the elaborateness which spoils many a scholar's felicities. We think that he might well have a success in serious verse of a larger flight. Meanwhile his book is a pleasant reminder that scholarship gives a terseness which is the best gift for the poet of any fluency.

The Soul's Destroyer, by William H. Davies, is published at Farmhouse, Marshalsea Road, S.E., by the author, who has, a writer in *The Standard* tells us, mortgaged a considerable moiety of his very small means to get it printed. It is in all respects a remarkable book, singularly lacking in the tags and conventionalities which go to the making of minor poetry. That the personal note should predominate is, perhaps, natural; neither is it surprising, in view of the peculiar circumstances of the book's production, that the verses should show a certain crudity of technique, a few shaky rhymes and some grammatical lapses; but these are surface faults, and by no means numerous. It is the work of a nature-lover, compelled to dwell in the unsavoury regions of the town; of one with an intimate and first-hand knowledge of the life of the very poor, and, withal, possessed of a genuine gift of poetry. The poems are numerous, and, naturally, of varying merit. That which gives its name to the volume, 'The Soul's Destroyer,' suffers in the main from a certain brutality of detail and a lack of restraint; yet in the first few lines we come upon this simile, beautiful, despite the somewhat halting blank verse:—

> And not without sweet sounds to hear: as I
> Have heard the music, like a hiding child,
> Low chuckling its delight behind a wall,
> Which, with a sudden burst and joyous cry,
> Out leapt, and on my heart threw its sweet weight.

The rest of the poem is almost unnecessarily sordid, and the blank verse is apt to be monotonous, though there are many beautiful and striking lines, such as

> It was a day of rest in heaven, which seemed
> A blue grass field thick dotted with white tents.

The author is more uniformly successful in his rhymed poems, particularly in the shorter of them. Here is one, simply expressed in a manner worthy of Blake. It is called 'Neighbours':—

> 'Twas Mrs. Jones knew Mrs. Brown's kind heart,
> Though neighbours said her tongue could scrape the bones;
> When Mrs. Jones and children were a-hungered
> Then Mrs. Brown befriended Mrs. Jones.
>
> She gathered all her costly goods together—
> The sum they fetched in pawn was two half-crowns—
> And bought them food: poor Mrs. Jones's clothes
> Were too outworn to pawn like Mrs. Brown's.
>
> Ye rich, though kind and good, 'tis not the likes
> Of you do all the good about this town:
> The likes of Mrs. Jones would oft-times starve
> If 'twere not for the likes of Mrs. Brown.

This curious kinship with Blake is evident in the verses called 'Unholy Meat,' particularly in the following stanza:—

> Who slays the singing bird, he sins,
> All other birds he plucks *alive;*
> Who feeds his body from such deed
> Shall hear of it again, and grieve.

Another striking poem, in a different vein, is 'The Figure in Wax,' of which we quote the first lines:—

> I saw a female poisoner, her face
> Was white, her bodice it was black; and there
> The awful peace on Murder's face in wax,
> And horrors hanging to her ends of hair!

But the verses dealing with life in a common lodging-house, describing the inmates, the miseries of existence in such a place, the foul surroundings, and the hopelessness of it all, constitute the distinctive feature of the book. One is called 'Saints and Lodgers,' from which we quote the following stanzas:—

> Ye saints that sing in rooms above,
> Do ye want souls to consecrate?
> Here 's "Boosy" Bob, "Pease Pudding" Joe,
> And Fisby Fat of Billingsgate.
>
> Such language only they can speak,
> It juggles heaven and hell together;
> One threatens with a fearful oath
> To slit a nose like a pig's trotter.

And again:—

> Here 's Irish Tim, outspoken wretch,
> Insult him, he is thy staunch friend;
> But say "Good Morning," civil like,
> He 'll damn thee then to thy life's end.

There is grim humour in these descriptions of "Old 'Barge' Bill," "Brummy Tom," "Sailor," and the rest of them; while 'The Lodging-House Fire,' which follows, has real pathos and a note of despair:—

> My birthday—yesterday,
> Its hours were twenty-four;
> Four hours I lived luke-warm
> And killed a score.
>
> I woke eight chimes and rose,
> Came to our fire below,
> Then sat four hours and watched
> Its sullen glow.
>
> Then out four hours I walked,
> The luke-warm four I live,
> And felt no other joy
> Than air can give.

And again:—

> For listen, it is death
> To watch that fire's glow;
> For, as it burns more red,
> Men paler grow.
>
> O better in foul room
> That 's warm make life away,
> Than homeless out of doors,
> Cold night and day.
>
> Pile on the coke, make fire
> Rouse its death-dealing glow;
> Men are borne dead away
> Ere they can know.

The faults of the book we have already indicated, but they are not such as should seriously interfere with a full appreciation of its force, sincerity, and poetry. It is to be hoped that the poetry-reading public will give it the welcome it deserves.

OUR LIBRARY TABLE.

THE 'Annual Review' Publishing Company, of Toronto, have issued the fourth volume of *The Canadian Annual Review of Public Affairs*, compiled and edited by Mr. Castell Hopkins. The 1904 volume appeared, we believe, only in July last. The book is illustrated, which is not perhaps an advantage, but the index is more convenient than that which old custom imposes on our own 'Annual Register.' The chief interest in the new volume lies in the account of the General Election for the Dominion, in which the undue use made of racial and religious antagonism bears a prominent part. Those who contemplate the Empire as a whole are agreed that the sufficient, though not unstinted, loyalty of the French Canadians is a valuable Imperial asset, and regret that the United Empire Loyalist feeling of some provinces should occasionally unite with fierce Protestantism to attack, not only the more violent French Roman Catholic politicians of Quebec, but even such Imperial statesmen as Sir Wilfrid Laurier. Mr. Castell Hopkins has tried to divest himself of prejudice: his style is sometimes unduly weighted with American political phraseology of which the sense cannot always be collected from the context. "A pronounced boomerang" apparently means a manifesto which by its exaggeration deeply harms the side by which it has been issued.

The Standard of Pronunciation in English. By T. R. Lounsbury. (Harper & Brothers.)—The idea that a standard of pronunciation exists is so popular, and so many individuals are convinced that their own speech conforms to or constitutes the perfect type, that Prof. Lounsbury is fully justified in expanding his oral exposure of these illusions into the interesting essay before us. That he takes pronouncing dictionaries more seriously than they deserve is due to the fact that "the American usually goes to his favourite dictionary, and meekly accepts, without even thinking of protest, what the man he has adopted as guide chooses to tell him." An Englishman, on the other hand, leaves the point undecided, or follows the course which he supposes a man who has committed himself to provide the pronunciation of every word in the language has followed—namely,

he adopts the pronunciation which takes his fancy on trial, or makes a wild guess, or consults as an authority somebody who may or may not have an opinion on the point worthy of consideration. His procedure may be defended by examples. Prof. Lounsbury tells us that Shakspeare and Dr. Johnson accented "corollary" on the first syllable, and adds, "The weight of numbers, both in England and America, is distinctly in favour of" this pronunciation. Now, in spite of "most of the compilers of dictionaries," we maintain that the 'N.E.D.' follows the majority of English geometricians in accenting, by preference, the second syllable, while it gives Johnson's alternative wrongly, in that the secondary accent on the penultimate, which is required to make the pronunciation fairly easy, is omitted. The only pronunciation of "laboratory" given in the 'N.E.D.' is accented on the first syllable, although to save the second syllable from extinction that is now often accented—the old difficult pronunciation tending to degenerate into "lavatory." Again, we read, "The sound denoted by the digraph *sh*.....is represented by *ce* in *ocean*,.....by *xi* in *anxious*," whereas, although the 'N.E.D.' ignores the fact, the *ce* in question and the sibilant part of the *x* of "anxious" with the following *i* are often heard as *shy*, which comes naturally to persons who have a tolerable knowledge of Latin. Prof. Lounsbury seems to regard "illustrate" as correct, as do we; but the 'N.E.D.' admits as a variant the archaic "illústrate." One of the strangest feats of orthoepists is giving "benefáctor" for *bénefactor*.

In Prof. Lounsbury's conclusion that on English pronunciation "one thoroughly educated man is as good an authority as another, and nobody is an authority at all," there is an element of truth, but the thoroughly educated child of thoroughly educated parents who consorts freely with thoroughly educated persons, and listens frequently to the best exponents of oratory and elocution, may be in relation to orthoepy thoroughly educated to a comparative or superlative degree.

The author exposes with some humour the pretensions of professional pronouncers—the Irish Sheridan; the cockney Walker, whose authority is largely due to sheer self-assertion; the Scotch Buchanan; and the New England Worcester, who claims familiarity with London usage. He also ridicules the acerbity with which pronunciations differing from one's own are condemned as low, ignorant, or provincial. He has collected many interesting cases of change from the eighteenth-century orthoepy as determined by the remarks of well-known writers, and has increased their usefulness by full indexes.

The suggestiveness of the volume is out of proportion to its small size. Such cases as the accentuation of "hostile," "illustrate," "inundate" on the second syllable, allowed by the 'N.E.D.,' prompt the question whether there may not be an increasing tendency to throw stress-accent on to syllables requiring a comparatively long time for utterance. If so, its arrest is desirable.

LYDGATE'S *Temple of Glass* (Caxton, 1477-8) and Betson's *Ryght profytable treatyse* (Wynkyn de Worde, 1500) complete this year's issue of the Cambridge University Press photogravure facsimiles of rare fifteenth-century books printed in England. The 'Temple of Glass' is, like the 'Anelida,' reproduced from a unique copy. It has, in fact, hitherto only been attainable by students in Dr. Schick's edition published by the Early English Text Society. Betson's treatise is of some interest from a philological point of view. We can only call the attention of students of typography who are unlikely ever to have the opportunity of purchasing original Caxtons or Wynkyn de Wordes to the opportunity afforded them by this magnificent series of reproductions.

Excursions. By Hugh Haliburton. (Edinburgh, Morton; London, Simpkin, Marshall & Co.)—It is many years since we greeted the author of 'Horace in Homespun' as a genuine master of Lowland Scottish song. Since then we have had but occasional volumes of miscellaneous essays from his hand, but all, slight or more durable in texture, filled with a pleasant and never too raucous breath of patriotism, and notable for sound judgment in the special field of letters Mr. Logie Robertson has made his own. His sane estimate of Burns as the flower of ages, his due recognition of Burns's predecessors in vernacular verse, and especially his reverence for "Dunbar's neglected throne," make him in every respect worthy of attention by his countrymen, many of whom, in the matter of letters, are more perfervid than literate. The present volume, we are told, is intended as a sequel to that called 'Furth in Field,' and consists for the most part of pieces already published in ephemeral form. It begins with a pleasant bit of humour in prose, 'John Henderson's Hairst,' and ends with some really excellent Scots rhyme, entitled 'Tammas Wilson':—

> Tam Wilson was a ploughman bred,
> But had a sowl abune his tredd.
>
> Nae hairum-scairum chield was he
> To birl awa' his dear-won fee
> On ale or sweeties, or sic trash,
> To hae a name or mak' a clash
> For a fine free an' easy mind:
> Tam was to better things inclin'd.
>
> Tam kent a bank—at nae wood side,
> Where moonbeams through the branches slide,
> And lovers meet, an' a' the rest o't,
> And fairies keek an' mak' a jest o't.

Through the savings-bank and the pack Tammas attained to the counter. How his purse-pride gets a fall, and adversity teaches him some tenderness as well as wisdom, we learn in humorous strains, not without one vivid turn of adventure. The number has been recast in view of the favourable criticism on it in Mr. J. H. Millar's 'Literary History of Scotland.' Other good pieces are 'The Firth of Forth'; 'Hamilton of Gilbertfield' (Burns's exemplar and the conscientious extender of Blind Harry); an account of the minstrel 'Blin' Hary' himself; a note on 'Milton's Scottish Tutor,' Thomas Young of St. Andrews

> (Primus ego Aonios, illo præeunte, recessus
> Lustrabam,

says Milton); excursions on 'Winter,' *à propos* of Thomson; and an excellent paper on 'Songs that Recruited the Navy,' in which the genesis of Campbell's 'Battle of the Nile' is discussed, and the claims of Thomson, rather than Mallet, to 'Rule, Britannia,' are reasonably confirmed. These and other pieces, including accounts of holidays in Norway and Sweden, make up a readable volume, though after so long a silence one feels, perhaps, a certain disappointment at the calibre of the work. But Mr. Robertson has always excited hopes of something more. There is never anything of the "kailyard" about his muse, poetic or pedestrian.

THE inclusion of *Essays from the Guardian* (Macmillan & Co.) in the uniform edition of the works of Walter Pater can only be qualified as a grave error of judgment. As we pointed out in our review of the privately printed volume (June 12th, 1897), the book is a mere collection of reviews, and an arbitrary selection from the reviews which Pater is known to have done. It is almost certain that Pater himself would not have reprinted a single one of these notices, interesting as some of them are as expressions of opinion. Occasionally, for a few sentences at a time, they rise from journalism into literature. It is wholly certain that he would not have reprinted, under the title of 'Wordsworth,' a review made up almost entirely of verbatim extracts from his own essay on Wordsworth, which had already appeared in *The Fortnightly Review*, and which is now contained in the volume of 'Appreciations'—extracts which served not only for the review in *The Guardian*, but also, a month earlier, for another review in these columns. Pater wrote only a few reviews, chiefly of the books of friends; he wrote these with great difficulty, very much against the grain, and only for some temporary purpose. That, after his death, any of these pieces of journalistic taskwork should have been dragged out of the decent obscurity of a small privately printed edition, and given to the public as part of the works, so scrupulously limited, into which he had put only the better part of himself, is matter for sincere regret.

Between the Cupolas. By W. (Headley Brothers.)—The author of this pleasant little sketch is wise in not attempting the difficult feat of writing a school story. He is, happily, content with a few personal recollections of, and reflections on, school life as lived at the Quaker school at Ackworth, near Pontefract, in the years 1875 to 1880. It is a brisk piece of writing, not innocent of humour, a "light and airy" record, as its author calls it, but it is not marred, as such efforts often are, by flippancy or ingratitude. It is so slight that we should expect its main appeal to be to old Cupolas. Two or three general topics are handled, and in the chapter on 'The Essay Society' an opinion is expressed which practical experience bids us endorse: "I do not believe that the most astute critic can judge whether work done in the teens is an end or a beginning." The writer goes on to protest against the idea of making school in some way a preparation for journalism. Architecture, journalism, and several other "isms," are among subjects we have recently seen pressed as proper subjects for schools, while the Classical Association is manfully grappling with the problem of how to lighten the curriculum. All learning and observation are the journalist's training, nothing less:—

> "It is only when a young fellow has emerged from his youthful exercises in essay-writing, and is brought into contact with events, topics, and social conditions, that you can tell whether he has the faculty of taking subjects straight from life, and the rapidity and freshness which journalism demands."

Here speaks the acting editor, and he is well within his book. But he makes an unnecessary pother about the unsuitability of Gray's 'Elegy' for teaching in schools. His contention is that, the words being learnt before they are understood, there results "a certain ossification of their beauty which cannot be overcome in after life." We agree that for the majority of boys under fourteen the poem is unsuitable as "a concentrated account of a mood impossible to the young." Certainly action, life, adventure, are mostly the poetical matter for boys; but even here our author forgets that some fair proportion, even of boys, appreciate reflective poetry. But we must take exception to his statement that the 'Elegy' "is the accepted introduction to poetry"; and we cannot countenance the "ossification" theory. The words of a Gray, a Virgil, or a David are clothed with new meanings as expanding life gives them ever fresh contexts. We do not think our author makes out his case, though he quotes in support the words of a somewhat superior schoolmaster.

The Ambitions of Jenny Ingram, by Flora Klickmann (Religious Tract Society), "a true story of modern London life," warns the incompetent young amateur poet and would-be

journalist against rushing up to town in the hope of earning a livelihood by her pen. The adventures that befall the heroine in her search after literary work are perfectly natural, and are graphically related. We cannot say the same of the remaining part of the story. The affectionate family of Jenny Ingram are much too lax in their guardianship, and it is a pity that the rich and exemplary son of the country squire, at first disdained with extraordinary rudeness, should be in waiting to endow the unsuccessful author with a title. This conventional touch interferes with a good moral, and imparts an air of unreality to the book.

The Piskey Purse: Legends and Tales of North Cornwall. By Enys Tregarthen. (Wells Gardner.)—These folk-lore tales of North and West Cornwall should prove very popular with children. They are pleasantly told, and possess much of that happy blending of the fantastic with the everyday which is an agreeable element in a good fairy tale. They deal with Piskeys, who are good fairies, and Spriggans (naïvely defined in a foot-note as "a kind of low fairy"), witches and wise women, and unoffending children transformed into animals by evil spells. Perhaps the most exciting stories are 'The Piskey Purse' and 'The Witch in the Well.' The former, which gives its name to the book, describes how a Piskey was imprisoned in a "Piskey purse" for ninety and nine years and three hundred and sixty-five days, and was at last set free through the courage of a little girl, who had to carry the purse by night, through bogs and over moorlands full of elves and hobgoblins, in order to reach a lonely "Tolmên" by sunrise, where the release was to be effected; and how she was guided on her way by magic shoes, and a tiny lantern, presented to her by a farmer of the neighbourhood, who afterwards changed mysteriously into a fairy and married the imprisoned one.

The latter story tells of six children of Padstow who were carried off by a wicked witch while innocently playing with her the game called "the witch in the well," and how they were never to be set free until one Betty should be able to fly up the witch's stairs and liberate them. How Betty was enabled to accomplish this extraordinary feat those who read about her will discover for themselves. We note one innovation in these tales: the heroes who are called upon to undertake arduous tasks—to do what they are told for a year and a day and to ask no questions—never swerve from the path of duty; whereas in the fairy tales of olden days there would be many false starts and much disobedience—as, indeed might be expected of children—ere the desired end was achieved. We think that the older method is, on the whole, to be preferred as being more productive of exciting incident. Then there is the story of the little girl who borrowed the eyes and ears of a sea-fairy for a night and a day; and of the boy who discovered a little white hare in his great-aunt's orchard, which hare was really a beautiful maiden under an evil spell; and how he freed her, and went off with her into the West, and was no more seen. Altogether, it is a book which should be very acceptable to young readers.

Uncle Tom's Cabin. Told to the Children by H. E. Marshall.—*The Pilgrim's Progress.* Told to the Children by Mary Macgregor. (Jack.)—These two little books, prettily bound and attractively printed, will doubtless serve their purpose, which is to make the stories on which they are based easily understood by very young children. That there is any crying necessity for this we are unable to believe. Such children will, at the age of sixteen or thereabouts, be able to enjoy 'Uncle Tom's Cabin' in the form in which Mrs. Beecher Stowe left it, and it seems a pity to anticipate matters with an infantile version, containing sentences like, "But Mr. Shelby knew that Haley was not a nice man." However, if we assume that the demand really does exist, such language is unavoidable, and the writer has certainly performed his task of compression and simplification as well as can reasonably be expected of him. 'The Pilgrim's Progress,' too, might, we think, have been left till children arrive at the right age to appreciate and understand. However much it may be adapted and abridged, it will always make rather gloomy reading for a child of tender years, though it lends itself more readily to the treatment required here by reason of the simplicity of its language. Miss Mary Macgregor's version is direct and interesting, and the pictures in each of these volumes will probably lure on infant readers; but we feel that such readers would be better employed in making themselves familiar with the nursery classics—'The Book of Nonsense,' and fairy tales of the simpler kind—than in anticipating what will come naturally and without abridgment in the course of a few years.

Le Drame de Varennes, Juin, 1791. Par G. Lenotre. (Paris, Perrin & Cie.)—If M. Lenotre has little to add to the researches of M. Bimbenet and of M. Victor Fournel, he at all events has written a consecutive and fairly readable narrative. Like the two specialists we have mentioned, he fails to give any adequate explanation of the enigmatical conduct of the Royalist officers MM. de Bouillé, de Raigecourt and Rohrig, or of the fact that when, at the critical moment, Moustier, one of the King's escort, searched Varennes and its convent (which served as barracks for the sixty hussars specially quartered there to await the sovereign's arrival), neither officer nor men could be discovered. Failure and ridicule would befall any playwright who ventured to make his plot turn on such a series of inconceivable blunders as that which destroyed the French monarch's last chance of life. Somewhat misleading is M. Lenotre's remark that Madame Royale, the daughter of Louis XVI., "fut le prix que l'Autriche demanda de la liberté de Drouet," the postmaster of Sainte-Ménehould; the regicide Conventional was only one of several prisoners given in exchange for the Princess.

MESSRS. JOHN BARTHOLOMEW & Co., of the Edinburgh Geographical Institute, send us a map of *Salisbury Plain and District* on the scale of two miles to an inch. It is coloured in such a way as to give readily an idea of the various altitudes—a most important point for all wheel traffic—and the main roads are noted in red. So far as we have tested it we find it well up to date. Those, however, who have any practical experience of using maps will not buy the shilling paper issue sent to us, but that on cloth, preferably cloth dissected. Paper tears inevitably, so that the extra price for more durable material should always be paid. In that form the map will be found generally clear and of great value.

MR. FROWDE sends us in two forms the "Oxford Edition" of *The Poetical Works of Shelley*, edited by Mr. Thomas Hutchinson, whose capable recension we have already praised. Including the materials of recent discovery and textual notes which are a model of their kind, the volume in cloth runs to 936 pages. The same book, at a somewhat higher price, forms the first complete edition of Shelley on Oxford India paper in one volume, and is a marvel of judicious compression. Our only doubt is about the green colour of the binding. It is well enough in the cloth edition, but in that just referred to the shade strikes us as unpleasant. We prefer the deep red in which the "Oxford Edition" of Byron and other poets was clothed.

The Reign of Queen Anne, by Justin McCarthy, in "a large-type fine-paper edition" (Chatto & Windus), is an admirable little book, which ought to be immediately popular in this neat and handy form.

MESSRS. BLACKWOOD have sent us *Doom Castle*, by Neil Munro, and Vol. V. of Burton's *History of Scotland*, both reprints which have our warm approval.

MR. LANE has added to his attractive "New Pocket Library" *Euphranor*, FitzGerald's charming little Platonic dialogue. Mr. Frederic Chapman is responsible for a pleasant introduction, which includes Spedding's review of the dialogue in 1851.

"BUSHIDO."

Hôtel International, Paris, August 25th, 1905.

MY attention having been called to the review on the "Bushido" which appeared in your issue of August 19th, I have noticed a good many points about which I am obliged to differ from the reviewer. Without, however, entering on any argumentative part of it, I beg, with your permission, to point out a grave error in the fundamental fact taken up by the reviewer. He says that the discovery of Bushido is quite recent, and that the term in literal Chinese means the "way of the executioner." This is technically quite inaccurate. I give a few examples, out of my scanty stock of reference books at hand, which will thoroughly demonstrate it.

In 'Hogen Monogatari,' an historical record describing some events which took place in the middle of the twelfth century A.D., and written not long after the events, Tametomo, a great hero, is represented as having said, in the course of a speech, as follows:—

"For a Bushi, an act of killing is inevitable. Nevertheless, Bushi-no-michi [*i.e.*, Bushido] forbids to kill an object whose position is not fit for doing so, and therefore, although I have fought more than twenty battles, and put an end to countless lives, I have always fought legitimate foes, and not illegitimate foes [in modern phraseology, combatants and non-combatants]. And, more! I have neither killed a deer nor fished a fish."

Bushi-no-michi and Bushido are one and the same thing, one being the colloquial way of reading, and the other being the Chinese way, of one and the same ideographs.

From the earlier parts of the seventeenth century A.D. we have seen many books written on the subject, and the terms both Bushido and Bushi-no-michi, also Budo and Shido, all of which are the same thing in the main purport, are most freely used. Without going into details, I will mention here the names of some scholars and expounders of Bushido in whose writings these terms appear: Nakaye Toju (born 1605), Kumazawa Banzan (born 1619), Yamaga Soko (born 1622), Kaibara Yekken (born 1630), Daidoji Yiuzan (born 1639), Izawa Hanrioshi (born 1711). These names are in Japan as familiar as Johnson and Goldsmith in England. K. SUYEMATSU.

*** What I wrote about *bushido* is strictly accurate. The word is a new coinage, otherwise as a word it would be in the dictionaries. Baron Suyematsu gives no instance of its older use. *Bushi no michi* is not the same thing, though the Chinese characters are the same. *Bushi no michi* is a sentence—the path walked in by the Samurai; *bushido* is a word (*jukuji*) more particularized, and signifying a caste-creed. It connotes qualities some of which I do not believe the Samurai possessed, or, at all events, usually exercised. My objection is not to the word, but to the ascription to the Samurai of all (not of some of) the virtues it is used to connote. Baron Suyematsu's interesting extract shows that the main virtue of the Shogunal Samurai was killing—killing his fellow-countrymen, not deer or fish. The characters *bu shi* in Chinese do mean "executioner," *wushih* (see Giles's 'Dict.,' No. 12,744). Neither in Giles nor Williams nor Morrison is *bu shi* (*wu shih*) used to signify a Samurai (server or follower). I altogether disbelieve in *bushido*, as described by Prof. Nitobe, being a virtue of old Japan, and the gist of my review is an expression of that disbelief. THE REVIEWER.

THE DOONES OF EXMOOR.

Hadlow, Kent.

MAY I add a few facts to the interesting communication by Dr. Cox?

1. The foundations of buildings at the foot of the coomb between Lank Combe and Haccomb Water were known as Doone Houses before 'Lorna Doone' was written. A considerable portion of their material was used in building the shepherd's house (for it is not a "hut," though often so called) higher in the same coomb.

2. There were living in Exmoor a few months ago (and they probably are still living) two men over eighty, who, as young men, were at work in the Badgeworthy Valley, and who spent their spare time at nights and mornings (for "years" one of them said) in digging around and amongst the "Doone Houses" for treasure. They had heard that it was buried there by the Doones.

3. The "long gun" which is still treasured at Yenworthy Farm, near Oare, is valued because it is said to have "shot a Doone." When I inquired of Oare folk, at the Parsonage Farm, Oare, whether the tradition could have arisen since Blackmore's book, I was assured that the tale had been connected with the gun for "a hundred years."

4. In the same inquiry I was assured by the old water-bailiff, who lodges at Parsonage Farm, and who has been "fifty years" on the water where Jan Ridd caught loaches and Lorna, that the tales of the Doones were well known to him before the Blackmore book was published. He told several which are given in 'Lorna Doone' or in its foot-notes, but he also told another story, which I had not seen in print until I find it, with slight variation, in Dr. Cox's communication in your last issue. He said:—

5. "Once a lot of Doones were out robbing, and they came to a farmhouse where there was only a woman and a little child. The woman hid herself, and the robbers could not find her or any money; but they knew she was not far off. One of the robbers said, 'Prick the calf an' the cow 'll howlee,' so they pricked the child with their swords to make it scream so the woman would hear it. But she didn't come out, so they killed the child; but they didn't find the woman or the money."

6. At the close of this narration one of the party turned to the water-bailiff and asked, "Don't you know where that happened?" and, on being assured that the narrator never heard what farm it was, replied, "Why, it was this very place where we are"—the Parsonage Farm, Oare. I do not know on what authority the last statement was made, but it was by a gentleman from a distance, who has spent much time fishing and tramping about Exmoor.

H. SNOWDEN WARD.

128, Nelson Road, Hornsey, N.

As a Devonian may I express my thanks to Dr. J. Charles Cox for his irrefutable presentment of the case in favour of the historic authenticity of the Doones of Exmoor, and of the facts and traditions connected with them, which Blackmore has woven into his romance of 'Lorna Doone'?

In corroboration of his argument, Dr. Cox may be interested to know that some months since *The North Devon Herald*, Barnstaple, printed a correspondence on the same subject. I believe it originated through a letter written by a lady who claimed to be a kinswoman of the Doones. She showed that the clan settled in Exmoor on their outlawry from Scotland, and quoted from documents in her possession which throw considerable light on the descent and history of the clan.

It is difficult to see how the Doones can be confounded with the Danes. The latter were met and vanquished at Northam, between Bideford and Westward Ho! some hundreds of years before the Doones were heard of in the west of England, as King Hubba's memorial stone at Northam bears witness.

That the "Doone Valley" derived its name from Blackmore's book may be accepted. In this connexion it is interesting to note that "Westward Ho!" beloved of golfers, as a place-name is also derived from Charles Kingsley's romance, the name having been previously "Northam Burrows."

It should be remembered that 'Lorna Doone,' although published in 1869, fell flat at first, and its popularity did not commence until the marriage of the Marquis of Lorne (now Duke of Argyll) with the Princess Louise in 1871. There was supposed to be some association between Lorne and Lorna, and from this unfounded supposition the story jumped into a favour which increases every year.

GEO. DENNIFORD.

KINDLY allow me to correct a careless slip in my last week's article. In the centre of the last paragraph but one, for "Healey" read "Rawle." J. C. C.

THE LIBRARY ASSOCIATION AT CAMBRIDGE.

II.

ON Wednesday afternoon, August 23rd, the first subject was 'Library Grouping,' by Mr. L. Inkster (Battersea), who proposed a more systematic direction for the library movement. 'Library Politics' were introduced by Mr. Ballinger (Cardiff), who made a plea for extending the organization of the Association. Councillor T. C. Abbott (Manchester) and Mr. H. R. Tedder proposed and seconded a resolution to arrange three meetings in the course of next year, in such different towns as should be considered convenient, for the purpose of discussing questions in which those interested in public libraries and public education might co-operate. The resolution, being in harmony with the report of the Committee on Public Education and Public Libraries already submitted, was carried. Visits were afterwards paid to King's College Chapel and the libraries of the University, Trinity Hall, and St. John's.

The annual report was submitted at a business meeting which was held in the evening. The obituary included the names of Mr. C. C. Blore, who for some years had rendered zealous and efficient service as one of the honorary auditors; Sir Reginald Hanson, alderman and Lord Mayor of the City of London, a life-member of the Association, who had taken special interest in the welfare of the Guildhall Library, and had long been active in every work of beneficence in the City; Mr. George McMaster, J.P., of Upper Rathmines, Dublin; Mr. J. H. Mathews, for seventeen years Chairman of the Brighton Public Library Committee; and Mr. A. B. Railton, for many years connected with the well-known bookselling firm of Messrs. Sotheran & Co., of which he had been a partner from 1893.

The Council with much regret reported that Mr. Lawrence Inkster had resigned the office of Honorary Secretary, which he had held for three years to the satisfaction of the Council and of the Association. Mr. L. Stanley Jast had been elected his successor, and Mr. J. W. Knapman had been appointed honorary auditor.

The twenty-seventh annual meeting, last year, at Newcastle-upon-Tyne, had been successful and agreeable. A new meeting-place for the Association had been found in the London School of Economics, and the first meeting held there on April 17th last. The Council considered it of advantage to the Association to be more closely connected with that important institution, where the Library Association classes had been held for some time, and where the Association's library had now been installed. Eight monthly meetings had been held during the year. The Public Libraries Acts had been adopted at thirteen places during the year ending June 30th, 1905. The Public Libraries Amendment Bill had been again introduced by Mr. H. J. Tennant, but the condition of parliamentary business prevented any advance with private Bills. The Council had taken steps to bring about closer relations between the Library Association and branches in the United Kingdom. The Committee appointed at the annual meeting of 1902 was still working on the revision of the Library Association Cataloguing Rules. A resolution had been passed last year in favour of inviting the American Library Association to co-operate in a joint code for Great Britain and America, and the Library Congress at St. Louis passed a unanimous resolution in favour of the suggested co-operation. The Council believed that this

XUM

important matter had now reached a stage which should ensure the successful carrying through of an Anglo-American code of cataloguing rules. The Council had received a letter from a Special Committee of the American Library Association suggesting a federation of the various library associations and bibliographical societies of the world. The Council were pleased to be able to report the continued success of the classes held under the auspices of the Education Committee of the London School of Economics, and were glad to note the great increase in the number of candidates for the examination. A new feature had been a Correspondence Class, conducted by Mr. J. D. Brown, which had long been wanted, and had proved entirely successful. It was hoped to extend these classes for the benefit of provincial assistants. The results of the 1905 Examination were highly gratifying to all concerned. Meetings of the Sound Leather Committee had been held at frequent intervals during the year, and the expert handbook, 'Leather for Libraries,' had been issued without expense to the Association.

The report, together with the balance-sheet and accounts of the Hon. Treasurer (Mr. H. R. Tedder), was received and adopted. It was announced that invitations had been received to meet at Bradford in 1906, and at Glasgow in 1907. Votes of thanks were passed to the Mayor and Corporation and the Vice-Chancellor and University of Cambridge for their welcome, to the Local Committee for their exertions, to the authorities of Trinity College and King's College for their hospitality, as well as to other bodies and persons who had contributed to the social success of the meeting.

The morning session on Thursday, August 24th, was devoted to newsrooms and Sunday opening. A discussion on 'Newsrooms: are they Desirable?' was opened by Mr. C. W. Sutton (Manchester), who considered that no one could object to the inclusion of professional and other well-known journals. A certain restriction in the number of newspapers was desirable. It was a popular branch of free library work. Mr. J. A. Charlton Deas (Sunderland) contended that newsrooms were undesirable. The opposite opinion was held by Mr. F. T. Barrett (Glasgow), who thought that the great daily newspapers were educational institutions. Mr. J. Pink (Cambridge) said that men did read books after the age of thirty-five. Mr. Doubleday (Hampstead), Mr. H. D. Roberts (Hackney), Mr. Briscoe (Nottingham), and others spoke in favour of newsrooms, and a resolution recommending their abolition was lost by a large majority. Mr. A. Capel Shaw read a paper on 'Sunday Opening of Libraries,' giving his experience at Birmingham. Bailie Shaw Maxwell (Glasgow) thought these institutions should be open to readers on Sunday, and remarked that public opinion in Scotland on the subject had changed within the last few years. Mr. H. D. Roberts submitted statistics to show that Sunday opening was unnecessary and undesirable. Other speakers mentioned that the practice had not been successful at Liverpool, Wandsworth, and Cambridge. From Wigan, Manchester, and Birmingham, on the other hand, there came a different report. Although no vote was taken, it seemed on the whole that the balance of opinion was against Sunday opening.

A joint conference of librarians, chairmen of library committees, and architects was afterwards held on 'Library Planning.' Mr. H. T. Hare, V.P. R.I.B.A., dealt with the subject from the architect's point of view, while Mr. F. J. Burgoyne sketched the accommodation needed by the librarian. Mr. M. B. Adams and Mr. S. K. Greenslade gave their professional experience. The Committee on 'Cataloguing Rules' presented a report; and this concluded the formal business. In the afternoon the President and Mrs. Jenkinson entertained the members at a garden party in the Fellows' Garden of Trinity College, and in the evening the usual annual dinner took place, when a service of plate was presented to the retiring Hon. Secretary, Mr. L. Inkster. On Friday there was a trip to Ely.

Besides the papers and discussions, the following exhibitions were held in the Corn Exchange during the week: library appliances; bookbinding and materials, especially specimens of sound leather; plans and photographs illustrative of recent library planning; and the best books of 1904. The last exhibition has been held for several years in succession, and has been highly popular. Thanks to the kind co-operation of the leading publishers of the country, the members have thus been able to inspect the best literature of the previous twelve months.

The meeting at Cambridge was well attended, the papers and discussions being businesslike and instructive. The resolutions carried in favour of taking practical steps to unite library and educational authorities cannot fail to be of public utility. The visits to libraries and the social side of the meeting were extremely agreeable, success in these respects being largely due to the local committee, the chairman of which was Mr. R. Bowes, the secretaries Mr. J. Pink and Mr. C. J. Smart.

KING JAMES I. AND FRA PAOLO SARPI IN 1607.

Via del Servi, 53, Florence.

WITH reference to a passage of King James I.'s letter to Sir Dudley Carleton, his ambassador in Venice, dated June 22nd, 1612, and published in No. 3689 (July 9th, 1898) of *The Athenæum*—

> Now because wee cannot imagine that he [Fra Paolo] is doubtfull of our favor in the general, remembring how often and how amply wee have declared our selfs in that point—

I feel sure that readers will be interested in some unknown particulars about the king's "favor" for Fra Paolo, which I discovered five years ago, and which are contained in five unpublished letters of the year 1607, kept part (two) in the State Archives in Venice, and part (three) in the Public Record Office in London.

The first of these letters, from Zorzi Giustinian, the Venetian Ambassador in London, to his Duke Leonardo Donato in Venice, is dated from "Craford, July 18th, 1607." After an audience with King James I. he writes (I translate):—

> The King went on to tell me of the kind manner in which the Pope had received our Ambassador in Rome,* from which manner, he said, one could infer that the Pope was seeing clearer and clearer every day that it had been quite contrary to reason that he had afflicted the "Serenissima." The King said that he hoped that after this event the world would be enabled to see more distinctly the point up to which the Pope has to extend his authority over princes. He added that Your Excellencies had proceeded with great prudence when, in the note lately published, Your Excellencies have declared *that the Pope had at last shown that he was persuaded of this truth.* I answered that, as the cause undertaken by Your Excellencies was a very just one, so Your Excellencies had sustained and ended it with full dignity. His Majesty was greatly pleased with this, and added: "I am told that some cardinal of the Roman Inquisition has spoken with great honour and esteem of Maestro Paolo's life and person: I should be very glad if it were so, because this would be a testimony of the truth of his doctrine. But I fear those words were spoken to entice and to attract him to that city." I answered that the force of truth is so great that even those who had denied it were finally compelled to commend it—that if those words were artifices they would very easily be discovered by Maestro Paolo's own prudence and by the prudence of the Most Excellent Senate protecting him. This being a thing in which the King agreed with me.....I left him.—R. Archivio di Stato, Venezia, Secreta Senato, Inghilterra.

* On April 21st, 1607, the interdict and excommunication under which the Republic of Venice had been placed through the bull of April 17th, 1606, had been revoked, and the Venetian Ambassador in Rome had been solemnly received by the Pope.

When this letter reached Venice the English Ambassador in that State was Sir Henry Wotton, the well-known admirer of Fra Paolo. He was informed of it by his friends, and in his next message to the Earl of Salisbury, Lord Treasurer in London, dated September 13th, 1607, he wrote:—

Sir Henry Wotton to the Earl of Salisbury.

Venice, Sept. 13th, 1607.

> .....I send youre Lp withall a very true picture in portable forme of Maestro Paulo the Servite, taken from him at my request, presuming that since it pleased his Majesty to bestowe upon him some gracious and honorable words (which have been written hether very precisely by their Ambassador and have given him and the Senate, where he is greatly esteemed, much satisfaction) it may be likewise some pleasure unto his Majesty to behold a sound Protestant, as yet in the habit of a Fryar, which I affirm unto your Lordship, not out of that vanity which maketh Jesuits register every great wit in their catalogue, but upon assurance thereof given me by my Chaplain, who hath sounded him in the principal points of our Religion. By him I deal with him for lesse observation in diverse things of importance, and they spend uppon agreement together every week almost one half day.
>
> In their very last conference he acquainted him from me with the taking of Blackwell and with some things in the late published booke toutching the same person, which had been sent me, where, in page 39, is mention made of a Breve of the Popes, contayning among other things an admonition against the oath, which as appeareth p. 11 mett Singleton at Siena. A Copie of the which Breve he hath desired me by all means to procure, that he may out of it informe the Senate palpably and authentically that the Pope's ends are to resist all natural obediences and finally to dissolve the jurisdiction of Princes and States. And in this he is the more eager because he holdeth this position, that it is the poynt of soveraignity under which other parts of God's truth must be replanted here. Now to say yet a little more of this man upon whom and his seedes there lyeth so great a work, he seemeth as in countenance as in spirit liker to Philip Melanchton then to Luther, and peradventure a fitter instrument to overthrow the falsehood by degrees than by a sodayne, which accordeth with a frequent saying of his own: That in these operations *non bisogna far salti*. He is by birth a Venetian, and well-skilled in the humour of his own country. For learning I think I may justly call him the most deep and general scholar of the world, and above other parts of knowledge he seemeth to have looked very far into the subtelties of the Canonists, which part of skill gave him introduction into the Senate. His power of speech consisteth rather in the soundness of reason than in any other natural habilitie. He is much frequented and much intelligenced of all things that passe, and lastly, his life is the most irreprehensible and exemplar that hath ever been known. These are his parts set down (I protest unto Your Lp) rather with modestie then excess.—Public Record Office, State Papers, Venice, Misc. 12, f. 805.

Only twenty-two days had elapsed since the date of this letter when, on October 5th, 1607, the attempt on Fra Paolo's life ("stylo Romana curia") took place in Venice. The Venetian Ambassador in London received from the Senate orders to communicate this event to the King, and after his reception at the English Court he wrote in his letter to the Duke, dated November 11th, 1607 (I give the translation):—

> I went on giving His Majesty from Your Excellencies a brief account of what befell Padre Maestro Paulo, keeping myself within those general terms which were prescribed to me by you. The King thanked Your Serenity for this confidence, and told me how, through his Ambassador, he had already received news of this attempt. He told me that, through the same Ambassador, he had also received the sentence published against the offenders, and, greatly commending the justice and protection of the Republic, he expressed his abomination for the enormity of the attempt, especially as being on the life of a person who for his doctrine and virtue is kept by him in great honour and esteem. The King added how easy it was to understand *who* had been the authors of this villainy, Maestro Paulo not having to fear persecution from any other but from Rome. He said that, having wonderfully preserved Padre Paulo's life from the snares of his ene mie

God had given this sentence on the truth of the Friar's doctrine. He said that the Pope pretending that the punishment of the assassins is to be his own business, every one here is anxious to see *how* he will proceed against the priest who is guilty of such an enormous crime, and, showing himself exceedingly angry about it, he exclaimed: "Might it please the Lord that these wretches would think of coming to these realms! I promise you that there would be no need for you to come and ask me for them, because I myself would send them immediately as prisoners to your own house! I would not proceed with the Republic as the Most Christian King has done with me, favouring the escape through his dominions of that rebel of mine, the Earl of Tyrone, only to please the Pope! To be sure, I do not know how to believe in the friendship of those princes who do not wish to be free, but will depend on other people's will also in temporal matters!" Now, in order cunningly to divert His Majesty from complaining of the King of France before me, I took occasion from these words to ask him where the Earl of Tyrone had come to, and he answered: "To Flanders, with the purpose, as I am told, of going to Rome." But as, after the observation which the King had made on the accident which had happened to Maestro Paulo, I did not give him a chance again to ask me more than the general information prescribed by you, he went on to tell me, &c.—R. Archivio di Stato in Venezia, Secreta Senato, Inghilterra, 1607.

On the following day, November 12th, 1607, the Earl of Salisbury addressed from London the following letter to Sir Henry Wotton in Venice:—

The Earl of Salisbury to Sir Henry Wotton.

London, Nov. 12th, 1607.

SIR HENRY WOTTON,—His Majesty hath well approved your care and industry, and he hath commanded me to return you thanks for it, being much pleased in the constant and magnanimous proceedings of that State upon all occasions offered, and particularly in the carriadge of the matter concerning il Padre Paolo, of whose escape from so foule an assassinate his Majesty is right glad, as he expressed himself to the Venetian Ambassador here at his last audience, to whom he did also make known his particular good declination towards il Padre Paolo, for his learning, modesty and zeale in the defence of so good a cause as is the sovereign power of an estate (which hath dependence of none but of God against the usurpations of the Pope of Rome, who being not only contented to have intruded himself into the sole power and authoritie for matters belonging to religion, doth seek also cunningly to wynd himself by little and little into the civil government and lift himself up above all the Monarchs of the Earth, as the examples in that State and elsewhere do make manifest, for which also his Breve against the oath of obedience here may serve for an instance, whereof I do send you a copy here enclosed, together with another Breve, which for better explication of the former hath since been published at Rome, to prevent all exceptions that might be conceived against it, both which you may impart to the partie you wrote of, for his better satisfaction and encouragement in the course he hath begun, to which His Majesty wishes all good success, for the propagation of God's glory.

Concerning the picture of Padre Paolo, it was intercepted by the way from him that brought it, and therefore His Majesty would be glad by some other means to have it, the sooner, the better.—State Papers, Venice, Misc. 12, f. 841.

On December 21st, 1607, Sir Henry Wotton had another picture of Padre Paolo ready for the King. He answered with the following words that part of the Earl of Salisbury's letter concerning the Padre Paolo:—

Venice, dec. 21st, 1607.

Captain Pinner.....I have now retayned a day or two that he may bring with him the picture of Padre Paolo, which His Majesty shall now, through the miscarriage of the former, receave with the late addition of his scarre. And I have this very morning communicated with him those papers as from his Majesty, whose gracious remembrances he taketh exceeding dearly and tenderly.—Public Record Office, State Papers, Venice, Misc. 12, f. 901.

EUGENIA LEVI.

DRYDEN'S 'ART OF PAINTING.'

WHY have most people so perverse a preference for attending exclusively to what is unessential in a discussion? In the little communication which I made to *The Athenæum* on the subject of the 1695 edition of Dryden's 'De Arte Graphica' I dealt with two points—the one wholly unimportant, the other, I believe, of some literary value. In the flood of correspondence which has followed, it is solely the unimportant matter which has attracted attention. I remarked, in passing, that I believed the 1695 edition to be extremely rare. Rarity is a relative term, and the existence of twenty copies of a book would not prove it to be common. However, I freely confess that, in the face of the evidence produced, the first edition of Dryden's volume cannot be so uncommon as Mr. Saintsbury and I, and Sir Walter Scott before us, believed it to be. Given that a work is known at all, the number of copies which turn up seems to me to be interesting mainly to booksellers and collectors. But let us admit that the 1695 edition can be consulted without difficulty.

This, however, only increases the surprise which I ventured to express in the fact that it never had been consulted. If it is so common a book, how is it that no critic has ever before defined and described the extraordinarily interesting and copious variants which it contains? To recover a large amount of unknown prose by Dryden, which had been lost for nearly two hundred years through the surprising audacity of Charles Jervas—this seemed to me, I confess, a matter of some positive literary interest. Yet, with the exception of Mr. Wheatley, not one of all the correspondents who have written to *The Athenæum* in deep indignation at our supposing this book to be infrequent, has so much as mentioned or shown himself aware of the critical part of my communication, the only part which for people of letters has the slightest importance. Instead of literature these correspondents offer me a shelf-mark.

Now, in the present complication of literary effort, it would be very rash to assert that these variants have never been described before. But I have been a diligent lover of Dryden for thirty years, and I never came across any account of them, nor has Mr. Saintsbury, nor has, so far as my private inquiry goes, any other student of Dryden. Prof. W. P. Ker published in 1900 a collection of Dryden's Essays, and (as I ought to have mentioned in my original communication) he reprinted the 'Parallel of Poetry and Painting' from the first edition, but he did not refer, as it was not within the scope of his volumes to refer, to those other portions of the 1695 issue with which Jervas tampered. Of course, if the variants have been described before, I apologize to readers of *The Athenæum* for wasting their time. But if not, I think I should be justified if I asked all the people who write to say how familiar they are with the outside of this book how it comes that they never took the trouble to look inside it. With all deference to their industry, it is useful to make press-marks, but they will scarcely ask me to admit that this represents the whole duty of the literary man. A great Frenchman, dealing with this very subject, has said, "Il est bon de faire des collections; il est meilleur de faire des promenades"; and he (was he not?) was brought up in the shop of a second-hand bookseller.

EDMUND GOSSE.

Bodleian Library, Oxford.

IN his recent article on this subject Mr. Edmund Gosse compared the original (1695) text with that of Jervas's (1716) edition, and in his concluding paragraph he says: "'A Table of Precepts,' which followed the preface in 1695, Jervas seems to have omitted." And among the names which Mr. Gosse charges Jervas with altering is that of Ghirlandaio into Chirlandaio.

It may interest Mr. Gosse to know that in the 1716 edition in the Bodleian the 'Table of Precepts' is *not* omitted, but duly inserted by Jervas, while on the page following the 'Table' is a list of *errata*, the last line of which is, "Page 224, line 5, read Ghirlandaio," so that not only did Mr. Saintsbury and Mr. Gosse overlook the original (1695) edition in our public libraries, but the 1716 (Jervas) edition, which Mr. Gosse has used for the purpose of comparison, was only an imperfect copy.

F. R. RAY.

THE LOST EIGHTH-CENTURY GREGORIANUM OF THE ROMAN CHURCH.

III.

Divisions L^1, L^2.—Honorius I., who has more than once given us a *terminus a quo* for the nucleus of the work I am reconstructing, built a church on the Via Ostiensis in honour of St. Cyriacus; and if in our next synopsis we set the value of that saint's mass in the second of the paired columns under "I.," we find that, pending the advent of more important accessories to the Roman menology, St. Laurence's Eve closed a fivefold gathering, L^1, which began with SS. Peter and Paul; and that the twelve pages, L^2, which began with St. Laurence's Day led on to a fresh starting-point, the Exaltatio S'cæ Crucis, another feast instituted by the same Honorius.

In L^2 the earliest post-Gregorian anniversaries were, in all probability, those of St. Protus and St. Cornelius, at whose tombs lamps had burnt as far back as the time of Gregory himself, and, besides these, that of St. Gorgonius, who has the next claim on our regard because he is mentioned in the earliest of the itineraries, because his mass is suggestively brief, because none but so short an item could have satisfied the stichometrical requirements of the division, because it satisfies these with punctilious nicety, and because but for it we should have had chaos instead of order.

The mass next after this invites remark. In Muratori, Ménard, and the Canterbury Missal two of its prayers have the strange reading, "Beati Proti et Hyacinthi," or "Beati Proti et Iacincti." Suspecting this to be no commonplace blunder, I have with some care examined† the epigraphy of the cemetery of St. Basilla, where the bodies of the two saints were deposited, and have little doubt that the primary nucleus of our document was compiled at a time when the *loculus* of St. Hyacinth had long been hidden from sight, and his claim to the palm of martyrdom lost to memory; that the *loculus* was disclosed and the claim re-established on occasion of a reconstruction of the chamber, perhaps about the year 640; that the words "et Hyacinthi" were then set in a margin of the papal missal over against the mass for St. Protus; and that "Beati Proti et Hyacinthi" is thus an awkward welding of new with old. But whether a fourfold substitution of the two names for one was made in the text of the book under Recension β — or, indeed, in Rome at any time—is a question more easily asked than answered. It may have been, thus raising to 3,808 letters the total of work then added. I am, however, inclined to think that the alteration was made at a later date than that just suggested, and confined to the margin of the papal book; but that the augmentation required for raising to a multiple of 380 letters the total of the additions to the Division made under Recension β was effected by giving SS. Cornelius and Cyprian a new Postcommunion of 139 letters, as found in the Canterbury Missal, in place of that in 79 letters which Alcuin has preserved to us. Either expedient would have served the necessary purpose. I note both, but compute the latter in my total for column II.

My reconstruction, then, of so much of the Gregorianum on which Alcuin worked as included both the feast of the Apostles and that

† De Rossi, 'Inscriptiones Christianæ,' I. i. 30.

The Præfatiuncula says that the masses for the Assumption and the Nativity of St. Mary contain material which, in the writer's opinion, was not original. Each has a noteworthy peculiarity. 1. Although, when the Præfatiuncula was written, the old "Dormitio" of Gregorius Dialogus had been superseded by the new "Assumptio," the only prayer for either vigil or feast that implies the latter, as against the former, idea is the only prayer that is textually unsatisfactory. Muratori reads it, "Veneranda nobis Domine huius est diei festiuitus *opem conferat sempiternam*, in qua sancta Dei genitrix mortem subiit *temporalem*, *nec tamen nexibus mortis deprimi potuit*, quæ," &c., where, of the words which I italicize, MS. Ottob. 313 has not the first three, and where the singularly mercurial scribe of the Canterbury Missal seems to have been influenced by a text which had not the other seven. By cancelling the two groups we obtain a tolerable construction, we destroy a false antithesis, we find a commemorated Assumptio reconverted into a commemorated Dormitio, and by the deduction of their 65 letters enable Gregorius Dialogus to satisfy the stichometrical requirements of his recension, the value of the prayer being thus reduced from 176 to 111 letters.† 2. The reference to the Nativity of St. Mary would seem to mean that its "Famulis tuis," &c., in 149 letters, is a substitute for the "Adiuvet nos," &c., an Oratio of 101 letters, common to the Queen of Sweden's book and the St. Gallen Sacramentary, and thus a doubly allotted prayer, which Alcuin's theory required him to supersede.

The only other single prayer which would seem to have challenged removal on the score of double allotment is the Secreta "Plebis tuæ," &c., for SS. Cornelius and Cyprian, a prayer common to the Queen of Sweden and Di Azevedo, to St. Gallen and Canterbury. I assume the strangely inappropriate "Adesto," &c. (Mur. Greg. 119), of the Libellus to be a substitute for it. Their numbers are 112 and 146 respectively.

It is theoretically possible that this portion of the Libellus was at a single revision put into the form in which we know it through Muratori; but a more probable view is, on the whole, that which conceives the changes mentioned in the Præfatiuncula and those that have left trace of rubrical disturbance behind them to have been effected *ex post facto;* and that the Octave of St. Laurence and the Decollation of the Baptist are also comparatively late eliminations. I therefore marshal the changes in two columns, thus :—

Cancelled or superseded :—

Nine Sundays	3515		
St. Felix		390	
SS. Simplicius. &c. (II. xxxvii. : 153)		508	
Maccabees (II. lxxvii. lxxviii. : 156)	379		5963
St. Sixtus : Preface		326	
St. Donatus (II. xli. : 159)	407		
Oct. of St. Laurence (II. xlvi. : 166)		438	
Assumption : Collecta		111	
Two Sundays	679		
St. Magnus (II. xlix. : 167)	300		
St. Rufus (II. l. 169)	348		2241
Passion of Baptist (II. lii. : 171)		414	
St. Priscus (II. liii. 172)	389		
Nat. of St. Mary : Oratio (II. liv. : 173)		101	
St. Gorgonius (II. lv. : 174)	280		493
SS. Cornelius, &c. : Secr. (II. lvii. : 176)		112	
	6297 : 2400		

Added or substituted :—

Five *aliæ* (103) : 167, 130, 97, 87, 113	594		1009
SS. Felix, Simplicius, &c.		415	
Assumption : Collecta		176	176
Nativity : Oratio		149	295
SS. Cornelius, &c. : Secreta		146	
	594 : 886		

† The ancillary rubric, 'Ad missam,' raises this to 119, as in my list.

That is to say, a net deduction was effected, in the first instance, of (6297−594=) 5703 (=15×380$\frac{1}{3}$) letters, and again, in the second, of (2406−886=) 1520 letters, or nineteen pages in all. Thus Alcuin's ultimate version of Division L filled thirty-three pages, as against fifty-two.

So skilful was all this hitherto unnoticed—and therefore unexamined—economy of textual change that the result wore a semblance of verisimilitude not unworthy of Gregorius Dialogus himself. The net deduction of (5963−1009=) 4954 letters from the first 13697 of Division L left Alcuin a balance of 8743=23×380$\frac{3}{12}$, thus enabling him to begin the Collecta for the Assumption on the first line of his twenty-fourth page. And, as will be seen by a glance at the last subdivisions of my three lists, since (19799−18268) −186−493+295=1147=3×382$\frac{1}{3}$, the Oratio of his mass for the Nativity of St. Mary began on the first line of his thirty-first, the introductory Collecta, as often happened, standing at the foot of the previous page ; as also the rubric 'Ad missam.'

Divisions M, N, O.—The subjoined summary carries on and completes my proof. Side by side with the work of the first Roman editor it epitomizes what Alcuin spared of that work ; and it epitomizes what, by my theory, he added to it. He, while excluding the items which I print in italics, adopted a mass for St. Theodore—like that of St. George, of later date than Gregory II.—gave a Preface to the Vigil of St. Andrew, and transferred hither the seven masses of Advent. The *missa* for St. Martin cannot, I suspect, have been intrinsic to the first scheme of the Libellus, and is probably due to Alcuin's preferment, very late in life, at Marmoutiers.

A few items of the original document deserve remark. 1. The feast of St. Nicomedes is in the order of thought, and presumably in the order of time, earlier than that, already recorded, of the dedication of his church by Boniface V. 2. The September feast of St. Euphemia, patroness of an urban church "per multa tempora detecta" by the time of Sergius I. (A.D. 687 *circ.*), may first have been honoured in Rome at any date after the Council of Chalcedon, the city whence her *cultus* came. The so-called Leonian Sacramentary (Mur. i. 404–407) has it. 3. St. Cæsarius was protector of the Imperial chapel within the precinct of the palace on the Palatine, where Gregory the Great solemnly set up the *icon* of the Emperor Phocas in the year 603, subsequently, therefore, to the divulgation of his Missal. 4. St. Mennas, or Menas, was patron of a small church on the Via Ostiensis, where the same Pope preached one of his homilies, the thirty-fifth. 5. St. Lucy's Day, like several anniversaries already noticed, is referable to Honorius I., and once more gives us the year 625 as a *terminus a quo*.

The recognition by the first editor of St. Cæsarius and St. Menas is, I think, highly instructive. It lends probability to the theory I propounded in *The Athenæum* of January 7th in the present year, that, although the text of such of the saints' *missæ* in the primary scheme of the document as are as old as Gregory the Great cannot be proved to have received, and probably did not receive, as did the underlying text of MS. C.C.C.C. 270, the authority which official publication would have given it, it may yet have been the text of an early or tentative compilation.

One more preliminary remark must be added to the foregoing. On the nineteenth Sunday, and at the very place where, for the first time, my figures would otherwise have failed me, I find in Di Azevedo (p. 152) the seemingly inserted clause, "per hæc s'ca quæ sumpsimus." I note its 23 letters in the second of the paired columns under I. No like instance occurs in the book. I believe it to be important, as having been introduced *pro re nata* to satisfy

the stichometrical necessity of the very short subdivision in which it occurs.

In this table the column which represents the last forty-one pages of Alcuin's *collectio*—fourteen of them containing the Advent masses transferred by him from the beginning of the *circulus anni*—enables us to see yet once more how carefully a character of verisimilitude has been given to the compilation. Alcuin's resultant here divides itself into seven groups of integral masses, each group contained in an integral number of pages, and each beginning with a prominent anniversary; and yet, now as ever, all the Sunday masses which by his theory were præ-Gregorian have been omitted, and, besides them, the two saints' masses which by the same theory were "Gelasian" became doubly allotted. He attained his object by introducing a new and shorter mass for the Exaltatio S. Crucis, by giving the vigil of St. Andrew a Preface, by inserting three *aliæ* before Advent Sunday, and by adding a fully developed conclusion to the Oratio for that anniversary. Nothing could be more interesting than this minute and sagacious ingenuity. As regards the first of these processes, if St. Gallen and the Queen of Sweden's book may instruct us, he found on the Exaltation of the Cross a doubly allotted mass, and replaced it by two prayers for the *adoratio Crucis*, a ceremony introduced by Sergius I. (A.D. 687 *circ.*), and a commonplace Postcommunion of 86 instead of 171 letters.

But if the distribution of Alcuin's Libellus was the outcome of design, what shall we say of the sacramentary whence he quarried its materials? I review the successive synopses of that sacramentary as reconstructed in obedience to the postulates of my theory; and I venture to declare that unless or until the idea of an undesigned design shall be conceivable, that theory cannot be wrong:—

τέχνη τύχην ἔστοργεν, οὐ τέχνην τύχη.

Such, then, is the account I offer of a document which, in contravention, whether conscious or unconscious, of the literary tradition recorded in the 'Micrologus,' has, without attempt at proof, been with equal rashness and persistency labelled as "the Hadrianic Sacramentary." If there ever was such a book, this is not it. It is Alcuin's mutilation of a work completed by a predecessor of Hadrian, in all probability Gregory II., the work thus completed having in the first stage of its history been compiled of materials which may have been, and probably had been, for the most part collected by Gregory I., but compiled by or for some successor of his not earlier than the second quarter of the seventh century.

MARTIN RULE.

'KNOX AND THE REFORMATION.'

St. Andrews, August 19th, 1905.

PERHAPS I may be allowed to defend my interpretations of certain passages in Knox's career as against those preferred by my courteous reviewer (*Athenæum*, August 19th). I say that Knox "spoke with two voices, and allege that he used a Biblical precedent in two absolutely contradictory ways." As to the latter charge, the interpretation favoured by the reviewer of the text about Paul's purifying at Jerusalem never occurred to me. But it may be the more probable; indeed, the passage is not clear enough to warrant my use of it. On the other hand, Knox did certainly speak to England "with two voices." Early in 1559, in 'A Brief Exhortation to England' (Laing's 'Knox,' v. 495–522), he gave very truculent counsels, which the seceding Nonconformists, prior to and during 1568, to the extent of their ability, preferred to his admonitions of 1568.

I have not noticed that any of Knox's biographers, except myself and Dr. Lorimer in 'John Knox and the Church of England,' discuss Knox's epistle to England of January, 1559. He attempts, under awful threats, to induce England to accept the lovable Genevan "Church discipline," and to overthrow any civil ruler who resists, as "enemy to God, and therefore unworthy to reign above his people." If the ruler "go about to destroy God's religion once established, and to erect idolatry," he must be "adjudged to death."

Now kneeling at the Holy Communion is, with Knox, one form of "idolatry"; the Litany, too, is a "diabolical" invention. Elizabeth "ordained" these very things; yet, in 1568, Knox wished the Nonconformist brethren *not* to kill Elizabeth, but — very reasonably yet very inconsistently — desired them to abstain from seceding. Less than a year before his vehement advice of 1559, Knox had bidden the Scots "advert that the King taketh upon him to command the priests" in the Bible, and that "the ordering and reformation of religion.....doth especially appertain to the Civil magistrate."

So Elizabeth understood the case, but not so Knox in 1559, when addressing England. He seems to have come round again in 1568, much, no doubt, to the confusion of the English Nonconformists, whom he addressed, among others, in 1559.

As to the Reformer's dealing with England in June, 1559, and the "five letters" from the Scots which I "do not prove," Laing mentions two from Kirkcaldy of June 23rd and 25th, one from Knox of June 28th, one from Kirkcaldy of July 1st, and there is an undated Kirkcaldy letter. Knox mentions another letter of his own. Perhaps the critic can prove that "it did not reach its destination," but it was written.

It is certainly my opinion that when Knox warned Cecil against giving "entrance" (*i.e.*, "enteress," "entrance" or "interest," or what?) "and title" to "many" women by whom "the truth shall be impugned," he meant Mary Stuart. He said nothing of the "Crown," but of "reigning over us." Mary had title—the queen over the water she was—but not "entrance" to her country; and in July, 1559, she could not be said to "reign over us"; her representative being then defied in arms by Knox's party. I am unaware that Cecil and Knox could deny rights to any other female and Catholic claimant of the right to reign in England and Scotland, except to Mary Stuart. Who else was in question, or even visible on the horizon as likely to be in question? Knox speaks to Cecil of "the dangers *appearing*." No other dangers of this kind—no Catholic female claimants — "appear" visibly to my eyes. My critic may be longer-sighted. I stand by my interpretation.

As to the assurances given by the Regent's and the Reformer's parties at Cupar Muir, I really cannot oblige my critic by inserting a full stop where David Laing's printed text of 'The Historie of the Estate of Scotland' gives a comma; and, by parity of reasoning, I cannot insert a full stop where Laing gives a colon! This heroic method of editing makes no sense, in my opinion, and is beyond my editorial valour.

The historian writes:—

"At the last, it was appointed in this manner, that the Frenchmen should incontinent remove forth of Fife, and that the Congregation should enterprize nothing, nor make no invasion for the space of six days following, for the Lords and principals of the Congregation read the rest on another piece of paper: which thing being concluded, the Queen ordained the Frenchmen incontinent to pass to the coast side, and the next day over the water."

Let the critic punctuate this as he pleases; the assurance of the Reformers was that they would "enterprize nothing." Now they were in arms, and the Regent was in arms against them, just because their "enterprizes" since May 11th had taken the form of wrecking churches and religious houses. The Regent had

marched against them on June 13th, solely because their latest "enterprize" of the wrecking sort at St. Andrews had come to her ears. Yet, though pledged to "enterprize nothing," the Reformers, during the truce, wrecked the abbey of Lindores. So Knox wrote to Mrs. Locke (June 23rd), but he carefully kept the fact out of his 'History,' meant for "posterity" and for "all realms." I think that I am not hair-splitting.

The penal Act of 1560 denounced death for the third attendance at Mass. Mary, very soon after landing in Scotland, came under that law. For that reason I say "her continued existence was illegal." That she "lay under sentence of death," as a person tried, found guilty, and condemned, I did not, of course, mean to assert. Legally she ought to have been put to death after hearing her third Mass in Scotland.

May I point out that, if the "Higher Criticism" were applied to Knox's 'History' as it is applied to the Bible, analysis would detect two parallel and inconsistent versions of the wrecking at Perth in May, 1559? The first version, very brief—let us call it "J"—is given in the last two sentences of vol. i. p. 319. The next version, "K," is contained in vol. i. pp. 320–3. I think that any Higher Critic could discover the reason of this curious arrangement. A third version, "L," different from both "J" and "K," appears in Knox's letter to Mrs. Locke of June 23rd, 1559, and is corroborated, briefly, by his letter to Cecil of June 28th.

A. LANG.

SIR THOMAS MORE.

9, Rue du Regard, Paris.

MAY I be allowed through your columns to appeal to any of your readers who are interested in Sir Thomas More? I am making a collection of his letters, and should be thankful to be put on the track of any that may have escaped the attention of Dr. Brewer and Mr. James Gairdner, the editors of the invaluable series of the 'Letters and Papers of the Reign of Henry VIII.,' or of Mr. Sidney Lee in his scholarly article for the 'Dictionary of National Biography.' From these and other sources I have been able to draw up a more complete list than any I have yet seen, but I am anxious to ascertain whether further discoveries cannot be made in private archives.

Such readers may also be glad to hear that my friend Mr. D. S. O'Connor and myself are now at work on a critical edition of the English works of More. JOSEPH DELCOURT.

Literary Gossip.

MESSRS. HUTCHINSON & Co. announce the publication of a new book entitled 'Mary, Queen of Scots, her Environment and Tragedy,' in two volumes, by Mr. T. F. Henderson, the editor with W. E. Henley of the "Centenary Burns." The author treats of the personality and career of Mary Stuart, particularly in relation to her contemporaries and her exceptional circumstances; and the work assumes virtually the form of a vindication. It will contain about 100 illustrations, and the publishers claim that it will include all the authentic pictures of Queen Mary, besides many portraits of her contemporaries and views of the places associated with her life.

MR. AUGUSTINE BIRRELL will publish a new volume of 'Literary Essays' very shortly through Mr. Elliot Stock.

SUBSCRIBERS to the "Victoria History of the Counties of England" will have noted the recent appearance of the second volume of Cumberland. The first volume of Buckinghamshire will also be published within the next few days, and volumes will appear during the autumn concerning the counties of Derby, Durham, Lancashire, Somerset, Worcester, Sussex, and Berkshire. The first of the genealogical volumes, which will also be ready this autumn, concerns Northamptonshire.

SIR ISAAC PITMAN & SONS will publish next month a new novel by Father Benson, author of 'By What Authority?' entitled 'The King's Achievement.' It is an historical romance of the reign of Henry VIII., and introduces many well-known personages, including the King, Sir Thomas More, Bishop Fisher, and Thomas Cromwell, Earl of Essex, who took so great a part in the suppression of monasteries.

THE same firm are publishing this autumn a series of copyright shilling books in specially designed paper covers. Except for binding, they will be exactly the same as regards size, shape, and type as an ordinary six-shilling book. 'The Simple Life' has already been issued in this form, and another volume by the same author, 'The Better Way,' will shortly appear. Two other books arranged for are abridged editions of George Fox's and John Wesley's journals. The same publishers also announce a new edition in two volumes of Dr. Stopford Brooke's book on 'The Poetry of Robert Browning,' and a popular issue of Plumptre's striking book, 'The Spirits in Prison, and other Studies of the Life after Death.'

AMONG the books which Messrs. MacLehose have in the press are 'The English Voyagers of the Sixteenth Century,' by Prof. Raleigh; 'Old Glasgow Essays,' by Dr. John Oswald Mitchell; and 'The Clyde Mystery,' a study in forgeries and folk-lore, by Mr. Andrew Lang.

MR. FISHER UNWIN has arranged to publish a new Welsh novel by Miss Gwendolen Pryce, author of 'John Jones, Curate.' The title will be 'A Son of Arvon,' and the scene is laid in Carnarvonshire, the author's native county. It is the county of tenor singers, and a tenor is the hero. But the book is not the story of a musical success; the deep-rooted passion of the Welsh for a bit of land, for home and hearth, and wife and child, is its true subject.

MR. ROBERT AITKEN, a Scottish journalist, has on hand a history of the Templars and Hospitallers in Scotland.

THE September number of *Macmillan's Magazine* contains an article by Mr. A. R. Hope Moncrieff on 'Gregor McGregor,' the adventurer whose name made some noise in two worlds early in the nineteenth century; Mr. F. R. Earp has a paper on 'The Traveller in Persia,' which describes his experiences in the province of Azerbaijan; Mr. Ernest A. Baker writes on 'The Novels of Captain Chamier'; and S. G. Tallentyre adds a study of Beaumarchais to her series of articles on 'The Fellow-Workers of Voltaire.'

MR. JOHN H. BURROWS writes:—

"The following statement may be helpful in fixing time and one reason why the late Lord Beaconsfield anglicized D'Israeli into Disraeli. In the year 1872 the printing plant and effects of the late Mr. John Grundy (a successor in the business of Vine Hall, author of 'The Sinner's Friend,' and father of the late Rev. Newman Hall), of Bank Street, Maidstone, were sold by auction, and after the sale, as an apprentice to Mr. John Grundy, I was employed in the clearing-up process, during which I came across file and other copies of Conservative literature printed at that establishment in connexion with the election by which Disraeli was returned one of the two members of Parliament for Maidstone. Some of it had the name spelt Disraeli, but a roll of from a dozen to a score copies of an election address bore the printed signature D'Israeli. I asked the overseer (Highstead)—who was then elderly and had been continuously in employment in that establishment since boyhood days—for an explanation, and he said that when Disraeli came to examine a proof of his election address, somebody suggested (the overseer's belief being that it came from Mr. Vine Hall) that the name would look more English-like if the apostrophe were taken out. Disraeli assented, and it came out; and in further printing work a like omission was observed."

A CORRESPONDENT writes:—

"As long ago as 1896 *The Athenæum* announced (No. 3591, August 22nd) that Mr. W. Graham Easton, of Carron Hall, Stirlingshire, was compiling a history of the Graham family. I should be glad to know what advance he has made, and if he has chosen a publisher, as I am interested in the subject, and am well aware that several subscribers have paid for copies in advance."

The Horatian period for delay having already elapsed, we think it reasonable to ask by this time what Mr. Easton has accomplished. We should be sorry to lose a work which promises to be of high interest.

Temple Bar for September will contain a paper called 'The Poet's Ringlets,' in which Mr. Michael MacDonagh maintains that the outward and visible sign of the poetic faculty is abundant hair, and supports his theory by instances from the National Portrait Gallery; Mr. George Makgill records his experiences when coasting along the Northern Isles with a Norwegian crew 'In the Whale's Wake'; Mr. R. O. Winstedt describes the quaint and graceful ceremonies incident to 'A Malay Wedding'; Mr. J. Sackville Martin illustrates the superstitions attached by the Japanese to a 'Muramasa Sword'; and Mr. Henry H. Brown, in 'A Memory of Tarvit Hill,' gives an account of the "duel" between Knox and Archbishop Hamilton.

THE death is reported, at the great age of ninety-three, of the Rev. Francis Procter, well known for his 'History of the Book of Common Prayer, with a Rationale of its Offices,' frequently republished since its appearance in 1855.

MR. LEWIS JOHNSON writes:—

"Will you allow me to point out two mistakes in your able and interesting review of 'Auction Prices of Books'?

"First, you mention 'an ordinary uncut copy' of 'The Haunted Man.' The uncut copy was an *extraordinary* one, in fact unique, the book being issued with gilt edges. Hence the price. An ordinary copy is worth 8s.

"Secondly, 'The Curious Dance' *was* written by Charles Dickens. I have seen the original MS.; it is now in the possession of Mr. Wise, the well-known owner of many bibliographical rarities."

Mr. J. C. Thomson also writes:—

"Surely the writer has made some mistake in his reference to Dickens's 'Haunted Man.' Copies of this, in first-class condition, cloth, gilt edges, as published, may be had from any London bookseller for 7*s.* 6*d.* upwards. Mrs. S. C. Hall's presentation copy may be worth 3*l.* 6*s.*, but, if so, the 3*l.* is the autograph value and the 6*s.* the book value. 'The Haunted Man' was issued with gilt edges. See my Bibliography' (1904)."

Next week we shall pay special attention to school-books and educational manuals, in view of the approaching winter term at the public schools.

Mr. E. H. Coleman writes:—

"Permit me to direct your attention to an error in last week's *Athenæum*, col. 1, p. 263. Mrs. Aphra Behn did *not* find 'a resting-place in Poets' Corner, Westminster Abbey,' but in the Cloisters, where 'her name may still be read,' but not on a slab of 'marble.'"

The eminent theologian Alexander von Oettingen, whose death took place on August 21st at Dorpat, was one of the most distinguished of the professors at Dorpat. He was born in 1827, studied at Dorpat, Berlin, and Erlangen, and became professor at Dorpat in 1856, retaining his post till 1891. He was an ardent Lutheran and an opponent of Ritschl and his school. But though he himself was most proud of his book 'Lutherische Dogmatik,' he was best known by his works on ethics. The volumes 'Moralstatistik' and 'Die christlichen Sittenlehren' created a sensation at the time of their appearance, and were the subjects of violent attack. He was also a great Goethe scholar, and wrote, among other things, a commentary on 'Faust.'

The death, on August 25th, of Norman Dalziel Warne, the youngest son of the late Frederick Warne, will cause much sorrow among his large circle of friends. On leaving the Charterhouse in 1865, he joined his father and brother in the Bedford Street business, and in 1895 became a partner in the firm.

The chief recent Parliamentary Paper is the Report of the Ordnance Survey for the year ended March 31st last (4*s.* 4*d.*).

SCIENCE

Address to the British Association for the Advancement of Science, delivered at Johannesburg, 1905. By Prof. G. H. Darwin, President. Part II.

The concluding part of Prof. Darwin's Presidential Address was duly delivered on Wednesday last. Although he dealt, as promised, with current theories of stellar evolution, only the nebular hypothesis of Laplace and his own doctrine as to the origin of the moon were examined at any length, and nothing very startling or sensational was announced. Perhaps the knowledge that, while he was speaking, the most complete solar eclipse since 1870 was under observation at the other extremity of the continent slightly hampered the speaker. The insight which we expect it to give us into the nature of the sun itself, especially of the gas coronium, which is supposed to exist nowhere but in the solar corona, and, perhaps, of the hitherto unexplained "shadow bands" which appear on the earth just before and after the phase of total obscurity, may well be such as to falsify any too dogmatic statements as to the sun's origin that might be made in advance.

By an inversion of the natural order of things, Prof. Darwin began by an account not of the birth, but of the growth of the larger bodies of our system, which he thought to be due to gradual accretions of meteoric stones. After declaring his belief in the accuracy of what is known as Bode's planetary law, he showed that a meteoric stone, coming within the mutual attraction of the sun and a planet, will

"describe an orbit of extraordinary complexity, at one time moving slowly at a great distance from both the sun and [the planet], at other times rushing close past one or other of them."

He then went on to say that whether the meteorite was absorbed by the sun, collided with a planet, or continued on its path for ever, depended on its orbit, and that herein he found another instance of the survival of the fittest:—

"There are perpetual orbits, but some, and indeed most, are unstable, and these do not offer an immortal career for a meteoric stone; and there are other perpetual orbits which are stable or persistent. The unstable ones are those which succumb in the struggle for life, and the stable ones are the species adapted to their environment.....The final outcome will be an orderly planetary system in which the various orbits are arranged according to some definite law."

This doctrine, however, of the evolution of sun and planets from a formless shower of meteoric stones is in apparent—but, according to Prof. Darwin, not in irreconcilable — disagreement with the nebular theory of Laplace, by which our universe was once a cloud of rarefied gas congregated round a central condensation which was ultimately to form the sun:—

"The nebula must have gradually cooled by radiation into space, and as it did so the gas must necessarily have lost some of its spring or elasticity, thus permitting a greater degree of condensation of the whole. The contraction led inevitably to two results: first, the central condensation became hotter; and secondly, the speed of its rotation became faster. The accelerated rotation led to an increase in the amount of polar flattening, and the nebula at length assumed the form of a lens or of a disk thicker in the middle than at the edges. Assuming the existence of the primitive nebula, the hypothesis may be accepted thus far as practically certain."

But the original hypothesis of Laplace supposed that this thickening at the middle in time led to the formation of several external rings, which gradually detached themselves from the parent nucleus or sun, and concentrated in turn round some point in their own circumference. This Prof. Darwin thinks impossible. A ring of matter, he says, can only concentrate round the centre of gravity of the whole ring, and this would lead to the ring returning to the parent body. If, however, we suppose the ring to be broken by some outside force, matters would be different:—

"If the ring were so far from being complete as only to cover a small segment of the whole circumference, the true features of the occurrences in the births of planets and satellites might be better represented by conceiving the detached portion of matter to have been more or less globular from the first, rather than ring-shaped."

From this he proceeds to inquire what would happen on the supposition that the detached portion were, like our earth, liquid, and under the combined influence of gravitation and rotation. He finds that an increase of rotation leads to a diminution of its power of resistance to any sort of disturbance, and he compares the different forms assumed by it under the influence of an ever swifter rotation to the different species of animal forms:—

"The first or planetary species has a circular equator like the earth; the second species has an oval equator, so that it is something like an egg spinning on its side on a table; in the third species we find that one of the two ends of the egg begins to swell, and that the swelling gradually becomes a well-marked protrusion or filament. Finally, the filamentous protrusion becomes bulbous at its end, and is only joined to the main mass of liquid by a gradually thinning neck. The neck at length breaks, and we are left with two separated masses which may be called parent and satellite."

The likeness between this and what appears in masses of protoplasm of course strikes him, and he draws the necessary parallel thus:—

"The figures which I succeeded in drawing, by means of rigorous calculation, of the later stages of this course of evolution, are so curious as to remind one of some such phenomenon as the protrusion of a filament of protoplasm from a mass of living matter, and I suggest that we may see in this almost life-like process the counterpart of at least one form of the birth of double stars, planets, and satellites."

This may well be, and if Prof. Darwin had had time to become acquainted with the experiments in cytogenesis made by M. Stéphane Leduc, and published by him during the British Association's journey to the Cape (see *The Athenæum*, No. 4059), he would perhaps have explained the constant giving way of the cellular membrane at the same point of its circumference by the impulse given by the increase of rotation. As it is, he goes on to restate the arguments which he has before made familiar to us, whereby he seeks to prove that our moon must have been formed by a different process from that which he thinks sufficient to explain the origin of the satellites of the other planets. His main contention is founded on the great relative size of the moon, whose mass is $\frac{1}{80}$ of that of the earth, compared with that of Titan, the largest satellite known, whose mass is hardly $\frac{1}{10000}$ that of its parent Saturn. Hence he considers that in our case, at any rate, the detachment of the moon from its parent must have occurred, as he puts it, "as a single portion of matter, and not as a concentration of a Laplacian ring." Its gradual retreat from the earth—to which it must once have been united—he thinks due, as he has before stated, to the friction caused by the oscillations of the tides, and he thinks that the time occupied in this retreat can be approximately calculated:—

XUM

"If, at every moment since the birth of the moon, tidal friction had always been at work in such a way as to produce the greatest possible effect, then we should find that 60,000,000 years would be consumed in this portion of evolutionary history. The true period must be much greater, and it does not seem unreasonable to suppose that 500 to 1,000,000 million years may have elapsed since the birth of the moon."

The discrepancy between this and Helmholtz's calculation of the duration of solar heat, which would make the whole of our system only 20,000,000 years old, he gets over by the now familiar supposition—unsupported as yet, it may be noticed, by any spectroscopic evidence—that the sun contains some radio-active element resembling radium. Finally, he touches very briefly on the phenomenon of double stars, no one of which, he reminds us, differs enormously in mass from its fellow; and he indicates that, if these be supposed to have come into being by the same process as our moon, tidal friction would account for the otherwise unexplained eccentricity of their orbits.

Looking at Prof. Darwin's address as a whole, we think that it is somewhat lacking in lucidity and grasp, but this is in great measure due to the changes that have taken place in our conceptions of the universe in face of the latest discoveries of physical science. To say that all our ideas on the subject are in a state of flux may be a hyperbolical way of putting things, but it is at any rate true that the facts recently acquired have not yet been sufficiently co-ordinated to be reproduced in the dogmatic form in which alone they are capable of being easily absorbed by a popular audience. Some conviction of this may be found reflected in different parts of Prof. Darwin's discourse; in others he has to depend on comparisons which, as in the case of the floating magnets mentioned a fortnight ago, seem on examination to be hardly analogous. We could have wished, too, that he had been able to devote more time to the spectroscopic side of his subject, as exemplified, for instance, by Sir Norman Lockyer's researches, as to which the partly instructed public are in considerable need of teaching. But when all is said his discourse remains as good an exposition of the present state of the question of the evolution of the universe as could probably be given in the space allotted to him. He seems to have a very clear notion of its vast extent, and, in his opinion, "the advance towards an explanation of the universe remains miserably slight." He even goes so far as to regard the problem as insoluble. "Our children's children," he tells us, "will still be gazing and marvelling at the starry heavens, but the riddle will never be read."

Meteorology; or, Weather Explained. By J. G. McPherson. (T. C. & E. C. Jack.)—Meteorology is becoming a science, but she is a coy maiden to those who seek to understand her methods of working, chiefly because her dwelling-place is the atmosphere, which is never in a state of equilibrium, but always making restless efforts to attain that condition. All sciences now trench more or less upon others, and the phenomena produced in the atmosphere by the rays of light and heat, and the currents of electricity, which pass through it, often lead the meteorologist into the domains of optics, electricity, and general physics. The present little work does not enter into elaborate descriptions of any of these, neither does it give any detailed account of thermometric, barometric, and other conditions of the atmosphere and their changes in different times and places. Its aim is rather to supply a popular explanation of many effects which are constantly noticed, though their causes are often misunderstood. Amongst these we may specially refer to the formation of dew, and to the blue colour of the unclouded sky. The author is particularly anxious to call attention, in the explanation of these and other phenomena, to the researches and experiments of Dr. John Aitken, F.R.S., which have been carried on during the last twenty years, the results being published from time to time in the *Transactions* of the Royal Society of Edinburgh. Mr. McPherson's little book, which is one of a useful "Shilling Scientific Series," will be read with profit and pleasure, and the perusal will probably lead many to more careful observation of the interesting atmospheric phenomena around us, which cannot fail to extend our knowledge of scientific meteorology.

The Crystallization of Iron and Steel. By J. W. Mellor, D.Sc. (Longmans & Co.)—Metallography is a very young branch of science, and it may perhaps be doubted whether the time has yet come for its principles to be satisfactorily enunciated in a small manual. Probably, however, no great harm can be done by putting together in a few pages the chief conclusions which have already been reached, and explaining briefly the methods of investigation which have led to them. It is certainly a convenience to possess such a book, but it must be regarded as an *ad interim* report only. Looking at Dr. Mellor's little volume in this light, we have nothing but praise to award it. It is, indeed, an excellent *résumé* of the main results attained up to the present, and one which could only have been written by an author who is thoroughly familiar with what has by this time become an extensive literature in many languages, and is equally at home in the novel and delicate processes which the subject demands. In six short and lucid chapters—originally lectures delivered in 1904 to the engineering students of the Staffordshire County Technical Classes of the Newcastle High School—we are taken from a well-put statement of what is known respecting the solidification and cooling of alloys in general to the consideration of the phenomena recognized in iron and steel in particular, and, lastly, to practical directions for the due preparation of specimens for microscopic examination. All this is done in so orderly a manner, so simply, and with such well-chosen and abundant illustrations, that we are tempted to fear lest readers should imagine the modern study of complex metals and their structure to be far less difficult and intricate than it really is, and that something approaching finality has been achieved in regard to it. But though a vast amount of most valuable knowledge has been won since the days of Sorby and Guthrie—the practical and theoretical fathers of the science—it cannot be too strongly insisted that the facts described and the working hypotheses deduced from them have been the reward of great manipulative skill combined with scientific acumen of the highest order. The perfection to which microphotography is now carried has helped greatly. So also has the fact that most of the discoveries made have been capable of obvious application in the metallurgical industries. Progress has been extraordinarily rapid, but much remains to be done. Metallography is a most vigorous infant, but it is an infant still. As an easily understood exponent of its state at an early stage in its promising career, Dr. Mellor deserves the thanks of those ironmasters and others who are only now beginning to feel that the information he has to impart is vital to them, and who cannot themselves ransack the numberless transactions and periodicals in which most of it has hitherto been hidden. His little work is bound to be popular, and in view of a second edition a few slips may be pointed out. Thus the sulphur rhombic bipyramid (p. 5 and fig. 1) should not be called an "octahedron"; the expression "More salt may be in solution than the true solubility of the salt" (p. 11), and the phrase "Iron crystallizes in the cubic system, rock salt, the crystal splits up," &c. (p. 85), are both unintelligible as they stand. *La Électricien* (p. 14), "oxodized" (p. 125), and "osmetic" are mere misprints awaiting correction.

A VISIT TO BHUTAN.

A MEMBER of the mission sent to invest the Tongsa Penlop of Bhutan, who assisted us during the Tibetan expedition, with the insignia of the Order of the Indian Empire gives an interesting account of the journey through this little-known country in two letters recently published by the Allahabad *Pioneer*. Our previous knowledge of Bhutan is derived from four sources—the missions of George Bogle and Capt. Turner in the time of Warren Hastings, of Capt. Pemberton in 1837, and of Sir Ashley Eden in 1864. In addition, there is the account of Kissen Kant in 1815.

The mission followed the route from Sikkim over the Nathu-la pass and across the Massong-Changdong range into the Hah valley. It had not been used by any Europeans previously, but the Bhutanese authorities, who from first to last gave our officers a most hospitable reception, described it as the best. The difficulties of the route were increased by an exceptionally severe winter in 1904–5, which may be gauged by the fact that 65 in. of snow were registered at Chumbi, as against 20 in. a year earlier. The passage of the Nathu-la pass was very difficult, for in many places there was not the slightest trace of a road or path. The Am-mo-chu valley, into which this pass leads, is described as a country with most delightful glades, and full of trees of many varieties, from oaks downwards. The main valley seemed a gigantic avenue leading to the snowy pyramid of Senchula. After leaving their camp in this attractive situation the party came to the pass over the Massong-Changdong range. This they crossed by a narrow ridge with precipitous cliffs on one side and a not less precipitous precipice on the other, which one of the guides called "a bridge of death." The practice is to cast a stone of thankfulness for a safe passage on one of the cairns, or "obos," that testify to the grateful feelings of many generations of travellers.

At last the mission entered Poonakha, the capital of Bhutan, in heavy rain. The entry is described as follows:—

"The road was of rich clay, on which neither man nor beast could keep his feet, and the gay clothing of the musicians and dancers who met the mission was out of keeping with the constant drip and mud. In time we managed to reach the welcome shelter of our camp, where a neat wooden house of two rooms had been made for us, while tents had also been pitched."

The ceremony of investiture was fixed to take place on the third day in the presence of the Deb Rajah. The most curious feature of the ceremony was the presentation of congratulatory scarves until the Penlop was "almost smothered" with them. He also received from his friends and admirers presents of tea, silk, gold dust, &c., which were deposited with a bang in front of him. The whole proceedings, including a libation of native beer blessed by the Deb Rajah, were quaint and original. The interior of the fort and palace of Poonakha did not compare favourably with similar buildings visited by the mission; but this was largely due to the

havoc worked by earthquakes. The mission returned to India by a different route, following the Thimchu valley, and gaining our territory by the Yakle-la and Phew-la passes. Complete success attended the visit, and our officers brought away the most favourable impression of the character and goodwill of the people.

ANTHROPOLOGICAL NOTES.

THE first Congrès Préhistorique de France, to be held at Périgueux from September 26th to October 1st, has already received nearly 200 adherents, among whom may be mentioned Prof. Putnam, of Massachusetts, and Mr. O. M. Dalton, of the British Museum. The questions proposed for discussion are: 1, the age of the engravings and paintings in the palæolithic caves; 2, the inventory and study of the neolithic stations and workshops in the region of the Dordogne. Papers on other subjects will also be read. The local authorities have taken great interest in the matter, and contributed liberally to the funds of the Congress.

Mr. David Boyle's Archæological Report to the Minister of Education of Ontario for 1904 records 270 additions to the Ethnographical Museum at Toronto, besides a number of objects presented to the historical section by the widow of Mr. George H. Wilson. Mr. Boyle explains that his report is not so comprehensive as he intended, owing to numerous interruptions since its preparation was begun, and warns us to expect from him only a brief report next year, as rearrangements of the collection, which now holds 27,023 specimens, have become imperative. Failing additional case-room, it will be necessary to stow away much of the present material to make room for improved reinstallation, with more labels and more descriptive matter upon them. He also pleads for workshop accommodation and additional assistance, without which the value of the museum as a factor in education will be prejudiced. The present report, however, though perhaps not so extensive as the average of recent issues, is 117 pages in length, and contains discussions of some interesting questions. The question whether the Amerinds used combs before the arrival of the Europeans, which was raised by Dr. Beauchamp, on the ground that a bone comb could not be made without a metallic tool, is settled by the discovery in Egypt of bone combs made with flint tools, and curiously resembling Amerindian types. The question whether the objects which are called perforated bone needles, but may be shuttles, are prehistoric is raised by Mr. W. J. Wintemberg, and Mr. Boyle maintains the accepted belief that they are pre European. Among the curious objects acquired by the museum during the year, figured in the report, are a huge stone pipe-bowl in the form of a bear or wolf, weighing two and a half pounds; a string of wampum beads, used about eighty years ago as giving a title to land; a picture record on deerskin, made by the Blackfoots; a design in porcupine quill work, representing two Ojibwa warriors fighting a Mohawk; and a mask made of husk. Mr. J. Hugh Hammond contributes to the report a series of papers on the Ojibwas of Lakes Huron and Simcoe; on Cahiague; and on North and South Orillia. We notice also an interesting communication by Mr. James Stewart, formerly of the Hudson's Bay Company, recording his observations of the Indians of Rupert's Land about sixty or seventy years ago. The tribe of Indians under the surveillance of the Company's post at Beren's River at that time went under the name of the Bungays. Among their divinities was one called Wesse-ke-Jack, which in the mouth of the white man becomes Whisky Jack. He is concerned in the creation myths of the people. He first made a man of stone, but this being destroyed by a bear, he proceeded to make another of clay, and endued it with life. The Indians lamented the destruction of the man of stone, as, if Wesse-ke-Jack had succeeded in putting life into him, the human family would have been ten times stronger than they are now. Another original document is a report by Mr. John Potts, dated "Richmond Fort, 15 March, 1754," addressed to the commanders-in-chief of Moose and Albany Forts, and containing much information as to the Eskimo at that date.

Science Gossip.

MESSRS. CASSELL will publish this autumn 'The Zoological Society of London: a Sketch of its Foundation and Development, and the Story of its Farm, Museum, Gardens, Menagerie, and Library,' by Mr. Henry Scherren, F.Z.S. The edition is to be limited to 1,000 copies. Mr. Scherren has utilized material included by Dr. Sclater in the official 'Record of Progress'; and Dr. P. Chalmers Mitchell, the present Secretary, has made many valuable suggestions.

MR. R. P. BROTHERSTON, head gardener to the Earl of Haddington at Tyningham, author of 'The Book of the Carnation,' has written 'The Book of Cut Flowers,' which will be published by Mr. Foulis.

THE death in his fifty-seventh year is announced of Dr. A. J. Kunkel, Professor of Pharmacology at Würzburg, and the author of a well-known handbook of toxicology. Dr. Kunkel was a man of liberal views and very popular with his students.

AN eminent engineer has passed away in Franz Reuleaux, for many years Professor of Kinematics at the Technical College of Berlin. He took an active part as expert in various international exhibitions in London and elsewhere, and his sharp criticisms on the Philadelphia Exhibition, in which he plainly exposed the weak points of German trade, brought upon him a storm of abuse at the time. Reuleaux, who was a member of the Patent Office and worked zealously for its reform, was the author of several valuable technical works, among them 'Theoretische Kinematik,' 'Der Konstructeur,' &c. He was in his seventy-sixth year.

THE eclipse last Wednesday was the largest in England since that of December 22nd, 1870, on which occasion 0·81 of the sun's diameter was obscured at Greenwich, instead of 0·79 as at the recent one. That of 1870 was total in the south of Spain and on the coast of Algeria, where M. Janssen, who had escaped from Paris (then under siege) in a balloon, was prevented by a cloudy sky from observing it at Oran. The latter part of the large partial phase was well seen at Greenwich, one of the observers being the present Astronomer Royal, who had recently been appointed Chief Assistant. But the sun was completely obscured there by cloud on the 30th ult., so that nothing whatever could be seen of the eclipse; indeed, this seems to have been the case over the greater part of England, though the sky was clear in the north of Ireland. Good success is reported from most of the observing stations on the line of totality in Spain and the North African coast. The Astronomer Royal from Sfax reports that photographs were obtained with all the instruments. M. Trépied speaks of splendid weather at Guelma, in Algeria; so does Prof. Todd, of Amherst College, who observed at Tripoli; whilst Prof. Turner and the Egyptian party were equally favoured. As is usual in eclipses near an epoch of sun-spot maximum, the corona, which was very brilliant, was distributed nearly all round the sun, whilst several extended streamers were seen, and some particularly fine red protuberances were perceived on the edge of the sun.

THE sun will be vertical over the tropic of Capricorn on the evening of the 23rd inst., which is therefore the day of the autumnal equinox. The moon will be full a little after 6 o'clock in the evening (Greenwich time) on the 13th, and new at 10 o'clock at night on the 28th. She will pass over part of the Hyades on the night of the 19th, and occult Aldebaran after daylight on the morning of the 20th. The planet Mercury will be at greatest western elongation from the sun on the 15th, and visible before and after that date in the early morning, situated in the constellation Leo. Venus rises a little later each morning; she will move during the month from Cancer into Leo, and pass very near Regulus on the 26th. Mars is in Scorpio, and sets earlier each evening; he will be about 2° to the north of Antares on the 4th. Jupiter is almost stationary in the eastern part of Taurus; he will be in conjunction with the moon about 2 o'clock on the morning of the 20th. Saturn is in the western part of Aquarius; he will be due south at 11 o'clock on the night of the 7th, and at 10 o'clock on that of the 21st.

PROF. OMORI, the distinguished Japanese seismologist, has concluded his Indian visit, and before his departure he gave some of his conclusions for publication in an Anglo-Indian journal. The more practical portion of his advice relates to the construction of the best buildings for resisting earthquakes, and incidentally he gives some curious details as to the ratio between houses destroyed and lives lost. It appears that in Kangra-tahsil alone the number of houses destroyed was 40,000 and of persons killed 10,600, or rather more than one person killed for every four houses. In other places not named the rate was as high as one person per two houses. Now in Japan, where the earthquakes are most violent in character, the average death rate is one killed for every eleven houses destroyed. The explanation is that houses in Japan are very much better constructed with regard to their capacity for resisting earthquake shocks. Mr. Omori says, "Walls built of stone, with little and poor cementing material, often filled in with rubble and small stones, cannot resist earthquake shocks, however great their thickness. It has been suggested that the collapse of houses was frequently due to the weight of the roofs. A heavy roof is certainly bad, but the fault was not in the roofs, but in the bad walls. The walls both in Dharmsala and Kangra were very bad indeed from the earthquake point of view." Proceeding from the negative to the positive, the Japanese professor recommends brick buildings cemented with good mortar, with a substantial timber or iron framework. He asserts that houses built with proper care on a good site can resist any earthquake. This is especially true of a wooden structure, which can never be overturned as a whole by an earthquake. With regard to sites for houses, the harder the ground the better, rocky ground being the best of all. Prof. Omori wished to impress on the Indian authorities the great importance of building houses, barracks, and public works to resist earthquakes, as it was inevitable that India should be visited by severe earthquakes from time to time; but if the precautions indicated were adopted it would be possible to mitigate in a considerable measure the damage to life and property.

FINE ARTS

OUR LIBRARY TABLE.

Hidden Treasures at the National Gallery: a Selection of Studies and Drawings by J. M. W. Turner, R.A. With some Account of them by E. T. Cook. (Pall Mall Press.)—This is a reprint from an "Art Extra" of *The Pall Mall Magazine*. Mr. Cook has no difficulty in

showing that Turner's will has been constantly set aside by the action of Parliament, and that, over and above that, the Trustees of the National Gallery have in the past shown a curious indifference to the fate of a large part of his legacy. Out of the 19,000 drawings, studies, and sketches which came, by arrangement with Turner's heirs, into the possession of the nation, only 1,156 are shown at the National Gallery in any way. Even of the one hundred drawings selected by Ruskin as representative, and submitted to the Trustees, some are now stowed away in almost inaccessible boxes. Turner's wish was that all his works might be kept together in a Turner gallery, and yet at the present time a number of his drawings are on "permanent loan" in the provinces. All this sounds deplorable, but there is really a good deal of excuse for not complying with the terms of Turner's will. Only harm would be done to him and every one who loves his work by showing at once and in one place a collection of 19,000 drawings. A collection of a few hundred properly chosen would be much more valuable, since of those 19,000, by universal admission, a large number are almost worthless scraps of paper. We think that it is much to be regretted that the nation has not the means of selling a large quantity of these works and buying with the proceeds other paintings which we badly need. These sketches have immense value to the private owner, but they must merely perplex and bewilder when herded together in one overwhelming mass. Turner was both too prolific and too retentive. For his own sake he should have had a bonfire. This is not to say, however, that the Trustees have not been to blame. Obviously they were not wise in allowing what was of real value among these drawings to become mildewed in inaccessible tin boxes, nor was their treatment of Ruskin of a kind to encourage devotion to the public good. He was allowed to arrange the drawings, but no assistance was given to him, and he had to provide out of his own pocket for the mounts and the cases in which they are shown. Still, we cannot doubt that the policy of dispersion is justified by the quantity of the work, though it contravenes Turner's wishes. Only the principle should have been carried further. The Print-Room at the British Museum might have absorbed a considerable number, and there is no place where such works can be more conveniently studied, or where they would receive more attention. Then the Fitzwilliam Museum at Cambridge has, at present, only a very few Turners, given by Ruskin. There is no reason why as large a collection as that permanently lent to Oxford should not be exhibited there; and similarly the policy of loans might, with profit, be extended to many more museums outside London. In this way the National Gallery would be relieved of a harmful plethora, and a great deal more enjoyment provided.

Mr. Cook is chiefly concerned in proving that the tin boxes are not Humbert safes, but really do contain treasures which should not be wasted, and this object the reproductions achieve beyond all question. There are a few quite early drawings which are rather interesting than beautiful; then several of the period of Girtin's influence, which look fine in tone and massive in design. Such are two views in Wales, and one on the Wye, which must be magnificent. For the most part, however, we find reproduced slight studies of momentary effects, done in Turner's later tours on the Continent, and as these depend entirely on colour, it is impossible to say whether they are of fine quality or not. Then there are a few exquisite pencil drawings of the middle and late periods, such as the 'Chamouni,' the 'Heidelberg,' and, best of all we think, the 'Fountains Abbey.' Fine in composition, too, and in its sensitive and vital contours, is the late and unfinished 'Bellinzona,' and for its suggestions of vibrations of light beating upon infinitely diversified surfaces, the 'Tréport.' Still, though there is nothing in the present selection (which, it must be said, does not pretend to anything like completeness) which can lay claim to first-rate importance among Turner's works, there is much that is capable of giving keen enjoyment to those who have not the same opportunities that Londoners have of seeing Turner at his best.

We believe that a thorough investigation of these 'Hidden Treasures' has been going on for some time, and that Mr. Cook's appeal, excellent as its motive is, has already been anticipated by the action of the Trustees.

The Clarendon Press have made a comely work of real value as a book of reference out of the *Illustrated Catalogue of a Loan Collection of Portraits*, which is the permanent record of the exhibition at Oxford last April and May. The portraits which figured in the show are those of persons who died between 1625 and 1714. Mr. Lionel Cust supplies an introduction, which is just what is required, concerning the tendencies of the period covered, rightly insisting on the wonderful influence of Van Dyck. The illustrations are the chief feature of the work, being abundant and admirably produced, but the lives of the various notabilities are skilfully annotated. Two whole pages are occupied by facsimiles of artists' signatures. This was not a great period either for art or for the University. Still, a number of striking personalities remain to us, such as those of John Locke, John Milton (who figures as an Oxford M.A.), Cowley (whose beautiful head is not reproduced here), the Falkland whose charm has been so gracefully rendered by one of Oxford's poets, Jeremy Taylor, and some musicians of note. There are also several royal portraits. The whole is produced in the same form as that used for the 'Chart of Oxford Printing,' with abundant margins and the beautiful printing we have learnt to expect from the Oxford Press. It constitutes that rarity, a luxurious and well-illustrated book of reference.

Brittany. By Mortimer Menpes. Text by Dorothy Menpes. (Black.) — Miss Menpes's experience in writing is beginning to tell on her style, and if she would only criticize herself a little more severely, and spare others that unpleasant task, she would learn how to write. As it is, her best descriptions, her brightest sketches, are spoilt for the reader by unnecessary blots of sloppiness. Of course, as the title shows, the writing plays a subordinate part in the composition of a book like this; but it seems certain that no expression of critical opinion will have the slightest effect on the quality of the output of Mr. Mortimer Menpes, while it may do something for his librettist. To the public at large we may add that the book describes some of the less-known corners of Brittany, and that a larger proportion than usual of Mr. Menpes's sketches are studies from life. Of the quality of the reproductions nothing need be said at this time of day; they touch, in this as in others of the series, the limits of possibility.

Florence and some Tuscan Cities. Painted by Col. R. C. Goff. Described by Clarissa Goff. (Black.) — Col. Goff's sketches make a very pleasant volume, much above the average of a class of books which seems to be in great favour at present. It would, in fact, rank with the best of them were it not that one or two of the sketches are, unfortunately, hardly suitable for reproduction by the process employed, though the originals must have been highly effective. The drawings preserve for us the memory of several nooks of old Florence swept away by modern improvements; they are rich in colour and characteristic. Fiesole, Prato, Viareggio, and Lucca are also amply illustrated. Mrs. Goff is an excellent guide round Florence, and supplies just the right sort of gossipy commentary for a book of this sort. We can recommend it heartily to all who desire a pleasant memento of Florence and its neighbourhood.

The Old House. By Hans Christian Andersen. (Laleham, Staines, Beaver Press.)—For some time past those interested in printing have been receiving circulars promising an entirely new translation of some selected tales of Hans Andersen, illustrated by the best artists, and issued as a joint product of the highest literary, artistic, and technical skill of the day. When this little book fell in our way we hoped that in it we should find a specimen of the work contemplated. We trust that it is not so. It is not necessary to say anything of the literary style of the translation, which is, though the fact is nowhere stated, simply the old familiar one of H. W. Dulcken, now nearly out of copyright; so that we must turn to its artistic and technical aspects. The illustrations, by Mr. Hugh Wallis, are unequal, but show promise. That of the old servant is the only one showing real achievement. The presswork is very poor, hardly a single leaf in the book before us being in register. And, to conclude, Hans Andersen's name is spelt wrongly on the label.

DISCOVERIES IN PHRYGIA, 1905.

During the journey of 1905 it was our good fortune to discover evidence solving on the spot a larger number of historical problems than in any previous journey. Not that the finds were in themselves imposing, but the problems had been previously carried to such an advanced stage that even a slight piece of evidence was sufficient to give the final solution. We reached Smyrna in the latter part of April, and went up the Ottoman Railway to the terminus at Dineir, helped by the courtesy and scientific spirit of the general manager, Mr. Barfield. Our plan was, first of all, to go direct from Dineir, the ancient Apameia-Celænæ, to Konia (Iconium), with the intention of searching for evidence on several historical questions, and of studying more carefully the situation and remains of Pisidian Antioch. This road is one of the most familiar and frequently traversed in the whole of Asia Minor, and it could not be expected that monuments of any importance should have remained undiscovered on it until 1905. I had avoided it in previous journeys, as being too trite and well known. Only in 1882 I went along the whole line under Sir Charles Wilson's leadership. Parts of the road I had seen in later years, especially in 1886. Yet even on this oft-trodden road we found far more than we had ventured even to hope for.

Our visit to Apameia-Celænæ was disappointing; there has been little building, and little or no discovery since our last visit in 1891. We spent one day, copied a few unimportant inscriptions, and prepared for the journey to Konia. I was eager to see once more the two fountains, the Laughing and the Weeping (described first in *The Athenæum*, August 19th, 1891, p. 233, and more fully in 'Cities and Bishoprics of Phrygia,' ii. 407). It is strange that this extremely interesting pair of fountains escaped the notice of all travellers till 1891. More than a score of professional explorers had examined the rivers of Apameia. The Laugher alone had been seen by almost every visitor, but not recognized, as a pair of fountains had to be found. My aim now was to learn whether the Weeper is permanent; th Laugher is a much larger and unvarying stream, whose bright rippling flow is clearly audible fifteen yards away. As before, we had to stoop down to the under edge of the low rock from beneath which the Weeper flows out of a very small low-roofed chamber. The low melan-

cholly murmur of the water can be heard when one bends down to the mouth of the tiny chamber; but this year the peculiar sound, like sobs occurring at short intervals, which was the most noteworthy feature in 1891, could not be heard. This sound is produced by air struggling with the water in a low passage, and would cease to be heard if the water either sank too low to touch the roof at any point, or were so high that it filled the passage completely. It was evident that the water must vary in height. A small shepherd boy informed us that the fountain was called Zem-zem, because it always ceased to flow in the summer and went on pilgrimage to Mecca. Desirous of having more evidence as to the variation of the water, I asked also an old shepherd, whom we met a few yards away on our return. He declared that the water had failed in 1904 for the first time in his experience. The discrepancy between the two accounts illustrates the difficulty of getting trustworthy evidence from the report of natives. The first tale told to the traveller may be quite incorrect; but if he is content with the evidence of one witness, the false story may pass into literature and become a permanent stumbling-block, for the stories that have once found footing in literature are afterwards reproduced unquestioningly.

We were fortunate in finding a group of three milestones on the way to Apollonia, eight miles from that city. One contains the name of the governor of the province Galatia in A.D. 198, C. Atticius Strabo, proving definitively that Apollonia (also *a fortiori* Pisidian Antioch) was in that province at least as late as 198, which practically means that both cities were Galatian until the reorganization by Diocletian about 295 A.D. This is admitted, indeed, by Marquardt, the accepted authority, but only in a half-hearted way, for he adopts Waddington's opinion that during the third century people in Apollonia dated according to the era of the province Asia (which would be impossible, if the city had been included in the province Galatia in that century). We now see that the dated Apollonian inscription on which Waddington's opinion rested must be counted from the era of the province Galatia. It speaks of the country and city as Galatian, and the date is equivalent to A.D. 222, so that it confirms, and is confirmed by, the newly discovered milestone. There was never any reason why this plain dating and the evident inference from it should not have been accepted, except the deep-seated reluctance to believe that Galatia could have been extended so far as to include Antioch and Apollonia. There lies the root of the evil: when once a strong misapprehension as to the Roman provincial organization is established, the historical view is distorted, and the judgment is misled on other questions apparently quite unconnected.

Our way now coincided with the line of march which had been followed by the Emperor Manuel Comnenus in 1176, and by Frederick Barbarossa in 1190; indeed, that was the reason why we took this route. We traversed the valley of Apollonia from the watershed down to the great lake called Limnai, into which its river flows; then proceeded along the northern shore of the Limnai, and from its north-eastern end turned away in an easterly direction up the pass to Pisidian Antioch. This pass was called in Byzantine times the Kleisoura Tzybritzi, and it was the scene of the great battle in which the splendid army of Manuel Comnenus was utterly defeated by the Seljuk Turks of Konia. It was this battle that decided the fate of Asia Minor, putting an end to the gradual revival of the Byzantine power under the able John Comnenus and his brave, but too rash, son Manuel. Never was a battle in which it was more clearly shown that superiority in arms and personal prowess cannot compensate for stupidity and carelessness in the general. The Byzantine army contained the finest troops of the empire, and a large body of Varangians and other soldiers of Western and Northern Europe, the best fighting material in the world, armed in a style far superior to the lightly equipped Turks, highly trained and accustomed to victory. Manuel had shown his personal courage and learnt the art of war in many Turkish campaigns, under his father's tuition, and in his own thirty-four years' reign. He had led an army right across Asia Minor within sight of Konia, the Seljuk capital; and he knew how unfit a Turkish army was to face in fair combat such an army as he could command. Now, as the consummation of two generations of war, persistently carried on by his father and fitfully by himself, he found himself with all the best forces of the empire at the north-east end of the Limnai, ready to enter the pass that leads to Antioch and Iconium. Before him, as he lay in the low ground by the lake, stretched a pass, broad and very gently sloping, bounded on the south by a ridge of mountains about 5,000 ft. high, which rises sharp and precipitous from the level ground; the pass is about one-third of a mile broad (as I guessed looking across it from the northern side), perfectly level, with a small river flowing down the centre; on the north side undulating hills, gently rising from the level, stretch back about three miles to a long range of mountains (Kara-Kush-Dagh) about 6,000 ft. high, running south-west and north-east above the Apollonia valley and the Limnai towards the great central range of Phrygia Paroreios (now called Sultan Dagh, over 7,000 ft. high). One or other of those three ranges was called in ancient times Olympos. This description, which I wrote on the spot, is almost a translation of Nicetas's description of the Kleisoura. It has only to be added that, as he says, the hills or undulating rising ground on the north side are intersected by broad glens. The pass was known to be occupied by the Turks. They could not hide themselves on those treeless, open, grassy slopes; and Manuel saw them with his own eyes, as Nicetas says, having previously been informed that they were preparing to defend the pass. But confident in his army, and contemptuous of his enemy, he marched on into the pass, just as if he were traversing a level and undefended country, soldiers and baggage intermingled in the column. The vanguard, more ready for fighting, and not mixed up with baggage or overcrowded, easily pushed back the Turks from the low northern hills, and forced their way through to the eastern end. The main body of the army, more encumbered and crowded, marched more slowly, and was separated from the vanguard; the Turks from the mountains then seized the opportunity, charged down from the mountains on the disordered army, and broke their ranks. Baldwin, son of the Norman Prince of Antioch, and brother-in-law of the emperor, vainly attempted, by a desperate charge with a handful of cavalry, to drive back the Turks; he perished with his small troop; and this calamity encouraged the assailants and struck panic into the Byzantine main body, which was now a mere mob, so densely crowded that the soldiers could hardly raise their hands and weapons, jammed against and among the baggage. The rest was a massacre. Courage and energy might still have saved the day; but there was no leading. Manuel had lost his wits and his courage. Thirty-four years of flattery and empire had frittered away his moral power and deteriorated his nerve. Only through the chance that the Turks did not understand the completeness of their own victory was he allowed on the following day to conclude an inglorious peace, and withdraw the shattered relics of his great army. The unconquered vanguard marched back through the pass, within view of the enemy, who now began to realize what a victory they had gained and to repent of the arrangement that permitted the remnant to escape; and some of them attacked the retreating Byzantine troops, inflicting further loss on them.

Unfortunately I had not taken Nicetas with me; and my recollection of his account was inaccurate. I thought that the battle had been fought in a narrow pass, in which a concealed enemy had attacked an unexpectant army. As that could not have happened in the open country near the Limnai, I actually came to the conclusion that the battle must have been fought elsewhere, and directed the rest of our route to Konia for the purpose of finding the scene of the battle. But when I came home I found that the description of the locality, which I wrote on the spot to show that this pass was not the scene, was exactly what Nicetas describes. Had Nicetas been in my hands, we should probably have been able to fix by precise measurement the localities, the seven glens, and the spot where the vanguard spent the night after the massacre.

In 1885 I wrote in *The American Journal of Archæology* an article attempting to fix the site of Khoma (from which Manuel's advance was made) and the scene of the battle; but though right about Khoma, I wrongly placed the battle too far west, in the pass immediately in front of that fortress, misled by the modern name of the pass, Turrije, which seemed to preserve the ancient name Tzybritzi. Some years afterwards the view stated by Prof. Tomaschek showed that I had erred; and then, in reading the narratives by eyewitnesses of Barbarossa's crusade and their description of the scene of Manuel's defeat, I saw that the battle was fought in the pass leading up from the Limnai. The error was acknowledged, and the scene inferred rightly from Barbarossa's route, in 'The Cities and Bishoprics of Phrygia,' ii. 346, and the locality is correctly shown on the map of Central Phrygia in that volume. But while I profited much by Prof. Tomaschek's arguments, I could not accept his views as to the locality (which he places too far to the north-east), and renewed examination of the localities proves that he was wrong; the pass which he selects (I crossed it in 1883) runs north and south, but the pass which Nicetas describes runs east and west.

In the low ground near the Limnai, before entering the pass, we found a very large basis with a Greek inscription recording a dedication by a slave Nilus *negotiator* and the village Karbokome. To occupy such an important position as to take precedence of the village assembly, Nilus must have been a slave of the emperor, stationed at Karbokome in charge of an imperial estate. Forthwith, it became evident the estate was part of the territory which had formerly belonged to the great temple of Men Askainos at Antioch, and passed into the possession of Augustus in 25 B.C. I had long been looking for traces of that vast estate, and here at last it was presented to me. Such discoveries always throw light on other unsorted and unarranged fragments of knowledge. A series of long inscriptions found in this neighbourhood, but nearer to Antioch, has been known for twenty years: the first and longest I published in *The Journal of Hellenic Studies* in 1883. The character of this series now becomes clear. They all belong to the third century after Christ. Each consists, apart from a mutilated exordium, of a long series of names and donations in money; to each person's name is attached the name of the village to which he belonged, and one of the villages was Karbokome. Now, not far away, the Milyadic imperial estates show a similar series of names and donations; from that series I have reconstructed the history of those estates, with the genealogy of a branch of the imperial family, during a century, and the page of history restored in this way has been accepted by the recent authorities on the administration of the imperial estates, Schulten, Rostowzew, &c.

The Antiochian estates furnish a similar series of inscriptions, and the history of the estates ought to be recoverable from those documents.

Two hours further on, near the other end of the pass, we reached the village where Sir Charles Wilson and I found the first inscription of the series in 1882; and there we halted for the night. In the village, in front of the mosque, lay a broken column, of the same peculiar shape as the one containing the long inscription. On the upper side were no letters, but when we rolled it over the whole under side was covered with an inscription of the same class, as was evident at a glance. Though the sun was already setting, I at once set to work to copy it. It is a golden rule never to postpone work when dealing with the Turks; any one of a score of possible events might deny us the opportunity of doing anything on the morrow. I copied until the last ray of light faded, devoting attention chiefly to the important matters and the parts that were best preserved; the fainter portions demanded stronger light. Before darkness stopped me I had copied all the best of the forty lines. Next morning, soon after sunrise, I was again at work unimpeded. But already on the previous evening the most important piece of information had been discovered, disclosing the nature and meaning of the lists, and the meaning of the strange name applied to the donors of money. The name had been discovered by Prof. Sterrett, who found many more lists in 1885. The persons mentioned were Xenoi Tekmoreioi, Tekmoreian Guest-friends. My friend Prof. Sterrett considered this name to be topographical, and marked on his map a town, Tekmoreion. On the other hand, I conjectured, in my 'Historical Geography of Asia Minor,' p. 411, that Tekmor was the old poetic Greek word meaning "sign," and that these Xenoi were members of a society which in some religious ceremony showed a mystic sign in proof of their character. Dr. Ziebarth and Dr. Judeich in Germany both declared my view impossible to accept, as that old poetic term Tekmor could not be alive in the third century after Christ. My contention was that this old poetic word was reintroduced in the artificial Phrygian Greek of the third century. The new inscription confirms my view, and gives us a new verb as well as the adjective, derived from Tekmor. A certain Lucius is mentioned as having "shown the sign twice," τεκμορεύσας δίς. This hitherto unknown verb was invented to express the act from which the society derived its name. The act was, beyond all question, something of religious character; the inscriptions make that certain, for they are all religious in type. But this act must have been an invention of the last period to which the inscriptions belong; had it been an old religious act it would not have called for the invention of a new word. Now the religion of the Xenoi was a union of the old Phrygian worship with the cult of the emperors; the inscriptions show this clearly. The new element, the showing of the Tekmor, must have been added to the old Phrygian mystic ritual as an act connected with the imperial cult; and as the one end and aim of that cult was to give strength and religious basis to the loyalty of all subjects, the Tekmor must have been a symbolic act declaring the loyalty of the celebrant to the emperor. On all those imperial estates dedications on behalf of the emperor and his household are common and characteristic; and it is now one of the points needing investigation how far one special form of such dedications was peculiar to the inhabitants of such estates. At any rate, those inhabitants were in a special degree bound to the service of the emperor; they were not exactly his slaves or serfs, but out of them developed the serfs of the Dark Ages. In ancient Roman society slaves were the most devoted and trusted of servants; and in proportion as the population of the estates approximated more to serfdom than the citizens of self-governing cities, so they were more attached and devoted to the imperial service. They were the descendants of the slaves of the god Men Askainos. The Roman State was very careful not to interfere with established conditions of society, where those conditions were not politically dangerous; and just as they always retained the Egyptian fellahin in the same condition of almost slavery which they had occupied towards their kings of old, so there is every reason to think that the people on the Antiochian estates were similarly kept in a condition not materially changed from their old service to the god. Among them, and in close relation to their peculiar connexion with the imperial service, developed this institution of the Tekmor, on which there is still a great deal more to say if space permitted.

Pisidian Antioch has been too often described to need mention here. It either requires a whole letter to itself, or it must be left in silence.

Another piece of work before us was to trace the "Imperial Road" from the colony Antioch to the colony Lystra. This was the way by which St. Paul travelled when Onesiphorus, in the legend of Thekla, came forth from Iconium to meet him. Milestones fix the line of the road as far as Tiberiopolis-Pappa in the Orondian mountains; and natural features leave no doubt that it went on through a long narrow defile, which leads to the valley of Kizil-Euren, in which was situated the Byzantine bishopric Sinethandos, eight hours from Konia. Here all trace disappears. The doubt remained whether the "Imperial Road" went on by the north side of the massive Mount Loras along the line of the modern road (in which case it must have gone first to Iconium and then turned south to Lystra), or followed some unknown and unexplored route across the hilly country south and south-west of the mountain. The former route would necessitate very serious modification of the views which I have published regarding the Thekla legend, whereas the latter would suit well, and make it possible to complete and improve greatly what I had written. From the village I hired two horses, and started, under the guidance of a villager, to explore the hilly country, leaving the others to make some search and take photographs in the valley. I had to find some evidence to determine whether or not a Roman road had ever traversed those hills—a difficult matter, which might require a week's search. I had, however, the good fortune to find within an hour two slight cuttings for a road in the rocks, which here and there protruded from the bush-clad soil of the hills, and when we reached the watershed I began to question my guide about the roads. To my astonishment he pointed out the waggon-road to Konia, and when I asked about this road he said that until quite recently the waggon-road from the west to Konia took the route south of the mountain, and passed where we were standing—where I could see the evident marks of wheeled carriages. This old waggon-road to Konia reached the plain considerably to the south of that city, and turned up north-east to reach it. There was no reason in the natural circumstances why this route should have been followed instead of the direct modern line on the north side of the mountain. The explanation lay in the history of the Roman road. It was intended to connect Antioch with Lystra, a military road constructed by the Emperor Augustus to maintain communication between the two great Roman fortresses; and when this road was built it was natural that wheeled traffic from Iconium to the west should go southwards over the plain in order to take advantage of the good road across the hills. It was only when neglect had suffered this imperial road to pass into complete decay that the established habit gradually fell into disuse, and the direct path came into use for both horse and waggon traffic.

This result was peculiarly gratifying. My confidence that an expression, "the Imperial Road which leads to Lystra," in the legend of Thekla, bore about it the savour of antiquity and truth, had led me on to discover the disused old road and to unravel the tangled skein of history. This expression, true and ancient, is misused in the later form of the legend as it has come down to us, and "the Imperial Road to Lystra" has been misapplied to describe the road from Iconium to Lystra, whereas both in fact and in the early form of the legend it denoted the road direct from Antioch to Lystra, which did not touch Iconium. The "Imperial Road" to Lystra is not correctly marked in the map attached to my 'Church in the Roman Empire.' It passed about seven or eight miles south-west of Iconium, and there it was that Onesiphorus, according to the legend, waited for St. Paul and brought him into Iconium.

One more discovery rewarded our journey before we reached Konia. Among the rather confused routes leading across Asia Minor to Constantinople enumerated by the Arab soldier of the ninth century, Ibn Khordadhbeh, is one which, in a very long paper on Lycaonia in the Austrian *Jahreshefte*, 1904, I conjectured to be the hill-road from Konia to Ak-Sheher, the most direct way to the capital. On it the Arab geographer places the Castle of Dakalias. Now about six or seven miles north-west of Konia, overhanging that road, is a lofty conical peak, which forms a very conspicuous and useful point for geographical observations, called St. Philip's Hill by the Greeks, and Takali Dagh by the Turks. After that paper was printed we ascended the peak, on geographic cares intent. The aneroid makes the summit 1,900 feet above Konia. The summit is occupied by a great castle, one of the series of castles on high, steep situations by which the Byzantine emperors tried to defend the country against raiders from the East. We hear most about them during the Saracen wars, but the system is of older origin. One at least of the most typical among them, Sivri-Hissar ("Pointed Castle"), in Western Galatia, which was called Justinianopolis, reveals its early foundation by its name. Another, Verinopolis, the site of which we fixed during the present year on a similar lofty peak at Zengijek, eleven hours north-east of Konia, carries us back to an even earlier date, about A.D. 474.

When we discovered that St. Philip was a great castle I did not at the time make the obvious connexion between the Turkish and the Arabic name. But this year, when we came in sight of Takali Dagh, the identity with the Castle of Dakalias struck me. Takali commands the road on which Ibn Khordadhbeh describes Dakalias. When we climbed the peak I thought we had made a discovery, but when we returned home I found that, as usual, Hamilton—"the prince of travellers in Asia Minor," as I have often styled him—had not omitted to ascend Takali Dagh, and record the existence of the castle. W. M. Ramsay.

Fine-Art Gossip.

Prof. C. J. Holmes writes in the September number of *The Burlington Magazine* on 'Turner's Theory of Colouring,' and Mr. Roger Fry discusses 'Two Miniatures by De Limbourg,' in the Bodleian Library and the Fitzwilliam Museum respectively; Dr. W. Martin contributes the second of his series of articles on 'The Life of a Dutch Artist in the Seventeenth Century,' which is concerned with instruction in painting; Mr. Egerton Beck concludes the section dealing with colour of his papers on 'Ecclesiastical Dress in Art'; and Mr. Lawrence Weaver writes on 'English Architectural Leadwork' of the later period. An important

article is that by Mr. S. M. Peartree, dealing with the medals usually attributed to Dürer, which Mr. Peartree assigns to Hans Daucher. Mr. Herbert Cook writes on 'Titian's Portrait of Laura de' Dianti in the Doughty House Collection'; and Mr. Van de Put on 'The Lemos and Este Bottles in the Waddesdon Bequest.' Mr. Weale publishes a picture by Gerard David in a private collection of Madrid. A new feature of the magazine is the supplement dealing with 'Art in America,' edited by Mr. F. J. Mather, Jun., which contains, among much other matter, a leading article on 'Sir Purdon Clarke in America.'

Messrs. MacLehose are publishing this autumn the third volume of Dr. George Macdonald's splendid 'Catalogue of Greek Coins in the Hunterian Collection,' which deals with specimens from Western Asia, Northern America, and Western Europe; and 'Coin Types: their Origin and Development,' by the same author, being the Rhind Lectures for 1904–5.

'William Strang: Catalogue of his Etched Work,' with 500 reproductions and an essay by Mr. Laurence Binyon, and an English edition, limited to 200 copies, of M. Maurice Hamel's book on 'Corot and his Work,' are other interesting announcements by the same firm.

Whatever may be one's opinion of the hotly debated "séparation" laws in France, there can at all events be only one view regarding the determination of the Government to publish a complete inventory of all the objects of art in the various churches in France. A circular to that effect was, it seems, issued to every department in the country as far back as 1887, but the order was apparently not carried out either with vigour or completeness. The proposed catalogue is now in active progress, and will doubtless be printed in due course. If complete, it will be of great value to students, French and foreign. During the confusion of the great Revolution many articles of priceless value mysteriously disappeared from the churches, and are now in private hands. It will, therefore, be interesting to compare the modern inventories with those of former times—the contents of the Paris churches to-day, for instance, with those recorded in that most interesting book 'Voyage Pittoresque de Paris,' by "M. D.," of which a fourth edition was issued by the De Bures in 1765.

The President of the French Republic has promised to open officially at the Petit Palais next month (October) the Salles Dalou and Ziem, as well as the superb collection of Sèvres made over by the State to the City of Paris, which figured with so much success at the St. Louis Exhibition. There is reason to believe that the President will hand to M. Ziem the "plaque de Commandeur" in recognition of the artist's splendid gift to the city of his adoption.

The genre painter Karl Emil Döpler, whose death in his eighty-second year is announced from Berlin, began life as a bookseller, and spent several years at New York as journalist and illustrator, and it was not till 1859 that he began the serious study of art under Piloty. Among his best-known pictures are 'Die Wittwe von Sadowa,' 'Das Geheimnis,' 'Ein Wiedersehen,' &c. He was employed at Weimar for some years as costume designer to the theatre, and as lecturer on historical costume at the art school, and did much good work in this connexion, notably by his designs for Wagner's 'Ring des Nibelungen' at the performance of 1876.

The death in his eighty-fifth year is reported from Leyden of the painter J. A. Stoebel, the master of Jacob Maris.

The forthcoming sale by auction in Philadelphia of the James T. Mitchell collection of Washington portraits is exciting much interest in the United States. It is regarded as the most complete in private hands, the owner having been a diligent collector for over thirty years. It includes nearly everything described in Baker's 'Engraved Portraits of Washington,' with "hundreds that are not in Baker," many that are not described in the most recent work on the subject, C. H. Hart's Grolier Club book, and several which are unique. One of the most noteworthy rarities is a piece of music entitled 'The Battle of Trenton, a Sonata for the Piano-Forte,' dedicated to General Washington, and printed in New York by James Hewitt. The outer sheet contains a portrait on copper of Washington, the only one known to exist, and doubly interesting from the fact that it once belonged to Washington. Another rarity is *The Manuscript, or Minute Observer*, August, 1779, to April, 1800, published at Belfast, Ireland, one number of which contains a handsome portrait of Washington.

MUSIC

Musical Gossip.

At the Promenade Concert at Queen's Hall last Saturday evening was given the first performance of a symphonic poem by Mr. Adam von Ahn Carse, based upon that composer's incidental music to Browning's dramatic poem 'In a Balcony,' written for the performance last year by the Royal Academy Musical Union. Considered as "programme" music, the work cannot be accounted very effective, the themes lacking distinction and character, and the writing at certain points being deficient in grip. Nevertheless, into the passages that depict the lovers Mr. Carse throws considerable eloquence and feeling, and his scoring is rich, yet not extravagant. In the first concert performance of the closing scene from Tschaïkowsky's 'Eugen Onégin,' Mrs. Henry Wood and Mr. Frederic Austin sang with skill and effect.

On Tuesday evening Alberto Franchetti's symphonic impression 'Nella Foresta Nera' ('In the Black Forest') was heard for the first time in England. Scored for a large modern orchestra, the piece is very free in form, the composer's idea being rather to create "atmosphere" than seriously to exploit his thematic material, which consists principally of melodies of folk-song character. He has succeeded in penning music that shows skill and imagination, many of the passages being genuinely fanciful. The scoring tells of good taste and discretion; there is only a trace of exaggeration here and there. Mr. Wood's band gave an attractive performance of the new work. Miss Elsie Horne played in emphatic style the pianoforte part in Sir Charles Stanford's somewhat ponderous variations upon 'Down among the Dead Men.'

After a career extending over more than a quarter of a century, the Finsbury Choral Association has decided to cease operations. Many of its members have joined the Alexandra Palace Choral Society, which has for conductor Mr. Allen Gill, and which will give nine concerts during the ensuing season. Among the works announced for performance are Sir Edward Elgar's 'The Dream of Gerontius' and 'The Apostles.'

The Incorporated Society of Musicians will hold its next annual meeting at Lowestoft.

The Blue-book (Return) of the British Museum for the year ending March 31st, 1905, states that 6,934 musical publications were acquired—6,693 under the Copyright Act, 200 under colonial copyright, and 41 by purchase, the last including the 'Responses of the Office of the Dead,' printed by Johann Luschner, Monserrat, 1500, the second book containing music printed in Spain. Of this work forty-three copies were printed on vellum, the present being the only one known to exist. The additions to the manuscript music include thirty-one volumes of compositions, for the most part autograph, by Sir Henry Rowley Bishop.

MM. Victorien Sardou and Maurice Vaucaire have handed over to M. Leoncavallo their libretto for an *opéra-bouffe* entitled 'La Jeunesse de Figaro.'

The production of 'Les Hérétiques,' an opera in three acts by M. A. F. Herold, with music by M. Charles Levadé, was announced for August 27th at the Arènes de Béziers. The part of Roger, Comte de Béziers, was to be taken by M. V. Duc, and that of his wife by Madame Strasy.

The death is announced of Mr. James Garner, a well-known voice-trainer, and conductor for twenty-two years of the Hanley Glee and Madrigal Society.

M. Amédée Boutarel, in *Le Ménestrel*, is writing a series of interesting articles on Schiller and the musical works which he inspired. Among other early poems he mentions the 'Leichefantasie,' yet, curiously, without adding that it was one of the earliest poems set to music by Schubert.

The Dal Verme Theatre at Milan reopens in October. Two novelties are to be produced—'Albatro,' by Signor Pacchierotti, and 'Jana,' by Signor Virgilio, both young composers.

A cycle of Gluck operas is to be given at the Stadttheater, Leipsic, under the direction of Herr Arthur Nikisch.

PERFORMANCES NEXT WEEK.

Mon. to Sat. Promenade Concerts, 8, Queen's Hall.

DRAMA

'L'AVOCAT PATELIN.'

Richmond, Surrey, August 28th, 1905.

Even to be adversely criticized in your columns is an honour. I am like the man who boasted that the king had spoken to him, only it is not possible for *me* "to get out of the way." *Literæ impressæ manent*, at the British Museum, if nowhere else! Here is the first English translation of *any* form or version of 'Patelin.' If I have accomplished nothing else, I have, at any rate, placed in position *un petit crochet convenable et de circonstance* from which my learned critics may conveniently hang their curious and delightful disquisitions. The subject is so interesting that perhaps you may be good enough to find space for a few further observations thereon. And, first, may I remark that, as in politics so in journalism, there would seem to be no room for gratitude? My slight performance has been boycotted to a large extent by the ordinary journalist, though it points out to him with exactitude the origin of those sheep or muttons to which he is for ever exhorting himself and others to return!

My choice fell upon Brueys for these reasons. First, the extreme difficulty—nay, impossibility almost—of rendering the original farce in another language. Adaptations of it there are many—in German, in Italian, *in Latin*, even in English—*but no translations*. This difficulty must be the main reason why the attempt has not been made, for 'La Farce de Pathelin' is almost the only popular French classic that has not been done into English. Secondly, the version of

the Abbé Brueys is a most excellent piece of work—in spite of our critics for this occasion—which kept the stage for the better part of two hundred years, and was highly praised by Voltaire in his 'Siècle de Louis XIV.' and by other eminent writers. So identified was Brueys's version with the 'Patelin' legend that in the prologue to his 'La Vraie Farce de Maître Pathelin,' modernized and produced at the Comédie Française on November 26th, 1872, M. Fournier thought it necessary to explain elaborately his reasons for reverting to the original. For the French public of that time (I speak not of scholars) 'Pathelin' was 'L'Avocat Patelin,' and none other. In the third place, the aforesaid attempt to excite interest in the original farce was a comparative failure, and with his foster-father Brueys, Patelin himself has now disappeared from the boards. During long sojourns in Paris I have never seen the play in the bills either at the Français or at the Odéon. Fourthly, 'L'Avocat Patelin,' besides being a remarkably well-constructed little comedy, wherein are preserved all the salient features of the original farce, especially those convenient to be translated, is itself a work of some historical and dramatic importance. It has served as a model for much stage work during the past two centuries.

With all its "conventionality" there are certain traits not found in the comedies, nor even in the farces, of Molière. A learned German critic, Dr. Schaumburg, whose name is identified with the critical examination of this whole subject, considers the *rôle* of Colette, the servant, one of the new characters introduced, to be the first appearance of the *soubrette*. This creation, as any student of French farce must admit, is different from the confidential and discreet waiting-woman of early comedy, and it presents also a type distinct from that of Nicole, for instance, in the 'Bourgeois Gentilhomme.' The *soubrette* is one of the mainstays of modern farce. Lastly, let it be granted that the half loaf (even if ill-baked !) is better than none, and the *raison d'être* of my little attempt is furnished.

To return to the difficulties of translating the original work. Here is one that leaps to the eyes. How would any one set about to give value or point in English to the humorous specimens of *all* the various patois of France employed by the astute lawyer in his sham madness, for the mystification of the "Drappier"? No, 'La Vraie Farce' is for the true student and scholar, and for them alone, and in the original.

Finally, may I be permitted one word as to my own merits (if any) and demerits in this connexion? In essaying to give an archaic flavour, I was, unconsciously perhaps, attracted to constructions allowable in blank verse, but not in prose. A critic whose opinion is of some value has been pleased to say that I have succeeded in preserving the *fun* of the piece. If this be so, in a farce it is *something*. But the only merit I myself claim, and that only in respect of the general reader, is the merit of discoverer and pioneer.

SAMUEL F. G. WHITAKER.

Dramatic Gossip.

SUCH novelties as have been seen at the theatres during the present week have been musical rather than dramatic. On Monday, however, begins a series of dramatic revivals or productions, the distinguishing features of which have already been noted. The novelties promised for the present month are indicative rather of managerial hopes than of the season's promise. As a rule the works in contemplation are of more than average interest.

MISS ETHEL IRVING cannot play in Congreve's 'Way of the World,' and next Monday at the Great Queen Street Theatre will be given 'The Scornful Lady.' In 'The Late Mr. Costello' of Mr. Grundy, Mrs. Wright will play Mrs. Bickerdyke, a part created by Miss Rose Leclercq on the first production of the play at the Comedy on December 28th, 1895. Who will succeed in other parts Mr. Cyril Maude, Mr. Leonard Boyne, and Miss Winifred Emery is not yet announced. Browning's 'Colombe's Birthday' and new plays by Maxim Gorky, Mr. Laurence Binyon, Mr. Arthur Symons, and Mrs. W. K. Clifford are promised, and there seems a chance that Dekker's renamed 'Bellafront' may at length find its way on to the stage.

A DRAMATIC rendering of Mr. Mason's 'Margery Strode' is among the novelties promised at the Duke of York's. This will be the third of Mr. Mason's novels to be adapted for the stage.

ON Monday Miss Ellen Terry begins at Bristol, with Miss Hilda Trevelyan and Mr. Philip Cunningham, a country tour, to last until Christmas, with 'Alice Sit-by-the-Fire.'

'THE CONQUEROR' is said to be the title ultimately chosen by Mr. Forbes Robertson for the piece with which he will open La Scala Theatre. 'The Conquerors' is the title of a piece by Mr. Paul M. Potter brought over from America, and given at the St. James's on the 14th of April, 1898.

THE *répétition générale* of 'The Prodigal Son' promised for Tuesday afternoon next at Drury Lane is in a sense the first that has been formally given at a London theatre. Something of the kind has, however, been seen at the same house and is not wholly unknown at other theatres.

SINCE the retirement from London management of Sir Henry Irving, Mr. Tree has been the chief upholder of the provision of gratuitous programmes. So much pains are taken by a thoughtless public to defeat his scheme that he asks, Why should he continue a voluntary charge on the treasury of some 2,000*l.* a year? We can only say, For the comfort of his patrons. Where there is no charge for programmes and cloak-rooms, courtesy on the part of the attendants is the rule, in other cases it is the exception.

PROF. HEINRICH BULTHAUPT, whose death, in his fifty-sixth year, is announced from Bremen, where he was librarian, was a poet of considerable merit, but he is probably best known by the works in which he dealt fully with the plays of Shakspeare and the great German dramatists. He also wrote 'Dramaturgie der Oper,' 'Franzosenherrschaft auf der deutschen Bühne,' &c. His own plays were not very successful.

TO CORRESPONDENTS.—C. B.—W. M.—C. A. M. F.—A. S.—J. H. S.—received.

J. H.—Many thanks.

LITERATURE

Garden Cities in Theory and Practice. By A. R. Sennett. 2 vols. (Bemrose & Sons.)

WHILE it may be questioned whether those are not in haste who speak already of civics as a science, it is certainly a subject, and perhaps the most stirring one within the King's dominions to-day. There are many reasons why "Cities and What to Do with Them" should be the pressing topic that it now is, the process of disposing of the nineteenth century's scientific assumptions being very fitly accompanied by a campaign of reprobation of its material bequests. Railways and cities—or a particular condition of cities—have been the chief of these; and we find that its railways are being repented of and electrified with all seemly haste, while a scattered multitude of intelligent folk are simultaneously aspiring to cough the smoke of its cities out of their lungs and buy a healthy little place in the country to die in. These, however, are but a privileged minority in any urban district, a visionary and fastidious few who wither unwillingly—languishing for large spaces and the healthy life—in the upland parts of Hampstead. For the many everywhere the question remains, how the town which they are obliged to live in, with not much choice in the matter of site, is to be made or kept inhabitable. We are confronted with the full-grown and over-grown forms of those evils of civic environment which good men were already fighting against in the sixties in England; and our present-day enterprise includes the attempt to dispose, along with the evil, of their methods of remedy also. They failed for want of science, the place of which was taken, but its office not supplied, by that sentiment which conceals a world of self-deception. Or we may say that they failed because they did not understand the enemy—known to them by many names, but chiefly as drink and the devil—and did not see that he also is a splendid fellow, indubitably vital and human, a development in masquerade, the very fullness of life gone astray, or rotting inwardly for want of outlet.

We ought to know more in these later days, since experience of what makes and unmakes citizens has massed and grown like usurers' interest; and if evil be nutrition, as James Hinton said, we should be ripe for great functioning, for an era of splendid action. And, indeed, many interesting experiments in civilization are being made all round the world. In Germany and in France, still more in the United States, most of all, perhaps, in the smaller European countries, every kind of practical initiative in the things that make for a happy social determinism is having its exposition, its tentative opportunity, or its fearless development. At a thousand points at home as many quiet persons are essaying a modest beginning of the remaking of England, and every kind of agency—private, municipal, and even State—is at work, with more or less consciousness of its share in a general process, in the attempt to order things in the direction of better growth. Even those who live amid the roar of printing machines are visited from time to time by the prospectuses of Garden Cities, and our walks abroad in London are bewildered by the apparition of things that are at least new and magnificent and the alleged tokens of an architectural revival.

Altogether, the stir that is being made in preparation for the Healthy Town and the City Beautiful—neither of them yet born—would almost suffice to celebrate their coming of age. The literature of the subject is so extensive that its bibliography, unless taken in hand soon, is likely to be a task for Benedictine labours, even if the great mass of relevant matter contained in Government blue-books, white-papers, and municipal publications be ruled out of the catalogue. As the subject is one highly concrete or synthetic—having, that is, many and varied relationships — comprehensiveness and mass tend to be the characteristics and the dangers of the treatises devoted to it. In the book by Prof. Geddes, recently reviewed in these columns, we have a comprehensive work on civics which is noteworthy as an intellectual declaration and an exposition of ideals and methods. Of 'Garden Cities in Theory and Practice' we may say that, after obvious differences in mental and cultural quality have been noted, and after much merit has been discounted by the critic in revenge for faults of confusion and excess, it is yet well worthy to stand beside 'City Development.' Had it been called 'City Making,' the contrasted titles would have indicated sufficiently the essential difference, apart from the difference in the personal equation, between the two authors. Prof. Geddes, who is a naturalist and a Celt, has his visions; Mr. Sennett, who is an Englishman and an engineer, has his plans. From the one we have an inspiring exposition of ideals and methods, from the other an instructive discussion of ways and means.

Mr. Sennett has, in fact, been moved to write by the danger which he foresees of the new Garden City being started upon lines which would have the effect of depriving the experiment of social and financial success, and especially of the vast national value as an object-lesson which ought to belong to it. He fears lest in execution the scheme should fall too much into the hands of persons holding extreme views, whether they be Socialists, Prohibitionists, the more niggardly kind of moralists, or the idyllic levellers whose ideal is a community in which everybody lives in the same kind of house and grows his own cabbages as hard as he can. Mr. Sennett argues cogently that the Garden City, if it is to prove anything and serve any large social and national purpose, must be a modern civic community, with its full equipment of diversified human elements, occupations, and conditions, like any other, but differing in others owing to the peculiar advantages attending its inception, in that forethought, experience and science have stood auspicious, like fairy gift-bringers, enriching it in the very hour of birth with the best gains of a secular lifetime. Nevertheless, Mr. Sennett would have done himself more justice had he taken some of his bugbears less seriously, such as the tyranny of trade unionism, and the unhappy reluctance of the contemporary British workman, particularly in the building trades, to give an appreciable equivalent of service in return for his day's wage. The long introductory section in which the author is much occupied with these somewhat extraneous topics is likely, we fancy, to make for him here and there an enemy without securing for him a reader. Having ourselves acted very faithfully by his fourteen hundred pages of text, we can say that he is well worth reading throughout, albeit his disquisitions on many special sides of his subject—such as the value of crêches and day homes, for which, we hope, the Garden City will have small use, or, again, on the possibilities of apiculture, sericulture, lace-making, beet-growing, and the processes of sugar manufacture—are extensive enough to have been made into another treatise. Towards this excessive thoroughness, however, we bear a tolerant spirit, and would deny to no profitable theme its universe of discourse merely in the interest of shallow brevity and impertinent hurry. No doubt the concise sociologist might call for a crêche in a single sentence, or recommend sugar-making in a couple of words. Yet without the universe of discourse which alone gives intellectual body and presence to the bare idea—which alone, therefore, awakes human interest and imparts conviction—the matter might as well not have been mentioned. On the other hand, those readers who do not care to explore that universe of discourse—those who find it tedious—are always at liberty to go into the next world without waste of time or temper, leaving the unreduced compendium of treatises for those who want them.

The second volume is mainly such a compendium of treatises, while the first contains Mr. Sennett's criticism of the official plan of Garden City, of which he in no

way approves. The proposal to make it a town of concentric avenues, intersected by radial boulevards, is here submitted to an examination from which its dearest friends could not, we fancy, honestly claim that it comes out alive. A wide historical survey shows that wherever forethought and intelligence have been at work from the first, and the conditions have given them scope, great civic architects, ancient and modern, have projected their streets in right lines, and have turned their corners at right angles; and that wherever extensive improvement of an existing city has been essayed, the effort has been to make straight the crooked and the curved. In the present case many inconveniences, both costly and absurd, are shown to result from the adoption of what is, in its general conception, only a substitute for a thought-out plan—since, given a pair of compasses, any child can draw a nest of concentric circles. The industrial zone, for instance, becomes a girdle round the waist of the most select circle of the town, and is served by a circular railway, having a mileage vastly out of proportion to the work to be done by it.

Other facile and unfortunate inspirations, such as the proposed Crystal Palace, are soon brought by Mr. Sennett to the test of figures. From this and many other instances we gather an impression that the projectors have too often ceased their calculations when they had worked out the cost, instead of going on to estimate the upkeep. And they have been sparing in unprofitable ways. The fantastic and excessive width of roadway, for example, is bought doubly dear when it means a ruinous yearly expenditure for upkeep and too meagre gardens for the cottagers. Mr. Sennett is in agreement with Prof. Geddes in desiring an arterial system of parkways rather than a number of extensive parks, and generous gardens in preference to either. No part of the argument commends itself more to us than that in which Mr. Sennett maintains his plea that, as a Garden City should be before all else a city of gardens, so the workman should have his allotment not half a mile from the town, but just outside his own kitchen window and his own doorstep. The author's attitude, be it said with emphasis, is as far as possible from being merely critical, or his counsels from being mainly inhibitory. His humane enthusiasm for the Garden City movement is evident on every page, and has led him to collect enormous masses of information, and to work out privately a great many statistical and scientific "results," in the hope of securing that the better cities of to-morrow shall begin life with the best purposes, powers, and resources of to-day as their outfit, as the very bases, indeed, of their material and social being. What such an outfit means is seen in the description here given of *a* Garden City, projected as upon the Letchworth site, and described in plan and elevation, in occupation and life. To read it is to have a new sense of the world-shaping and life-conditioning powers which modern science places at the command of mankind; it is also to believe, what we had heard, but doubted, that the management of the world during the next generation or two is going to pass into the hands of the engineers: State departments, of course, being permitted to go on marking time, and occasionally even making mischief, as before. Still, though we boast ourselves to be better men than our fathers, there were some good men even in mid-Victorian antiquity. In that age James Silk Buckingham, the founder of this journal, projected in great detail the plan of a model town or Garden City, of which Mr. Sennett, who gives a full account of it, speaks with much respect. The conception was comprehensive, ordered, architectonic; its aim instinct with philanthropy, its presentment not failing, as one would not expect the expression of such a mind to fail, in a just and appropriate *μεγαλοπρέπεια*.

Our use of this invaluable Greek word debars us, we fear, from reproaching Mr. Sennett with his unfortunate habit of besprinkling his English text with all kinds of odd ends of other languages. Nevertheless, let him look to it, for the results are sometimes amazing. On the other hand, he will rejoice to hear that the "invert roadway" which he recommends was recommended (but without the subterranean gutter) by Benjamin Franklin a century and a half ago; and that the kitchen at the top of the house, instead of in the basement, was a feature in the housekeeping of Jeremy Bentham which made a deep impression on the mind of the youthful Stuart Mill.

FRENCH EDUCATION.

Nos Enfants au Collège. By Dr. Maurice de Fleury. (Paris, Librairie Armand Colin.)

Dr. de Fleury is a member of committee of the "Ligue des Médecins et des Familles pour l'Hygiène Scolaire," and writes both as father and physician. He points out the almost culpable indifference of fathers in the choice of schools for their sons, and expresses no slight dissatisfaction with the material, intellectual, and moral condition of the existing schools from which choice must be made. Dr. de Fleury spent some of his boyhood in a school controlled by a religious order, and although he is no supporter of such schools—"les écoles congréganistes"—he recognizes their merits, and would gladly see certain of their methods of discipline and instruction followed by the two classes of schools which now exist in France, *i.e.*, those directly controlled by the State and those independent of it—"les lycées de l'État et les écoles libres, catholiques ou non." The author's conception of education as it should be is comprehensive, but decidedly and thoroughly utilitarian: the "humanities," as generally understood, are indeed so minimized in his suggested school curriculum that the culture and taste which he values highly, and considers characteristic of his nation, will not, we fear, be maintained in any considerable section of the population, and certainly will not be diffused among the lowliest classes. His depreciation of Anglo-Saxon education and civilization on both shores of the Atlantic is somewhat exaggerated. There is reason to hope that we are not all truculent pirates, or merchants and manufacturers, incapable of thoughts beyond the scope of the office or the factory. We must, however, admit that Anglo-Saxon development is comparatively admirable for its strength rather than its beauty—

"la figure de ces magnifiques hommes de proie de l'Ouest n'est certes pas exempte de beauté; mais qu'elle s'enlaidit auprès de l'indulgent sourire d'un philosophe et de la douceur éclairée d'un visage latin."

Dr. de Fleury divides his volume into three parts, in which he discusses successively the physical, the intellectual, and the moral life of the school. So far as material comfort and physical training are concerned, Dr. de Fleury's discontent with the existing state of things in the great majority of French schools appears well founded, and French schoolboys must have what their English brothers would call a really "bad time." They are inadequately nourished—this, indeed, is a common English complaint — and those who are boarders seem to be ill housed; and for all the hours of work—whether class-work or preparation — are cruelly long. In these matters many comprehensive and laudable reforms are recommended, and the drift of them is to assimilate the French system to our own. In the discussion of questions of school hygiene, Dr. de Fleury suggests (and the suggestion is admirable) that the field of activity of the school doctor should be greatly enlarged; it should embrace not only sanitation and recognized complaints, but also the diagnosis and cure of many evil habits, that should be considered physical ailments rather than moral delinquencies. He looks forward to successful treatment by skilled physicians of idleness, inattention, outbreaks of temper, dejection of spirits, timidity, &c.; in fact he maintains that many faults that receive censure and punishment should receive special medical treatment. In many cases we do not doubt the applicability of the system recommended, though it is best known to Englishmen in the fantastic romance of 'Erewhon.'

The most prominent question in the second part of the volume, and the one first considered, is over-pressure, and we are glad to find that Dr. de Fleury is of opinion, on the testimony both of educational experts and physicians, that this evil is very rare in school life; but he finds that waste and misuse of school time are frequent, and that considerable reforms in methods of teaching and class organization are necessary. The hours of work are far too long. In the class of "Rhetoric" boys are expected to work eleven hours and a half a day, in uncomfortably furnished, ill-ventilated rooms; and concerning his own school life Dr. de Fleury exclaims, "Oh! la salle d'étude, quel souvenir affreux j'en ai gardé!" He would largely modify the existing school curriculum: the old classical training would finally disappear, and Latin be suppressed; higher mathematics would be much restricted, and the teaching of inductive and experimental science—"les sciences physiques et naturelles"—greatly developed. It surprises us to find that Dr. de Fleury is more hostile to mathematics than to classics, and in both cases his hostility seems to us carried to an unreasonable extreme. If we assume the suppression of Latin, a judiciously arranged

time-table should, without undue strain on pupils or teachers, include instruction in simple practical hygiene, and on the value of this subject the author earnestly and rightly insists.

Dr. de Fleury proposes three important changes in school method: classes should be smaller; scholars, until they are placed in the second class, should be taught all subjects by their own class (or form) master; and thirdly, the whole of every morning (three hours) should be devoted to the study of one subject only, each hour being separated from the following one by five or six minutes' relaxation in the open air. This rather startling proposal is directly opposed to the tenor of the official instructions published by the French Ministry of Instruction and by our Board of Education, and, we believe, to the general practice of schools in both countries. It deserves careful consideration, however, by practical people, and might with advantage be put to the test of experiment in a certain number of suitable schools. Dr. de Fleury adduces cogent arguments in favour of this novelty in method, and mentions, by way of illustration and comparison, the case of Paris omnibus horses, which suffer more severely from frequent starts and stoppages than from the uninterrupted dragging of heavy loads—"le travail étant un dans toute la nature, et ses lois identiques."

The chapters in part iii. on the moral life of schools and the teaching of morality seem to us far less convincing than those in parts i. and ii. The teaching of civism, with nothing beyond or above it, lacks authority. Carefully developed selfishness will go far to ensure a man's prosperity, perhaps even to gain for him the respect of his fellow-citizens, but Dr. de Fleury pushes his doctrine perilously far when he says, "L'égoïsme lucide, intelligent, doit demeurer le premier et le grand mobile des actions humaines." This sounds like a modern echo of the more epigrammatic maxim of De la Rochefoucauld. Altruism and solidarity, we read, are but developments of selfishness, and alone furnish a solid foundation for any system of social morality.

The conclusions drawn from the study of school life and its physical, mental, and moral influences on the schoolboy are valuable, and the whole volume deserves careful perusal by experts in England. The various departments of the subject are treated with unsparing French logic, and the author's opinions and arguments are the more interesting to English readers because they are unobscured by the fogs of party and sect which nearly always envelope the subject in this country.

International Law as interpreted during the Russo-Japanese War. By F. E. Smith and N. W. Sibley. (Fisher Unwin and Clowes & Sons.)

THE judgment of competent critics in regard to this large volume is likely to be of a mixed sort—it is not well written; it is padded with irrelevant matter, and it is everywhere wordy. On the other hand, the authors follow Prof. Holland, a good guide, display research, and when they strike out a line for themselves occasionally carry the reader with them.

It is not necessary to repeat what we have said in reviewing books upon the war. Our authors write of "the Chemulpho incident," "it is difficult to see by what right the commanders of the public armed vessels of" Great Britain, France, and Italy "protested." They should have noted the fact that the naval officers of the United States declined to join the lead of the captain of the Talbot, and we have already stated that his action was disapproved by our Foreign Office and Admiralty.

The immunity of neutral vessels under convoy is a subject raised by a French naval volume lately reviewed by us and by the evidence before the Royal Commission on Food Supply discussed by us on the same occasion. The authors of the present work wish Great Britain to adhere to the usual view of the Powers in favour of this immunity. With the absence of regard to mundane facts common among writers on International Law, they take no notice of the declarations of all French naval and political authorities against allowing any practice—even their own of past wars—which could help us in the event of conflict between France and England. On the other hand, the certainty that, if any opponent of the United Kingdom should ever attempt to apply the principles of Admiral Aube, the United States would actively defend the rights of neutrals, guards us from bark becoming bite. So, too, with the sinking of prizes. In an interesting quotation it is pointed out by Messrs. Smith and Sibley that the Russian Foreign Office expert, M. de Martens, said many years ago that the conditions of Russia must force her to sink prizes, and that the application of this practice to neutrals "soulèvera indubitablement contre notre pays un mécontentement universel."

On the taking of the dispatches of the foe out of mail bags on mail steamers, and detention and search of mails for that purpose, the wishes of the authors satisfy us better than do their researches. A passage on p. 249 draws a false analogy and is misleading. If they will read all that has been written on this subject—which would have been worthy of a place in their index—they will find that British mails were searched by Russian cruisers during the recent war, and that no official remonstrance was made on the particular point because it was found that the precedents were on the Russian side.

It is a pity that the appendix on our import of food could not have been based on the facts recently laid before the Royal Commission. Many of them might have been obtained by the authors some months or even a year ago.

The authors quote the excellent new edition of Hall in proof of a rather absurd guess that the prohibition of "projectiles, the only object of which is the diffusion of asphyxiating or deleterious gases," was "aimed at lyddite." Not even a Hague delegate would be so rude to the Royal Artillery as to suggest that its favourite shell has for *only* object, or even for an object at all, anything but the usual object of all shell. We need hardly assure learned writers of text-books that lyddite is still used without objection, as are by all other Powers the similar compounds of which it is a mere imitation. Not only has melinite also a bad smell, but further the form of smokeless powder used by several Powers for their own field-guns affects the gunners with "jaundice" and nausea, as our lyddite affects the enemy.

The authors seem to think that Russian action in the matter of "the idle fiction of leases" was something "new." Yet Cyprus, the Quetta "strip," the Lado Enclave, and many similar cases of our own rise to the mind.

Besides a good deal of doubtful English there are a few slips in names, of which we imagine "Cancalé" is one. The Rocher de Cancale, greatest of all historic and literary dining-places, was named after the oyster-haunted reef which closes a part of the bay to which reference seems to be intended. The index is much better than is now usual, but one of the chief mentions of the Allanton (p. 243) is omitted from the list of references to that ship.

The English Lakes. Painted by A. Heaton Cooper. Described by W. T. Palmer. (A. & C. Black.)

THE order in which the names are placed on the title of this book probably indicates the comparative importance which the publishers would wish us to allot to their respective shares in the work. Mr. Cooper has produced a set of colour-sketches representing attractive bits in the Lake country, and Mr. Palmer has written what used to be called the letterpress to them. This kind of combination, well known to our grandsires in "Keepsakes," "Picturesque Annuals," and the like, has lately, by favour of the various mechanical methods of reproduction which photography has made possible, taken, it would seem, a new lease of life. Every self-respecting publisher seems to feel it his duty to bring out one or more of these sumptuous—that, we believe, is the word—volumes in the course of the year. The worst of them is that, though very smart at first, the illustrations soon get to look shabby; it may be doubted whether the china-clay-loaded material which carries them will last as long as the vegetable tissue on which Finden and Miller and Cousen reproduced the designs of Turner, Stanfield, and Prout. The reviewer, however, is concerned with the present; and it cannot be denied that colour "processes" do render very agreeably drawings like these of Mr. Cooper's; which themselves serve as agreeable memoranda, to those who know the country, of its changing moods and endless variety of scenes. From Coniston, dreaming under a summer sunset, to Buttermere, gleaming through rain while the storm-clouds sweep over Honister Crag, to discharge themselves on the slopes of Dale Head, we have specimens of almost every aspect under which this land of "samples" is to be seen. If we have a fault to find with the artist in this respect, it is that he has given fine weather rather more than its fair share of illustration. No doubt several of his sunsets indicate plainly enough to the experienced eye what is to be expected shortly. We should be much

surprised to hear that it did not rain the day after he drew the Borrowdale yews, with every crag on Glaramara plain in a flood of golden evening light. Similarly, there are several instances in which gleaming roads and swollen becks show that the sun has not been shining long. But except for the Honister view already mentioned, 'A Sudden Shower, Blea Tarn,' and a most characteristic 'Pillar Rock'—does it ever not rain on the Pillar Rock?—we do not recall any attempt to represent the country under what are, after all, its normal weather conditions, and, we may add, the only conditions which bring out its full beauty. Three or four consecutive days of dry weather take all the delicacy out of the colouring, make the valleys unendurably hot, and draw up a haze which effectually blots out all view from the heights. We have stood on Great Gable in such weather and been unable to see the coast-line, eight miles or so away. It is true that a good many of Mr. Cooper's drawings seem to have been made in spring, when, perhaps, these conditions do not so fully apply; but the August visitor had better not be inveigled by these basking hillsides into leaving his mackintosh at home. Those who know some of the less-frequented corners of the district may or may not be grateful to Mr. Cooper for two of his most charming designs: those of the head of Eskdale, perhaps the grandest bit of scenery in all this region, and of Loweswater, with the view past Mellbreak to Grassmoor.

Mr. Palmer may have been "put off" by the obvious subordination of his share in the work to that of the artist, or it may be that his two former books on the Lake country have "exhausted his mandate." At any rate, we fail in this volume to find many of the interesting stories of adventure and sport on the fells, or glimpses of the dalesmen's life, such as made its predecessors readable in spite of a somewhat unchastened style. The style, indeed, is all there. Strange words abound. We read of "such as know Rothay from its source in the craggy fells to slooming Winander," and before we have made up our minds as to what a lake is like when it slooms, we find a glen doing the same thing "in dying bronze of bracken." Another strange form is "abstemity." A good deal of novelty can be introduced by using words out of their right meaning, as "turgid" for "turbid," or "deprecate" for "depreciate." Perhaps it could not be expected that "watershed" should not be used to denote an area rather than a line; but we must protest against 'The Daffodils' being called "a fine sonnet." No amount of anecdotes about Wordsworth will atone for such careless reading of him as this phrase betrays. What, again, are we to say of such a sentence—no, it is not a sentence—such a concatenation of words as:—

> "Wastwater, its bed hewn and filled by Almighty power in the beginning to contrast the silvern temporalities of a level mere with the solid, silent, rugged eternities of rock around."

This is, perhaps, a somewhat exceptional specimen of what we have called Mr. Palmer's less chastened style; but he comes very near to it once and again, and almost every page bears evidence that to admire Ruskin is not of itself a sufficient qualification for attempting to wield Ruskin's weapon. Indeed, by far the best chapter in the whole book is one which describes a conversation with a Skiddaw shepherd, in which the shepherd takes the leading part. He is terse and racy; but we have had, perhaps, enough of him and his like of late years, and generally we are inclined to wish that the Lake country might be left in peace for a few years by descriptive writers. It is all very well to lament the arrival of motor-buses; but if those who are capable of intelligently admiring the charms of the district will insist on proclaiming them so assiduously, they must not wonder if the unintelligent crowd comes, if only to say it has been there, and demands its motor-bus. The railway will follow, and the carriage-road over Styhead, and all the rest of it. Then some of these fluent writers will wish that they had celebrated, say, the Bedford Level, and kept their own district and its beauties a little more to themselves.

NEW NOVELS.

Twisted Eglantine. By H. B. Marriott Watson. (Methuen & Co.)

Of the long tale of books which Mr. Marriott Watson has to his name, this is, we think, the best. The theme is romantic, the period that of the Regency, the Brighton Pavilion, and the beau. The exquisite Sir Piers Blakiston, landing at Lymington, comes on a young girl whom he recognizes as fit to adorn any Court. He proceeds to interest her, in spite of a second admirer who is more of her age, and the resultant scheming leads to many pretty situations, for Mr. Watson is always clever at contriving situations. Belonging to the Stevensonian tradition of romance, with the apt word and the real touch of the time to back it, he need not share Stevenson's doubt about the introduction of a petticoat, for his girls are admirable, spirited, and gay, though in no wise of a "more coming-on disposition" than Rosalind. The fair Barbara here is clearly seen, a charming character who remains with us by virtue of a dozen touches, and is a relief after the popular type of hoyden. On the beau, however, Mr. Watson has lavished the most care, and the result is the best portrait of his that we know. The beau is superbly imperturbable, sordidly selfish, and strikingly generous by turns. His assurance makes his inferior cards equal to the best trumps; he has an air even as the Egoist had a leg; but he is a man beneath his mask. He is not like the fancy rustics of the modern stage, mere overdressed puppets for an audience to disbelieve in, to grin or grunt at. Mr. Watson in a letter to a critical friend views his Sir Piers from the scientific standpoint as the last male to keep the fine feathers which allure the more sober-clad female. Such views are rare in novelists; but in combination with a feeling for form and atmosphere they make fine endowments. An eminent practitioner in this kind of writing has said with equal truth and felicity that a novelist should be half a philosopher and half an artist. Our author has been some time a-writing, but has clearly retained both prepossessions. There is more success to be got by shallow optimism, cheap epigram—above all, by the pervading sentimentalism which has struck up a union with religion. But these things have nothing to do with character, with atmosphere, which it is the business of the novelist to present; and fortunately the "best sellers" are the worst survivors, while no one groans over their early demise. A real study like this is different. But, alas! it is sometimes dull, and we have occasion to remind psychological gentlemen of the injunction in the theatrical Prologue to 'Faust': "But chiefly give us incident enough." Mr. Watson has a lightness and a turn for narrative which easily clear him from such rebuke. He has, in fact, given us a good story as well as an accomplished piece of work; and he should secure a wide public for it. He has one advantage which is rare—admirable illustrations by Mr. Frank Craig. Anyway, whatever its success may be, this book puts him in the front rank of living romancers.

Hugh Rendal. By Lionel Portman. (Alston Rivers.)

We are glad to notice that this story has already secured success, for it deserves it. Mr. Portman, taking apparently Wellington as his model, has given an account, enlivened by easy humour throughout, of the life of a boy who has brains, but at first no particular aptitude for school sports, and is therefore tempted to lounge or do forbidden things. His hero emerges from a period in which he is steadily bullied by some boys and perverted by others into a place in the school eleven, a scholarship (after one failure) at Oxford, and a leaving Exhibition. The period in which he is put at the head of a new and alien dormitory, and sorely tried by the "cheek" of those he has to rule, is admirably depicted. Mr. Portman hits off exactly the ingenuity of boys in devising apparently innocuous taunts which tell every time and provoke their enemies to unadvised action. He has real insight into boy nature, its attitude to religion, the taciturnity of fathers, the hopeless ideals of mothers, and other influences of home life on the growing boarder. There are two headmasters in the book, the former slack after years of reign, the latter young, keen, and perhaps too meddlesome, though, from the school point of view, even necessary reform is always regarded as an outrage. It certainly needed pointing out that under the old head things were exceptionally bad: otherwise we think the bullying would be distinctly too over-coloured to be fairly representative of public-school life, nor would a boy, even if he was a peer, escape expulsion after being four times convicted of smoking. A lady of humour and understanding, like the wife of the master who looks after the hero, is a great boon; but many are called, few chosen or fit for such a position. And "it needs heaven-sent moments for this skill," not to say infinite patience and tact. Mr. Portman forestalls

some expert criticism by presenting pictures of form work as well as play, and in each case his scenes are instinct with real life. We presume that the book refers to a period some twenty years ago. We believe that things have improved all round since then, but we cannot say that the incompetent master of the book is overdone. We knew more than one of the sort in our salad days. In fact, the whole narrative strikes us as veracious, and admirably free from cant. Boys still, we daresay, get their verse and prose done for them, as they do here and did in Tom Brown's day, however loudly prominent educational experts deny the existence of such imposture. There is a hint from the author that he will trace the career of his hero at Oxford, and we hope that he may be induced by his success to make good the suggestion. With 'Godfrey Marten, Schoolboy,' 'The Hill,' and this book, the present age can fairly boast that the reproach that there is no successor to 'Tom Brown's Schooldays' has been removed.

The Lady of Lyte. By Graham Hope. (Methuen & Co.)

This story is set in Restoration days, and tells incidentally of the pretended Popish Plot and the difficulties between the King and the Opposition. But, as is right in stories, it is concerned with individual lives, and is chiefly the tale of a love that found no earthly fulfilment, but possessed instead considerable beauty and nobility. Entangled with it is another, fresher, happier, younger love quest, which, if not so exalted, is pretty enough. The author writes with ease, even with charm, and, in a quiet way, makes character and circumstance stand out, though the atmosphere of the past clings about them and softens their outlines.

The Black Barque. By Capt. T. Jenkins Hains. (Dean & Son.)

One gathers that the author of this stirring sea story is an American sailor. On the second page of the book he writes of a passage from the United States to Europe as a "voyage," and that is almost his only unsailorlike expression throughout. The barque of the title is the Gentle Hand, a pirate "slaver," whose owners are making a trip to the West Coast of Africa to get a cargo of slaves for the United States. The period is that immediately following England's war with America, but the language is, in the main, that of modern American sailormen, and includes many of the popular idioms of the last twenty years. It is a good, rousing yarn, and should find favour among adventure-loving boys. The feminine interest is not entirely lacking, since the fair daughter of one of the owners is aboard the vessel, and an object of interest to the hero, but there is no actual love-making. There is an abundance of cut-and-thrust fighting, incident follows incident with great rapidity, yet with tolerable verisimilitude. In addition, Capt. Hains has a literary conscience and a sailor's characteristic manner, two excellent qualities, which make for genuineness and solidity in this story.

The Soul of a Villain. By Mrs. Hughes-Gibb. (John Long.)

The inadequacy between an act and its consequences is often striking; but in this story the relation seems untrue and not thinkable. The author might have found a better and more convincing way of creating and sustaining the central situation; but it is easy to think, and much more difficult to do. The weakness of the machinery is visible throughout what may be a first and tentative excursion into the fields of fiction. A want of ensemble and a lack of the instinct that discovers what should be the really important elements also strike us. We find, however, certain good points and some latent interest here and there.

SCHOOL-BOOKS.

In Messrs. Longman's "Class-Books of English Literature" we have before us *Marmion*, edited by G. Kendall; *The Lady of the Lake*, edited by W. H. Spragge; and *The Lay of the Last Minstrel*, edited by F. W. Tickner. To each of these books, which are well printed and produced, is appended a short biography of Scott by Mr. Lang, which is excellent, simple, yet full of essential facts and sound criticism. The annotators, who supply an introduction and notes, do not please us so well. Mr. Kendall is best on 'Marmion,' for he does offer some criticism of the poem, *e.g.*, as to the question whether Marmion was regarded by Scott as hero or villain. His notes are good as far as they go, but rather perfunctory. We do occasionally find references to other poets whose usage explains that of the word before us, but not so often as we should wish. The special point about Arcadia (p. 216) was that its inhabitants were supposed to be musicians. This is clear in Virgil's "Arcades ambo," which was doubtless the main source of later allusions. Mr. Kipling has revived "selle" for saddle (p. 215). It might have been pointed out that the solan-goose (p. 213), by no means common, is specially associated with the Bass Rock in Scotland. Merely to say that it "is a web-footed sea-fowl" is dull.—Mr. Spragge gives us no æsthetic criticism of 'The Lady of the Lake,' but a bald analysis of the narrative with a short page on "historical details." The notes are brief and singularly lifeless. We think it would add much to the interest of words that are odd to the learner, such as "woned" (p. 87), "weeds," for dress (p. 168), and "bourgeon" (p. 163), if he were told that they are familiar to lovers of good poetry—the first, for instance, in Milton, the second and third in Tennyson's 'In Memoriam.' Scott was a great quoter of Shakspeare, whose vocabulary has left its influence on all his poems. The derivation of the word "links" (p. 164) might have been explained as interesting to the sport-loving boy. "Ben-Shie" (p. 165), it might have been added, is far more common in another spelling.—Mr. Tickner says nothing of the famous critical objections to the scheme of 'The Lay of the Last Minstrel,' his introduction being a brief and uninspired summary, and nothing of the minstrel's place in history and legend. He should have distinguished by means of their derivations the two words both spelt "wight" (p. 108). A word like "Almayn" (p. 113) should be glossed with its Latin original, and the familiar singular of "beeves" (p. 117) might have been mentioned. None of the books, we notice, contains an index, which is a pity, but two of them have some examination questions added at the end.

In the same series are *Tales of King Arthur and the Round Table*, adapted from Mr. Lang's 'Book of Romance,' and edited, with an introduction and notes, by J. C. Allen. As might be expected, the language is exactly what is required for this purpose—sufficiently modern to be easily understood, yet preserving as far as possible the atmosphere of Malory. The notes are very short, and principally confined to a brief explanation of single words and phrases. Some of these might, we think, have been omitted, as far as their instructiveness is concerned, for in too many cases a word or phrase is unnecessarily explained by its alternative or otherwise in the baldest manner. For example, the expression "High Degree" is interpreted as "high station in life"; venison is explained as the "flesh of deer"; and "ger-falcon" as "a large and fierce kind of falcon."

The introduction explains somewhat dryly the origin of the Arthurian legends and their literary history, but has the merit of being short. A word of praise must be given to the pictures by Mr. H. J. Ford. Most of them are excellent, and add largely to the attractiveness of the book.

Yet another volume of this series contains Macaulay's *Lays of Ancient Rome*, together with *Ivry* and *The Armada*. Mr. David Salmon contributes a short biography, and Mr. J. W. Bartram is the editor. It is a pity that the latter in his introduction should have thought fit to go again over some of the ground already covered by the biography—for instance, we find in each the anecdote concerning Macaulay's boast that he could reproduce from memory the text of 'Paradise Lost,' besides various examples of his early precocity—but, for the rest, the introduction is interesting and useful. For those young readers to whom even the mythical portions of Roman history are as yet undiscovered country the notes should be helpful enough; though it is possible that such would like to know more about Castor and Pollux than the bald statement that they were "twin heroes, 'the twin brethren,' sons of Zeus or Jupiter, honoured as gods." Mr. Bartram, moreover, makes a blunder in explaining "I wis" (from Anglo-Saxon adj. "gewis," meaning "certain") as "I know, I am sure that." Apart from this the notes are adequate.

Selected Essays of Henry Fielding, edited by Gordon H. Gerould (Ginn), is a sound piece of work, and represents study in a field which is hardly touched by the ordinary man who has a taste for letters or for writing school-books. Fielding's work is backed by a solid equipment and a classical training which are out of fashion; but not so long ago the present reviewer read all his 'Miscellanies' with pleasure, and he sees no reason why, with Mr. Gerould's capable notes, this selection should not bring both pleasure and profit. It affords an interesting insight into the literary manners of the day. Selections are included from 'Joseph Andrews,' 'Tom Jones,' and the 'Covent Garden Journal.' There is one piece from the 'Journal of a Voyage to Lisbon,' and we wish that there had been more from that wonderful record of cheerfulness in the Valley of the Shadow. The editor has evidently profited by consulting the best critical comment on his author, and his introduction is both full and interesting. He leads off, however, with Gibbon's magnificent compliment about the House of Hapsburg and 'Tom Jones,' which a modern genealogist has shown to be founded on a false basis.

Mr. A. E. Roberts has edited in Messrs. Blackie's "Junior School Milton" *Paradise Lost*, Book V., and provided a very satisfactory summary of Milton's life and notes. So much work of the sort has been done on

XUM

Milton by this time that it is impossible to be original, and difficult to be stupid. Judicious brevity is, however, not common, and this Mr. Roberts achieves without omitting anything of importance. We are glad to notice a few remarks on Milton's metrical scheme, the points of which are seldom realized, even by modern writers of blank verse.

In the blaze of advertisement concerning modern books one is apt to forget older and quieter volumes, which were often better written. We hope that there is still a wide public for such sensible and well-equipped performances, and welcome *A Book of Golden Deeds*, Part I. (Macmillan), a selection edited by Helen H. Watson. The introduction seems to us a rather unnecessary piece of sermonizing, but the notes supply all the necessary explanations, which are not many, since Charlotte Yonge's prose was simple, lucid, and devoid of the obscure graces dear to some female stylists. It wears well, in fact, and will go far, we expect, in this well-printed form.

We are very glad to notice that the same firm have produced *The Water-Babies* in an abridged form suited for schools. There is nothing so well fitted to inculcate a zeal for natural history, and—what is, perhaps, more important—that feeling for others which is often novel to the "age without pity." Mr. Linley Sambourne's illustrations are not entirely a success; they seem to the present reviewer to exaggerate the grotesque side, even as Noel Paton did the elegant. The picture of the little girl on the rocks on p. 71 is awkward. Still, the otter and the "tremendous old brass blunderbuss" who was the porter are admirable.

In Messrs. Blackie's "English School Texts" we have Swift's *Gulliver's Travels*. There is an introduction of two pages and a half only, which is far too little for a striking and subtle man like Swift. The result of this brevity is that several points are insufficiently, if not incorrectly, stated.

Nothing is more striking than the breadth of range in school-books to-day. The teacher and pupil who cannot be pleased by the variety of things offered them must be like Signor Pococurante, who was great enough to dislike everything. Messrs. Blackie offer in their "English School Texts," besides the booklet we have already noticed, *Tales from the Arabian Nights*, a selection from the famous version of E. W. Lane. At first sight it might seem that this is a translation by no means so attractive to youth as the ordinary popular one derived from the French. But we believe a well-known novelist is right in enunciating the principle that the young like a didactic touch in their books. Equally delightful volumes are *Sindbad the Sailor*, again from Lane; Kingsley's *Heroes*; Lamb's *Adventures of Ulysses*; and Borrow's *Gipsy Stories* and *Antonio and Benedict Mol*, both from 'The Bible in Spain,' with a few notes on foreign words. The inclusion of a condensation of Sir Richard Hawkins's *Voyage into the South Sea*, derived from the reprint of the Hakluyt Society, is a capital idea, though we wonder why a few notes as to difficult English words and foreign phrases were not added. The introductions to these little volumes concerning the life of their authors are brief and generally adequate, though not always, we think, written in a sufficiently simple style. If ever holiday tasks are more than a farce it will be by help of a series like this—cheap, well printed, and easy to slip into the pocket.

We have received a number of little paper books from Mr. Edward Arnold, under the general titles of *The Laureate Poetry Books* and *The Arnold Prose Books*. They contain selections from classical English writers in prose and verse, intended particularly for use in schools. The absence of the usual intimidating array of notes is a pleasant feature, and will probably render these books more attractive, and consequently of more real educational service, than many with similar aims. Introductions, too, are dispensed with, the life and general characteristics of each writer being, as a rule, dealt with in a short note at the end of the volume. The authors chosen include poets so modern as Tennyson, Browning, and Matthew Arnold, and among prose writers Carlyle, Borrow, Emerson, and Washington Irving. The selections, too, are made with a view to what will interest youth, though we cannot see any good reason for discarding the version of 'The Ancient Mariner' usually printed nowadays in favour of its earlier and less perfect form, cumbered as it is with wilful archaisms, which first saw the light in the 'Lyrical Ballads' of 1798. Particularly pleasing are the selections from George Herbert, Marvell, and Herrick; and the extracts from Thomson's 'Seasons' may serve, perhaps, to turn the attention of the rising generation to that rather neglected poet. Of the poetry of Matthew Arnold, 'Sohrab and Rustum,' 'Balder Dead,' and one or two of the shorter poems are printed. The prose series contains, besides the authors mentioned above, selections from Froissart, Johnson, Gibbon, Kinglake, Leigh Hunt, Lamb, Thackeray, and many others. Enough has been said to indicate the wide scope of the series. The books are clearly and attractively printed, and it may be hoped that their use in County Council schools may be instrumental in attracting to the study of literature many who would otherwise shrink from it as from a task.

From Messrs. Macmillan we have — in "English Literature for Secondary Schools" —*Tales from Spenser*, chosen from the 'Faerie Queene' by Sophia MacLehose, a prose version for the First Year (12-13), which is well executed and annotated; and Macaulay's *Essay on Sir William Temple*, edited by G. A. Twentyman, intended for the Fourth Year (15-16). Surely at such an age a boy does not need to be told by a glossary that "ludicrous" means laughable; "morbid," diseased, unhealthy; "omen," a sign, foreboding. The introduction is careful, pointing out the modifications of Macaulay's views which research has made since his day, and we are much pleased to see a little bibliography of 'Help to Further Study,' a feature we are always anxious to encourage in an age full of cheap and incompetent books.

The Song of Hiawatha, edited by P. T. Creswell (Blackie), is an excellent edition. We find words explained by their usage in other poets, a practice for which we have pleaded above. Mr. Creswell knows his Shakspeare and Tennyson. He might, by the by, have given the latter as an authority for the frequent use of "moon" for "month," cf. the passage

> Here, in this roaring moon of daffodil and crocus,

in the 'Prefatory Sonnet to the Nineteenth Century.'

Learning to Read: Step One and *Step Two*, two booklets by Emile S. Mortimer (T. C. & E. C. Jack), deserve high praise. The illustrations are bright and pretty, and details of production have been studied with good results. We are much pleased with the type and paper, which should be restful to young eyes. The puzzles of pronunciation which abound in English are carefully kept out of the way; in fact, these books should satisfy both educational experts and ordinary mortals.

The books on *Class-Work in English*, published by the same firm, strike us as excellently practical, being throughout calculated to make a child think for himself. He is asked to notice that the days of the week are written with a capital letter; has to fill up sentences with missing words, a pastime that is sure to appeal to the present generation; and is taught to address envelopes. Here he is told to put "St." for Street, "Av." for Avenue. We doubt the propriety of suggesting these abbreviations for use at an early age when we consider the present standard of ordinary handwriting. The 'Picture Stories' included—*e.g.*, of a donkey which a woman is trying to pull off a railway line before an advancing train crashes into it—with questions as to their purport, are well executed. We have daily reason to lament the want of reasoning power in the average boy. He knows by rote that 2 and 2 make 4, but the induction that 2 and 2 do not make 5 seems beyond him. These exercises should improve his reasoning powers, or, at any rate, show him the way to use them. There is another merit in the series: it could not possibly be cheaper.

Australasia, by G. L. Glover, in the "Round the World" series of 'Geographical Handbooks' by the same firm, deserves high praise for its ample illustrations and maps, which make the subject both easy and interesting. We find pictures of Melbourne Harbour, Collins Street in the same city, badges of the various colonies, Wellington, Pearl Fishing, and the Landing of Capt. Cook. Certainly this handbook represents a wonderful advance on the older books of the sort in every way.

Rabelais. Selected and edited by Curtis Hidden Page, Ph.D. (Putnam's Sons.)—A series of French classics for English readers under the charge of Prof. Adolphe Cohn and Dr. Curtis Hidden Page, both of Columbia University, begins with selections from Rabelais. Succeeding volumes, the appearance of which is to be expected during the present year, will comprise the works of Montaigne in Florio's translation, Molière, Beaumarchais, and George Sand. More ambitious than ordinary efforts of the kind, the scheme, if it is carried out as it has been begun, will supply the reader with what, to all except the scholar, may prove a competent knowledge of the masters with whom it is sought to deal. Except in the case of Voltaire, whose writings are too voluminous to permit of an adequate idea being conveyed in a selection, the most formidable difficulty has been faced in the initial effort. In some respects the greatest of French thinkers, Rabelais is in all respects the least tractable. What in him is unsuited to general perusal is inherent and ineradicable, and can only be dragged out with the life. Expurgatory processes have qualified for popular editions the works of Boccaccio and the Queen of Navarre, and La Fontaine we can judge fairly by his 'Fables,' leaving aside and out of the question his *contes*. By no processes of domestication can Rabelais be made to amble in a pasture or to answer a call like "tame villatick fowl." Among the efforts to amend him the present is at once the most earnest and the most nearly successful, and it may fairly be assumed that what now is unreclaimed is irreclaimable.

No attempt, such as seems promised in the case of Molière and George Sand, to provide a new translation has been necessary. The accepted rendering of Urquhart, Motteux, and Ozell—as great a linguistic masterpiece as the original, and a work of unparalleled ingenuity in the manner in which it supplies equivalents for the nonsense of the original and enhancement for its obscenity—is found adequate for all purposes, and is employed with a moderate amount of expurgation of text. Many things are necessarily excised, but it is, as a rule, episodes rather than

passages that disappear, and a respectable amount of continuity is maintained. The extent of the reductions may be judged from the fact that the fifty-eight chapters of the book of 'Gargantua' are reduced to thirty-one, and the thirty-four chapters of 'Pantagruel,' book i., to fourteen. The chapters themselves are not seldom shortened.

So long as the task of purification and abridgment has to be attempted at all, it is difficult to complain seriously of the manner in which it is accomplished. No lover of Rabelais who has access to the original or to the full text of the English translation will be content with this or any other modification, any more than he will with the bowdlerized text of Shakspeare. That Rabelais is gross and obscene almost beyond precedent has to be conceded; what he is not is provocative or wanton. No more curious instance of irony can be advanced than the fact that *la substantifique mouelle*, so little to the taste of the Parlement and the Sorbonne, is now what the world seeks in Rabelais, and that the indecencies which, contributing to the delectation of sensual monarchs, Churchmen, and nobles, saved him from the fire with which he was always menaced, are the things for which he has now to do penance.

In preparing this edition for home perusal Dr. Page has avowedly followed a principle entirely different from that adopted by Besant in his 'Readings in Rabelais,' and, instead of choosing primarily what is "of ethical and philosophical interest," has chiefly sought, in his own words, to keep

"all the essential parts of the story, and all the scenes which had most literary value and human interest; secondarily, to retain all the best of the historical satire; and in the third place, to include other parts which have some special interest, such as the chapters on education."

The two schemes, it must be seen, overlap, since the chapters on education are among those which have most "ethical and philosophical interest." It is claimed that by the plan adopted, while no essential or important portion of the story is omitted, the omissions, though somewhat larger in proportion than those in our usual editions of 'Gulliver's Travels,' are not closely connected with or essential to the work. Comparing the book with the 'Readings in Rabelais' and 'The Life of Gargantua and Pantagruel,' edited by Henry Morley, we think it holds a position more than respectable. It is, however, claiming far too much to say, as does Dr. Page, that his excisions

"fall away, and leave the story, the characters, the situations, the satire, and the thought only the more vivid and interesting through being freed from excrescence and prolixity."

Most of them are made in the interest of decency, and against such we are not disposed to protest. For others there is no excuse but considerations of space. The volume is handsomely got up. An introductory chapter owes much to the 'Rabelais et ses Œuvres' of Jean Fleury, of the Université Impériale de St. Pétersbourg, 1876, two volumes, a work of admirable taste and erudition.

Mémoires d'un Ane, par la Comtesse de Ségur, edited by Lucy E. Farrer (Arnold), makes a very pretty reading-book, vivacious and not too long. Added are a note on the author, exercises on the various chapters, with grammatical questions and portions to translate into French, and lastly a vocabulary. We should omit this feature and let the pupil look out words in the dictionary. We think too much is ready-made nowadays for the schoolroom.

The Public School French Grammar.—Part II. *Syntax.* By Elphège Janau and Alfred Ludwig. (Hachette & Co.)—The 'Grammaire Française' of Auguste Brachet is the basis of the present work, as it was of Part I. published by the same firm some twenty years ago. So impressed were students by the excellence of the 'Accidence,' that the 'Syntax' was eagerly awaited. Messrs. Hachette have at length produced the long-promised volume, and we congratulate them and the authors. As in the companion volume, the historical development of the language is kept in view, and reference constantly made to it in order to explain to English students the subtleties of French syntax. For candidates seeking honours in French, we know of no other book so suitable, and therefore recommend its adoption for the senior classes of our schools and for university examinations.

In addition to the ordinary syntax, which is very fully and carefully expressed, we are pleased to find a most useful and interesting chapter on 'Gallicisms'; and not the least valuable portion of this valuable production is the appendix containing a complete list of French synonyms. In another appendix are added the changes which have been recently sanctioned in French syntax and orthography.

In Messrs. Blackie's "Little German Classics" we have the *Sintram* of De La Motte-Fouqué, edited by Medina Pittis; and select scenes of Goethe's *Hermann und Dorothea*, edited by J. F. Schilling. The brief notes in each case we cannot consider adequate, for we have recent experience of the help needed by the average beginner to master the two classics in question. Brevity is all very well, but it must be the brevity which has experience and good powers of condensation behind it.

Messrs. Dent's *New First German Book*, by Walter Rippmann and S. Alge, is sure to be widely taken up. This book is, in fact, founded on a revision of a similar book issued by the same publishers, which has had a large sale. Mr. Rippmann is one of the keenest and most successful advocates of new methods. In the 'Phonetischer Teil' he introduces the annotation of the Association Phonétique Internationale, which looks at first sight rather alarming, but will be readily recognized by the intelligent as simplifying pronunciation. The page containing pictures of current German coins is an excellent idea.

Horace: Odes II., edited by W. H. D. Rouse, is one of Messrs. Blackie's "Latin Texts," a new series intended for use in the first two or three years' study of Latin. All vowels long by nature are marked, in order to give correct ideas of pronunciation from an early age, a habit certainly not natural to English boys, or adults, for that matter. There are no notes concerning single words and phrases, but there is a competent introduction, which includes a novel feature in some remarks about textual criticism. The principles of this science are lucidly explained in two pages of summary, but we doubt if a young boy will know the meaning of some of the words used—*e.g.*, "cursives"; and we think he should not be confronted with a word like "haplography." It is sufficient to give the English explanation of it. The section which follows on 'The Style of Horace' does not seem to us simple enough for youngsters. The little volume is certainly very cheap at sixpence.

Examples in Arithmetic. By C. O. Tuckey. (Bell.)—This addition to the "Cambridge Mathematical Series" will commend itself to those teachers who prefer to rely entirely on blackboard work for demonstration of the theory of arithmetic, and place in the hands of their pupils merely the problems to be solved. The examples, ranging over the whole field of arithmetic, are well selected, and include one chapter on 'Problems on Physics.' We think the author would have done well to give more attention to the metric system, in view of the importance of that branch of the subject in modern requirements.

A First Algebra. By W. M. Baker and A. A. Bourne. (Bell.)—The larger work by these authors was favourably noticed in our columns a few weeks ago, and the opinions then expressed apply equally to the present volume. The compilers have made it their special object to interest young students in their early algebra, and to remove that dull feeling that commonly exists in the first stages, when the young are so apt to say, "What is the good of it?" For lower classes working up to the standard of the University Junior Local Examination the book is well adapted, and deserves success.

Elementary Algebra. By W. G. Borchardt. (Rivingtons.) — Excellent as are the text-books recently published on this subject, the book under review has several good points which will commend themselves to teachers of mathematics. The arrangement of the work follows the suggestions of the Mathematical Association now generally adopted; and, though all that is necessary in the proofs is clearly stated, we are pleased to notice the absence of that superfluity of explanation which is prominent in certain text-books. Graph-work is introduced at a very early stage, the problems placed before the student to illustrate the principles being well chosen. The latter sections, on 'Summation of Series,' the 'Binomial Theorem,' and 'Annuities,' though presenting nothing new, are very clear and concise. As the book is in two parts, we think it would have been a better arrangement to make the first embrace the syllabus of the Junior Local Examination. Apart from this the volume is deserving of success, being well written, carefully arranged, and clearly printed.

OUR LIBRARY TABLE.

The Poor and the Land. By H. Rider Haggard. (Longmans.) — Mr. Haggard has done well to publish the report upon the Salvation Army Land Colonies in America which he compiled for the British Government and the Rhodes Trustees, with the addition of an introduction and illustrations not printed in the original Blue-book. The author has earned honourable notice by his efforts to call the attention of this country to the dangers of town life, especially in the more congested areas of the poor, and the necessity for active reform if the depopulation of rural England is to be stayed. Here he describes two experiments in the reverse direction in America, in the deliberate effort to settle the town dweller or landless labourer back as an independent freeholder on the land. The experiments have been conducted on the tiniest scale: in the one, at Fort Romie, in Southern California, some twenty families have been repatriated; in the other, Fort Amity, in Colorado, nearly twice that number. An interesting account is given of the history of these two colonies, with conversations, full of interesting human touches, between the Commissioner, Mr. Haggard, and the settlers. It cannot be said that either has climbed far out of the experimental stage; neither has been in existence for more than ten years, and both began with serious failure. From Fort Romie the original settlers, drawn from San Francisco, have all fled except one, and at both a serious monetary loss has been entailed, amounting to more than 10,000*l.* Mr. Haggard, indeed, advances special reasons for these first difficulties—unprecedented

drought in the one case, alkali in the soil in the other. He thinks these difficulties surmounted. He found the settlers full of satisfaction and a buoyant hope in the future. This was specially marked at Fort Amity, where the majority had come straight from town occupations at Chicago. On his departure they united in a farewell message that "we would like the benefits which we—our families and children—are receiving to be extended to the thousands who have been longing and praying for such a chance." It is noteworthy that while all the settlers are still in debt to the Salvation Army, all show an "equity" (excess on valuation of assets over liabilities)—amounting in some cases to many hundreds of pounds—certainly far in excess of any accumulation of capital possible to the agricultural labourer in England, or the unskilled worker of the city.

With these experiments as texts, Mr. Haggard, in his introduction, with all the hopeful eagerness of the practical reformer, asks that a scheme of similar change should be made a national interest. He desires, by co-operation between the home Government, the Canadian Government, and the Salvation Army, to initiate a regular system of "drainage," by which those now leading bewildered and valueless lives in the cities of England may be brought back to the land, either in Canada or in England. His picture of the English city is, perhaps, somewhat too rhetorical in its vision of desolation; and it cannot be said that these frail experiments by themselves can justify the whole scheme of demonstration which he builds upon them. America is not England. Southern California is not the Canadian North-West, dependent on wheat or cattle, nor the forlorn clay lands of Essex. Selection of thirty-six families from Chicago with some success does not justify a general claim that the poor of the English city can be successfully established in similar fashion on the land. Nor is it without significance that so many of his American names signify a different stock from the home-bred people: Mr. Baetschen, "a German Swiss," Mr. Matheson, "by birth a Dane," Mr. Lindstrand, "a Finn by birth," Mr. Vrieling, Mr. Ziegler, Mr. Erik Erickson, and the like. The experience of a philanthropic newspaper fund last winter at West Ham, spending time and care in the thorough equipment of a few score families for emigration, showed the great difficulty of obtaining suitable emigrants willing and able to face the journey, even in such a hive of crowded poverty. Nor, we confess, are we much enamoured of Mr. Haggard's reason for employing the Salvation Army as Imperial agents in the matter. One of the chief reasons is that any alternative involves "a crushing expense." "Highly trained and specialized men," he holds, would cost a large figure in the market; whereas the Salvation Army will perform the work "at the price of their out-of-pocket expenses only." There is something a little mean in the plea that a great nation should thus get rid of its poor by the exploitation of religious ardour, employed "below cost price." We are inclined to agree with Mr. Haggard that the Salvation Army would probably do the work better than any other existing agency. But if employed by the Government they should receive as good a price for their labour as that obtainable in the open market. Mr. Haggard is not entirely correct in his statement that here alone we have a practical object-lesson in the work of repatriation—a journey considerably shorter than that undertaken to California would have shown him, at the Frederiksoord Labour Colony in Holland, a body of philanthropic individuals, the Society of Beneficence, performing with considerable success the same desirable work. These little criticisms do not imply that we have anything but hearty commendation for Mr. Haggard's patriotic work. We join with him in apprehension of the magnitude of the evil which he desires to remedy, and a strong hope that his scheme for experiment along these lines—"the landless man," in a happy catch phrase, "to the manless land"—may be speedily realized.

A Text-Book of Sociology. By J. Q. Dealey and L. F. Ward. (Macmillan & Co.)—It is seldom that a text-book for students combines such virtues as are exhibited in this volume from the other side of the Atlantic. It is at once academic in its treatment and individual in its views. No doubt this comes of the fact that sociology is as yet not qualified fully as a science. Like so many other sciences *in posse*, it is only on the way to full graduation. Yet the demand for a good text-book is all the greater because of this elementary condition of the science. The fact is that it has only recently become possible to see the correlation of the pure sciences in anything like full perspective. Messrs. Dealey and Ward claim that their book contains

"a clear and concise statement of the field of sociology, its scientific basis, its principles as far as these are at present known, and its purposes."

It is possible that the scientific basis is stated a little too ceremoniously and with too much technicality; but that is almost the only criticism we have to make. Naturally in a science so newly developed there is room for much diverse speculation and theorization, but the authors keep singularly within the limits of controversy. Their natural reticence and circumspection are shown, for example, in their exposition of the phylogenetic forces. They explain the alternative theories as to the natural priority of the sexes, the androcentric and the gynæcocentric views, and pass on to another subject without pronouncing in favour of either. One gathers by chance that they favour the latter theory, although they make no definite statement. Unfortunately for this theory, there is no sound evidence in the history of organic life of original parthenogenesis, and the union of two similar or dissimilar cells has always been the basis of growth and multiplication. In other words, it is impossible to claim priority in time for either male or female. It is true that the superiority of one sex over the other is a question of accident. In mammals it is invariably the male that predominates; in other and lower classes it is frequently the female, as in the case of spiders or bees. A certain school of thinkers, however, would reverse the Biblical myth as to the extraction of the woman from the rib of man. But on the general subject of these ontogenetic, phylogenetic, and sociogenetic forces the authors are at once sound and clear. Sociology is in its infancy, but such a book as this will avail much to interpret it to students.

A History of European Diplomacy. By David J. Hill. Vol. I. (Longmans.)—The American intellect is, we believe, recognized as a separate entity by a "realist" writer in the seventh volume of the "Cambridge Modern History." Works like the present afford some evidence of its characteristic qualities. Dr. Hill shows himself admirably equipped for the task which he has undertaken, and the bibliographies at the end of each chapter are, as a rule, admirably done, exhibiting a competent knowledge of continental scholarship. We do not, however, understand why Church's translation of the 'De Monarchia' is omitted, and a French version mentioned. We fail, moreover, to discern anything original in the book. It forms a useful guide to general history up to 1313, and will doubtless be interesting to the reading public and useful to undergraduates. But it is in no sense an addition to our knowledge. The best chapter is that on Frederic Barbarossa and his reliance upon the legal theory of the Empire. This is really suggestive. On the other hand, we cannot understand the justice of the remark that the 'De Monarchia' was the first treatise on politics in the Middle Ages. It might be truer to say that it was the last. On the whole, the book has the qualities of competent American work, being well written, but a little dull, very dependent on European scholarship, and lacking in freshness. We seem to hear the tones of the mutual improvement society debater in much of its criticism, and even books like this suggest a University Extension audience rather than a University public. The result is that a great deal is written down that ought to be taken for granted, that the author is often substituting "vain repetitions" for real thought, and that the feminine characteristics of mere reproduction, so unmistakable in examination papers, are predominantly wearisome. Perhaps when Dr. Hill gets into modern times he may have something new to tell us.

The Labyrinth of the World and the Paradise of the Heart. Edited and Englished by the Count Lützow. "The Temple Classics." (Dent & Co.)—We are glad to see that Messrs. Dent & Co. have included among "The Temple Classics" Count Lützow's translation of the 'Labyrinth' of Comenius. The work, published in English in 1901, has already gone through two editions, and has been favourably received not only in England, but also in America. In the latter country, at Chicago and Racine, Wis., there are large Bohemian settlements. It was in America that was passed a great part of the life of Naprstek, the patriot who bequeathed a fine museum to Prague.

On a previous occasion we reviewed the present work in the columns of *The Athenæum*. It is, therefore, not necessary to say much now, except to wish it a further sale among the dainty volumes of "The Temple Classics." The book is redolent of the quaint pietism of the seventeenth century. It seems naturally to belong to the period of Donne and Herbert and Vaughan. We might compare it in some respects with the spiritual meditations of the Earl of Manchester, entitled 'Manchester al Mondo,' of which the ninth edition (1667) is now before us. We are glad that this work has been brought again to the notice of readers, after a neglect of more than two centuries.

In his notes Count Lützow considers the relations of 'The Pilgrim's Progress' to the 'Labyrinth.' We agree with him in thinking that it is extremely improbable that the English author ever heard of the latter book, which was not translated into our language in his time. There was all the difference possible between the highly educated Bohemian and the untutored, although eloquent tinker. The fact is, allegories, descriptions of journeys, and pilgrimages of this sort were in the air at the time. Whatever help Bunyan may have had was drawn, as Prof. Firth has satisfactorily shown, from chap-books—'St. George and the Dragon,' 'Valentine and Orson,' and other works of the kind. If we compare the books of Bunyan and Comenius we miss the gorgeous pictures and richly quaint dialogues of Bunyan, although we must acknowledge that Comenius has some fine descriptive passages, and resembles the Englishman in the droll nomenclature of his characters—*e.g.*, Searchall, Lovegold, Takegift, &c. The tone of the work is pessimistic, and the satirical descriptions of the professors of medicine and public lecturers remind us of Swift. The reflections of Comenius on matrimony are noteworthy.

Of the great educational importance of Comenius we need not speak here; he may be

said to be the father of the modern educational systems. He anticipated the kindergarten method, and the more enlarged views of the education of women now in vogue. Count Lützow, by his works on Bohemian history and literature, has established himself among us as the champion of his countrymen. He has many of the qualifications needed for the task. He writes our language with perfect facility; we may be sure that nothing is lost in the transference from one idiom to another. It remains now for him, if we may offer a suggestion, to tell Englishmen of the Bohemian writings of Huss. Something was done in this way by the late Mr. Wratislaw, who was of Bohemian extraction ('John Huss,' London, 1882); but probably much can be added to his meritorious labours after a lapse of twenty-three years. The works of Flajshans and others on the great reformer must now be consulted.

Rachel Harvey: a Memoir and Collection of her Verses. Compiled by Alfred J. Harvey, Vicar of Shirehampton. (Bristol, Arrowsmith.) — Mr. Harvey, who has already written a life of his father, entitled 'From Suffolk Lad to London Merchant,' has in this little volume written the record of a long and useful life. In 1859 Miss Harvey's brother took a room in St. Giles's, to be devoted to useful purposes for the benefit of the poor in that district, which was at that time occupied by the worst characters in London. Good use was made of the room; readings were given from the best authors during the week, a savings bank was established, and on Sundays there was a school for religious teaching. Miss Harvey decided to have a class of boys ranging from sixteen to eighteen years of age. These were of the wildest and roughest description, but her ability as a teacher, and her firmness of character, were such that she completely mastered them, and so quiet and attentive were they that the other classes in the same room were not disturbed. They would listen with delight to poems read to them. "Sound the loud timbrel" was a special favourite; one boy said, "I can say it, and kiver it." Mrs. Sewell's 'Homely Ballads,' then just published, caused much pleasure, as most of these were written for girls. Miss Harvey wrote to the author and asked her to write similar pieces for boys. Mrs. Sewell then suggested that Miss Harvey should send her some details of the lives and surroundings of her rough pupils, and as the result 'Mother's Last Words' was sent in MS. Its success with the boys was complete. One of them said: "That a'most made me cry." This ballad was printed, and the sale of it has exceeded a million, and it is still in demand. Miss Harvey died on the 24th of March last at Shirehampton Vicarage, at the age of ninety-three. Two characteristic portraits are given, one at the age of eighty, and the other at ninety. Miss Harvey was working for the good of others to the end, and was teaching a class of senior girls only twelve days before her death.

The Ways of Lady Isabel. By Mrs. Neish. (Tallis Press.)—"Smart" society has been so often the theme of novelists and satirists that one has come to be exacting as to the way in which it is rendered in fiction. It may be a relief to some people to find that Lady Isabel does not emulate the morals which are popularly supposed to belong to this section of London life. She is an honest woman, in the narrow sense of the word, and does not traffic in other people's husbands; indeed, she professes to care only for her husband and herself. But we do not pay much attention to her professions, for she is a pronounced humbug, and her business talents would have made her fortune in the City. She gets commissions from her tradesmen, is paid by parvenus anxious to be introduced into society, contributes (for a consideration) to society journals, and keeps a shop. She manages to make money at everything. Some of her dodges are ingenious, and raise a smile; but one gets rather tired of her selfishness and parsimony, which, related episodically in seventeen papers, grow monotonous. One looks for the same sort of end in each, and is never disappointed by the turn of it. Perhaps she would have been a little more interesting if her wickedness had not been wholly confined to getting the better of other people.

With two volumes containing *Wildfell Hall* and *Agnes Grey* Messrs. Dent & Co. complete their new edition of the Brontë novels, with illustrations in colour by M. Edmund Dulac. His pictures here are full of character, and most striking in colour. As he has generally to deal with a plain heroine, his work has not been easy, and he emerges from it with credit. He makes pretty play with the fashions of the time, though we think some of his colour schemes more effective than veracious. The edition is well and daintily produced, and ought to rank among Messrs. Dent's numerous successes.

Old Tales from Rome, by Alice Zimmern (Fisher Unwin), retells the legends of Rome as related by Virgil, Livy, and Ovid. Miss Zimmern is an experienced writer who knows the value of simplicity, and her easy style of writing is decidedly effective. Supported as it is by illustrations with a classic spirit, it should go far.

We have on our table *The Church of Christ*, by A Layman (Funk & Wagnalls),—*The Unrealized Logic of Religion*, by W. H. Fitchett (C. H. Kelly),—*The Views of Praxeas on the Christian Faith*, by the Rev. J. C. Elgood (Skeffington),—*Pro Christo: an Examination of Foundations*, by H. W. Holden (Skeffington),—*The Worship of St. Philomena, a Nineteenth-Century Roman Cult*, by the Rev. E. D. Cree (Thynne),—*A Guide to High Mass Abroad*, by Athelstan Riley (Mowbray), — *Trial and Triumph: Sermons on the First Epistle of Peter*, by C. Brown (Clarke),—*Life's Dark Problems*, by M. J. Savage (Putnam),—*Glimpses of the Ages*, by T. E. S. Scholes (John Long),—*The Pipe Rolls of Cumberland and Westmorland, 1222-1260*, edited by F. H. M. Parker (Kendal, Cumberland and Westmorland Antiquarian and Archæological Society), — *An Introductory History of England*, by C. R. L. Fletcher (Murray),—*Lives of the English Martyrs*, Vol. II., edited by Dom Bede Camm (Burns & Oates),—*Joseph Lancaster*, by David Salmon (Longmans),—*Mel. B. Spurr: his Life, Work, Writings, and Recitations*, by Harry A. Spurr (Brown),—*Life of Giovanni Diodati, Genevese Theologian*, by Maria Betts (Thynne),—*Great Thinkers*, compiled by M. G. Haymes (Daniel),—*S'ri Brahma Dhârâ, through the Favour of the Mahatma S'ri Agamya Guru Paramahamsa* (Luzac),—*The Museums Journal*, edited by E. Howarth (Dulau),—*The Ideal Mother*, by B. Gwernydd Newton (Putnam),—*A Defence of Pessimism*, by David Irvine (Watts),—*The Bodie Book*, by Walford Bodie (Caxton Press),—*The Place of Science in Music*, by H. Saint-George (Reeves),—*Canadian Life in Town and Country*, by H. J. Morgan and L. J. Burpee (Newnes),—*The Last Records of a Cotswold Community*, by C. R. Ashbee (Privately printed),—*Beverston, its Church and its Castle*, by J. Nowill Bromehead (Phillimore),—*The English Counties: Surrey* and *Upper Thames Counties* (Blackie), — *The Book of Garden Design*, by C. Thonger (Lane),—*The Book of the Cheap Cottages Exhibition* ('The County Gentleman' and 'Land and Water'),—*Drawings of Sir E. J. Poynter* (Newnes),—*A Bridge of Hope*, by T. Folliott (Fifield),—*Cricket Poems*, by G. F. Wilson (Simpkin & Marshall),—*Ante-Room Ballads*, by "Centurion" (Routledge),—*The Pilgrim of India* (Skeffington),—*Poems New and Old*, by M. S. C. Rickards (Simpkin & Marshall),—*Gleanings from the Talmud*, selected and newly translated by the Rev. W. MacIntosh (Sonnenschein),—*The Household of Sir Thomas More*, by Anne Manning (Moring),—*Brought into Subjection, and other Stories*, by Lottie Long (Daniel),—*Thoughts and Fancies of a Girl*, by Kitty Balbernie (Cassell),—*My Friend the Chauffeur*, by C. N. and A. M. Williamson (Methuen),—*A Solicitor's Love-Story*, by A. Charles M—— (Drane),—*Everyday Life*, by S. C. Logan (Drane),—*Confessions of a Ladies' Man*, by W. Le Queux (Hutchinson),—*The House by the River*, by Florence Warden (Unwin),—*His Mascot*, by L. T. Meade (John Long),—*The Marriage Market*, by Mrs. G. Corbett (Robinson Printing Co.),—*Lifting the Veil, with other Lawn-Tennis Sketches*, by F. W. Payn (John Long),—*The Conquering Will*, by Silas K. Hocking (Warne),—*Tongues of Gossip*, by A. Curtis Sherwood (Unwin),—*Fables and Things Fabulous*, by J. H. Cotton (Daniel),—*The Glory of London*, by G. E. Mitton (Black), — and "*The Doctor Says*" (Appleton). Among New Editions we have *The Duties of Women*, by Frances Power Cobbe (Sonnenschein), — *Wayside and Woodland Blossoms*, by Edward Step (Warne),—and *Die Genesis*, by Dr. Hermann L. Strack (Munich, Beck).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Beaumont (J. A.), Walking Circumspectly, and other Sermons, cr. 8vo, 3/6 net.
Buxton (H. J. Wilmot-), Day by Day Duty, cr. 8vo, 5/
Ellicott (C. J.), Sermons at Gloucester, cr. 8vo, 3/6 net.
Hardern (T. B.), A Manual of the Collects from the Book of Common Prayer, cr. 8vo, 2/6 net.
Hodges (G.), The Human Nature of the Saints, 3/6 net.
Holland (H. S.), Personal Studies, cr. 8vo, 6/
Keesey (G. W.), The Voice from Patmos, cr. 8vo, 5/ net.

HAROLD GEORGE PARSONS.

THE premature death of Harold George Parsons should not go unrecorded within the precincts of literature. He was, in a sense, a reversion in type to the Elizabethans, uniting as he did high literary qualities with a restlessly active life. He was an adventurer in spirit, and a man of letters in mind. Born in 1867 in Melbourne, he received his education in this country, and got a scholarship at Oxford. His literary interest was engaged very early by *The National Observer*, and he soon became a principal leader-writer on Henley's journal. He was frankly Imperialist and High Tory in his creed, yet, oddly, was associated through an important part of his life with perhaps the most democratic community in the world.

His genuine literary gifts might not anchor him to England; he went to the Antipodes in search of adventure, and found it in the newly discovered goldfields of Coolgardie. He tramped from the coast to the theatre of the new "find," and wrote his impressions of the place in vivid articles, which formed the first account of the goldfields printed in this country. Later, faithful to the true character and career of the pioneer, he acquired a large fortune, became a mayor and member of the Western Australian Legislature, lost most of his money, and drifted home to England.

His next venture was as a volunteer in the Boer war, where he spent some months in the pursuit of De Wet. He was present at the famous Christmas Eve surprise of Tweefontein by that Boer general, and was seriously wounded in two places. Returned to England once again, he devoted his enforced leisure to what was designed to be a brilliant and comprehensive book on the constitution of the Empire. Mr. Parsons held that the Crown possessed and had always exercised imperial authority over the colonies and dependencies, and he wrote much in demonstration of his theory. It is to be hoped that his work in this direction may be collected and published. He was interrupted in his researches by his appointment as an assistant commissioner in Lagos in 1903, and he laboured in that remote colony and dangerous climate till his death.

Mr. Parsons was endeared to his large circle of friends by a simplicity of nature and a generosity of heart which were the most marked features of his character. His intellect was as astute and brilliant as his nature was open, and he was hospitable and generous to the point of quixotism. Such a man was bound to cover a large surface in life, and such a man was bound to die fighting in some corner or other of the Empire. It is the end he would have desired, though that end has come all too soon, and before he had fully developed the great talents which should later have been at the service of his country.

THE LIBRARY ASSOCIATION AT CAMBRIDGE.

Cambridge Free Library, Guildhall, Cambridge, September 5th, 1905.

I NOTICE the following statement in your report: "Mr. J. Pink (Cambridge) said that men did read books after the age of thirty-five." If you will add the word "not" before the word "read" it will represent what I did say. I think it is common knowledge among public librarians. But the men who do read books, a small minority, read many more than was formerly done: (1) because they are studious, and (2) because they have greater facilities for getting them. The newspaper and the periodical are what men in the aggregate read now.

J. PINK, Librarian.

*** We suspected the omission of the negative which Mr. Pink supplies, but it seemed to us that we should not run the risk of missing a hopeful view beyond our general experience. Mr. Pink's last sentence is undoubtedly true; and the general world not only devours cheap magazines, but even calls them "books." We are very glad to see that Mr. Pink's interesting paper, 'After Fifty Years,' has been printed. We congratulate him on his long term of service at Cambridge and his enterprise. In April, 1858, the Lending Library was opened with 1,407 volumes. In the same year "a retired stage-coachman commenced presenting, and continued doing so almost month by month for several years, until at his death, in 1867, he had presented 2,578 volumes, and by his will he bequeathed a sum of 200*l*." It is due to Mr. Pink that each elementary school has a library of books for the use of its scholars. In 1905 there were 51,775 volumes in the Cambridge Free Library, and the number of books issued was 1,153,555.

THE LATE MR. ALBERT COHN.

THE late Mr. Albert Cohn, of Berlin, who died on August 24th in the seventy-eighth year of his age, merits a conspicuous place in the honourable array of learned booksellers. His activity, both as bookseller and as antiquary, was largely connected with this country. In the former capacity he maintained intimate relations with the British Museum for half a century, having in 1852 entered the great firm of Asher & Co., where he had been employed for some time as a subordinate. Mr. Asher, a man of great ability and knowledge, was one of the agents upon whom Sir Anthony Panizzi principally relied to fill up the deficiencies of the Museum Library after he had procured the augmentation of the grant for purchases. After Mr. Asher's death Mr. Cohn worthily filled his place and immensely enriched the Museum Library, both by the rare and important books in all European languages which he was continually seeking out and bringing to the notice of the authorities, and by his efficient representation of the institution at the principal continental sales. The additions made through him to the great collection of tracts by and relating to Luther were especially important; and he was of particular service at the sale of the Weigel block-books and that of the Heredia library. As an antiquary Mr. Cohn at one time paid much attention to the bibliography of Goethe and Schiller, but for many years had devoted himself entirely to Shakspeare. He had long been engaged upon a general bibliography of Shakspeare, which, it is believed, he has left nearly complete. His 'Shakspeare in Germany in the Sixteenth and Seventeenth Centuries,' London, 1865, is a classic work, standard and unique in its way. It is mainly an investigation of the visits paid by troops of English actors to Germany and the Netherlands during the period, but also has the full text of the contemporary German plays which can be brought into any relation with Shakspeare, such as 'The Beautiful Sidea,' 'Julius and Hyppolita,' and 'Titus Andronicus,' with English translations.

Mr. Cohn was highly esteemed by those who had either literary or business relations with him, and his death has called forth numerous expressions of regret in Germany. R. G.

THE DOONES OF EXMOOR.

Chislehurst, September 4th, 1905.

IN *The Athenæum* of August 26th, under the above heading, appeared an article by the Rev. Dr. Cox, in which that gentleman traverses the conclusions I arrived at in a little work published two years ago, entitled 'The Doones of Exmoor.' In that compilation was brought together much that had been written and gleaned concerning the Doone traditions, including some particulars of the earliest attempts to collect and preserve those legends in 1839; the guide-book allusions of about 1850; the article in *Fraser's Magazine* of 1857, and also *The Leisure Hour* story published in 1863, from both of which copious extracts were given.

With the above-mentioned references before them, it certainly is surprising that any one who had carefully perused 'The Doones of Exmoor' should charge me with an attempt to prove that Blackmore *invented* the Doone traditions. Nothing of the kind was attempted. My object was to demonstrate—after considerable research, extending over many years—among ancient records of various kinds, and covering a period of several centuries—that the alleged family of outlaws that figure so largely in Blackmore's great romance had no real existence on Exmoor in the seventeenth century; that the leading incidents narrated, as well as the chief characters mentioned therein, such as Jan Ridd, Sir Ensor, Councillor, Carver, and Lorna Doone, were all the clever creations of that gifted author's brain. And this opinion I ventured to express at some length in 'The Annals of the Royal Forest of Exmoor,' which was published in 1893. In this connexion it may be mentioned that a well-known North Devon archæologist—the late Mr. J. R. Chanter, of Barnstaple—contributed a most interesting supplement to *The Western Antiquary* for 1884, respecting the Doone legends and other tales incorporated by Blackmore in 'Lorna Doone.' He says:—

"I believe it will be found that the incidents and lifelike pictures of characters and localities so graphically narrated, are founded much more on a fertile imagination than on actual historical or topographical details.....He has, however, skilfully welded several distinct but rather meagre local traditions, and some better-known historical and local details, as well as the general political history of the period, into a connected story endowed with such intense vitality and picturesque surroundings, embodying well-known local names both of persons and places, with a vividness of description so lifelike as to leave his readers under the impression that 'Lorna Doone' is a veritable history.....The special fore-names given to the Doones are all purely imaginary, as well as the heroine Lorna Doone herself, who in fact is the most improbable character in the whole story."

Those are the words of one who lived most of his life in the neighbourhood, who had studied and investigated the matter on the spot, and who, by training and instinct, was eminently qualified to form an authoritative opinion on the subject.

Dr. Cox says he has no purpose to serve save a search after the truth, in quest of which he has during the last few weeks—after an absence of nearly forty years—visited each parish in the Hundred of Carhampton, interviewing the older Exmoor folk upon the subject. The results of his inquiries are interesting as a collection of nursery "bogey" tales, but cannot be accepted seriously as proving that an outlawed family of robbers were really entrenched in the fastnesses of Exmoor during the seventeenth century, or that they actually perpetrated the dastardly outrages attributed to them. Take, for example, the yarn spun at Porlock Weir by the venerable fisherman eighty-six years of age, as it serves to show how absolutely unreliable such testimony is when put to proof. Here we have an assertion by the "oldest inhabitant" that the Reds of Broomstreet, in Culbone parish, were the actual vanquishers of the robber Doones; that

one of the family, after killing the leader, married Lorna, "so there is a bit of Doone blood in the Reds yet." This is extremely picturesque. I myself have known "Old John" for more than half a century, and it is not without a pang I am obliged to state, *as a fact*, that there were no Reds or Ridds in Culbone parish, nor in the adjacent parish of Oare, in the sixteenth or seventeenth century. The various Subsidy Rolls of that period for the Hundred of Carhampton, tything of Yarnor—which includes the parishes of Oare and Culbone with a portion of Porlock—prove that beyond all doubt, for the name Red or Ridd does not occur among those assessed there on land or goods. Further, the extant parish registers of Culbone go back to 1683, but no Red or Ridd occurs therein until towards the close of the eighteenth century, when John Red and Joan his wife settled there. They had nine children born to them between the years 1791 and 1811, all baptized in the tiny church there, as recorded in the registers. They and their descendants, for varying periods, were located at Broomstreet, Twitchen, Silcombe, Ash, and Pitt farms. The family is still represented in the parish, but Dr. Cox does not appear to have interviewed any of them. The above *recorded facts* do not corroborate the fisherman's story. It may here be mentioned that the *only* instance of the name Red or Ridd occurring in the parish registers of Oare—which date back to 1674—was in 1768, when John Red married Mary Ley.

In connexion with the "small parliament of fisher-folk" held on the quay at Porlock Weir, and presided over by Dr. Cox, it may interest him to know that the "feathers" story then narrated is printed in Mr. F. J. Snell's 'Book of Exmoor,' and the incident is said to have occurred at a farm in the parish of Challacombe.

Of the evidence obtained by Dr. Cox at Oare little need be said. It is the oft-repeated tale told to the numerous summer visitors by the sexton, who naturally has more than an ordinary interest in the Doones, particularly as one of their most dastardly outrages is said to have been perpetrated at the altar steps of the little church there. Here, again, one cannot but think that the testimony of the hospitable squire and lord of the manor would have been of value, since he and his ancestors before him have resided in the parish for very many generations.

Dr. Cox makes no allusion to the attempt made a few years ago by a *soi-disant* descendant of Sir Ensor Doone to prove that the Exmoor marauders were Scottish exiles of noble lineage, and since he does not refer to the evidence offered in support of that claim, one may reasonably infer that he does not consider it of any value towards establishing his own contention that the Doones were real flesh-and-blood personages of the seventeenth century.

Dr. Cox is inaccurate when he says that I have only made brief and rare visits to Exmoor. On the contrary, since 1880 scarcely a year has passed during which I have not paid one and often two visits to that wild and picturesque region, to which from childhood days I have been greatly attached, and in which I still take a warm interest.

Thanks to Blackmore's great romance, the Doone traditions have of recent years become a valuable asset to what is now popularly known as the "Doone Country," and to the surrounding district as well. It will, therefore, be readily understood that anything tending to dispel illusions, even for the sake of historical accuracy, is not, for obvious reasons, viewed with popular favour.

In a letter to an evening paper on the subject of the Doones, Dr. Cox, referring to the county muniments at Taunton and to the Somerset Record Society, intimates that a search will ere long be undertaken, but, with premonitory cautiousness, acknowledges that he is not very sanguine as to the results. Yet, notwithstanding that gentleman's tilt at what he is pleased to call my "scepticism and the chilling breath of the higher criticism," which discriminates between fact and fiction, I shall await with keen interest the outcome of that expert investigation. *Magna est veritas, et prævalebit.*

EDWIN J. RAWLE.

September 4th, 1905.

IN addition to the interesting letters from Mr. Snowden Ward and Mr. Denniford that appeared in your last issue, several correspondents have kindly sent to me a variety of valuable contributions to what may be termed Doone-lore.

Mr. George W. Russell tells me of another reference to these outlaws in contemporary literature that has hitherto escaped attention. The late Mr. James Payn made mention of them in pre-Blackmore days when he wrote 'A Dull Day on Exmoor,' about 1853, which was subsequently reprinted with some of his humorous sketches.

A recent post has brought me a highly interesting letter, accompanied by an authoritative pamphlet, from the Rev. J. F. Chanter, the rector of Parracombe, North Devon. The pamphlet is a reprint of a paper read in June, 1903, before the Devonshire Association, entitled 'R. D. Blackmore and "Lorna Doone."' A pedigree of the Blackmores, who were a Parracombe family, is given, going back six generations before the novelist. The evidence that I was allowed to set forth in *The Athenæum* from the Somerset side of Exmoor is most strongly corroborated by that from the adjoining county. Mr. Chanter says:—

"Any son of North Devon whose memory goes back before the date when 'Lorna Doone' was published (1869) can recall stories of the Doones which were current before then."

He tells us that the Rev. M. Mundy, vicar of Lynton, on coming to that parish in 1833 began to collect the Doone tales, and several manuscript copies were made of these collections, one of which, dated 1843, Mr. Chanter has recently seen. Circumstantial evidence is also produced of the migration to Exmoor from Scotland of Ensor Doone.

In his letter Mr. Chanter adds that he has "a string of testimony gathered by myself and my cousins in Brendon from very old men, since dead." It is much to be wished that Mr. Chanter would undertake the publication of his matter. There is no reason, because of the absurd recent embroideries of the Doone legends, or because the name is now associated in the district with flimsy cigarettes, cheap sweets, or gaudy ties, and painted on the backs of chars-à-bancs or second-rate inn-signs, that the notion of the fabulous and modern origin of it all should be sedulously cultivated by would-be superior persons. One of the most recent of a much vaunted series of guide-books, "under royal patronage," leans apparently to scepticism, and allows Mr. Rawle the last word.

My suggestion, made in your columns, that the Somersetshire sessional papers might possibly yield some information is about, I am glad to say, to be acted upon. I have had a kind communication from the gentleman (Mr. A. T. Watson) who last year arranged the very voluminous Somerset Records, to the effect that he found all presentments of headboroughs, constables, &c., placed inside the sessional rolls from the reign of William and Mary, and prior to that date (from the reign of Elizabeth to James II.) they are filed with the indictments. I have also heard from the Rev. E. H. Bates, hon. sec. of the Somerset Record Society, giving good hopes that the suggested search among the constable returns of the Hundred of Carhampton will ere long be undertaken. If the like documents are extant at Exeter, a similar search among the Devonshire muniments would be desirable.

J. CHARLES COX.

DR. COX'S article, in your issue of August 26th, on the "Doones of Exmoor," gives one an opportunity to bring forward two pieces of evidence, the value of which those interested can settle for themselves.

"The Doones of Exmoor" are said in the book, and by Dr. Cox also, to have come from Scotland. This is curious, as the clan of the Doones, and a famous clan at that, lived no further away than the other shore of the Bristol Channel, on the coast of Carmarthen, where the clan was famous as turbulent even in that land of turbulence. Not only the Doones lived there, but they lived there cheek by jowl with the Ryds of the same neighbourhood, and even intermarried with them on occasion. Moreover, one distinct feature of this clan was that it seemed to claim, as part of its inheritance, the right to burn the towns of Carmarthen and Kidwely, and to kill the mayors. For these performances certain members of the clan regularly disappeared from the pedigree, with the entry against their name "fled to England" or "left the country." Of course, the Welsh way of spelling the name is "Dwn," pronounced "Doon." They were descendants in the male line of the old princes of the country, and the pedigree of the chief branches of them may be found at large in the volume of pedigrees collected by the Elizabethan Herald, Lewis Dwn.

The other piece of evidence is that Blackmore wrote a book called 'The Maid of Sker,' to collect the evidence for which he must have gone very close to the Doon country, and would, therefore, be quite likely to learn something of the old Doons and Ryds. Whether he wrote 'The Maid of Sker' before 'Lorna Doone' or after I do not know, but leave the whole thing to those interested in the discussion.

OWEN RHOSCOMYL.

'KNOX AND THE REFORMATION.'

MR. LANG'S defence illustrates his rashness in jumping to conclusions, and his tendency to use his inferences and assumptions as if they were undeniable facts. He now admits that the interpretation of the passage in the Nonconformists' letter of 1568, suggested in the review, may be the more probable, and further that it never occurred to him. It ought to have occurred to a man of his acuteness and penetration, and, no doubt, would have occurred to him, had he not been in impetuous haste or blinded by prejudice. Any one can judge of this by examining the letter, which is in Lorimer's 'Knox and the Church of England,' pp. 298–300. Mr. Lang also admits that the passage is not clear enough to warrant the use he made of it; and yet, in two different parts of his book, he referred to it as emphatic proof of Knox's inconsistency.

This unfairness he cannot justify, but runs off into what he considers proof of Knox's having spoken with two voices to England. For this purpose he pits Knox's 'Brief Exhortation to England' in 1559 against his advice to the Nonconformists in 1568. He thinks that he is the first, or among the first, of Knox's biographers who has discussed this 'Brief Exhortation.' He should, therefore, have exercised special care in dealing with it; but his summary of its teaching is misleading. In the pamphlet, in urging England to adopt a more thorough reformation than it had previously had, Knox did not say "overthrow any civil ruler who resists." What he recommended was that the Scriptural ordinances of the Church in their purity should be

"*so sure and established*, that if prince, king, or Emperour would enterprice to change or disanul the same, that he be of thee reputed ennemie to God; and therfore unworthie to reigne above his people: yea, that the same man or men that go aboute to destroy God's true religion once established, and to erect idolatrie, which God detesteth,

XUM

be adjudged to death, according to God's commaundement."

Although the Church under Elizabeth did not come up to the standard which Knox wished it to attain, it was at much the same level as before Mary Tudor's accession; and, on the other hand, it was, from his point of view, incomparably better than it had been under Mary. He could not, therefore, regard Elizabeth as one who was disannulling or endeavouring to destroy "God's true religion once established"; and so Mr. Lang is utterly wrong in suggesting that had Knox been consistent, he would have advised the Nonconformist brethren to kill her.

In his anxiety to make it appear that messengers were sent almost daily into England, Mr. Lang asserted that "five letters were written between June 21st and June 28th." This was challenged; and, in trying to make it good, he now has to include a letter of July 1st, and also two letters of which he cannot give the date.

In his interpretation of Knox's letter to Cecil of July 12th or 19th, 1559, Mr. Lang, as previously pointed out, admitted that it was not clear, even according to his own view, whether Knox, while thus working against "a woman's 'entrance and title' to the crown," was thinking of Mary Stuart's "Scottish rights"; and yet, in a subsequent chapter, when the question was clearly of her Scottish rights, he unhesitatingly affirmed, on the strength of this letter, that Knox had tried to trouble her "estate," and had raised the question of discarding her on the ground of her sex, before she returned to her own country. This, his own inconsistency, he ignores in his defence. Now he suggests that "interest," and not "entrance," may be the equivalent of Knox's word "enteress"; and adds that Knox "said nothing about the 'Crown,' but of 'reigning over us.'" It is true that Knox did not use the word "Crown," but Mr. Lang did; and it matters little whether we prefer his former word "entrance," or his new word "interest." Mary's entrance to the Crown had been formally made sixteen years before, and her interest in it was both real and apparent. Notwithstanding the Congregation's being in arms in July, 1559, she was still Queen of Scots, and reigned over Scotland.

It could hardly be expected that Mr. Lang would willingly relinquish his reading of the passage which he quotes from the 'Historie' concerning the truce or assurance of Cupar-Muir, since he has built two theories on his interpretation—one as to the nature of the truce, and the other as to the authorship of the 'Historie' itself. To me it appears that the existing MS. was taken by the incompetent transcriber from a rude draft, and that he inadvertently took into the text a clause which the writer intended to serve as a private reminder or instruction, that clause being, "For the Lords and principalls of the Congregation read the rest on another peece of paper." This explanation makes sense. Mr. Lang's reading does not. As we understand it, the passage is avowedly incomplete. And the stipulation that the "Congregation should enterprise nothing, nor make no invasion," for a certain space of time, is the counterpart of the obligation undertaken by Chatelherault and D'Oysel: "We, nor nane of our assistaris, being present with us, shall invade, truble, or inquyet the saidis Lordis, nor thair assistaris, during the said space." The limitation, therefore, of the "enterprise" and "invasion" as to the object should not be regarded as absolute, but merely as respecting Chatelherault and D'Oysel and their "assistaris." But if Mr. Lang will insist on adhering literally to the printed text, and if we assume that he is right in the interpretation of the whole passage, it only represents the obligation of the Congregation as lasting for six days; and he has failed to show that Lindores was reformed before that period expired.

As to Mary lying under sentence of death as an idolater, Mr. Lang now explains that he only meant that "legally she ought to have been put to death after hearing her third Mass in Scotland." Elsewhere he has said that the Convention, or Parliament, which adopted the penal Act against the Mass was itself "absolutely illegal." THE REVIEWER.

THE HISTORY OF THE GRAHAMS.

MY attention has been drawn to a letter from an anonymous correspondent, which appears to be endorsed by your editorial note thereto, in the last number of *The Athenæum*. It regards a matter concerning myself and my 'History and Genealogy of the House of Graham.'

I am not concerned to enter into any details, but would merely observe that my work is entirely a private undertaking, and I am not aware that any limit of time, "Horatian" or otherwise, is fixed for the production of such a work. Hundreds of pounds—not one penny of which comes to or benefits me—are at this moment being expended in research in connexion with families interested in my work, and I am sole judge of when it is ready for issue. I have not yet asked the public to support my work. It is true I have received a few private subscriptions, some of them volunteered, to promote the enterprise. As to any private emolument to correspond with the labour expended, perhaps I need not expect it, especially in view of such attacks as this. But I have received so much encouragement already from members of the house that I cannot but believe I can trust them still for support to complete an undertaking which has through all these years been a serious labour, but always a labour of love.

W. M. GRAHAM EASTON.

*** Mr. Easton has an odd idea of logic. Our correspondent wished to know how he was getting on; so did we, speaking of his work as likely "to be of high interest." We cannot see how this desire and statement can interfere with his private emolument or his book.

THE AUTUMN PUBLISHING SEASON.

MESSRS. A. & C. BLACK

announce:—Art and Illustrated Books: Kate Greenaway, by M. H. Spielmann and G. S. Layard,—Burma, painted and described by R. Talbot Kelly,—India, painted by M. Menpes and described by Flora A. Steel,—London, Vanished and Vanishing, painted and described by Philip Norman, all these being available in an ordinary edition and an édition de luxe,—The Italian Lakes, painted by Ella Du Cane and described by R. Bagot,—Rembrandt, by M. Menpes, with text by C. Lewis Hind,—Normandy, painted by Nico Jungman and described by G. E. Mitton,—Bruges and West Flanders, painted by A. Forestier and described by G. W. T. Omond,—The Homes of Tennyson, painted by Helen Allingham and described by A. Paterson,—The Garden that I Love, illustrated by G. S. Elgood,—The Beautiful Birthday Book, illustrated by G. D. Hammond,—Abbotsford, painted by W. Smith, Jun., with text by W. S. Crockett,—and Days with Velasquez, by C. Lewis Hind, illustrated. In History, Science, &c.: Mediæval London — Social and Ecclesiastical, 2 vols., by Walter Besant,—India of To-day, by W. Del Mar,—Black's Medical Dictionary, by J. D. Comrie,—A Treatise on Zoology: Part V. Mollusca, by D. P. Pilseneer,—New Editions of The Practical Angler, by W. C. Stewart, and The System of the Stars, by A. M. Clerke,—A Military Geography of the Balkan Peninsula, by Prof. L. W. Lyde and Lieut.-Col. A. F. Mockler-Ferryman,—The Testament of the Twelve Patriarchs, by Rev. R. H. Charles,—Johannine Vocabulary, by E. A. Abbott,—Neumann's Life of Jesus, translated by M. A. Canney,—and The Writers' and Artists' Year-Book, edited by G. E. Milton. Juvenile Literature and Educational Works: Animal Autobiographies—The Black Bear, by H. P. Robinson, and The Cat, by Violet Hunt,—Willy Wind and Jock and the Cheeses, by the Duchess of Buckingham, illustrated by J. S. Eland,—Don Quixote, translated and abridged by Dominick Daly,—The Adventures of Punch, and The Schoolboy Abroad, by A. R. Hope,—The Head of Kay's, by P. G. Wodehouse, illustrated,—and New Editions of Farrar's School Stories; The "Council" Arithmetic for Schools: Scheme B, 8 Parts; The "Council" Literary Readers, by J. Finnemore; Summary of English History, by N. L. Frazer; A First French Song-Book, by F. B. Kirkman and R. B. Morgan; and Regional Geography—Europe, by J. B. Reynolds.

MESSRS. CASSELL

are publishing Sir Wemyss Reid's Memoirs, 1842-85, edited by Stuart J. Reid,—Nelson and the Twentieth Century, by Arnold White and E. H. Moorhouse,—Five Famous French Women, by Mrs. Henry Fawcett,—Fifty Years of Public Service, by Major Arthur Griffiths, a popular edition,—The Story of Protestantism, by F. H. Gale,—Leaves from an Indian Note-Book, by Sir Edmund Cox. In Science and Technology: Outlines of Electrical Engineering, by H. H. Simmons,—The Zoological Society of London, by H. Scherren,—Pictures from Nature, by R. and C. Kearton,—Cassell's Wild Bird Sheets, by R. Kearton,—"Cassell's Home Handbooks": The Home Lawyer; The Home Physician; Vegetarian Cookery, by A. G. Payne; Cookery for Common Ailments; Our Sick and How to Take Care of Them, by F. Stacpoole; and The Making of the Home, by Mrs. S. A. Barnett,—Cassell's Building Construction, New Mechanics' Manuals, 'Work' Handbooks, and Technical Instruction Series, all edited by P. N. Hasluck,—Organotherapy, by T. H. Batty Shaw. In Art: Sir Lawrence Alma-Tadema, by P. C. Standing,—Henrietta Rae, by A. Fish,—The Art of Portrait Painting, by the Hon. John Collier,—Duval's Artistic Anatomy, edited by A. M. Paterson,—The National Gallery of British Art, with introduction by Sir C. Holroyd,—completion of Great Pictures in Private Galleries,—and Sir Benjamin Stone's Photographs. Fiction and General: The Hundred Days, by Max Pemberton,—A Woman of the World, by E. W. Willcox,—The Spider's Eye, by W. Le Queux,—The Sword of Gideon, by J. Bloundelle-Burton,—new pocket editions of The Little Minister and other works,—A Flower Wedding, by Walter Crane,—Fairy Tales, Old and New,—Thoughts and Fancies of a Girl, by K. Balbernie,—The Book of Photography, edited by P. N. Hasluck,—Cassell's Popular Music,—Pictorial Practical Flower Gardening,—additions to Cassell's National Library,—The Lost River, and River and Forest, by E. S. Ellis,—Cassell's Natural History for Young People, by A. E. Bonser,—The Black Adventure Book, by A. T. Quiller-Couch,—The Grey Adventure Book, by the same,—Funny Foreigners, by J. R. Monsell,—Archibald's Amazing Adventure, by S. H. Hamer,—and several yearly volumes.

MESSRS. CHATTO & WINDUS

have in hand: History and Biography: a completion of A History of our Own Times, by Justin McCarthy, 2 vols.,—The Life of Charles Dickens, by P. FitzGerald, 2 vols., illustrated,—Charing Cross and its Immediate Neighbourhood, by J. H. MacMichael. Poetry and Belles-Lettres: The Cotter's Saturday Night, illustrated by A. S. Boyd; continuation of Swinburne's Tragedies. In Fiction and General: A Thief in the Night, by E. W. Hornung,—Love and Lordship, by Florence Warden,—The Waters of Destruction, by A. Perrin,—The Speculations of John Steele, by R. Barr,—Dilys, by Mrs. F. E. Penny,—Maurice, by J. Keating,—Sacred and Profane Love, by Arnold Bennett,—The Dreams of Simon Usher, by A. Gissing,—The Lost Earl of Ellan, by Mrs. Campbell Praed,—So Like a Woman, by G. M. Fenn,—The Amethyst Box, &c., by Anna K. Green,—The Princess and the Kitchen Maid, by Dorothea Deakin,—The Freemasons, by L. S. Gibson,—Thunder and Lightning, by C. Flammarion, translated by H. Whyte,—A Dictionary of the Drama, Vol. II., — and New Editions of On a Mexican Mustang through Texas, by A. E. Sweet and J. A. Knox,—Infatuation, and Some One Else, by B. H. Croker,—The Man-Hunter, by D. Donovan,—and other novels.

MESSRS. DUCKWORTH & CO.'S

list includes: Molière and his Time, the fourth volume of 'A History of Theatrical Art,' by Karl Mantzius, translated by L. von Cossel,—Handbook of Geography, Physiographical and Mathematical, by Emil Reich, with maps and diagrams,—a new book by Hilaire Belloc, with illustrations by the author,—Underground Man, by Gabriel Tarde, translated by Cloudesley Brereton,—The Story of Red Fox, by C. G. D. Roberts, illustrated,—A Little Boy Lost, by W. H. Hudson,—Rome, by Dr. Walter Amelung and Prof. H. Holtzinger, with 250 illustra-

tions,—Normandy, by Francis Miltoun, with illustrations by Blanche McManus, and Brittany, by the same two,—Odes from the Divan of Hafiz, freely rendered by R. Le Gallienne. In the Library of Art, "The Red Series": Pisanello, by G. F. Hill,—Constable, by M. S. Henderson. In "The Popular Library of Art": Raphael, by Julia Cartwright,—Holbein, by F. M. Hueffer,—The English Water-Colour Painters, by A. J. Finberg. Fiction, &c.: The Sacred Cup, by Vincent Brown,—The Secret Kingdom, by Frank Richardson,—The Wandering of Joyce, by E. M. Devenish,—After his Kind, by M. S. Henderson,—Magic Casements, by Arthur Cripps,—After London, by Richard Jefferies, a new edition,—Saint Mary the Virgin, by René Marie de la Broise, translated by Harold Gidney,—The Anatomy of Melancholy, 3 vols.,—and A Glossary of Botanic Terms, by B. D. Jackson, revised and enlarged.

SIR ISAAC PITMAN & SONS'

autumn announcements include Mrs. Brookfield and her Circle, by Charles and Frances Brookfield, with illustrations,—James Anthony Froude, a biography, by Herbert Paul,—George Mac Donald, a biographical and critical appreciation, by Joseph Johnson,—The Poetic Movement in England, by the Rev. Stopford A. Brooke, and Selected Passages from Unpublished Sermons and Addresses, by the same,—Seven Angels of the Renascence: the Story of Art from Cimabue to Claude, by Sir Wyke Bayliss,—The Parables of Jesus, by the Bishop of Stepney,—The Conflict of Ideals in the English Church, by Canon Knox Little,—a devotional book on the Apostles' Creed, by the Rev. F. B. Meyer,—The Salt of my Life, by F. G. Aflalo, with fifty illustrations,—How to Choose a House, by Charles Emmanuel and E. M. Joseph,—The King's Achievement, a new novel by Robert Hugh Benson,—Princess Joyce, by Keighley Snowden,—The Secret of the Turret, by Ethel F. Heddle,—The Radium Seekers, by Fenton Ash,—The Stowaway's Quest, by H. C. Moore,—In the Realms of the Ice King, by E. F. Suffling,—The Temple of Fire, by Fred Ashley,—On Life's Threshold, by Charles Wagner,—The Law of Mechanical Traction on Highways, by C. A. M. Barlow and W. J. Hicks,—Pitman's Mercantile Law, by J. A. Slater,—Office Organization, Management, and Secretarial Work, by L. B. Dicksee and H. E. Blain,—Money, Exchange, and Banking, by H. T. Easton,—How to Teach Book-keeping, by H. W. Porritt and W. Nicklin,—Commercial Correspondence,—Needlework for Student Teachers, and Cutting Out for Student Teachers, both by Amy K. Smith,—The Foreign Correspondent, by A. E. Davies,—and New Editions of A New Dictionary of the Portuguese and English Languages, based on Cornet, by H. Michaëlis,—Hurricane Island, by H. B. Marriott Watson, illustrated,—The Poetry of Robert Browning, by the Rev. Stopford A. Brooke, 2 vols.,—Abridged Editions, also in 2 vols., of Boswell's Johnson and Fox's Journal,—The Spirits in Prison, by Dean Plumptre,—The Commandments of Jesus and The Teaching of Jesus, by the Rev. R. F. Horton,—The Two St. Johns of the New Testament, by Prof. James Stalker,—Wesley's Journal, abridged,—and The Simple Life and The Better Way, by Charles Wagner.

MESSRS. SWAN SONNENSCHEIN & CO.

announce in History, Biography, &c.: Dictionary of Indian Biography, edited by C. E. Buckland, C.I.E.,—William Clark, Journalist: his Life and Work, by Herbert Burrows and others,—Rates and Taxes as affecting Agriculture, by Prof. J. S. Nicholson,—A Practical Programme for Working Men, Book I. The Book of Exhortation, Book II. The Book of Facts, Book III. Wisdom, Faith, Karitas,—and Commerce and Christianity, by G. F. Millin. Books of Reference: Dictionary of German Quotations, by L. Dalbiac,—Dictionary of Spanish Quotations, by the late T. B. Harbottle,—Sonnenschein's Cyclopædia of Education, a new edition, revised by M. E. John,—The Little Cyclopædia of Common Things, by G. W. Cox, revised by F. B. Sonnenschein,—The Oxford Year-Book and The Cambridge Year-Book, both edited by A. W. Holland,—The Schoolmaster's Year-Book,—and The Public Schools Year-Book. In Philosophy, Theology, and Science: Physiological Psychology, by Prof. W. Wundt, a translation of the fifth German edition (1902-3) by Prof. E. B. Titchener, in 3 vols., Vol. II.,—The History of Philosophy, by Dr. J. E. Erdmann, an English abridgment, translated and edited by W. S. Hough,—Thoughts and Things, by Prof. Mark Baldwin: Vol. I. Theory of Knowledge: Functional Logic; Vol. II. Theory of Reality: Real Logic,—The Needs of Man: a Book of Suggestions, by W. Winslow Hall,—Introduction to the Study of Organic Chemistry, by John Wade, revised and enlarged,—The Student's Text-Book of Zoology, by Adam Sedgwick, Vol. III. completing the work. Belles-Lettres and Miscellaneous: "A New Classical Library," edited by Dr. E. Reich: The Thearchus and Philebus of Plato, translated and explained by H. F. Carlill; Plutarch's Lives, translated by W. R. Frazer; The Annals of Tacitus, translated by A. V. Symonds,—How to Deal with your Broker, by Henry Warren,—The Fredericksburg Campaign (1861-4), a strategical sketch, by Major G. W. Redway,—The Russo-Turkish Campaign (1877), a strategical sketch, by Major F. Maurice,—Studies in Browning, edited by Susan Cunnington,—Gleanings from the Talmud, selected and edited by the Rev. W. Macintosh,—Too Good to Live, a story of two children, verses by S. C. Woodhouse, illustrations by Olive Allen,—My Friend the Umbrella, verses and illustrations by Eleanor S. March,—A Son of Ashur, by Capt. W. Beddoes,—Oak Farm, by "Georgie Martin,"—The Story of Stella, by S. B. McLean,—The Teacher's Story-Book, by Alice Chesterton, illustrated by G. M. Bradley,—and An Anthology of French Poetry, by Frederick Lawton. Education: Tekel! a study, by F. J. Adkins,—The Student's Hygiene, by E. Evans,—The Chemistry of Common Life, by J. B. Coppock,—Practical Housewifery (excluding Cookery), by C. F. Picton-Gadsden,—The Function of Words: a Guide to Analysis and Parsing, by M. C. Carman,—Sure Steps to Intelligent French, by H. R. Beasley,—Arithmetical Wrinkles, by J. Logan,—The Greek War of Independence, for beginners, by C. D. Chambers,—and School Gardening for Little Children, by Lucy R. Latter.

Literary Gossip.

Mr. Fitzgerald Molloy has completed a new book, which will be issued by Messrs. Hutchinson & Co. during the autumn, under the title of 'The Russian Court in the Eighteenth Century.' The author has devoted considerable space to the reigns of the Empress Elizabeth and Catherine II. In addition to the evidence of English ambassadors, whose dispatches and papers have been preserved in the State Paper Office and the Manuscript Library at the British Museum, the author quotes the correspondence of foreign ministers and the memoirs of travellers. The book will be fully illustrated with portraits.

Mr. H. B. Marriott Watson, whose new romance, noticed by us to-day, 'Twisted Eglantine,' is in a second edition within a week of publication, will issue through Messrs. Methuen & Co. early in next year a series of highwayman stories, to which he has given the title of 'The High Toby.' Some ten years ago a former series of these ran through *The New Review*, under Henley's editorship, and were subsequently reprinted as 'Galloping Dick: Chapters in the Life of Richard Ryder, sometime Gentleman of the Road.' They attracted considerable attention at the time, both here and in America, and were pronounced by Marcel Schwob, the distinguished French critic, to be a "work of genius."

Mr. Unwin is to publish a monograph, by Mr. Charles A. Gray, on the little-known dramatist Lodowick Carliell. Carliell, the chief period of whose literary activity fell between 1630 and 1640, is specially interesting as forming a link between the playwrights of the Elizabethan age and those of the Restoration. His identity has not hitherto been established, but Mr. Gray has discovered that he was "Master of the Bowes," and a keeper of the deer park at Richmond under Charles I. The volume will contain, in addition to a study of Carliell and his plays, the full text of one of them, 'The Deserving Favourite,' and several appendixes.

Mr. Arthur Symons has made a translation of the 'Petits Poëmes en Prose' of Baudelaire, which will be issued shortly by Mr. Elkin Mathews in his "Vigo Cabinet Series."

Messrs. J. M. Dent & Co. announce, in connexion with Messrs. Scribner in the United States, a new edition of the novels and stories of Turgénieff. It will consist of sixteen volumes. Each volume has been newly translated by Miss Isabel Hapgood, who also contributes a preface. The introduction to the edition is by Mr. Henry James. Special pains have been taken to secure good paper and printing. The binding will be of green cloth stamped in gold. The frontispiece of vol. i. is a portrait of Turgénieff, and the edition will begin with 'Memories of a Sportsman.'

Mr. Stanley Weyman's new novel, 'Starvecrow Farm,' which is to be issued shortly by Messrs. Hutchinson & Co., touches upon events that, though full of interest, have been generally neglected by novelists. The scene is laid in the North Country in the year 1819, when the working classes, impoverished by the long struggle against Napoleon, were seething with discontent and latent rebellion. The escapades and adventures of the heroine in her love affairs play a big part in the story.

Among interesting announcements by Messrs. Macmillan is a 'Memoir of Archbishop Temple,' by Seven Friends, who deal with different periods of his life, Archdeacon Sandford, the editor of the book, taking the period of the Exeter bishopric.

A new (copyright) edition of Mr. George Mac Donald's story 'Phantastes,' with thirty-three fresh illustrations by Mr. Arthur Hughes, the author's oldest living friend and first illustrator, will be issued early in October by Mr. Arthur C. Fifield.

Mrs. Humphry Ward will before long pay a visit to the United States, with a view, it is said, to her next novel, which is to be published by Messrs. Harper.

The last-named house have in preparation a new edition of Mr. Hardy's novels. It is to consist of twenty-six volumes, bound in green silk, to be called the "Wessex Edition," and is to be sold by subscription. There are to be full-page illustrations in half-tone.

The next volume in the "Story of the Nations" series is to be 'Mohammed and the Rise of Islam,' by Prof. Margoliouth.

Messrs. Kegan Paul are publishing in October a cheap edition of Mr. Austin Dobson's 'Proverbs in Porcelain,' with Mr. Bernard Partridge's illustrations. They will also publish a new volume of Lady Lindsay's under the title of 'Godfrey's Quest: a Fantastic Poem.'

Mr. H. Fielding Hall, the author of that notable book 'The Soul of a People,' will deal again with the Burmese in 'A People at School,' to be published by Messrs. Macmillan this autumn.

The same firm will issue Mr. H. G. Wells's 'Kipps'; 'Coniston,' by the Ame-

rican Mr. Winston Churchill, which is a love story; 'Soprano,' a story of modern operatic life by Mr. F. Marion Crawford; and two important philosophical books: 'Idola Theatri,' by Mr. Henry Sturt, which includes criticism of some leading Oxford thinkers, and the 'Philosophy of Martineau in relation to the Idealism of the Present Day,' by Prof. Henry Jones.

MR. FIFIELD will publish in October a book by Mr. F. C. Constable on 'Poverty and Hereditary Genius,' which is a criticism of Mr. Francis Galton's well-known work on 'Genius.' Mr. Constable will be remembered as the author of an ingenious novel, 'Aunt Judith's Island.'

MISS CATHERINE I. DODD has been recently appointed to the post of Principal of Cherwell Hall, Oxford, the training college for women secondary teachers of the Church Education Corporation. Miss Dodd has been for many years Lecturer of Education and Mistress of Method in the Victoria University of Manchester. She has written educational works, but what is of more interest to the average reader is the fact that she is the author of 'A Vagrant Englishwoman.'

ETONENSIS writes:—

"In your review of Lucian's translated works you say that 'Lucian has been added tardily to school-books.' Between forty and fifty years ago we read selections from Lucian in the old Eton 'Scriptores Græci,' and some of us enjoyed them. Those old-fashioned Eton books had merit."

THE summer session of the School of Irish Learning at Dublin has just come to an end. It was opened on July 10th by the director, Prof. Kuno Meyer, who delivered a public lecture on 'The Making of the Irish Language.' Three courses in Old and Middle Irish were held by Prof. Strachan; and Mr. Timothy Lewis held a class in Welsh grammar. The first part of the second volume of *Eriu*, the school journal, is now going through the press, and will be ready shortly.

IN the number for September 23rd, published a fortnight hence, we shall again pay special attention to school-books and educational works.

AN interesting paragraph in *The Westminster Gazette* tells the story of the saving by Freemasonry of the life of Gruneisen (not "Grunieson"), successor of Chorley and predecessor of Prof. Prout as musical critic of *The Athenæum*. Being sentenced to death as a spy during the civil war in Spain, he

"was placed in position, blindfolded, heard the word of command given, 'Make ready, present,' and was in momentary expectation of the word 'Fire,' when he involuntarily made some sign on his forehead which Freemasons understand. Thereon the officer in command suspended the proceedings, and, having asked Gruneisen why he had not said that he was a Freemason before, eventually saved his life."

THE Lord Mayor and the Lady Mayoress will give a reception at the Mansion House on Wednesday, September 20th, from three to five o'clock, to meet the Trustees and friends of the Printers' Pension Corporation.

MESSRS. BELL will publish immediately a volume by Sir George Trevelyan, entitled 'Interludes in Verse and Prose.' It is a collection of the author's best work in lighter vein, and includes 'Horace at Athens,' 'The Cambridge Dionysia,' 'The Modern Ecclesiazusæ; or, Ladies in Parliament,' and those portions of the 'Letters of a Competition Wallah' which have an abiding value.

AT the conference of the Institute of Journalists held at Bournemouth last week, Mr. Arthur W. à Beckett, who was president in 1900–1, was elected for the fifth time hon. treasurer.

THE French poets are demanding a Prix de Rome, or something of the same description, in common with the painters, sculptors, and musicians. Their object is not so much to secure diplomas as to be "officially" recognized. M. Sully Prudhomme, the honorary president of the Poètes Français, has taken the preliminary steps towards the institution of such a prize, and has forwarded a petition to M. Dujardin-Beaumetz. It is estimated that there are at least 50,000 poets in France, so that, united, such a body could make even a Minister of State think twice before refusing so simple a request. But there are already several prizes, due to private generosity, for which French poets may compete, to the envy of their continental confrères. Fortunately—for the critics at least—every French poet does not publish a volume annually.

THE extensive structural alterations at the Bibliothèque Nationale are progressing, slowly but surely. The great new public room is very nearly finished, and will soon be opened. The plans for the scheme of enlarging the Bibliothèque were drawn up in 1879, and accepted ten years later, but the work was not actually begun until 1898. The alterations are not expected to be completed until 1914, owing to the insufficient annual sum granted for the work.

THERE are no Parliamentary Papers of interest this week.

SCIENCE

CHEMICAL BOOKS.

The Study of Chemical Composition: an Account of its Method and Historical Development. With illustrative Quotations. By Ida Freund. (Cambridge, University Press.) — The accomplished Staff Lecturer on Chemistry of Newnham College has admirably succeeded in her efforts to produce a book dealing with the historical development of theories regarding chemical composition. She has quoted largely from classical memoirs and great writers on the science, and her selections from these are excellent for the purpose, helping to give an atmosphere of reality and life to the book such as is scarce in text-books on chemistry. Also in dealing with quantitative results the actual values obtained by the investigators are printed as well as the final results; this indicates to the reader the degree of accuracy attained by the worker, and adds to the interest of perusal. But besides the advantage of the method employed so successfully by Miss Freund, her own style in writing the connecting links between the quotations, and in the admirable summaries and abstracts of some of the work, is clear and refreshing. No part of the book is dull, and the student who starts on it will be led on to continue to the end, to his own great advantage. Many people have no time or opportunity to refer to a large mass of original papers, and the value of this book of careful selections carefully and cleverly put together will be very great. Even those whose knowledge of chemistry is small will, if their mental training has been scientific, be able to follow the arguments with the aid of the foot-notes and explanatory matter interpolated. Full references are supplied to original papers, and there is an excellent index. Students of physical science who wish to form a clear conception of the laws of chemical combination, of the meaning and accuracy of combining weights and combining volumes, of the doctrine of valency and of isomerism, and of the parts played by various investigators and authors in elucidating these and kindred matters cannot do better than refer to this book. The final chapter is on the ultimate constitution of matter and the genesis of the elements, and gives a short *résumé* of the speculations on these subjects down to the present day; it concludes with a quotation from Kekulé, written in 1867, which still expresses the situation as it exists to-day. Thus Kekulé wrote, *inter alia*:—

"I have no hesitation in saying that, from a philosophical point of view, I do not believe in the actual existence of atoms, taking the word in its literal signification—I rather expect that we shall some day find for what we now call atoms a mathematico-mechanical explanation, which will render an account of atomic weight, of atomicity, and of numerous other properties of the so-called atoms. As a chemist, however, I regard the assumption of atoms not only as advisable, but as absolutely necessary in chemistry.....We may, in fact, adopt the view of Dumas and of Faraday, that *whether matter be atomic or not, thus much is certain, that, granting it to be atomic, it would appear as it now does.*"

The author shows keenness and enthusiasm in her subject, and handles it so well that she cannot but impart some of her keenness to the numerous readers we believe she will attract.

Outlines of Inorganic Chemistry. By F. A. Gooch and C. F. Walker. (New York, the Macmillan Company; London, Macmillan & Co.) —We have little but praise for this new text-book, which has been prepared with great care by Prof. Gooch, of Yale University, and Mr. C. F. Walker, of the High School of Commerce of New York City. Its plan is to introduce the student to a knowledge of chemistry by a consideration of the simplest phenomena, and as few of these as are necessary. The book is divided into two parts. The first part is inductive, and deals with the experimental development of the principles of systematic chemistry, beginning with chemical change, chemical elements, laws of combination and equivalents. Electrical equivalents and ions, action and equilibrium, including Gibbs's phase rule, thermal equivalents, chemical mass-units, valency, are treated in following chapters, and the last chapter of this part introduces the notion of the atom, the electrolytic theory of dissociation, and the modern conception of ions. Part ii. is descriptive, and discusses the properties of the elements and their combinations in accordance with the periodic system of Mendeléeff. The ionic terminology is used, but not carried to extremes. Graphic formulæ are freely employed, and this we believe to be an advantage; the student rarely looks on the bonds as material entities. The introductions to the characteristics of the groups of elements are well done, and we can also commend the summaries at the end of the chapters, showing the relations of the members of the groups to each other. Parts i. and ii. are paginated separately, and in the index references to part i. are given in italics, and to part ii. in roman type; this does not seem a very convenient arrangement. The book has much

to recommend it as a text-book, and we anticipate that it will be widely used.

A Treatise on Chemistry. By Sir H. E. Roscoe and C. Schorlemmer. — Vol. I. *The Non-Metallic Elements.* New Edition. (Macmillan.) — The first edition of this standard work on chemistry was published in 1877; the second in 1894, after the death of Schorlemmer, when the remaining editor was assisted by Dr. H. G. Colman and Dr. A. Harden. The present edition is the third, and Sir Henry has again had the good fortune to secure the help of Drs. Colman and Harden in its preparation. This volume contains a portrait of Dalton, engraved by C. H. Jeens from a daguerreotype taken shortly before Dalton's death, and 217 carefully drawn illustrations.

It is almost superfluous to say that the work maintains its original high standard, and is pre-eminent among works of its class in all languages. As an illustration of its being up to date, we may mention that it contains in the text (p. 730) notice of the discovery of the 3,032 carat diamond at the Premier Mine, Johannesburg; and of course there is an account, short but excellent, of the recent discoveries and work on gases of the helium group.

Theoretical Chemistry, from the Standpoint of Avogadro's Rule and Thermodynamics. By Walter Nernst. Translated by R. A. Lehfeldt. (Macmillan.) — This is the second edition in English of Dr. Nernst's book, revised in accordance with the fourth German edition. The first English edition was published in 1895, being translated from the German text, soon after its publication, by Prof. C. S. Palmer, of Colorado. The original has meantime passed through three editions and increased considerably in bulk, although the plan of the work remains as before. A short new chapter has been added on 'The Atomistic Theory of Electricity,' dealing with the development of the electron theory, and a few mistakes and ambiguities of the first edition have been got rid of. The translator has done his work well, and this new edition of the Göttingen professor's valuable treatise is a welcome addition to our books on theoretical and physical chemistry.

RESEARCH NOTES.

FROM Mr. Butler Burke's article in this month's *Fortnightly* I gather that he claims priority of discovery over M. Raphael Dubois on the ground that he showed his experiments to several friends at Cambridge in October, 1904, while M. Dubois did not deliver his inaugural lecture at Lyons, in which he announced the effect of radiferous chloride of barium upon gelatine (see *The Athenæum*, No. 4056), until November in the same year. This does not seem convincing, because M. Dubois must in the course of things have experimented with his radiferous salt several months before he made his announcement. As for priority of publication, if the Faculty of Science at Lyons publishes 'Annales,' as do the other faculties, a note of M. Dubois's lecture will probably be found there. I see that both Mr. Butler Burke and M. Dubois intend to be present at the forthcoming International Congress of Radiology at Liège, where M. Dubois is to read a paper on 'Eobes et Radiobes,' when we shall probably hear his side of the question. Mr. Butler Burke assures us that "eobes" are the same things as his "radiobes," and, if so, it is to be hoped that the first-named word—which appears to be manufactured from ἠώς by analogy with "eocene"—will be adopted in the place of its hybrid rival.

Other parts of Mr. Butler Burke's paper lead one to doubt, however, whether there has been any discovery at all. The "cyclic process" of passing into higher forms and then decaying is, he tells us, "the test and guarantee of life." To this I have the less objection that they are very nearly the actual words used in these notes (see *The Athenæum*, No. 4053) at the beginning of the discussion. But he goes on to say:—

"The growth [*i.e.*, of his "radiobes"] is from the minutest visible speck to two clots, then a dumb-bell shaped appearance, later more like frog's spawn, and so on through various stages until it reaches a shape largely different from its previous forms, when it divides and loses its individuality, and ultimately becomes resolved into minute crystals, possibly of uric acid."

His "radiobes" are, then, crystals in the making. But Signor von Schrön, to whose experiments I have repeatedly drawn attention both here and elsewhere since they were made public some five years ago, claims to have shown, by photographs enlarged to 800,000 diameters, that in every solution of salt on the verge of crystallization there appear small bodies which he calls petroblasts, which grow by absorption, move, subdivide, and reproduce until they finally complete their cycle and become inert as crystals. Apart, therefore, from the very probable error of observation which Sir William Ramsay has suggested in a daily paper, it is possible that all the phenomena noted by Mr. Butler Burke and M. Dubois would be exhibited under sufficient microscopic power by a solution of chloride of barium which was not radiferous. It is to be wished that some one interested in the matter would make the experiment.

Prof. Rutherford's article in this month's *Philosophical Magazine* conveniently marks the consensus at which physicists are arriving with regard to the transformations of radium. Following on the announcement made by Mr. Soddy three months ago (see *The Athenæum*, No. 4050), he argues, as it seems to me conclusively, that the experiments conducted by the last named in conjunction with Mr. Whetham—in which some uranium freed from all trace of radium was kept under observation for eighteen months, and was then found to be strongly radio-active—prove that radium is itself a product of uranium, a proof which he supports by quantitative tests which have been applied independently by Dr. Boltwood, the Hon. R. J. Strutt, and Mr. McCoy. He also agrees with Mr. Soddy that the final product of radium is probably lead, which possesses nearly the exact atomic weight which should on this hypothesis be attributed to it. In all he gives a list of eight transformations, of which all but two are radio-active. Of these, one, which he names Radium D, forms, he states, the primary constituent of radio-active lead, and the last, Radium F, is, according to him, the active constituent of Prof. Marckwald's radio-tellurium and Madame Curie's polonium.

In these circumstances the position of actinium becomes extremely interesting. We have both Prof. Rutherford's and Dr. Boltwood's word for it that it is not a direct product of uranium, as is radium, and it has not yet received citizenship among the list of admitted chemical "elements." Although Prof. Giesel, as mentioned in these notes at the time (see *The Athenæum*, No. 4023), has very handsomely admitted that his "emanium" is the same substance, the investigations into the nature of actinium have been left, for the most part, in the hands of its original discoverer, M. Debierne. This last announces, in a communication to the Académie des Sciences, that he has repeated, with chloride of actinium in solution, the now classic experiment of Sir William Ramsay and Mr. Soddy which revealed the characteristic spectrum of helium in the emanation from radium, and that he found the spectrum of helium present in this case also. But when he substituted for the dissolved chloride a fluoride dried at a temperature of 200° C., he obtained an intense continuous spectrum, in which could be feebly traced the characteristic lines of hydrogen and mercury. As actinium has a very rapid rate of decay, this may give us a hint as to the parentage—I had almost said the synthesis—of mercury. It should be noticed, also, that there seems to be a close relationship between actinium and thorium. M. Debierne further says that he was successful in repeating Sir William Ramsay's radium-helium experiment in every particular.

A communication, signed with initials only, appears in a contemporary on what may be called chemical resonance. From this it appears that if a small portion of dry iodide of nitrogen is detonated it will sometimes explode other portions of the same substance remaining in the room, even though these last are not yet dried, and are thus impervious to shock otherwise caused. Instances of similar phenomena are given, and from this the two observers suggest the inference that there is in chemical combinations a sort of resonance or law of sympathetic vibrations resembling that which has been established in the case of electrical discharges. If this be so, it would go far to prove the contention of Dr. Gustave Le Bon that chemical reactions—such as the hydratation of sulphate of quinine, the decomposition of water by sodium amalgam, and the like—will produce sufficient vibrations in the ether to discharge a charged electroscope. This, as already noted here, has been denied in some quarters.

A further advance towards photography in natural colours can now be marked. A sensitive film must be backed during exposure by a mirror of mercury. After development, the true colours of the object photographed appear by reflection. If a film of celluloid prepared with bichromate of potassium be used, the colours appear when the plate is washed with water, remain so long as it is damp, and disappear on drying. M. Lippmann, in whose communication to the Académie des Sciences the experiment appears, has tried substituting for plain water baths first of weak solution of iodide of potassium, and then, after drying, of a twenty per cent. solution of nitrate of silver. The colours then became permanent, although, when looked through against the light, they were changed into their complementaries. What is now wanted, he says, is some means by which this effect can be produced, not with the bichromate film, which is neither very sensitive nor isochromatic, but with a gelatine bromide one, when copies could be multiplied by a press in the ordinary way.

M. Blondlot has at length broken silence with regard to the N rays, his faith in which is unabated. He reaffirms, in an article in the *Revue Générale des Sciences*, the practicability of obtaining photographic proof of their existence by their influence on a properly regulated spark from an induction coil. He recommends the use of a telephone in the circuit of the coil, whereby the experimenter can establish the regularity of the spark before exposure. He says that he has thus made more than one hundred experiments without a failure, and that M. Jean Becquerel, working independently, has been successful in two instances. F. L.

Science Gossip.

MESSRS. GRIFFIN & Co. announce: Mining Law, by C. J. Alford,—Mining Geology, by James Park,—Wireless Telegraphy, by Dr. G. Eichhorn,—Electricity Meters, by H. G. Solomon,—Smoke Abatement, by W. Nicholson,—Testing Explosives, by C. E. Bichel and Axel Larsen,—Glue, Gelatine, and their Allied Products, by T. Lambert,—Paper Technology, by R. W. Sindall,—The Bacteriology of Brewing, by W. A. Riley,—The Synthetic Dyestuffs, by J. C. Cain and J. F. Thorpe, in three parts,—A Handbook of Medical Jurisprudence and Toxicology, by W. A. Brend,—Toxine and Anti-Toxine, by C. Oppenheimer, translated by C. A. Mitchell,—The Laboratory Book of Dairy Analysis, by

H. D. Richmond,—The Laboratory Book of Mineral Oil Analysis, by J. J. Hicks,—Physico-Chemical Tables, by J. Castell-Evans, Vol. II.,—and New Editions of Petroleum and its Products, by Sir B. Redwood,—Ore and Stone Mining, by Sir C. Le Neve Foster, revised by B. H. Brough,—Practical Coal-Mining, by G. L. Kerr,—Electrical Practice in Collieries, by D. Burns,—Gas, Oil, and Air Engines, by Bryan Donkin,—The Principles and Construction of Pumping Machinery (Steam and Water Pressure), by H. Davey,—Properties of Matter, by Prof. J. H. Poynting and Prof. J. J. Thomson,—Principles and Practice of Brewing, by W. J. Sykes, revised by A. R. Ling,—Chemistry for Engineers and Manufacturers, by B. Blount and A. G. Bloxam, Vol. II.,—Jaksch's Clinical Diagnosis, edited by A. E. Garrod,—Applied Mechanics and Mechanical Engineering, by Prof. A. Jamieson, Vol. I.,—and other books.

THE Kinchinjunga expedition started from Ghum on August 8th. It is stated on authority that the route decided on is that by the Singalela Spur *viâ* Toongloo, Sandakphu, and Phallut to Tseram. If the Nepal durbar grants permission, some of the party will go to Jongri in order to push on supplies over the Kang-la (16,313 feet); if permission is not obtained the more difficult route will have to be taken, over the Gulcha-la (16,430 feet), across the Talung glacier, up the Jongshion glacier, and thence through the Zemu gap if it can be forced. The party may have to descend on to the Zemu glacier, gradually working up to the foot of the north-eastern buttress of Kinchinjunga, which, according to Mrs. Freshfield, does not offer insurmountable difficulties. In her opinion, if good weather obtains, experienced mountaineers will have no great difficulty in reaching the summit. The expedition, it may be mentioned, has made careful preparations for a three months' stay in the mountains, and over a hundred coolies have been taken for the transport of stores.

THE death is announced from Berlin, in his seventy-fifth year, of the eminent specialist in diseases of the eye, Prof. Karl Schweigger. He was the assistant of Gräfe, whom he succeeded in 1871 as Director of the Ophthalmic Clinic of the Berlin University. He was the author of a number of valuable works dealing with his subject.

FULL reports have not yet been received of all the observations of the total solar eclipse on the 30th ult. Fine weather was experienced at Burgos and many other places in the interior of Spain, but it seems to have been cloudy, except at one point, on the east coast. The numerous observers at Palma, in Majorca, had only partial success, but most of those in Algeria and on the North African coast generally were favoured with a splendidly clear sky. It is very unfortunate that nothing could be seen by the astronomers in Labrador, as it was much desired that they should obtain observations to be compared with those made in Egypt, which were very successful.

WE have received the seventh number of vol. xxxiv. of the *Memorie della Società degli Spettroscopisti Italiani*. Prof. Mascari contributes a note giving the statistics of the solar spots, faculæ, and protuberances observed at Catania during the first half of the present year, which seem to indicate that the maximum of activity took place in the month of February. The number also contains a continuation of the diagrams of spectroscopical images of the sun's limb to the end of February, 1903.

A NEW small planet was discovered photographically by Prof. MAX WOLF at the Königstuhl Observatory, Heidelberg, on the 23rd ult. One observed there on July 30th, and supposed at first to be Dresda, No. 263, turns out to be new.

A NEW variable star (to be designated var. 104, 1905, Aquilæ) was detected by Mrs. Fleming whilst examining plates taken at Harvard College on the 18th ult. It was then of the seventh magnitude, fading rapidly. Dr. Guthnick, of Bothkamp, states that on the night of the 1st inst. there was no star equal in brightness to the eleventh magnitude near the place indicated.

FINE ARTS

The Royal Academy of Arts: a Complete Dictionary of Contributors and their Work from its Foundation in 1769 to 1904. By Algernon Graves. Vol. II. (H. Graves and Bell & Sons.)

THE second volume of Mr. Graves's monumental work carries the alphabetical sequence from Carroll to Dyer, so that only four letters are disposed of as yet. At this rate of progress the dictionary would run into thirteen volumes, or more than double the number originally estimated; but, fortunately, few of the remaining twenty-two letters will take up as much space as the first four have done. The new volume does not need any very exhaustive examination to prove its surpassing value to all who have to do with art and artists. It deserves to rank with such an enterprise as the 'Dictionary of National Biography,' to which, indeed, it is a complement, and, like it, should be in every institution, public or private, worthy of the name of library. The real value of a work of this description can only be proved by practical experience, and if Mr. Graves himself does not reap so rich a harvest as he deserves, he will at all events have the satisfaction of knowing that he has accomplished single-handed a work of permanent value. In these days of inadequate book-making it is refreshing to meet with such unwearying industry.

Very many interesting names occur in this volume. There are, for instance, Sir Francis Chantrey, who was exhibiting from 1804 to 1842; George Clint, from 1802 to 1845; William Collins, from 1807 to 1846; John Constable, from 1802 to 1837; E. W. Cooke, from 1835 to 1879; Abraham Cooper, from 1812 to 1869; T. S. Cooper, from 1833 to 1902; John Downman, from 1770 to 1819; De Loutherbourg, from 1772 to 1812; De Wilde, from 1778 to 1821; and T. Creswick, from 1828 to 1870, to select only a few whose careers suggest that the average life of an artist is long. Curiously enough, some of the artists best known to-day, so far as "collectors" are concerned, make a singularly poor show in this volume. David Cox, for instance, exhibited only twelve works at the Royal Academy, John Crome only thirteen, Peter Dewint the same number, and George Cruikshank only eight. Fortunately for the artists, their "show" in this book does not in the least depend on the judgment of the critic of to-day. If it were otherwise, some of those who make the best appearance in Mr. Graves's pages would suffer severely. Abraham Cooper's fifteen and a half columns, for instance, would be much compressed. Indeed, we think that in this case, as also in those of Eyre Crowe and William Daniell, Mr. Graves would have been wise in deleting the long "legends" attached to many of the pictures. Little or nothing would have been lost, and much valuable space gained.

Apart from his artistic treatment, for he was the victim of the hideous fashions of his time, A. E. Chalon is, we think, one of the most interesting names in this volume. The entries under his name comprise nearly all the wit, beauty, and talent of the earlier part of the last century. In 1823 we have a portrait of the Countess of Blessington, and another of her sixteen years later; in 1841 one of D'Orsay. In 1829 we have Mlle. Sontag, who had in 1828 married Count Rossi; in 1832 Taglioni (here spelt "Taglione"), and three years later Madame Vestris. We have also Mrs. C. Kean in 'The Lady of Lyons,' Mr. and Mrs. Kean in 'The Wife's Secret,' Rachel in the "rôle de Camille dans les Horaces," and very many others whose fame, on account of their beauty, their talents, or their eccentricities, has long since passed into history. On more than one occasion Chalon was successful in obtaining admission for two portraits of one lady in the same year's exhibition. In 1835 he had two portraits of the "late Countess Dowager of Burlington," and in 1857 two of Mrs. J. J. Underwood, one of which, however, was painted in 1824. Some of the names in this entry, as elsewhere, do not appear to be accurate, and Lady "Wrotheseley" Russell (1831, No. 478) is certainly meant to be Lady Wriothesley Russell, the wife of the eldest son of the sixth Duke of Bedford by his second wife; her two sisters-in-law, painted on one canvas, were in the same year's Academy, and subsequently engraved as 'The Sisters' for the 'Cabinet of Modern Art,' 1835.

In going through the new volume we have made an alarming number of notes. Mr. Graves has followed the Academy Catalogues with a fidelity which is almost painful at times. In one instance he has fused two men into one, and in another has split one man into two. William Chamberlain, Opie's pupil, died in 1807, and therefore could not very well have exhibited a picture of 'Itinerant Potters' in 1817. "J. W. Childe," who exhibited views and landscapes from 1798 to 1810, is identical with the "James Warren Childe" who exhibited miniatures from 1815 to 1853, if the 'Dictionary of National Biography' notice of him is accurate. Of course, we realize the difficulty of being accurate in cases like these; but by cultivating a taste for chronology Mr. Graves may be able to avoid falling into similar traps in future. For one incongruity he at least is not responsible. In 1842 Marshall Claxton exhibited a picture with the title of 'The Deathbed of John Wesley, March 2, 1791,' and it is said that one of the many who "assisted" at that scene was George Whitefield, who died some twenty-one years previously. We think that the earlier (1788) entry of 'J. Carter' on p. 3 should be included under 'John Carter' on the following page. John Carter is best known for his interesting views, and his single exhibit of 1788 may be explained by the fact that he was in this year busily engaged in making drawings and sketches of Horace Walpole's house at Strawberry Hill—the series of 111 original drawings and sketches

formed one lot in Sir William Fraser's sale at Sotheby's in April, 1901. The later of the entries under 'J. Carter, 1814,' 'Portraits of an artist, his two nieces, and a friend,' may possibly have been also by John Carter, but probably not. The "Mr. F. Grant, Sussex Villa," mentioned under 'J. M. Carter,' was afterwards Sir Francis Grant, P.R.A. The entry of 'Carteaux' on p. 9 is out of place, and his Christian name, Jean François, easily accessible in Bryan.

Mr. Graves's classification sometimes requires a little elaboration. The earlier Academy Catalogues are by no means clear, "miniatures, &c.," being capable of a good deal of elasticity. Mr. Graves describes J. W. Chandler as a miniature painter; he may have painted miniatures, but, with one possible exception, the exhibits here set forth were certainly not of that character—the catalogue numbers alone show this. Chandler was an artist of great promise; we have seen work by him which Hoppner would not have been ashamed to own. Several of his pictures were engraved, notably his portraits of Prince William of Gloucester and Sir W. Sidney Smith, by E. Bell, in 1799 and 1796 respectively; Alleyne, Lord St. Helens, by Ward, in 1795; and his 1791 exhibit of a 'Young Lady of Quality in the character of a Country Girl' may be identical with the 'Cottage Girl' engraved by C. H. Hodges in 1794. So, too, Thomas Cheesman is described as a miniature painter, whereas his fame entirely rests on his skill as an engraver; but he is known to have done some water-colour drawings. The "Antique Academy" room, in which some of Cheesman's exhibits were displayed, included miniatures, engravings, water-colour drawings, and designs of various descriptions, so that if the catalogues are not explicit, it is now impossible to decide upon the exact nature of an exhibit. Some of the entries are a little vague; for instance, George Dance's exhibit of 1800 is catalogued as 'Mr. W. Turner'; this, of course, was J. M. W. Turner, R.A., the original drawing being now in the Royal Academy library. One of Dance's exhibits of 1795 seems to have puzzled Mr. Graves. No. 622, 'Portrait of a Gentleman,' is annotated thus: "Mr. Kinlon or Mr. Kemble"; there can be no reasonable doubt that the portrait is of J. P. Kemble. The original drawing was in the Dance sale at Messrs. Christie's, July 1st, 1898, and was engraved by W. Daniell for the second volume of 'A Collection of Portraits,' by George Dance, 1814. A fairly complete list of Dance's portraits appeared in *Notes and Queries* of July 1st, 1899. Mr. Graves's identifications are not invariably happy. When he adds to Cosway's exhibit of 1786, catalogued as 'Portraits of a Lady and her Daughter,' in italics "Duchess of Richmond," he is wide of the mark, for the third Duke of Richmond (he succeeded his father in 1750, married in 1757, and died in 1806) had no children; moreover "a lady" would at once suggest an untitled woman. The next Cosway in the list, 1787, No. 53, 'View from the Breakfast-room in a Gentleman's House in Pall Mall, with the Portrait of a Lady by Mr. Cosway,' was the work of W. Hodges, and the lady was Cosway's wife. The picture itself was in the Tweedmouth sale at Christie's in June last.

Many of Mr. Graves's entries make some of the "biographies" in the new edition of Bryan's 'Dictionary' look very mean and shabby. Richard Collins, for instance, who was a regular exhibitor at the Royal Academy from 1777 to 1818, is dismissed in five and a half lines in Bryan, where it is stated that "in 1777 he exhibited some portraits at the Royal Academy." Some of the names here registered are not to be found in Bryan at all, *e.g.*, Madame Melani de Comoléra, who was exhibiting from 1826 to 1854, and who was flower painter to the Duchess of Clarence. C. F. de Breda's exhibits at the Royal Academy from 1788 to 1796 are also entirely ignored. Other omissions might be mentioned. Could the W. W. Collins, of 38, Blandford Square, who exhibited a picture of 'The Smugglers' Refuge' in 1849, have been Wilkie Collins the novelist?

The number of foreign artists whose exhibits at the Royal Academy are here recorded is remarkable. Benjamin Constant's first appearance was in 1896, when he sent three portraits, one of which was of the great M. de Blowitz, of *The Times*, and this was again exhibited at the Salon of 1902. (By the way, Mr. Graves's "Rue Pigale" in this entry should of course be Rue Pigalle). M. Dagnan-Bouveret only exhibited once at the Academy, the 'Vaccination' picture of 1884, which is presumably identical with the remarkable work in the Henry James Turner collection, sold at Christie's in April, 1903; in this case also the artist's address is shorn of a letter—Avenue de "Villier" should be Villiers. One of the last of the more important entries is John Downman, and it is a matter of much regret that Mr. Graves has been able to identify so very few of the portraits. One of the entries under 1785 is "A head of Cinci, who was innocently burnt alive." We suppose that Beatrice Cenci is intended, although she was not burnt alive. If so, Downman repeated the subject, for we saw recently in one of the finest private collections of pictures in London an exquisite drawing by Downman, dated 1798, of Beatrice Cenci, based on the famous so-called Guido portrait of her in the Barberini Palace in Rome.

NOTES ON THE CHURCHES OF BLYTHING HUNDRED.

I.

EVERY one interested in English church architecture knows or has read of the grand Suffolk churches of Blythburgh and Southwold, and of the extensive ruins of the once equally great fifteenth-century churches of Covehythe and Walberswick on the same coast. Dunwich, too, the seat of a former bishopric, and a once important populous borough, is an attraction to many from its romantic interest as they gaze on the last of its ruined parish churches, which continues to pay its yearly toll of stones and mortar to the encroaching sea. But the proper way to learn to understand and appreciate England's exceptional wealth of churches, enwrapt in countless memories of successive generations, is to visit all the churches of a particular district, more especially, perhaps, those which the ordinary guide-book asserts to be "devoid of all interest." Each one will be certain to tell or teach something of the past, and to add some fresh intelligence to the appreciative mind.

Perhaps, then, some general notes on the fifty old churches of the Hundred of Blything, extending from a little below Beccles on the coast line to the verge of Aldborough, and running inland to beyond Yoxford and Halesworth, may be suggestive to other ramblers. I know of no other district in England where the old church fabrics are so diversified in interest.

Of the round towers for which East Anglia is celebrated, Suffolk possesses forty, seven of which are in the Hundred of Blything. It has been more than once emphatically stated that these towers, including the one hundred and twenty-five in Norfolk, are (with one exception) "all of the same dimensions." It is strange that a statement such as this, which can so easily be tested, has so long held its ground. So far as this Hundred is concerned, the assertion is absurdly erroneous. The interior diameter of the round tower of Theberton is 11 ft. 4 in.; of Bramfield, 10 ft. 8 in.; of Thorington and Wisset, 9 ft. 8 in.; of Frostenden, 9 ft. 2 in.; and of Holton, 7 ft. 11 in. The dimensions of the ruined round tower of Spexhall were, by an oversight, omitted. The thickness of the walls and consequent outer diameter measurements differ just as much. Where the width of the east walling of the archway into the nave can be obtained, a great thickness is usually to be noted, arising probably from the adding of the nave to the tower. Thus at Wissett the thickness of the wall in the arch is 5 ft. 4 in.; but the outer diameter, taken north and south and compared with the inner diameter, yields a wall width of 3 ft. 11 in. Like measurements give the wall thickness of Theberton tower as 3 ft. 4 in., and that of Thorington as under 3 ft. Frostenden, however, is like Wisset, having a thickness of 3 ft. 11 in. Holton, again, has a thickness of 3 ft. 9 in. Bramfield round tower admits of more accurate measurement, for it stands 18 ft. clear of the adjoining fourteenth-century church. The wall at the entrance is just 5 ft. thick; and this very closely tallies with the general result from the outer circumference of 63 ft. 10 in., and the inner diameter as already stated. This Bramfield tower is said to be 40 ft. high; but it is very difficult to realize, from mere eye-estimate, how greatly the circumference exceeds the height.

Moreover, these East Anglian towers (and I have numerous notes of other Suffolk and Norfolk examples) differ constantly in other respects besides measurements; indeed, I have not met with any two that are really alike. Take, for instance, these six cases, excluding the ruined one at Spexhall. Bramfield is singularly substantial and stout, and remains pretty much as it was when it first left the builder's hands, save that it has a fourteenth-century enlarged east doorway, and that it is crowned with a much later brick battlement. Frostenden tower has a curious roundel let into the wall on the south side about 2 ft. from the ground, and a west lancet window and a trefoil-headed niche of thirteenth-century insertion. There are two circular stages, apparently somewhat later than the basement, and at the top are battlements, with loopholes below them of a much later date. Holton has two lower stages with round-headed lights (save for a later west window insertion); a third original stage rises from a string-course a little above the level of the nave roof, which has four small circular-headed lights to the cardinal points, with like blank windows between each of them. Above this is a further lofty stage with embattled parapet, and four large two-light pointed windows of fifteenth-century date. Theberton round tower has an octagon continuation, with two-light pointed windows of fifteenth-century date. Thorington tower, though crowned with brick

XUM

battlements, has three Norman stages, the top one having four two-light windows with a central shaft. Wissett has two Norman stages, the second one with small lights; the third stage has larger pointed fifteenth-century windows.

In one respect all these round East Anglian towers are alike, namely, that they are cunningly constructed of flints and pebbles embedded in exceedingly strong mortar. Suffolk was destitute of a single quarry, and local ingenuity devised this means of using the abundant resources of the sea-shore in building substantial towers of such a shape as to save the expense of bringing stone quoins from a distance for the angles. They are without newel stairways, and the different stages were doubtless gained by wooden ladders. A few are undoubtedly of pre-Norman date—one Norfolk example has Saxon work in the third stage—but the great majority are unquestionably Norman. I know of no case with thirteenth-century lights where these do not appear to be subsequent to the original fabric. There seems good reason to believe that the lowest stage of the Frostenden tower is Saxon, and possibly the remains of the Spexhall tower are of like date; the rest of the Blything examples were built in the Norman period; probably Thorington is the latest of them. There is ample room for a well-illustrated monograph on these round towers of East Anglia.

The Domesday Survey, so irregular in its ecclesiastical returns, records the existence of no fewer than 364 churches in Suffolk. Of these, doubtless, the vast majority were entirely of wood, for timber used to abound in the district. No sooner were the Normans established than stone churches began to spring up, the new lords transhipping not a little stone for carving from their lands beyond the sea. It is usual to say that "Suffolk is not rich in Norman architecture." This is partly true if extensive remains are intended, but the churches are frequent where such remains are not inconsiderable, still more so when the practised eye knows where to look for Norman traces in the fabrics of the village churches. So far as Blything Hundred is concerned, more than half the churches yield evidence of the church-building zeal of the conquerors.

In the parish of Wenhaston, two miles from Halesworth, on the south bank of the Blyth, stands the ruin of the once beautiful little chapel of St. Margaret, of early Norman work. It consists of a nave with a small apse-ended chancel. The history of this building, which was at one time independent of Wenhaston, is of exceptional interest. As an example of a simple but most effective style of early Norman church building it was without a rival in East Anglia. Half a century ago this ruin was well described and illustrated, and much of its story told, by Mr. Suckling in his uncompleted history of the county. It is piteous to notice how rapidly the work of destruction has gone on since his days. The building, standing close to a farmhouse, is now utterly neglected, and choked up with a riot of tangled briers, whilst enormous trails of ivy are swiftly dragging it to pieces. One great limb is 22 in. in girth. Unless something is speedily done, the ivy within a very few years will have completed its work of destruction. I write in total ignorance as to the ownership of the property. But could not the county archæological society intervene? Or possibly ecclesiastical authorities might with advantage have something to say as to this once consecrated site.

Among the few remnants of ancient Dunwich that have not yet become a prey to the sea is the eastern end and apse of the once fair late Norman chapel of the important Hospital of St. James, close to the modern churchyard. Some beautiful arcading remains round the interior of the apse. This fragment is still of some importance, with walls of a considerable height. I found it measured 53 ft. in length by 23 ft. 3 in. in breadth. But here again the ivy seems to be encouraged to fling its deadly octopus-like arms over the ruins, particularly on the north side. The certain destruction that it is gradually achieving is apparent to any student of old buildings; but then, as all the cockney trippers and sketching young ladies say, "the ivy is so picturesque." But for everything there is a place.

Several of the smaller village churches of this Hundred retain the walls of their naves in the old state, and exhibit the dimensions they had in the Norman days, though pierced with later windows. This is undoubtedly the case in the two interesting small churches of Ubbeston and Spexhall, where the small quoin stones at all four angles of the nave, with their Norman dressings, can be readily recognized. Roughly speaking, the dimensions of these Norman naves are always the same—namely, the length three times the breadth, and the height of the walls (where they have not been altered) the same as the width. The south-west Norman angle of the nave can be noted at Holton, and the old eastern extremities of the nave at Uggeshall. At Thorington, also, the side walls of the nave, notwithstanding various alterations and insertions, are plainly Norman.

At the little-visited and almost unknown church of Westhall the old Norman nave was utilized as the south aisle of a fine church of the fourteenth century. The small apsed chancel was cleared away, but the beautiful west front, having a much enriched doorway with lights and arcading above it, has been thoroughly preserved — though awkwardly situated for inspection—by having a western tower built up against it.

In many parts of England, Norman fonts are found in not a few churches when all other traces of the period have disappeared; but this is not the case in East Anglia, where a great development of font-making was one of the particular characteristics in the local church art of the fifteenth century. This strong current carried away most of the earlier examples. I have not noticed one of Norman date in Blything Hundred. It is different, however, with the doorways. The Normans here, as everywhere, reserved some of their best efforts for the doorways into their churches, trying, as it were, to attract worshippers to the entrances by a richness of carving unknown in any domestic buildings of their villages, the very material of which must have been strange and costly-looking in such a district as this. As glass became more common and beautiful, the desire for increased light and general progress led to wider window piercings in the pebble walls; but the stone doorways of their churches were for the most part long preserved and re-used, from motives that were probably a blend of admiration and utility. Thus south or north Norman doorways, or both, may be noticed in the churches of Blythford, Cookley, Darsham, Henstead, Holton, Knodishall, Spexhall, Stoven, Theberton, Walpole, Westhall (west), Westleton, and Wisset, several of them being good examples. Blocked-up Norman lights may be noticed on the south side of Thorington church, and the head of one can be seen in the north wall of Ubbeston; the latter is close to the pulpit, and the old window was recently removed by the incumbent, who seems to have desired a better light for sermon-reading. At Ubbeston, too, should be noticed the highly ingenious, but miserably cheap way in which the restoration of the west jamb-shaft of the south Norman doorway has been accomplished. It is formed of common drain-pipes stuck up on end, covered with a slight coating of stone-coloured plaster! At Theberton a Norman corbel table yet remains in the chancel, as well as a built-up Norman window. The chancel windows of Middleton show alternate-billet and other Norman mouldings used up in hood-moulds of windows of Edward I.'s time. The basement stage of the unbuttressed tower of Cookley seems to be of this period. Many fragments of a former Norman church may be noticed in the outer walls of the north aisle of the grand old church of Blythburgh, and there are many Norman bits remaining in the church of Brampton.

I noticed four small incised mural sundials on the south sides of these Blything churches; three of them are certainly Norman. The most remarkable is one on a quoin-stone of the south-west angle of Ubbeston nave; it is only 4 in. in diameter, and has some curious carving above it. A yet smaller one, 3½ in. in diameter, may be noticed on the left-hand capital of the jamb-shaft of the south doorway of Stoven church. The two other examples are at Aldringham and Little Linstead.

Remains of Norman holy-water stoups can be seen at Blythford and Walpole, and perhaps at Rumburgh.

There is no impressive Early English or thirteenth-century work in the district, save in the low tower and west front of Rumburgh church, which pertained to the small Benedictine priory at this place. Rumburgh was a cell of St. Mary's Abbey, York; the nave of the church was parochial. The tower of Chediston is mainly of Henry III. date. Other work of that reign may be noticed in the chancels at Wrentham, Uggeshall, Blythford, and Frostenden; also in the priest's doorways of Darsham, Spexhall, Westleton, and Wissett. Other indications make it plain that there was a general lengthening and enlarging of the Norman chancels in the first half of the thirteenth century.

The fonts of Benacre, Blythford, Knodishall, Leiston, and Thorington are Early English.

J. Charles Cox.

Fine-Art Gossip.

Messrs. Macmillan are publishing this autumn 'Pre-Raphaelitism and the Pre-Raphaelite Brotherhood,' by Mr. Holman Hunt, two volumes which are sure to create a good deal of discussion. It is likely that Mr. Hunt's views on this important movement will differ from some of those now before the public.

The Photographic Salon hold the private view of their thirteenth annual exhibition at the gallery of the Royal Society of Painters in Water Colours on Thursday next.

Leopold Rivers, R.B.A., died on August 30th at Weston Park, Crouch End. Born in 1852, he came of an artistic family, his father being a marine and historical painter; his uncle, Charles A. Rivers, a well-known sculptor; and his grandfather an engraver. Leopold Rivers began his studies under his father, and had followed his career as a landscape painter with success from 1873 up to his death. Since 1878 he had exhibited every year at the Royal Academy except on two occasions. His work has been seen at the French Salon and at the Institute of Painters in Oil and Water Colours and other places. In the Royal Academy exhibition just closed he had three drawings hung. He was a rapid sketcher from nature, and his works, generally representing evening and stormy effects, are in many of the best private collections.

An exhibition (organized by the Edinburgh Architectural Association) of drawings and photographs, arranged and collected by Mr. W. H. Goodyear, Curator of Brooklyn Museum of Fine Arts, illustrative of mediæval buildings, was opened in the Edinburgh National Portrait Gallery on Wednesday.

The President of the Royal Society of British Artists, Sir Wyke Bayliss, F.S.A., is the author of a new art volume which Sir Isaac Pitman & Sons will publish on the 28th of this month. He has called it 'Seven Angels of the Renascence: the Story of Art from Cimabue to Claude,' and in some respects it may be looked upon as a successor to his work 'The Likeness of Christ: Rex Regum,' for where that leaves off this begins. The book will contain forty full-page plate illustrations, including portraits of the greatest of the painters and poets, to which are attached facsimiles of many rare and interesting autographs.

A complete and exhaustive history of the porcelain manufactory at Sèvres yet remains to be written, for the documents constituting the archives of that historic place have hitherto been distributed in various offices. These documents are now all united and catalogued. The catalogue comprises eighteen series, and something like a hundred thousand documents are registered. The royal and other "ordonnances," dating from 1745 to 1790, include many of great interest; whilst the documents concerning the inner history of the factory, the reports of the various directors, the inventories of the pieces manufactured, the memoirs of the various artists, and the registers of the Compagnie des Potiers constitute a veritable mine of information respecting one of the most ancient and interesting of French arts.

Madame Édouard Pailleron has offered to the Musée de Versailles the fine half-length portrait by Mr. John S. Sargent of Édouard Pailleron, the French dramatist, whose most famous work was, perhaps, 'Le Monde où l'On s'ennuie,' first produced over twenty years ago. The gift, it is almost unnecessary to add, has been accepted. Pailleron lived at Versailles for many years, and was a great admirer of the Palais de Louis XIV., in one of the galleries of which the Sargent portrait will be exhibited.

The death is announced of the marine painter François Barry, at Saint Laurent-du-Var, at the age of ninety-three. He studied under Joseph Gudin, and was Louis Philippe's favourite artist. He painted a number of views of Marseilles, where he was born. His 'Prise d'Alger' is at Versailles, and 'La Revue passée en 1880 par le Président Grévy à Cherbourg' is in the official residence of the French Minister of the Navy. Two of his more ambitious works, both inspired by incidents in Russian history, are the property of the Tsar.

The death, in his eighty-fifth year, is also reported from Basle of Eduard His-Heusler, the author of several well-known works on Holbein, and for many years President of the Art Committee of the Basle Museum, which owes much to his efforts.

Finland has lost one of its greatest artists in Albert Edelfelt, who has just died at Borgo. Edelfelt was born at Helsingfors on July 21st, 1854, and studied in Paris under Gérôme. He exhibited at the Salon first in 1877, and for many years afterwards was represented there. He was an intimate friend of Dagnan-Bouveret (whose portrait he exhibited at the Salon in 1881) and Bastien-Lepage. One of his works, the 'Service Religieux dans le Skaergaad,' is in the Luxembourg, and the well-known and frequently reproduced picture of 'Pasteur in his Laboratory' is in the Sorbonne. Edelfelt was a portrait painter of great note, and several members of the royal and imperial families of Russia, Sweden, and Denmark sat to him. His 'Laundry,' a "harmony of yellow on white," was in the Munich Exhibition of 1893, and attracted wide notice. 'Christ appearing to Mary Magdalen,' in which the story is treated as if it were a Northern legend, 'The Women in the Churchyard,' and 'Boys Bathing,' are among his best-known imaginative creations.

An interesting addition has been made, according to the Anglo-Indian papers, to the Lahore Museum by the purchase of a cartoon representing an event in the life of a king who played an important part in the history of Afghanistan and the Punjab in the earlier half of the nineteenth century. The cartoon is described as a panoramic picture nearly twenty-four feet in length, and depicts a long procession of strikingly dressed personages, with their names written in Persian above them. In the centre, gorgeously robed and riding a gaily caparisoned charger, is Shah Shuja ul Mulk, who was put on the Afghan throne by our Government in 1839. As he is shown in the picture wearing the Koh-i-nor, it was evidently painted before he was despoiled of that famous gem by the Maharaja Ranjit Singh.

MUSIC

Musical Gossip.

Richard Strauss's Symphony in F minor (Op. 12), written when the composer was about twenty years old, was produced at the Crystal Palace under the direction of Sir August Manns in 1896, and it was performed again yesterday week at the Promenade Concerts under Mr. Henry J. Wood. Little notice was taken of the work nine years ago; but now that Strauss has made a name for himself, and has composed some symphonic poems which are highly appreciated, and others which have called forth criticism both favourable and unfavourable, the early symphony naturally attracts more attention. It is a clever, earnest, healthy work; it bears honest traces of the influence of Schumann, Mendelssohn, and Wagner, and in addition there are curious foreshadowings of the coming man. The Finale, though not lacking in energy, is weak as compared with the other three movements. The opening Allegro, and the expressive, if somewhat lengthy Andante, are the most satisfactory sections. The performance was excellent. The programme included a very early work of Haydn's, entitled 'Le Midi,' and it may be noted that two others written by him bear the titles 'Le Matin' and 'Le Soir.' 'Le Midi,' the composer's second symphony, written in 1761, is most interesting; it contains, moreover, a fine Adagio, with recitative passages for violin. The scoring, as mentioned in the analytical notes, does not, by the way, quite agree with that given by C. F. Pohl in his 'Joseph Haydn' (vol. I. p. 285), where he mentions not only a *violone obl.*, but also a part for *continuo* (cembalo). The mention of the latter instrument reminds us that the scoring of the Bach Brandenburg Concerto in G, No. 4, also given at this concert, was noted, though without mention of the cembalo part, for which an unsatisfactory organ part was intended, we presume, as a substitute. Miss Eva Mylott's fine voice was heard to advantage in Handel's 'Ombra mai fù.'

On Tuesday evening the programme contained three pieces (Méditation, Mélodie, and Scherzo), published under the title 'Souvenir,' by Tschaïkowsky, for violin and orchestra; they were written originally for violin and pianoforte, but the part for the latter has been scored, as indicated, for orchestra by Glazounoff. They are short and attractive. Miss Beatrice Langley, the soloist, displayed skill and taste.

The freedom of the city of Worcester has just been presented to Sir Edward Elgar, whose 'Dream of Gerontius' and 'The Apostles' will both be performed at the Festival to be held next week.

Walter Cecil Macfarren, who died last Saturday at his London residence, was an accomplished musician, a successful lecturer, and an earnest teacher. Born in 1826, he studied at the Royal Academy of Music, at which institution he was appointed a professor in 1848, a post which he held for over fifty years. His autobiography was published only this year, and was duly reviewed in these columns. We spoke of the author's lack of sympathy with Wagner's art-work. During his most impressionable years he was under the direct influence of Mendelssohn, whose acquaintance he made in 1842; and, as it was with other musicians of those early days, that strong influence, even after the composer's death, prevented him from transferring his allegiance to a new master. History repeats itself. Art does not stand still, and men who in their youth idolized Wagner will be just as unwilling, or rather unable, to recognize the merits of the coming genius. It is interesting to note that Macfarren was one of the first to make Chopin's music known in London. In 1882 he gave three orchestral concerts at St. James's Hall, and these deserve special mention. The programmes were interesting; the performances, with a band of eighty, under the leadership of Sainton, were excellent, and the prices of admission were most reasonable; but the experiment was not financially successful. In his autobiography Macfarren remarks truly that "the British public has only lately awakened to the attraction of orchestral music." It was at these concerts that he conducted without book, a method which is generally supposed to have originated with Wagnerian conductors. Notwithstanding his busy life as a teacher, Macfarren found time to write a symphony, six overtures, pianoforte trios, and sonatas, and many pianoforte pieces and songs. Among his pupils were Maude Valérie White, Dora Bright (Mrs. Knatchbull), and C. T. Speer, Tobias Matthay, E. H. Lemare, and Henry J. Wood.

Signor Tamagno, the great Italian tenor died last week at Varese from heart failure. He was born at Turin in 1851, and made his *début* at Palermo in 1873, but his appearance in Verdi's 'Ernani' at La Scala in 1880 was his first stepping-stone to fame. He then attracted the notice of the composer, who afterwards became his friend and patron. His highest achievement was his impersonation of Otello, when Verdi's opera of that name was produced at Milan in 1887. Soon after that he was heard for the first time in London (July 5th, 1889), when 'Otello' was given at the Lyceum under the direction of Signor Faccio. Tamagno appeared rarely at the Paris Opéra, for singing in French was for him a matter of considerable difficulty. He, however, sang the part of Jean in Massenet's 'Hérodiade' at Monte Carlo in 1903. His repertory, in addition to 'Otello,' consisted of 'Aïda,' 'Trovatore,' 'Le Prophète,' and 'Les Huguenots.'

PERFORMANCES NEXT WEEK.
Mon. to Sat. Promenade Concerts, 8, Queen's Hall.

DRAMA

THE WEEK.

His Majesty's.—*Revival of Oliver Twist.* Adapted from Charles Dickens by J. Comyns Carr.

The custom, gradually establishing itself in managerial favour, of giving on the closing day of an expiring season the piece with which a following season will begin has its advantages. One of these, which a management is more apt to value than to praise, is that the piece thus treated receives ordinarily two press notices in lieu of one. A second

is that in case unfitness or inadequacy is displayed in any exponent, time is afforded to displace him, and opportunity is left for the rehearsals of his successor. Few changes have been found necessary in recasting 'Oliver Twist,' and those principally in subordinate and female parts. Miss Hilda Trevelyan, whose style, even when most fantastic, is delicate rather than strong, has resigned to Miss Nellie Bowman the part of Oliver himself; but this juvenile personage, eponymous as he may be considered, plays but an insignificant part in a drama principally made up of crimes in which he does not participate. The central figure remains Nancy, whose attempts to reconcile with a species of sentimental attachment to Oliver a passionate loyalty to her brutal and bloodthirsty lover, and fidelity to her despicable employer, involve all in one common calamity. Fagin himself is the true hero of the piece, Bill Sikes, prominent as he seems, being but the blind tool of the elderly and astute ruffian, and with his defeat and death the gloomy and gruesome story reaches its climax and its close. In these characters no change of exponent has been found expedient, nor is any readily conceivable. It has previously been said that Mr. Carr's rendering of the story is the most popular that has yet been seen. It may be doubted whether with a less transcendent rendering its excellence would have been equally manifest. In that peculiar blend of realism and fantasy which constitutes Mr. Tree's most effective method Fagin is his greatest triumph. In that method make-up goes for much, and the presentment of the fawning, plausible, and in every way detestable Jew is masterly. Cruikshank is, as might be expected, mainly responsible for Fagin's appearance. What is most characteristically loathsome in Fagin is, however, independent of make-up, and the chief merit of the impersonation consists in the method in which the astute and cowardly criminal uses for his own felonious purposes the strength and brutality of his more ruffianly, but hardly less detestable associate. No creation of Mr. Tree's is more deadly and malignant than this. The criminal characters generally are well played, and the Nancy of Miss Constance Collier remains the best to be recalled; Miss Nellie Bowman makes as good an Oliver as a girl can, and Miss Alma Murray and Miss Jennie Lee constitute pleasant accessions to a cast which leaves little to be desired. One important point may be mentioned. The elocution in general is not good, as we are assured by patrons of the higher and more distant seats.

ADELPHI. — *Dr. Wake's Patient: a Comedy in Four Acts.* By W. Gayer Mackay and Robert Ord.

THOUGH a novelty as regards London, 'Dr. Wake's Patient' has enjoyed a certain amount of popularity in the country. The scene of its first production was the Shakespeare Theatre, Liverpool, at which house it was produced a year ago precisely—on the 5th of September, that is, 1904. On that occasion its heroine, now known as Lady Gerania Wyn-Charteret, was played by Robert Ord, otherwise Miss Edith Ostlere, one of the authors; the part of her cousin, Duff Wynterden, being taken by Mr. Mackay, by whom it is now resumed. Though old-fashioned and a little trivial, 'Dr. Wake's Patient' belongs to a class of piece the return of which to the boards is a matter for congratulation. It tells pleasantly and sympathetically a tale of true love, is written with vivacity and a sense of the requirements of comedy, and, though a little strained and artificial, is one of the cheeriest and most agreeable pieces of modern days. There is scarcely a story to tell. A London physician on a country excursion binds up the wounds of a young lady who has fallen from her horse. The pair then part, ignorant of one another's identity, but mutually enamoured. Three further acts are passed in the search for one another and in their union after the conquest of the difficulties springing from inequalities of rank — the lady being the daughter of an earl, and the physician a man of yeoman birth. Slight and idyllic as is the story, it is agreeably stimulating, and constitutes an acceptable entertainment. Miss Lilian Braithwaite, as the heroine, displays genuine gift for comedy, and Mr. Mackay, part author, exhibits as an aristocratic *malade imaginaire* a very bright and agreeable creation. The characters generally are well played, and the entertainment constitutes a happy return to discarded faiths.

MARY'S CHAPEL ROYAL AND HER CORONATION PLAY.

No previous sovereign had made on his coronation so sudden and complete a change in the Chapel Royal of his predecessor as Mary did. The Bishop of Norwich was the Dean; six priests replaced so many clerks and gentlemen; little boys to bear censers and crosses were introduced; the Communion table became the altar once more; the English service was replaced by the Latin; the metrical Psalms were banished, and the old Psalters and Antiphonals took their place. Doubtless to the gentlemen of the Chapel who had taken the oath of fealty the last change was welcome, from the Psalms sung in unison (for there is no mention of Crowley's four parts having been used at Court) to the richer harmonies and more "curious" music of the old service. But Mary's changes marked conservative, not revolutionary ideas. She never thought her young brother old enough to understand, or to judge for himself in matters of such great moment, and she wanted to conform to the customs of her progenitors on their accession, in so far as she could.

Therefore, among other things, she ordered a play to be performed at her Coronation, and the "Gentlemen of the Chapel Royal," as was their wont, were to perform it.

Meanwhile her poet, whoever he was, must have taken his cue from a general caution. On August 16th the Privy Council prepared a "Proclamation for reformation of busy medlers in matters of religion, and for redresse of Prechers, printers, players." This was printed* and circulated on August 18th, and treated of

"the playing of Interludes and printing of false fond bookes, ballettes, rhymes, and other lewde treatises in the English tongue concerning matters now in Question and controversy."

No one was to play an interlude without the Queen's licence in writing. Collier, 'Hist. of the Stage,' i. 154, says that "a play had been ordered on the occasion of her coronation, which, we may presume, was performed by the gentlemen of the Chapel." But he says no more, Stowe does not further allude to it, and the name of the play is not known. Therefore it is of some importance that certain definite facts should be recorded and preserved concerning it. The play *was* performed by the gentlemen of the Chapel, and their dresses, which had probably been prepared before, were given out to them on September 30th.

Among the papers subsidiary to the Wardrobe accounts is a royal warrant to the Keeper of the Royal Wardrobe, Exchequer Acc., 427, 5 (9):

"Marye the Quene.—We will and command you further upon the sight hereof, to provide and deliver to the berer hereof, for the gentlemen of our Chappell for a play to be playde before us for the feaste of our coronation, as in tymes past hath ben accustomed to be don by the gentlemen of the Chapell of our Progenitours, all such necessary stuff and other things as hereafter followeth.

"Item, *Genus Humanum*, for a gowne of purple brege satten, vii. yerdes.

"Item, v. Virgin's Cassocks of white bruge satten, and vii. yerdes for every of them, that is to saye, xxxv. yerdes.

"Item, Reason, Verytie, and Plentie every of them vii. yerdes purple brege satten, xxi. yerdes.

"Item, Self-Love, a Cassock of rede Satten of Brege, vii. yerdes.

"Item, Care, a Cassock of grene Satten of brege, vii. yerdes.

"Item, Skarsitie, a woman's Cassock of Russett Satten of Brege, vii. yerdes.

"Item, Sickeness, Feebleness, Deformitie, three longe gownes, one of Tawny Satten, the tother of ashe-colored satten, the other blacke satten, for every of them viii. yerdes, in all xxiv. yerdes.

"Item, for the Epilogge a Cassocke of blacke Damaske and ix. yerdes of purple Damaske for a long gowne for the same, xv. yerdes.

"Item, a shorte gowne of rede damaske for the Ende, vi. yerdes.

"Item, three shorte gownes of purple brege satten for the Ende, vi. yerdes for every of them, xviii. yerdes.

"Item, the bad angell iii. yerdes of Kersey, and wings for the good angel and the bad, three thromd hattes and tenn dossen of counters, and what you shall lake of the furniture thereof to provide and see them furnished, and this shalbe your warrante in this parte. Geven at our Pallace of Westminster the last of September in the first yere of our reign.

"Summa: of Damaske xxi. yerdes, of brege satten vi. score xiii. yerdes, of Kersey thre yerdes."

Among the old plays which have come down to us, either in print or in MS., I cannot find any which would fit this cast. It could not have been 'The Castle of Perseverance,' as "Humanum Genus" there enters as a child, and except the "good and bad angel" the characters are all different; nor the other allegory, called by Collier 'Mankind,' which gives Mercy, New Guise, and Now-a-days, Mischief, Nought, &c. Nor could it have been 'Respublica,' said to have been made in the year 1553, 1 Mary, and to have been played before the Queen. The Prologue is spoken by the author himself in the character of the Poet, and the other characters are Respublica (England), Authority, Policy, Oppression, Avarice, Insolence, Adulation, Nemesis, Misericordia, Justitia, Honesty, Pax, People. Nor could it have been the old play of 'Nature and Reason,' nor the 'Interlude of Youth.' So it may be reckoned as an interlude of which neither the name nor the text is as yet known, but it may some day be discovered, through this cast. Of its plot we may at least guess that it would be in supposed prophetic relation to the Queen's reign, and that all the good characters would triumph over the bad. Of its author no clue has as yet been found.

John Heywood was an interlude-writer of the time, formerly a singing gentleman in the Chapel, and jester to Queen Mary, as Tarleton afterwards was to Elizabeth. Udall had written plays, and various scholars of the universities had tried their hands. The play might have been put together by one of the gentlemen of the Chapel. Richard Farrant, afterwards Master

* A copy is preserved by the Society of Antiquaries.

of the Children of Windsor, is known to have written interludes, and so is William Hunnis, author of many pieces in 'The Paradise of Dainty Delights,' and many religious poems in the following reign, when he was also the Master of the Children of the Chapel Royal, and designer of the great festivities at Kenilworth, 1575. His friend Thomas Newton writes of him that in prime of youth he had written "sonets sweete," "interludes and gallant lays," which have not come down to us.

If we do not know the author, there is a good deal to learn about the actors. From the 'Order of the Royal Household of Edward IV.'* we know the necessary qualifications and duties of the gentlemen, not their numbers; for while there were 20 and 8 children in Henry VIII.'s time, in Edward VI.'s these were raised to 32 gentlemen and 12 children, a number kept up by Mary. From the royal warrants to the Keeper of the Great Wardrobe we know that they all had new liveries for the coronation. A further warrant for new surplices includes several other small items for chapel use, and a list of the names of the gentlemen. As there is no full list previous to 1561† printed, except that of Hawkins and Burney in their 'History of Music,' without date, and with the hazy reference to "a MS. in the British Museum," which has thus indefinitely been followed by all musical writers and by Rimbault in his 'Cheque-Book of the Chapel Royal,' it will be as well to print this duly authenticated list here. One referring to the mourning for Edward VI. appeared in *Archæologia*.‡ I have found three others "at the British Museum" with definite references, and one at the Society of Antiquaries, but none of them agrees exactly with that of Hawkins and Burney, the original of which has yet to be found.

Exchequer Accounts, 427 (5) 10.

"Marye the Quene.—We will and commande you forthwith upon the sight hereof to deliver, or cause to be delivered, unto our servant Robert Bassocke, serjeant of our Vestry, to be by him employed within our chappell about the servyce of God, these parcels following, that is to saie for our sub-deane of the said Chappell two surplices of drawne worke; for 32 gentilmen and yeomen, threscore and foure surplices; for 12 children foure and twentie surplices; for foure children for censers and tapers, eight Albes for ravyshment with Amyttes to them; for thre children to carie thre crosses in procession, sixe Albes with Amyttes to them; for the High Altar prestes, deacon, and subdeacon, for foure sewtes, twelve Albes, and for corporas clothes four elles of fyne clothe; for the two lowe alters foure Albes and foure elles for corporas cloths. For the high altar four alter clothes of five Elles apece, for towelles for the said high aulter foure Ellys, and two Ellys for the Lowe Alters; for sixe aulter clothes for the Lowe Aulters eighteen elles. Also two payer of Tynne Crewettes, one Lether potte for water and one gyspuy of lether for wyne. Also sixe peace of Tape for tucking girdelles. Also twelve dossen of silke poyntes for Copes. Also one hundreth crochettes, and sixe hundredth hookes, for green cloth to folde stuffe upon three yeardes. Also one coffer to trusse in plate. Also two bare hydes to cover the stuffe in cartes, one hammer and one payre of pynsons. Also one small fyre shovell to fyll censers, and a grete shovel to carye coles. And these our letters shalbe your suffycient warrant and dischardge in that business. Geven under our signet at our mannor of St. James, the 17th day of September in the first yere of our reygne.

xii Children of the Chappell."

It may be noted that there are only thirty-one, instead of thirty-two. It is possible that one has been accidentally omitted, probably "John Lucam, yeoman"; or some one may have refused even then to take the oath of allegiance. Several other names appear in other lists. Every one of these, in his day, must have been of some note.

The Chapel Royal was the haven of the best musical talent of the day. Every music lover knows of Shepherd, Tallis, Farrant; and Marbeck's service was harmonized by these in conjunction with some of the minor names above. Thomas Byrde was the father of William Byrde, the pupil and associate of Tallis. Thomas Palfreyman was a well-known writer on moral philosophy, as well as a musician.

We have no clue to the names of the twenty-three performers selected from these, either for their fitness or as a special mark of honour. Richard Bowyer was Master of the Children then, William Hunnis and Richard Farrant were Masters of the Children afterwards, so these three would probably have definite histrionic powers. Of their appearance we know little. We only know of one of them, William Hunnis, that he was a very handsome young man, as this is stated in his examination at the Tower in 1556.

As to the day and hour of the performance there is no definite information. Stowe mentions that during the Queen's progress from the Tower to Westminster on Saturday, September 30th,

"At Fanchurch was a costly pageant made by the Genouawayes, at Grace Church Corner there was another pageant made by the Easterlings. At the upper end of Grace Street there was another pageant very high, made by the Florentines.....One other pageant at the little Conduit in Cheape next to Paul's, made by the Cittie, where the Aldermen stood.....and in Paul's Churchyard, against the School, one Master Haywood sate in a pageant under a Vine, and made unto her an oration in Latin and English."

It may be remembered that it was after she reached Westminster in the afternoon that she signed the warrant for the dresses. After the Coronation services in the Abbey on Sunday, which are of course well known, came the Coronation feast, the details of which are not so well known, and are worth recording. "She was conveyed in goodly order unto Westmynster Hall to Dinner" (Cotton MS. App. xxviii. 24). In MS. 34,320, f. 97, Brit. Mus., we find the "*Summa Fercularum* [or number of the dishes] served on Sunday at Westminster ye first of October for ye coronacion of Quene Mary, 1553."

"First bord. At ye first Bord sat Regina, ye bishoppe, ye Lady Elizabethe, and ye Lady Anne of Cleves, dishes in ye hole 156, with ye kevers 312.

"Dukes, Marques, Earles, and all other Lords spirituall and temporall, and ye barons of ye Exchequer, to sitt at ye middel bord, on ye ryght hand of ye hawle, 500 dishes.

"Duchesses, Marchionesses, Countesses, and other Ladies of honor at ye middel borde, on ye left hand of ye hawle, 500 dishes.

"Barons of ye V porttes, &c., at ye side board upon ye right hand off ye Queene, next ye wall, 450 dishes.

"Lord Maior of London, &c., at ye side board in ye hawle on ye left hand of ye Quene, next the wall [9 yards long and 5 broad], 450 dishes.

"4900 dishes wast, in all 7112."

The food served at these five boards is most remarkable, and accounts for a considerable part of the levy of 20,000*l.* which Mary made on the City of London. To note it all would take too much space, but the Queen's dinner is really too interesting to pass. In the same MS. (f. 86) we find:—

"The Fare at the Royal Table for the Queene, the Bishop, and the Lady Elizabeth, three messe of like fare.

"1st course.—A warner of the feast. Brewet blancke. Viand sipers. The Wyld Bore's head. Pheasant in Stew. Pestles of red deer powdered. Signets larded with Chawdorne. Capons in hault gr. in brewett. Carpets of Venison in Egerduc. Pikes gr. in Armor. Langetts larded and endored. Herush larded. Doreie or. Friands de Shappord. Custard Royall. Leach solas in Mountaine. Fritters Pomander. A subtlety representing a Queen's Estate, with this Scripture 'Vox populi vox Dei. Vivat Regina Marye.'

"2nd course.—Jelly Blancke in Rockspott. Rudge Mange Royal in barrye. Pecock in hackley. Rooe reverste. Bittores larded. Connyes larded. Coungers gr. in fild. Knotts or good Wytts. Brawne or. Carpe gr. on soppe in sharpe sawce. Phesant larded. Peions. Singlets. Venison in paste Royall of fallow and red. Florentyne garnisshed. The Cheste board garnisshed. The tarte melior. Leach Lemony. Fritters sharp. A Subtlety.

"3rd course.—Caudelet Royall. Jelly Rubie gilt. Crane larded. Rayles. Plovers green. Fresh Sturgion. Quayles. Feasant in his Royaltie. Larks. A subtletie made of a Castle garnished with armes of England, France, Ireland, and Spaine. Great Buck in soile furnishes garnished. Red Deer hackt froit. Oranges conserved in paste. Tarte barbenott. Leach Viand. Fritters Roisset. A subtlety made wherein shalbe enclosed with four pillars a device representing VII. Cardinal Virtues with their scriptures."

Apparently each of these was reduplicated three times, except the subtleties; and the three "messes" seem to have been one for the Queen, one for the Bishop (*i.e.*, of Winchester, who had crowned her that day), and one for the two ladies who sat at her board. That this distinction was carried out may be inferred from the following note:—

Sewers.
The Earl of Sussex for the Queen.
Sir Humphrey Ratcliffe for the Bishop.
Sir Anthony Browne for the Ladies.

The most noticeable peculiarity beyond its variety is the apparent setting on of salt and sweet together, which is still a custom in Eastern feasts, and the making a second and a third course, as of another complete dinner, also of salt and sweet dishes. The crown of each was the "Subtilty," a comparatively artistic design in jelly and candied sugar, something like a modern trifle, but always utilized for bearing the motto of the feast, and consequently it was probably the last to be demolished. No wines are mentioned in this MS. It must have taken a long time to eat even a morsel of each selection.

And after the feast was over would come into the hall, as was the custom with her progenitors, the gentlemen of her Chapel Royal and perform their play about Humankind and the good and bad angels. The customary prayer for the Queen, by the performers, would close the proceedings.

Dramatic Gossip.

ROOM has not been found in the case of a week so crowded with events for any important novelty on the part of the Mermaid Theatre, and that institution began proceedings at the Great Queen Street Theatre on Monday with a

revival of Mr. Sydney Grundy's 'The Late Mr. Castello,' first seen at the Comedy in December, 1895.

AFTER innumerable postponements, the date of the reopening of La Scala Theatre by Mr. Forbes Robertson remains undetermined, and the date of the first performance of 'The Conqueror,' by Mr. R. E. Fyffe, is now said to be the 23rd or the 28th.

IN spite of the postponement until the 16th of the reopening by Mr. and Mrs. Kendal of the St. James's, originally fixed for this evening, the beginning of the autumn season has been unprecedentedly bustling. Among the members of the original cast of 'Dick Hope' when given on November 20th, 1903, who will reappear, are, in addition to Mr. and Mrs. Kendal, the author, Mr. Ernest Hendrie, who resumes his part of a curate, Miss Mary Jerrold, and Mrs. Tapping.

MISS FANNY BROUGH will produce at Terry's Theatre on Tuesday Mr. R. V. Harcourt's comedy 'An Angel Unawares.' At the close of her tenure, which expires with the present year, the house is likely to pass into the hands of Mr. James Welch, who proposes to make thereat his first essay in management.

A ONE-ACT play by Mr. Albert E. Drinkwater, the title of which is as yet withheld, is in course of rehearsal by Mr. John Hare for production in the country.

'JOSEPH AND HIS BRETHREN,' a Biblical play, is promised at the Coliseum on the 25th inst. It will be a characteristic exercise of the Censure if the right to produce plays on Scriptural subjects, withheld from the theatre, is conceded to the halls.

M. RENAN'S work 'L'Abbesse de Jouarre,' adapted for the stage by M. Henri Bataille, will be produced at the Odéon, in Paris, during the winter.

MISCELLANEA

WAS JEAN PETIT A FRANCISCAN?

4, Lawn Road, N.W.

THANKS to the courtesy of M. Omont, of the Bibliothèque Nationale in Paris, I have been able, I think, to clear up a point of some obscurity in regard to the position of Jean Petit, the apologist for tyrannicide in connexion with the assassination of the Duke of Orleans in 1407.

For a long time it has been believed that Jean Petit was a Franciscan friar, apparently on the strength of his having been buried in the church of the Grey Friars at Hesdin; but as his memory has become odious to our modern way of thinking, there is a general tendency to disown connexion with him, and a closer examination has shown that, after all, it is very difficult to prove that he was a member of any religious order at all. To this conclusion, however, one formidable obstacle still remained. For in an official document published by his namesake, M. E. Petit, in 1888, he is called "Maistre Jehan Petit *cordelier*" ('Itinéraires de Philippe le Hardi et de Jean Sans Peur,' p. 693).

It seemed, therefore, as if there were no more to be said. But, at my request, M. Omont has kindly consulted the original document from which the above quotation is taken, only to find that the word *cordelier* is not there, but that the words should be "Mre. Jean Petit, *Docteur en théologie*."

This curious fact may be of interest to those numerous Franciscan scholars who are jealous for the honour of their order. It is also a curious confirmation of the value of the homely old rule—verify your quotations.

LITERATURE

The Far East. By Archibald Little. With Maps, Diagrams, and Illustrations. (Oxford, Clarendon Press.)

IN this admirable work an authentic account is given of that tract of the earth's surface to which in these columns we have sometimes ventured to give the name Sinesia—the Far East, that immense Asiatic region which nature has isolated from the rest of the world by deserts, mountains, and seas. The dwellers in these vast lands have seconded the efforts of nature, and in the main preserved their isolation up to the middle — in part up to the close — of the nineteenth century. Within their boundaries lie the twenty-two provinces of China proper; the four existing dependencies of Manchuria, Mongolia, Turkestan, and Tibet; the former dependencies of Indo-China and Korea; the "buffer" kingdom of Siam; and the island empire of Japan; and of all these countries, Japan not excepted, the initiatory, and still basal, civilization is wholly Chinese in character. Though historically among the oldest of civilized lands, the greater part of this wide territory is among the most recent of geological constructions. Even the Himalayas, their south-western boundary, are of Tertiary age; and between their northern slopes and Yarkand, in Turkestan, the very centre of Central Asia, the stratified remains of *Zostera marina* and other seaweeds prove the existence of an ocean which was probably in communication with the great inland sea of Europe. Within these limits every variety of soil and climate is to be found — vast deserts, immense ranges of lofty mountains, rivers of enormous length and volume, rich pastoral steppes, and an infinity of fertile valleys. But the race of men is for the most part of a homogeneous character, the Mongoloid type everywhere prevails, uninflected monosyllabic or monosyllabo-agglutinative languages are spoken, and we find one literature, one model of civilization on the whole, even one religion prevailing. That literature, that civilization, is Chinese; even the Buddhism which rules the minds of men more or less from the Himalayas to Sagalin is of a sinicized character. But Sinesia, isolated from Greece, Rome, and Judæa, became the victim of unprogressive deduction; the lack of intelligent observation of the facts of the world arrested all development as soon as the modicum of truth contained in the ancient formulas which swayed the course of affairs was exhausted. Now, through Japan, the West has made a definite breach in Sinesian exclusiveness; even China is assuredly following, after a more deliberate and very possibly even more successful fashion, the example of her island neighbour. The moment is, therefore, more than usually happy for the appearance of a work of this character, and if we may congratulate Mr. Mackinder on the suggestion, we owe still greater thanks to Mr. Little for the preparation of this important and authoritative survey of the geography, history, position, and outlook of more than half (exclusive of India), and that by far the more interesting half, of the Asiatic continent. The style of the book is everywhere lucid, its thought is everywhere original and stimulating, and even the dry geographical details are vivified by their connexion with human history. In a word, the volume, which is amply furnished with carefully prepared and most instructive maps and diagrams — the latter are particularly informing—supplies a key to the problem which the Far East offers at the present moment to the attention of the West.

Our review must be mainly illustrative of the principal lines of treatment adopted. The volume opens with a description of the eighteen (more properly the twenty-two) provinces of China itself. These are arranged in three categories: those constituting the northern basin, watered by the Yellow River; those which make up the middle basin, of which the principal river is the Yangtse; and the provinces of the south, drained by the Canton River. These streams all flow eastwards from the hill ranges that form the western boundary of China, from the vicinity of which the great Irrawaddy flows for more than a thousand miles almost due south into the Indian Ocean. China proper, as one of the diagrams shows, is larger than all the Teutonic and Latin lands of Europe put together; the Chinese empire is nearly half as large again as the United States (excluding Alaska). In the one western province of China, Szechuan, the whole of France might be easily included. According to the diagram on p. 6, the whole of India proper might be twice at least placed within the limits of the Chinese empire, including Tibet. All the lands watered by the Yellow River and the Yangtse are populated at the rate of over 100 to the square mile, and the great provinces of Hupeh, Kiangsu, Fokien, and part of Kwangtung have over 400 to the same area. With these data we may compare the rate of 455 per square mile which obtains in Great Britain. A few other figures may be interesting. Of China proper, the area is estimated at 1,350,000 square miles, and the population at nearly 380,000,000; the area of Dependent China at nearly 3,000,000 square miles, its population at 27,000,000. The area of the British Empire is taken at 11,000,000 square miles, more than double that of the entire Chinese empire, but the population is about the same —400,000,000. Of these enormous figures the significance is hard to grasp. The British Empire is spread over the world; that of China is continuous territory, though, of course, the latter possesses no such unity as the former. What might be the force of the Middle Kingdom, with its homogeneous population, homogeneous by race, habitation, and civilization, should railways remove this difference, it is impossible to calculate; but the calculation will have to be made within the next century, possibly within the next fifty, or even five-and-twenty years.

The northern provinces (six in number) are the most truly Chinese of all. It is here that Chinese civilization, whether wholly indigenous or brought by the Chows down the Tarim valley in the first or second millennium B.C., seems to have originated, perhaps owing to the fertility of the great loess deposits that form the characteristic soil of the upper basin of the Yellow River. Richthofen supposes that the loess consists wholly of dust which was blown by westerly winds from the great desert tracts, and

> "in the course of ages has filled up the valleys, smoothed over the rugged mountain formation, and deposited upon it a fertile loam many thousand feet in thickness."

The middle basin, the most extensive of the three, comprises on the whole the most fertile and populous provinces, and is served by the Yangtse, whose sources almost touch the drainage lands of the Irrawaddy in the far south-west. The great southern provinces were annexed to China by the famous Shih Hwangti in B.C. 216, the aboriginal inhabitants (of Indo-Chinese stock) being driven further south and replaced by military immigrations on the vast scale practised in the further as in the nearer East in ancient times. The Southern Chinese have been less influenced by Tartar immixture than their compatriots of the North, and speak the oldest form of Chinese yet extant. Among them the Miaotse, a remnant of the aboriginal inhabitants, have managed to preserve their existence. More purely aboriginal still are the Li of the island of Hainan, which supplies the Hongkong market with swine, but was formerly celebrated for its pearls.

Of the dependencies, by far the most important is Manchuria, now happily rescued from a stupid tyranny. Its area is 280,000 square miles, and its population 21,000,000. Its summer is hot and damp, fostering magnificent crops—its winter is cold but sunshiny. The soil is largely that black loam which gives so wonderful a fertility to Canadian North-West lands. The Manchu have almost disappeared, the language is hardly known, and ways and words throughout the "three

eastern provinces" are Chinese. Yet in the seventeenth century they overthrew the Ming dynasty, and in 1644 the grandson of Nurhachu, lord of but a few hundred warriors who dwelt on the western slope of the Long White Mountain, ascended the throne of Peking. The present Chinese dynasty, the Ta-tsing, is, indeed, the third that Manchuria has given to China; more, the very name of China (Cathay—Kitai the Russians still call it) is derived from that of the Kitan Tartars, who in the tenth century founded the first Manchu dynasty. Of the Dependency of Mongolia (three times the size of Manchuria) the interest is chiefly historical. Its population is about two millions of pastoral nomads, who spend their lives wandering over the upland steppes. Yet at one time populous cities existed in it, long since buried under the ceaseless clouds of wind-blown sand. One of these was Shang-tu, where Marco Polo saw the Khan riding

"through the park with a leopard behind him on his horse's croup; and then if he sees any animal.....he slips his leopard at it."

The Mongols became Lamaist Buddhists some five hundred years ago. Their hero, Genghis Khan, and his successors occupied the Chinese throne in the thirteenth century, but were expelled by the Chinese Ming in 1368. Mongolia was not brought into complete subjection to China until 1756. When the railway now in contemplation is built it will be found "that there is more in Mongolia than the desert of Gobi."

Chinese Turkestan intervenes between Mongolia and Tibet. It comprises about half a million of square miles, and was added to the Chinese empire by Tso Tsung-tang in 1877 in the course of the great war against the successors of Yakoob Beg. It is mostly a high tableland, but lower than the Mongolian plateau to the north and that of Tibet (15,000 ft.) to the south. This depression is drained by the Tarim river, the source of which, according to Richthofen,

"is girt by a semicircular collar of mountains of the loftiest and grandest character, often rising in ridges of 18,000 and 20,000 ft. in height, while the peaks shoot up to 25,000 and even 28,000 ft."

It was through the deserts of Turkestan,

"from the days of the Roman Empire up to the time when the sea-route to China was opened up by the Portuguese navigators in the fifteenth century, that the one road of communication between the western and eastern extremities of the Eurasian continent lay."

Along this road passed Marco Polo in the thirteenth century, and here (in Dsungaria) lived "the semi-mythical Prester John of mediæval travellers."

The above must suffice to show the nature and quality of Mr. Little's book. His treatment of Tibet and of Indo-China is, of necessity, somewhat superficial. Of Korea and Japan he has nothing particularly new to say, but of both countries a capital geographical survey is given. Of Formosa, too, an interesting picture is presented. The contrast between the Japanese and Chinese, which Mr. Little finds so "extraordinary," is far from being so great as is commonly imagined; and what exists is due to local conditions and historical influences, rather than to causes of a different character. It is a pity that travel in China cannot be made more comfortable and less expensive. Those who know not the Yangtse, the Min, and the Canton rivers have no idea of the loveliness and grandeur of Chinese scenery, beyond anything to be found in Japan, nor of the colour and picturesqueness of village and town life in true China, away from European influences, which have departed in large measure from the deep valleys and hill-girt plains of the Dawnland. Canton alone is wealthy in variety and interest beyond, probably, any other Eastern city in the world, as the readers of Archdeacon Gray's delightful book may learn without crossing the seas. Mr. Little might well have added a few words of advice as to travel in China, an art of which he is, and long has been, a past master.

The Principles of Economics: a Fragment of a Treatise on the Industrial Mechanism of Society, and other Papers. By the late W. Stanley Jevons. With a Preface by Henry Higgs. (Macmillan & Co.)

THE publication of this volume, the unfinished work of Prof. Jevons, on which he was labouring when his untimely death occurred in 1882, increases our feeling of the loss which the study of economics has suffered through his removal from among us.

More than most other studies, economics has suffered greatly in recent years through the death of its ablest teachers at periods of their lives when much excellent work might still have been expected from them. We need only recall the names of Bastiat among French economists—of Cliffe Leslie, of Bagehot, among our own; in a different walk, of Dudley Baxter, and again, of Henry Sidgwick, whose calm and equable judgment would have been specially valuable at the present time.

Fragmentary, incomplete, as this volume is, lacking in all those finishing touches which impart grace and symmetry to the roughly sketched form, it stands out as the monumental work of a really great thinker. The subject — an attempt to describe the structure of society—had occupied the mind of Jevons from a very early date. A rough memorandum found among his papers records what he had desired to do, and the length of time the subject had been under his consideration:—

"The completion of this work will be to me a time of great satisfaction. It will be in reality the completion of a thirty or thirty-five years' work. It was in 1851 that I first began, at the age of sixteen, to study the industrial mechanism of society."

In working thus Jevons desired to break up new ground and to describe social life from an economic point of view. To his task he brought his great natural gifts and his habits of steady work, both which rendered him especially suited for it. As Mr. Higgs most truly says of him in his preface:—

"Alert, original, exact, profound, he brought to the study of economic theory a mind trained in the processes of logic and of mathematical analysis, while his powers of observation and co-ordination were quickened by a large acquaintance with the principles and the details of natural science."

A few remarks on the contents of the volume will be a help to the reader, who will be struck with the ample knowledge of the writings of foreign economists possessed by Jevons. This enabled him to supplement in various ways the omissions of some of our principal English authorities. Thus he notices the care with which the French economists, almost from the very commencement of the study of political economy, have placed a chapter on 'Besoins' at the beginning of their treatises:—

"Utility is plainly the subject matter of economics from beginning to end. It is the Alpha and Omega of the science, as light is of optics or sound of acoustics. The real basis of the science must then be an investigation of the circumstances in which utility arises. This amounts to a consideration of human wants. A thing is useful to us when we want it, and only when we want it."

Following up this idea, Jevons proceeds to a definition of wealth. He is thus brought at once into an interesting analysis of the manner in which the subject was approached by J. S. Mill, and here, again, we find ourselves met by the difficulties arising from the gaps in the work, and the consequent absence of the continuation of the investigation intended in it.

The opportunity of the appearance of this volume has been taken to reprint some of Jevons's smaller economic papers, as he himself had thought of doing. His very ingenious essay on Richard Cantillon and on the Match Tax proposed by Robert Lowe, afterwards Lord Sherbrooke, and also some very interesting notes on the pressure of taxation, are thus included.

There is also a thoughtful paper on the future of political economy. In an early passage in it the following very striking remark occurs: "There is certainly less agreement now about what political economy is than there was thirty or fifty years ago." This remark might be made with as much truth at the present day.

We may obtain from the volume an idea of the subjects which occupied Jevons's thoughts as his mind matured. We find him saying:—

"If such a thing is possible, we need a new branch of political and statistical science which shall carefully investigate the limits to the *laissez-faire* principle, and show where we want greater freedom and where less."

Again and again he returns to the subject. Thus:—

"It will not do in a few sweeping words to reassert an old dictum of the last century, and to condemn some of the greatest improvements of the time because they will not agree with it. Instead of one dictum, *lassez-faire*, *laissez-passer*, we must have at least one science, one new branch of the old political economy. Were time available I might go on to show that this is by no means the only new branch of the science needed. We need, for instance, a science of the money market and of commercial fluctuations, which shall enquire why the world is all activity for a few years, and then all inactivity; why, in short, there are such tides in the affairs of men."

The "modernness" of thought shown in Jevons's mode of handling his subject strikes

one throughout. Had the dates recorded not reminded us that the book is some quarter of a century old, we might have believed it was written during the last year or so.

Full of interest as the volume is, it is scarcely possible to attempt any critical examination of this unfinished work, and yet the evidence of the extreme simplicity of Jevons's habit of thought—a simplicity only to be found in conjunction with really high mental power—continually induces the reader to study it again and again. We gather from the list of chapters which were to have been written that not half the volume was even drafted out in the roughest manner. Probably much that is already printed would have been greatly revised before it appeared, and yet, imperfect as it is, the careful student of economics will lose a great deal if he does not master this volume.

The work of preparing it for the press has been the object of sympathetic devotion on the part of the editor, Mr. Higgs. The "Fragment," he tells us, "was first prepared for the press by the loving care of Prof. Foxwell and Mrs. Jevons." After they had carried the preparation as far as they could, the printed slips were some years since entrusted to Mr. Higgs. He has done his duty in the most careful and conscientious manner, endeavouring to complete the references to the works consulted by Jevons, and also to arrange the fragments in the manner which would render them most easily intelligible. The reader who turns over the volume and observes the number of references at the foot of the page will form some idea of what this labour must have been, and will not wonder that many of the twenty-three years which have elapsed since the death of the author have been needed to bring this work into the shape in which it now appears. The time has been well spent, and on behalf of those who appreciate the work of Jevons we desire to express our sincere thanks for what has been done.

The Scenery of London. Painted by Herbert M. Marshall. Described by G. E. Mitton. (A. & C. Black.)

The Londoner has always been proud of his city, and the poets from Chaucer downwards express the general feeling of Englishmen in its favour. It was styled "lovely London" in the Middle Ages, but by the eighteenth century it had lost much of its beauty—had, indeed, grown ugly. Now, although we have lost and are losing much of antiquarian interest, we have regained a little by opening up vistas in some of our streets. Few finer views can be seen than that in the Strand looking eastwards from the end of Southampton Street. The lowness of the houses in many cases had given a poor appearance to the view; but now we have gone to the opposite extreme, and the great height of the houses in the Strand bids fair to dwarf the churches in the middle of the road.

It is only of late years that the Londoner has awakened to the fact that London is beautiful, and even now the idea that there is scenery in London will be novel to most readers. Messrs. Black have added to their series of "Beautiful Books" a volume in every way worthy of it, and Mr. Herbert Marshall's series of drawings, taken from the most advantageous points of view, goes to prove the truth of the contention contained in the title of the book.

Although we know that London atmosphere is not altogether grey, we cannot say that we were at all prepared for the glowing effect in Mr. Marshall's drawings. Where all are beautiful it is not easy to choose some for special praise, but we may say generally that, as might be expected, the river views are the most interesting. All phases of meteorological change are shown in them, and the very atmosphere of the streets is represented for us, so that the artist helps the slower sight of the ordinary man to see a beauty which long acquaintance has made too familiar to him.

One of the chapters of the book is devoted to the colour of London, a thing which the Londoner often overlooks. Turner saw effects in London that no one had seen before, but he made us see them in the end. Later Whistler revelled in the effects of London streets and London colour.

Miss Mitton has well assisted the artist in presenting to the reader some key to the undoubted charm of London. She is very severe upon Heine, whose description of our city she considers both offensive and inaccurate, but we must remember that the beauties of London grow upon the sightseer, and seldom reveal themselves at first sight.

Among the subjects of the chapters are 'London as a Piece of Mosaic,' 'Circle of Associations,' 'Name Associations,' 'Common-Place Scenes,' &c. The author, in dealing with associations, chooses as representative Londoners Chaucer, Spenser, Milton, Johnson, and Dickens. It is a good selection, although we should like to add a few others—in particular, one who was the greatest Londoner of them all, Hogarth.

The eighteenth century was, perhaps, the most interesting period in London history. The men and women of that day had their special faults, but they knew how to enjoy life by association with one another. We deny that the London of Johnson's time, as the author says, was "below the level of some sleepy old provincial town of our own day." It was then really as full of life as it is to-day. In the chapter on names there are some interesting notes, but the tracing of such things to their origins is attended with difficulties. To notice one instance, there is the etymology of Bayswater from Baynard's Watering, a place marked in old maps as situated on the north side of Hyde Park. It is true that Baynard of Baynard's Castle was a tenant of the Abbot of Westminster, and possessed "a common field at Paddington"; but we strongly suspect that "Baynard" is merely a mistake for "Bayard" by some seventeenth-century would-be philologist, for it is but natural to give a pond where horses were taken to water the generic name of the horse—Bayard's Watering. This will explain the non-existence at any time of an *s* in the name Bayswater.

We hope that we have said enough to indicate that both artist and author have succeeded in producing what is a real addition to the literature of London. It will be a constant pleasure to the possessor of the book to look at the pictures again and again, and where these differ from his own impressions he can attempt an impartial opinion as to which is right.

Zulu-English Dictionary. By the Right Rev. J. W. Colenso, D.D., LL.D., Bishop of Natal. Fourth Authorized Edition. Revised and Enlarged. (Pietermaritzburg, Vause & Slatter.)

The study of the Zulu language does not date back beyond the year 1840. W. B. Boyce, in his preface to Archbell's 'Sechuana Grammar' (1837), speaks of "the Amazulu" very much from hearsay; and, indeed, few Europeans had up to that time come in direct contact with them. The Wesleyan and Glasgow missionaries had done good work in Xosa ("Kafir"), some of which was in print when the above was written; but, though identical in grammar, Zulu is so widely different in its vocabulary that those who first heard it spoken might well consider it a distinct language. Lewis Grout, in the preface to his grammar 'The Isizulu' (1859), says that, before leaving America in 1846, he could find no aids to the acquisition of the language beyond "a few Kafir words from the writings of travellers, in defective orthography, and a few remarks and examples in Kay's 'Researches.'" In South Africa itself the state of things was not much better:—

"Arriving here, I.....found a brief grammatical outline prepared by Dr. Adams, amounting to some three or four dozen pages in manuscript, which, with Boyce's 'Grammar of the Kafir Language,' was all that could be found, at that time, in Natal."

The linguistic labours of the Norwegian mission resulted, in 1850, in the publication of Schreuder's 'Grammatik der Zulu-Sproget,' for a long time the only text-book available, and that, owing to the language in which it was written, only in a limited degree. A translation made by Miss Grote, of Trumpington (of which the MS. still exists in the Grey Library at Capetown), was the basis of a tentative grammatical sketch drawn up by Colenso for the use of his own mission party after his preliminary visit to Natal in 1854.

The controversies connected, first, with his work on the Pentateuch, and secondly, with the ecclesiastical position of the Natal bishopric, have tended to obscure the services rendered by Colenso to linguistic study; but they are nevertheless great and lasting. All his works in this kind had some immediate practical end in view; they were designed either for the use of Europeans desiring to learn Zulu, or to meet the requirements of natives who had learnt to read their own language. That they were admirably adapted to their purpose is shown by the continued popularity of 'Inhlanganisela,' 'Umzimba Ozwayo,' and the version of the 'Pilgrim's Progress' ('Ukuhamba Kwesihambi'), which are not

only used as school-books, but also read and listened to with interest by natives all over the colony. These translations, by following the only sound method in such cases—that of constant reference to native authority—have avoided the dangers which beset the well-meaning European ambitious of creating a vernacular literature. Moreover, the two elementary reading-books (still used in mission schools) contain a large amount of genuine native material, and are, therefore, exceedingly useful to the philological student. Between 1855, the date of his settling in Natal, and 1860 Colenso had prepared a Zulu grammar ('First Steps in Zulu Kafir,' 1859; a fourth edition appeared at Pietermaritzburg in 1903); the 'Dictionary' now before us, of which the first edition was published in 1861; and versions of some books of the Old Testament, with the whole of the New. All these were printed by the mission press at Bishopstowe.

A small Zulu-English dictionary, of about 6,000 words, the work of James Perrin, was produced under Colenso's care in 1855; but the first complete one was Döhne's, which saw the light in 1857. Its author went to Natal, where he worked in connexion with the American Board of Missions, in 1847; but he had previously spent ten years among the Amaxosa, in what is now Cape Colony. This book is out of print.

The second edition of Colenso's 'Dictionary' appeared in 1878, with considerable additions and corrections, and an appendix containing a large number of Zulu proverbs, some of them reprinted from *The Natal Colonist*. This seems to have been virtually reprinted in 1884, making the present edition the fourth.

Colenso's preface, which is reproduced in the new edition, raises several interesting questions which have not yet been settled. Thus:—

"There are double sounds of the letters *b*, *p*, *g*, *k*, *d*, *t*, which at present we have no means of expressing, corresponding to the double sounds of the same letters in Hebrew, according as they are written with or without Dagesh. This accounts also for two very different meanings being sometimes assigned to the same form of word: as *tenga*, 'sell,' *tenga* (*t* Dageshed), 'waver.'.....There appears also to be a medial sound between *b* and *p*, *g* and *k*, *d* and *t*, so that it is difficult at times to decide [under which of these letters] to register a word."

It does not seem certain whether these sounds are identical with those described in Swahili as "explosive *b*, *p*," &c. The Rev. A. Hetherwick has adopted the spelling *ph*, *kh*, *th*, to mark similar sounds in Nyanja (*phala*, *khoswe*, *thupi*). Miss Colenso remarks that "Dinuzulu has urged that 'several more letters' are required to complete the Zulu alphabet," and that the plan of inserting *h* after mute consonants does not give a really satisfactory notion of the sound. It seems clear that what is needed is the application to Zulu of a really scientific system of phonetics, such as that of Prof. Vietor.

We have sometimes heard it remarked that Zulu and its cognate languages are destined to perish within a generation or two, giving place to English. Were such a consummation indeed inevitable, we should regard it with unfeigned regret; one need be no faddist to deplore the loss of a rich, harmonious, and flexible idiom, which, if as yet without a written literature, has capabilities hardly to be estimated at present. But more important still than this is the injury done to a people deprived of the natural medium for the expression of their thoughts, and restricted to the use of one which, however excellent in itself, can never supply the place of their own. It is too often forgotten by enthusiastic advocates of English as a universal language that Latin, as a living speech, could maintain no pretence of uniformity when spoken beyond the bounds of Italy. English, unless relegated to the position of a dead language, would break up into as many fresh ones as there were nationalities using it; indeed, it has already, in the Southern States of America, been transformed beyond recognition. Zulu, like several other Bantu tongues, has a great future before it, though it is no doubt destined to undergo considerable transformations in the course of its development, and to assimilate a large amount of European material. This process it is neither possible nor desirable to check; but there is a wilful debasing of speech against which Miss Colenso utters a much-needed protest:—

"I believe that a fine language like the Zulu is a valuable possession for the country, and that the debasing of it into an ungrammatical mixed lingo, only half understood on either side, which is now going on, is a positive evil.....Hybrid words must, of course, arise wherever two or more vigorous races begin to live and to work together (has not the English tongue been so built up?), and I have recognized this need by appending to the 'Dictionary' proper a list of some of those words now in common use by natives in Natal. But 'kitchen kafir' proper is another thing."

Two specimens are then given, of which we may quote one for the edification of linguistic students:—

"Hamba down to lo spring and tarter manzie and cadan stir up the bottom and if you don't make plenty checher I will bularler your scope with this here bit of kuney."

We may add that we can identify all the words in the above, with the exception of *cadan*, of which we can make nothing, unless some connexion with *ga* or the negative particle *ka* is to be conjectured; and *scope*, which appears to mean "face" or "head," but the exact word intended remains obscure.

The fourth edition, from the preface of which we have just been quoting, contains a large number of additional words, illustrative sentences, and notes—see especially under *amuleka*, *belu* (*im*), *benguza*, *nobongo* (*u*), *Nkosinkulu* (*kwa*), *tshopi* (*um*), &c.

As above stated, a number of words (some of which in former editions were included in the body of the 'Dictionary') derived from English, Dutch, &c., are given in an appendix. Some of these have undergone most curious transformations in form or meaning. *Ikeli*, for "a postal address," seems utterly unaccountable, till it is explained to be derived from "care of"; and *olayita* from "all right," meaning "reckless, devil-may-care fellows, hooligans," requires some reflection. We notice that *imali* is said to be derived from the English word "money" (see p. 335, where it is given, as well as in the appendix); this seems a little doubtful, as Döhne says that the word originally meant property in cattle, and was so used before intercourse with Europeans became general; its application to "money" in our sense was only a secondary use. We may add that *mali* is "property, wealth," in Swahili. Mr. Madan sets this down as an Arabic or, at any rate, a non-Bantu word; but we find it also in Ronga (Delagoa Bay), where, however, it appears to be a plural of the *di-ma* class. The point is worth elucidating. In connexion with this question of borrowed words, we may point out that *bakela* (*s.v.* p. 16) may perhaps be the Dutch *bakkel* (*bakkeleien*), which is probably of Malay origin, and means "to fight." See Mansvelt, 'Proeve van en Kaapsch-Hollandsch Idiotikon,' p. 12, and Hesseling, 'Het Afrikaansch,' p. 90.

In a work of this kind it is impossible to avoid occasional mistakes, in spite of the greatest vigilance; and it is not surprising to find that the list of errata on p. xiv does not exhaust them, though we are bound to say we have noticed none of real importance. On p. vi of the preface the reference to "paragraph xxix." should obviously be "xxviii."

Étude Comparée de la Versification Française et de la Versification Anglaise: l'Alexandrin et le Blank Verse. Thèse pour le Doctorat d'Université présentée devant la Faculté des Lettres de l'Université de Grenoble. Par Thomas B. Rudmose-Brown. (Grenoble, privately printed.)

Few poets, English or French, are ever likely to master this treatise on versification, written in French by an Englishman, with a full understanding of his subject in the abstract, and of the individual genius of each language. But then are treatises on versification written for poets? Is there anything in them from which poets could ever hope to learn much? They are sometimes, it is true, written by poets, who in this way try to reason out for themselves and for one another what has come to them by no act of reasoning. In the main books like this are learned curiosities, to be valued as such; not for any practical use in helping poets to write well, or readers to read sympathetically. Their chief use, when they are full of wise pedantry, is to demolish the foolish pedantry of earless and long-fingered critics, who are sometimes able to discredit a beautiful verse by giving it an ugly name. Such books are useful defences or counter-blasts against this kind of critic when he talks of iambics. Their legitimate service is when they prove that the great poet was right when his line shocked the little critic; that there is no such thing as a poetic licence or an invariable rule; and that though an art is not a science, it can be examined by science and found very good.

We are glad to find that Mr. Rudmose-Brown, who seems to be a strictly scientific person, gives the first place among English studies of versification to Coventry Patmore's remarkable 'Essay on English

Metrical Law,' in which a learned poet explained and interpreted some very difficult secrets of his art. Two other poets, Sidney Lanier and Mr. Robert Bridges, are seriously considered in these pages; and then some theoricians, English, French, German, and, one in particular, Swedish—Fredrik Wulff, on whose book, 'Om Värsbildning,' much of the author's theory is based. A good deal of his book is taken up with a consideration of all these theories, though, the writer assures us, "je n'ai critiqué les théories d'autrui que pour mieux démontrer en quoi consiste l'originalité de la mienne." And, indeed, apart from a certain air of infallibility, apparently natural to those who deal in numbered demonstrations, there is nothing uncourteous or combative in this examination. Each theory is given a fair hearing, and is considered from a fixed point of view. From each theory is taken, quietly and reasonably, whatever it has to lend. And throughout, though no room is allowed for anything but the closest argument, there are indications, in the choice of specimen lines, in the passing references, to Charles Morice, to Mr. Yeats, and the like, and in the singular tact with which the problem of *vers libre* is treated, of more than a merely theoretical acquaintance with and interest in the questions dispassionately debated.

"Le but de ce travail," we are told in the opening words of the introduction,

"est l'application d'une théorie générale de la versification et d'une théorie spéciale du mètre à l'étude comparée de la versification française et de la versification anglaise, et à l'élucidation par cette méthode de divers problèmes relatifs aux mètres principaux des deux langues, *l'alexandrin* et le *blank verse*."

The fundamental idea of the book is that verse should not be scanned by syllables, but by groups of syllables, and that in these groups of syllables should be included the natural pauses which accompany them. The quantity of syllables depends on accent, and is in direct ratio to it. Accent is defined as "psychological relief":—

"L'accent est équivalent à l'importance psychologique. Les syllabes qui ont plus de relief psychologique sont les plus accentuées."

"La phrase forme ainsi, en prose comme en poésie, un dessin rythmique composé de groupes accentuels plus ou moins longs séparés par des pauses plus ou moins longues; dans lesquels, sans qu'on tienne compte du ton qui monte ou qui descend, certaines syllabes 'ressortent' plus que d'autres, celles dites plus ou moins accentuées."

"L'ictus sert à mésurer la division en périodes égales de temps.....Le mètre est donc un arrangement spécial des éléments rythmiques. .....Le rythme et le mètre sont deux entités distinctes. Le mètre ne doit pas dénaturer le rythme.....C'est par la bonne accentuation grammaticale et éthique (comme s'il s'agissait de la prose élevée) que le mètre se fait valoir, non malgré elle."

Applying this general theory of versification to English and French verse, Mr. Rudmose-Brown distinguishes the different kinds of verse by their syllabism or non-syllabism, and by their metrical or rhythmical arrangement. He exposes the absurdity of measuring English verse on the classical theory of feet, and defends the legitimacy of French *vers libres* by explaining the principles (rhythmical rather than metrical) on which they are constructed. The pages on *vers libre*, from p. 166 onward, are among the most valuable of the book, and give for the first time a satisfying explanation of a form of verse which even Frenchmen are often unable to understand or to accept.

Mr. Rudmose-Brown has worked out and applied his theory with admirable minuteness, and his book deserves careful and consecutive study. It is not easy reading, and it is complicated by the different and actually contradictory terminology employed by different metricists, especially the confusion between metre and rhythm. What Mr. Bridges, for instance, calls rhythm, *i.e.*, metrical movement, our author more logically calls metre, reserving the term "rhythm" for what he calls "l'élément psychique." He contends—not for the first time, but more persistently than any one else—that "l'élément psychique et l'élément métrique dans le vers sont tous deux absolument inviolables," and thus that every violence done by metre to rhythm—by the verse, that is, to the proper articulation of the phrase—is itself a derangement of metre, which can only subsist harmoniously when it is in real, though not always obvious agreement with it. And he is able to justify many apparently irregular lines by showing how the rhythm, spoken naturally, with the pauses natural to articulation, fills up, with pauses as well as with syllables, the full metrical time.

There is much controversial matter in the book, and there are many startling assertions, as, for instance:—

"Dans le blank verse moderne, comme dans l'alexandrin moderne, la pause finale n'est pas obligatoire.....Dans l'alexandrin moderne la césure également n'est pas obligatoire."

The whole question of the alexandrine, with the Romantic modifications of its end and middle pause, is discussed from a point of view which cannot fail to disconcert those who still listen for the cadence of Racine in the verse of Francis Jammes. The structure of syllabic and of non-syllabic blank verse is clearly discriminated, on a principle which seems to be largely new, and the theories of Mr. Bridges and of Mr. Stone as to the quantity of words in English are vigorously, and, it seems to the present reviewer, successfully, disputed. The treatment of that free, unsyllabic verse, flexible to all the rhythms of the mind, which in recent times has developed out of the already liberated alexandrine, is singularly explicit:—

"La disposition en vers d'un poème peut être rythmique ou métrique: la ligne de vers libre est une unité rythmique; le vers alexandrin et le vers de blank verse sont des unités métriques."

There we get what is essential in the difference stated clearly; and with what novel truth are we reminded that just as in blank verse and the alexandrine, with their strictly metrical scheme, no pause is required at the end of the lines, so in *vers libre*, which is divided into verse wholly by the rhythm, such a pause is required (a pause which may well be accentuated by rhymes), and

"le poète peut ainsi indiquer clairement les pauses demandées par *l'éthos* de la phrase en coupant cette dernière aux endroits convenables par une fin de vers."

We have indicated only a few of the points in the writer's patient and elaborate argument; all demand consideration, many are convincing.

NEW NOVELS.

The Patient Man. By Percy White. (Methuen & Co.)

MR. WHITE'S story has its obvious merits. The plot is cleverly constructed, and is developed in a workmanlike way. The heroine is well drawn, and most of Mr. White's people may be said to be alive. Nevertheless, the theme is distinctly unpleasant. The heroine, who is an innocent girl, discovers that her mother has been the mistress of several men, to one of whom the heroine is married soon after the beginning of the story. This motive has been used by Guy de Maupassant. It was unpleasant even in the hands of the great French story-teller. It is still more unpleasant when treated by Mr. White. The hero of the book is its chief failure. He is intended as an example of sublime magnanimity, but it is probable that most readers will be more impressed with his want of common sense in the selection of his wife than by his magnanimity. Mr. White gives out his prizes at the end of the book with the utmost impartiality. Every one is made happy, and even the chief villain is presented with an American heiress with ample means to enable him to live riotously for the rest of his days. Nobody to whom Mr. White introduces us ever seems to have heard of the existence of a God, except as a convenience for swearing. The heathenism of all the men and women here might be paralleled in Central Africa, provided there is still a Central African tribe that is ignorant of missionaries. It may be doubted if this is quite true to life. Among the eight or ten persons who take part in Mr. White's story, surely there must have been at least one or two who believed in a life beyond the tawdry, sordid, and vulgar existence that most of them led. People realize that the professedly religious novel is often as untrue as it is tedious. What they fail, however, to perceive is that the utterly heathenish novel is at least as untrue, though it may escape the charge of tediousness.

The Fall of the Cards. By R. K. Weekes. (Harper & Brothers.)

MR. WEEKES presents a hero who apparently possesses all the manly virtues, except the power to abstain from gambling. Startled by the sudden death of his father, he resolves never to touch a card, but the heroine tempts him to break his resolution, and then decides to marry him, as the only method of atoning for her fault. Discovering, a little later, that she loves another man, she breaks the engagement, but declines to marry her new lover unless he can cure the old one of his passion for cards. This the new lover fails to do, but when the discarded lover learns that his persistence in gambling stands in the way of his former *fiancée's* happiness, he

instantly reforms. It need hardly be said that Mr. Weekes's plot is improbable. It might also be said that his virtuous and noble gambler is as impossible as "Mr. Jack Hamlin" himself. But allowing for these blemishes, we have little fault to find with Mr. Weekes's story. It is admirably told, and interesting from beginning to end. The characters, with the exception of the impossible hero, and the rather conventional lover who succeeds him, are lifelike; and the tomboy "Willy" brings genuine humour into the book. Although it certainly is not written in the "American language," 'The Fall of the Cards' is apparently American in its origin. If so, it is decidedly one of the best stories that America has lately sent us. We may not believe unreservedly in the hero, nor find the heroine particularly sympathetic, but no one can fail to find the story unusually interesting.

The Cost. By David Graham Phillips. (Werner Laurie.)

THE atmosphere of this novel is so very American that it becomes almost difficult for an English reader to estimate it fairly. But it may be judged on its broad lines as an average piece of work from the sentimental point of view. We read, "Instead of entering 'senior prep,' Pauline was able to make freshman with only three conditions," and we are staggered on the threshold, until we remember, if we are just, that English academic colloquialisms may be equally disconcerting to American readers. Perhaps more interest will be aroused in the adventures of John Dumont on the Stock Exchange, and in the singular way in which he meets his death. He is a pretty bad figure of a man, and we do not much believe in him. This is the old, old story. A girl of eighteen marries a man without any knowledge of the world or of life or of herself, and has difficulty in keeping to a bad bargain, more particularly as she is quick to discover the man who would have made her a proper mate. But sentimental books do not as a rule end unsatisfactorily, and all 's well with the world ultimately. The author presents an illuminating picture of what the American is exposed to by his "Yellow Press." The petitioner in a divorce case sends to a newspaper the full details of the evidence given, with the result that the co-respondent's house is besieged by a crowd of inquisitive sightseers and "snap-shotters," and he has to get out of it by the basement. If this is not an effort of the author's imagination, it is lamentable.

The Ferryman. By Helen Mathers. (Methuen & Co.)

HELEN MATHERS has used this romance as a peg on which to hang her views as to the advisability of securing euthanasia in hopeless cases. Such views have long been ventilated in private, and the peg is of such skilled workmanship that, unadorned, it would have been a thing of beauty. Some readers may quarrel with our author in that at the end she appears to wish to retract her severe animadversions on doctors who will not release the suffering patient from this mortal coil; but we feel that the question is one of such difficulty that the wisdom of the ancients and moderns combined is not yet sufficient to solve it. Of plot there is little, the story dealing largely with Tom Shippon's success in gaining over Capt. Ravenal to his views on painless death, and the incidents which are the outcome, until Capt. Ravenal gives up his attempt to shorten the agonies of the incurable on two counts—first, the weaker plea that because he cannot do much he will not do little, and secondly, the higher plea that only a Divine Providence can know when a case is hopeless. We thank the author for sweetening life by the portrayal of such characters as Huldah and Jess, and commend the book to the attention of the more serious-minded.

The Man Who Won. By Mrs. Baillie Reynolds. (Hutchinson & Co.)

BEGINNING in the troublous period in South Africa at the time of the Boer War, the story passes to the peaceful dales of Cleveshire, and deals mainly with the evolution of full manhood and womanhood in Bert Mestaer and Millie Lutwyche. Unsparingly faithful in delineation is the portrait of the country parson who would insist on his family never looking over their own gatepost for fear of the world's contamination; but happily as true to life is the large-minded missionary in the remote Boer district, whose influence helps so greatly to mould the character of our hero. We close the book with regret, and a lively premonition that the sound of wedding bells ushers in no lengthy period of unrelieved monotony for so high-spirited a couple as Mr. and Mrs. Bert Mestaer. Though we do not doubt the author when she says that after three years the marriage was truthfully declared completely happy, we think the record of this period of initiation would be interesting.

The Marquis of Putney. By Richard Marsh. (Methuen & Co.)

THIS novel, dealing with the abduction of the heir to a marquisate, the subsequent vicissitudes of his parents, and the final ousting of the usurper, with the reinstatement of the rightful heir, will undoubtedly attract many readers. It is only left to the reviewer, jaded with the present plethora of sensational fiction, to regret that this should be so. But this is a reflection on popular taste, not on Mr. Marsh, who makes his sensation without degrading the English language.

Captain Sheen. By Charles Owen. (Fisher Unwin.)

WE cannot but advise Mr. Fisher Unwin, if he wishes this romance to find a sufficient harbourage, to sail it under other colours, bring out another edition in two months' time, and call it a boys' book. As a tale of sea adventure it has much to recommend it. Capt. Sheen, the burly villain who will stop at nothing in pursuit of derelict wealth, and his white-livered mate are well drawn, but boys, old or young, require a more full-blooded hero than the one provided.

TWO BOOKS ON RUSSIA.

M. GEORGES BOURDON gives us, under the title *La Russie Libre* (Paris, Charpentier), a most valuable book on the present constitutional movement in Russia. He is hopeful with regard to it. We much regret that we are unable to agree with him, and both wish that he should be read and desire that he should prove right. Not only are the facts all put before us, but also M. Bourdon states them for the most part in language of great eloquence. His portraits of the Emperor and of De Witte are literature as well as history: the rest of his fine passages are what the French term "plaidoirie," and distinguished rather by oratory of the spoken order than by the purer if less forcible style of letters. M. Bourdon boldly faces the peasant difficulty which we have stated in reviewing other recent books on Russia: "Let us hope that the Revolution will be accomplished without them"; "a monarchy similar to the monarchies of Europe." Yet the heading is "The Tsar restored by the people." Now the people are the peasants—there are few others. The peasants are in favour of the old Tsarism. Is the "autocrat" to let himself be turned into a constitutional king against his own wish, that of all his advisers, and that of virtually all his people, at the bidding of Whig landowners, who would be murdered at once if he ceased to protect them? M. Bourdon throws the blame for the recent war on the Emperor himself—"l'artisan de la guerre," for, although this phrase is put by him in the mouth of a Russian friend, and is not adopted by him, he proceeds to show that the creation of a Viceroyalty of the Far East with seat at Port Arthur was the Emperor's act, and the outward and visible sign of intentions which made war certain. M. Bourdon evidently thinks that De Witte will be the last resort of the autocracy: that this powerful man has no trace of Liberalism we agree. Where we differ from M. Bourdon is in believing, as we do, that by violence the autocracy can be continued. In other words, we think that De Witte might succeed. We also agree that, if not employed, he will be anxious to treat the Emperor as Thiers treated the Orleans family. Almost the only criticism of detail that we have to offer is that M. Bourdon regards Don Jaime de Bourbon, the son of Don Carlos, as a serious person, and quotes his letters as important. He went, no doubt, to Manchuria nominally as a Russian officer, but is, in fact, no more worthy to be listened to than any other unskilled correspondent.

Mr. Fisher Unwin publishes *Siberia: a Record of Travel*, by Mr. S. Turner, a volume of deep interest to all who make or trade in butter, and of some interest to mountaineers. Mr. Turner seems to be in the butter business, and also to have a pretty taste in climbing. He has taken and has used some excellent photographs, but he has not given us so good a book as could easily have been constructed from his notes; indeed, the advice of any friend might have done much. The Russian Consul in the north of this island contributes an introduction, which asserts that Russia has suddenly become "entirely European" and "a civilized European country," "thanks to the autocratic form of her Government." "Justice," he says, has been made "independent of the Government." One would think, to listen to this official—who will, doubtless, receive promotion—that secret arbitrary arrest and punishment have ceased. The author follows in the same line, and, showing little acquaintance either with European Russia or with the Russian tongue, attacks the English for ignorance of Russia. He would have done well to read the latest writings of Sir Donald Wallace or of M. Anatole Leroy Beaulieu, both friends of

Russia, and would have discovered that arbitrary arrest and exile are increasing since their "abolition." Mr. Turner even goes out of his way to attack the unhappy students: "those who have had the privilege of attending the magnificent universities, and who repay that privilege by defying the Government that grants it." He also declares, in the teeth of terrible facts, that political exiles in Siberia "are secure against being banished further into Siberia."

On butter Mr. Turner is sound, and with butter and ice-axe could have made an excellent book. Why should Siberia produce butter throughout the winter, and Ireland "only during seven months of the year"?—a question for the costly Agricultural Department. Why, too, should County Council butter experts often refuse to give prizes to hard butters, and insist on a "grain" which the best butters in the world do not exhibit? It is almost true that no first-class butter is made in the United Kingdom, and entirely true that where made it is not "up to sample" throughout the year, as is the case with the best foreign butters.

Mr. Turner has some innocent remarks upon the recent war: "The Russian nation was not prepared.....which goes far to prove that the Czar's desire for universal peace is sincere." Political criticism on the passage is not needed by our readers. If Mr. Turner knew Russia better he would hardly style the Emperor "Czar." Mr. Turner, who has the honour to be a fellow-subject of the officers and men of our Indian cavalry, declares of the Siberian Cossacks that they "are the equals of any cavalry in the world." Mr. Turner is so "green" that no more literary epithet is applicable in his case. He records in large type such incidents as the presence of a tin box with a small red cross, on the end carriage of a Siberian mail-train, in which letters may be posted. But this exact practice has been almost universal in France and Italy and Switzerland and Germany for many years, and is familiar to such young travellers as our shop assistants. He tells at length, as new, such ancient tales as that of the survival of Alexander I. He does not understand the double system of order on which the supply of horses from Russian post-stations is based. He describes as though peculiar to Siberia the watchman with his rattle, universal in the villages of the whole empire, and formerly universal throughout Europe. He does not seem to be familiar with grouse, for he twice compares the willow grouse of Russia with "our English partridge"; and, again, "These birds are vastly superior to partridges." "Our English partridge" is common in Siberia, and much eaten and esteemed there; but there is no room for comparison between the feathery-booted, juniper-flavoured birds of the grouse tribe and the partridge tribe. Many people, even in Siberia, much prefer kouroupatki. The ryabchik is very inferior to our grouse, which is, for that reason, imported to Petersburg and Moscow for well-kept tables. Many of Mr. Turner's observations are singularly trivial, as, for example, his statement that in the Baltic "a small bird, not unlike a duck in appearance, flies about in flocks; it is, however, too strongly flavoured with fish to be palatable." The "spear duck" is as common off Calais as in the Baltic. Dishonest tradesmen on our south coast scrape and file its bill, and sell it, plucked, for widgeon. Mr. Turner gravely tells his readers of Siberia that "the sparsity of the population is very noticeable—a thoroughfare like that of London Bridge being something undreamt of." He relates the conversation of the Swiss porter of the regular foreign hotel of Petersburg: "He introduced me to a Frenchman who told me that he was the first to discover the African pigmies." At Moscow "reminiscences..... crowded through my mind.....Napoleon's disastrous march and the heroic burning of the city." Mr. Turner, avoiding politics and descriptive writing about well-known scenes, should have stuck to butter and eggs, diversified by peaks and glaciers.

CLASSICAL BOOKS.

The Peace of Aristophanes. Edited, with Introduction, Critical Notes, and Commentary, by H. Sharpley. (Blackwood.)—This is a good, sound piece of work, which will be a real help to students of the play. A new edition of the 'Peace' has long been a want in this country; and it is refreshing to see one which, although not "monumental," aims at something more than the sixth-form boy cramming for a scholarship. Mr. Sharpley takes his task seriously, and has not neglected, though probably he has not exhausted, the work of continental scholars. The reviewer feels regret that one result of his studies has been capitulation to Dörpfeld and the no-stage party, and he recommends him research in the volumes of Frazer's 'Pausanias,' where several of the Dörpfeld theories are criticized. In the introduction we have the question of a second edition discussed. Mr. Sharpley, rightly we think, assigns the original performance of the play to 421; but this does not touch the question of a second edition, for which there are two pieces of direct evidence, and two only, all other alleged arguments being answerable. The matter remains doubtful; but it should be remembered, as Mr. Sharpley himself says, that Aristophanes may have composed another play of the same name. The scenic arrangements of this play are a perplexing problem. Mr. Sharpley states summarily all the main views, and adds his own. We will grant that there must have been a higher level to represent heaven, and probably that Trygæus and Hermes remain aloft from l. 234 to 736. We think that the roof of Trygæus's house probably served for the floor of heaven; just such a scheme, where a man steps out of his door upon his neighbour's roof, must have been a familiar sight to Aristophanes, as we see it to-day in many a mountain village in Greece. That would also add to the fun. The μηχανὴ for raising the Beetle was doubtless plainly visible; as Mr. Sharpley remarks with some acuteness, a device which in tragedy would be concealed, in comedy will be revealed on purpose, and the clumsier the better. For the cavern, Mr. Sharpley postulates the Χαρώνιοι κλίμακες in the centre of the orchestra. We do not feel so confident as he does that the pole must have been in the centre; but if it were, this does not disprove the existence of a raised stage. Actors might have come down into the orchestra for the nonce, as, we hold, the chorus used to go up on the stage.

Many good suggestions are made as to the other details; in particular, Peace seems to have been of huge size; and if she were placed upright by Trygæus's house, Hermes could whisper into her ears from the roof (661 ff.).

The introduction further contains an account of the MSS., and discusses the relations of the Ravennas and the Venetus; Mr. Sharpley comes to the conclusion that *V* was copied from a MS. closely related to the archetype of *R*, but that it contains elements belonging to another MS. "of a different family from any which we possess." Amongst readings adopted in this text which deserve mention are Διὸς σκαταιβότου, 42 (Rutherford); λᾰκήσῃς, kept, 382, as an echo of λᾰκήσομαι; Διπολίεια for Διπόλεια, 420 (Sharpley); κᾰτνπόν ἐστιν, 491 (supplement, Sharpley); νενημένη for ἐνημμένη, 1032 (Verrall). Others do not seem so happy: τήνδε (τῶνδε, Mein.), in 417, may refer to χρυσίς, for both verbs suit this or the rope; φιαλοῦμεν, 422, makes a better joke than the editor's 'πιαλοῦμεν; there seems to be no reason for doubting the double form οὕνεκα and εἵνεκα, 203, 210. We are not fond of textual emendations, but offer a modest suggestion of ταταράξει in 266, a stutter. The notes are remarkable for their careful use of the inscriptions, by which Mr. Sharpley tests the forms of the text, and supports (*e.g.*) his reading of Διπολίεια. His work on syntax and on morphology is careful and good, and shows independent knowledge. On 414 he might have gone further, and said that the note of past time in the imperfect tense is often quite faint (*e.g.*, ἐλέγετο ἄν); οἴκοθεν, in 522, we should regard as an old-fashioned colloquialism, which, like εἰ with the subjunctive, is found in both poets and uneducated folk. Παχύς (639), for the rich, seems to be again a colloquial metaphor, not meant to be rude, like "a warm man." The notes as a whole are admirably terse and to the point, and we can find few indeed that do not deserve praise. The suggested translations are not many, but good.

Corpus Poetarum Latinorum. — Part V. *Martial, Juvenal, Nemesianus.* Edited by J. P. Postgate. (Bell & Sons.)—With the present texts of Martial, Juvenal, and Nemesianus, the 'Corpus Poetarum Latinorum' is virtually complete. By this time many Latin scholars have had occasion to bless this admirable publication. A close examination of a few pages of any of the twenty-two poets included begets a serene confidence in the able editorship of Prof. Postgate, and assures the most critical that for textual criticism and orthography the new 'Corpus' is the best thing attainable. That best is also in a handy form for research purposes, is well printed, and is offered at a reasonable price. In the part before us Martial has been entrusted to Mr. J. D. Duff, whose task has naturally been much lightened by Mr. Lindsay's Oxford text published in 1902. To this the editor expresses his great indebtedness. The Juvenal text is the recension of Prof. A. E. Housman, who has aimed at recording more accurately than hitherto the readings of the better MSS., and estimating more justly their relative values. His *apparatus criticus* is particularly full, as is also that of H. Schenkl, attached to the 'Bucolics' of Nemesianus. This latter editor has already appeared in the 'Corpus' as responsible for Calpurnius Siculus in Part IV. The 'Cynegetica' and fragments, for completeness' sake, have been added in the recension of Prof. Postgate. There remains the question of the proper limit of this collection of Latin poets—whether an appendix shall be added, either a short one to contain Ausonius and Claudian, or a longer one, in the shape of another volume, to include Prudentius and other Christian poets. For our part, we strongly urge on the publishers and editor to adopt the wider limit, so that English scholars may be able to place on their shelves a complete collection of all that can reasonably be called Latin poetry. We think we are justified in supposing that those who have hitherto bought the various parts of the 'Corpus' would continue to support it to its absolute conclusion.

T. Macci Plauti Comœdiæ. Edited by W. M. Lindsay. 2 vols. (Oxford, Clarendon Press.)—The second volume of Mr. Lindsay's 'Plautus,' in the Oxford series of classical texts, contains 'Miles Gloriosus,' 'Mostellaria,' 'Persa,' 'Pœnulus,' 'Pseudolus,' 'Rudens,' 'Stichus,' 'Trinummus,' 'Truculentus,' 'Vidularia,' and Fragments. It is a pleasure to be able now to handle a complete edition of Plautus by the foremost authority in England on the Plautine text. Expert readers will not need to be

assured that text and orthography are the best to date. We should surmise with confidence that the sale of German texts in England must be steadily decreasing, except for the fact that they compare favourably in the matter of expense with their English rivals. Certainly classical scholars in England have recently been very much alive to their responsibilities, and the volume before us is a good sample of this alertness.

We are very glad to see that Munro's *Criticisms and Elucidations of Catullus* has been reprinted by Messrs. Bell & Sons. It first appeared in 1878, and has for some time been a rare book, not easily procured. Mr. J. D. Duff contributes a prefatory note to the effect that three short papers, printed by Munro in *The Journal of Philology* after the publication of his book, have been added, a few misprints have been corrected, and a few fresh notes by Munro himself included. Reference has also been made occasionally to discussions of points since Munro's day. But the book, as at present printed, is only two pages longer than in the old form. This masterpiece of Munro, with all its liveliness of style, knowledge of Latin, and feeling for poetry, ought to be known to every classical scholar, and our best thanks are due to those who have made it available for the present generation. It is odd that it should not have been reissued years ago. We wonder whether the public will ever have a chance of buying Munro's 'Latin Verses,' long privately printed. Surely it is time they left this comparative seclusion to brighten a wide world of scholars.

OUR LIBRARY TABLE.

With Togo: the Story of Seven Months' Active Service under his Command (Hurst & Blackett), is not so valuable a volume as its second title made us expect. The author, Mr. Seppings Wright, was, we believe, as he says, the only correspondent (and indeed the only foreigner, except our own naval attachés) who was on board the Japanese fleet off Port Arthur. He says that he took letters from Armstrongs of Elswick, and when delayed by the Japanese (from the first April of the war till September 1st) he writes: "The interests of the firm required me not to let such an opinion as this deter me." On the other hand, the "active service" was only technical, and either the Japanese did not tell Mr. Wright much, or he has not told it to us. We shall notice all the points which deserve notice in the narrative, the rest being pleasant gossip. The defence against the submarine is to be the mine. Mr. Wright agrees with *The Athenæum* that the Channel is sealed in any war with France: "defended narrow seas are" closed by "mines, torpedo, and submarine." The Japanese continually clean and paint the bottoms of their big ships at sea, to prevent fouling and keep up speed. They pump out water from one side, and sling out on the other all the boats, which are filled with water; the angles show great confidence in the stability of the ships. Their artillery practice is entirely with full charge at ranges of from 10,000 to 12,000 yards. Such practice has hitherto been unknown in other fleets. No ship, after twelve months' service off Port Arthur, was away for more than one month for repairs. Mr. Wright differs from every other observer of the war in thinking that the big battleship is discredited, an opinion which will not suit "the interests of the firm." Proofs have not been properly corrected. We have "Hokdido" and "Hokido" for Hokaido, and "Okuru," "Okura," and "Okuma" for the same nobleman.

Under the general title of *Shakespeare's Christmas* Mr. Quiller-Couch has collected into one volume (Smith & Elder) that and half a dozen more of his short stories. Whether they have seen the light before, and if so, where, is not recorded. In any case, those who have not read them will be glad of them in their present form. The author's quality as a teller of short stories is well known, and the present instalment will maintain his readers' estimate of it. We note the usual flavour of distinction in the writing, the scholarly attention to details, the little touches of observation which show how thoroughly the writer has identified himself with the beings of his invention. His danger, indeed, is lest he should forget that his readers know no more about them than he chooses to tell. Links seem now and then to be missing, the want of which somewhat obscures the connexion of individual incidents with the thread of the tale. Thus in the first story one does not exactly see how the ghastly tragedy with which it concludes helps the clever study of Shakspeare and his times, which is, we suppose, the theme. If it is merely an illustration of the manners and customs of Bankside, it surely is a little out of proportion to the rest. 'Ye Sexes, Give Ear,' is a bit of fun which would have appealed to Capt. Marryat. There are two good Peninsular war stories—we are glad that Mr. Couch goes on working that mine. But most readers will probably get the greatest satisfaction out of 'Captain Wyvern's Adventures' in the Civil Wars.

Another important book of short stories is *Knock at a Venture*, by Eden Phillpotts (Methuen). There is a certain affinity between the work of Mr. Hardy and that of Mr. Phillpotts which does not entirely arise from their choice of subject. These tales concern Dartmoor, which Mr. Phillpotts has consistently cultivated as the fertile field of fiction in the West. They relate to village life, and set forth the ways and superstitions and loves of Devon rustics in one generation or another. Mr. Phillpotts writes always picturesquely, and often with surprising vividness. It may be alleged against him that he is too coloured; but his themes do not generally lend themselves to austerity. He loves the moor and the moor-men, and, what is more, he knows both. Though he is naturally disposed to the tragic issues of life, he can see the rustic humours, and successfully depict them, as in the tale entitled 'Corban' in this volume. The most ambitious story is the first, 'Mound by the Way,' which relates the wooing of one woman by two men. It is tragic, and its atmosphere is that veil of gloom which settles on the moor at certain seasons. But it is as convincing as any of Mr. Hardy's tales of Wessex. And the two writers have in common a power of description which is at times impressive, though it would appear that Mr. Phillpotts's is the more conscious and less natural style. Still, one need not complain if it is effective, as it undoubtedly is. Take this picture of the moor, for example:—

> "Beneath this standpoint Devon's unnumbered breasts billow to the misty horizon, and dimpling valleys, between the arable lands and higher wealds, are marked by orchards, water-meadows and the winding ways of rivers. These, born aloft, have come from far, and now, with slower current and ampler volume, roam melodiously through pleasant lees, through denes and dingles of sweet flowers, beneath the music of birds and the shadows of great woodlands, to their confluence with the sea. Here, too, lie hamlets, and rise crocketed church towers; peat reek sweetens the air; blue doves croon through blue smoke on many a low thatched cot; and life moves in simplicity and apparent peace"

It is Mr. Phillpotts's mission to prove that the peace is very often only apparent.

Raw Material, by Phyllis Bottome (Murray), puts together some episodes and characters in the life of working lads. The author depicts herself as managing a boys' club in connexion with a Church organization, and gives an account of some of the rough and genial customers who play whist and billiards under its hospitable roof. The scene is laid in Adingport, a riverside town on the Thames, dominated by the factory. It may be accepted as not beyond the influences of the London area, and the language placed in the mouth of the chief characters is almost pure cockney. The episodes are mostly incidents in the grey life of the poor, with an occasional strike or accident or conflagration to vary the monotony of the working hours. The scene presents its sordid aspects, to which the writer is not blind. Though preaching no social gospel, and inclined to the more old-fashioned view of the rights and responsibilities of labour, she is full of pity and sympathy for the cramping and austere influences of the modern factory system. Her working boys appear far more real than the characters who occasionally intrude from another sphere of existence. The managers, district nurses, sisters who make scornful comments upon the failure of philanthropy, good, hard young men with glittering blue eyes, incredibly dull and heavy, appear as the elements of melodrama rather than of real life. But with her boys the author is entirely at home, and the result is a most interesting series of portraits of that quaint and misunderstood representative of English humanity, the working boy of the cities. He is prematurely old, learned in the wickedness of the world, as in the case of 'Arry on the barge in a collision in the fog, scaring a neighbouring skipper by the violence of his language. He is at the same time astonishingly young, responsive to all the emotions of childhood, elemental in his generosities and sudden gusts of passion. He can cherish his own standards of respectability, repudiating acquaintance with "'Noffin'" (although a hero), because "'e ain't got ner Sunday clothes." "Wiv 'eroes and thet lot," is his satisfactory explanation, "yer don't want to know 'em too well fust—it takes the gilt orf the gingerbread." He can rise to heights of endurance, as Bill Badgers, crushed under the engine, but demanding that the railway shall not do him out of the compensation money. He is, for the most part, a noisy, jolly, kindhearted, thoughtless animal, moving through an existence to whose meaning and ultimate significance he seems destined to be for ever blind. There is human nature, raw and primitive, in all these sketches. And the whole is illuminated by a grateful sense of humour which carries the writer through the most difficult situations and keeps the whole tone of the work healthy and bracing. The wrestlings, mostly ending in failure, for the creation of some sense of religion or desire for church-going amongst these working populations; the encounter not only with idleness and indifference, but also with deliberate crime; the revelation, as in the pitiful story of 'The Botticelli Angel,' of some mysterious hereditary and ancestral sin, would form a subject of rather shabby futility, but for the humour which can carry through the effort to the end. 'Raw Material' will be welcome to all those who are concerned with the same difficult surroundings as those in the outlook of the author.

To the "Globe" edition, which was one of our chief boons in early days, Messrs. Macmillan have added *The Diary of Samuel Pepys*, which fully deserved inclusion by the side of Boswell's 'Johnson.' Mr. G. Gregory Smith has supplied an ample and well-considered introduction and excellent notes, owing, of course, much to the labours of Mr. Wheatley and other experts on the subject. The text is the fifth edition of Lord Braybrooke's ver-

sion corrected by Mynors Bright, while the few antique spellings have been reduced to modern usage. The editor notes regarding the disputed pronunciation of the diarist's name that "the evidence is in favour of *peeps*." It is pointed out that a correspondent of John Byrom saw the celebrated diary in May, 1728, at Magdalene College, and suggested that Byrom should decipher it, both of them being interested in shorthand. So we were very near having the complete text, at which the eighteenth century would not have boggled. Mr. Gregory Smith has a very just notion of Pepys, pointing out that the main elements of his character are "intense curiosity and the sheer joy of living." These qualities appealed to, and, indeed, were exemplified in, R. L. Stevenson; but what is odd is that their possessor was not a mere sanguine wastrel from the worldly point of view, but a most competent and valuable navy official. We notice an interesting discussion of Stevenson's view as to Pepys's wishes or hopes concerning the future divulgation of the 'Diary.' The only point in which we are inclined to dissent from the editor is the view that the pleasure of reading the 'Diary' "is hardly literary." At his best Pepys seems to us to have the artist's eye for effective detail though, of course, as is intimated, his haphazard, shorthand style is against him.

IN vols. xvi. and xvii. of Messrs. Dent's edition of *Tolstoy*, edited by Prof. Wiener, are contained some of the most important religious writings of Tolstoy, especially his treatise entitled 'My Religion,' in which he explains how, after having been for a long time a Nihilist, he became a Christian. Many readers will remember the sensation which this book created when it made its appearance in 1884. It has enormous importance as giving the "platform" of Tolstoy's belief, and the reader is assisted in studying it by the analysis of arguments which is supplied at the beginning. Like Ecclesiastes and the Confessions of St. Augustine, it is the revelation of a human heart. The seventeenth volume contains a few miscellaneous papers and some popular tales. In the latter style Tolstoy always shows his strength. He has the same Biblical power in writing prose, straightforward and simple, that Wordsworth showed in writing poetry. We can see by his collection of the miscellaneous papers of Tolstoy that Prof. Wiener intends us to have a complete edition and full measure. Some very interesting papers by Tolstoy were published in 1903 by Mr. Aylmer Maude ('Essays and Letters'), including the remarks on T. M. Bondarev, who also figures in these volumes. This interesting man, born a serf, enlisted the sympathies of Tolstoy. On account of his opinions he had been banished to Siberia.

A Primer of Explosives, for the use of local inspectors and dealers, by Major A. Cooper-Key, edited by Capt. J. H. Thomson, Chief Inspector of Explosives (Macmillan & Co.), is what such a handbook should be. It contains information which the preface justly claims will help an inspector to do his duty intelligently and a trader to store these dangerous wares with reasonable safety. The author says: "In the following pages little attempt has been made to explain the law—this has been adequately attended to in the guide recently prepared by Capt. Thomson." But he has been unable entirely to avoid the subject, and claims some latitude in interpretation. This is clearly admissible when the same Act applies to "Christmas crackers and torpedoes, ha'porths of squibs and tons of dynamite"; but on the whole the Explosives Act, amended from time to time as experience dictated, has been found satisfactory. Many persons beyond those immediately concerned will find in these pages information both interesting and useful; for people habitually talk of gunpowder, the various smokeless sporting powders, cordite, dynamite, and so on, with very slender knowledge of what these explosives are, and how they should be treated. This and much besides is set forth, and the little primer is brought to a close by tables in which some disasters from explosions are recorded, with the distances affected, and by a list of documents relating to the subject which may be obtained on application to the Home Office.

MESSRS. MACMILLAN have sent us the third and the fourth editions of FitzGerald's *Omar Khayyám* in the same neat form as that of the earlier issues. The third edition has a misprint which is unfortunate. Stanza lxxviii. reads:—

> What! out of senseless Nothing to provoke
> A conscious Something to resent the joke
> Of unpermitted Pleasure.

The "joke" should be a "yoke."

IN the series of "Favourite Classics" (Heinemann), which is, perhaps, the most wonderful feat of recent publishing at cheap prices, we have *Poems of Coleridge*, with portrait and introduction by E. H. Coleridge, and *Selected Poems of Matthew Arnold*, 2 vols., with portrait of Arnold, a picture of his house at Cobham, and an introduction by Mr. Arthur Waugh. Both introducers are judicious. We are glad to see that 'Sohrab and Rustum' and 'The Scholar Gipsy' are included among Arnold's poetry. Occasionally copyright interferes with the poet's latest version. It is a pity, for instance, that the well-known line

> But it needs heaven-sent moments for this skill

should have to appear with a less significant adjective, though we do not suppose any but a close student would detect the point.

IN the series of "Handy Illustrated Pocket Novels" (Collins) we have before us *Esmond*, *Ivanhoe*, *The Pilgrim's Progress*, *Mrs. Halliburton's Troubles*, and Tennyson's *Poems*. Each of these has eight illustrations, and the series is certainly cheap at a shilling, though we do not think all the artists could qualify for the "eminence" assigned to them with their illustrations. Still, the pictures are such as appeal to the popular mind. Tennyson's appearance among novels may be noted as an instance of the all-powerful selling quality of that word.

WE have on our table *The Hundred and First Report of the British and Foreign Bible Society*, and *Seed Corn for the World: a Popular Illustrated Report of the British and Foreign Bible Society for the Year 1904-5* (The Society),—*Summary of Progress of the Geological Survey of the United Kingdom and Museum of Practical Geology for 1904* (H.M. Stationery Office), — *Columbia University Studies in Political Science*, Vol. XXIII., edited by the Faculty of Political Science of Columbia University (King), — *The Jewish Literary Annual, 1905* (Union of Jewish Literary Societies),—*The Crown of Science*, by A. Morris Stewart (Melrose),—*Oblique and Isometric Projection*, by J. Watson (Arnold), —*Parental Honesty*, by Sylvanus Stall (Vir Publishing Company), — *Angélique of Port-Royal, 1591-1661*, by A. K. H. (Skeffington),—*Charles, Duke of Brunswick*, by W. Fitzhugh Whitehouse (Stock),—*Guide to Finger-Print Identification*, by H. Faulds (Hanley, Wood, Mitchell & Co.),—*Literary Landmarks of Torquay*, by W. J. Roberts (Laurie),—*The Arraignment of Paris*, by George Peele, edited by O. Smeaton (Dent),—and *A Plea for the More Energetic Treatment of the Insane*, by C. Williams (Glaisher). Among New Editions we have *Higher Mathematics for Students of Chemistry and Physics*, by J. W. Mellor (Longmans), — *How to Live*, by R. Caton (Williams & Norgate),—and David Ricardo's *Grundgesetze der Volkswirtschaft und Besteuerung*, Vol. II. Part I., and Vol. III. Part II., edited by Dr. Karl Diehl (Leipsic, Engelmann).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Carter (T.), Shakespeare and Holy Scripture, 8vo, 15/ net.
Century Bible (The), Isaiah i.-xxxix., edited by the Rev. O. C. Whitehouse, 12mo, 2/6 net.

A CURIOUS DANCE ROUND A CURIOUS TREE.'

September 6th, 1905.

THE information given by your correspondent Mr. Lewis Johnson, in last week's issue, that 'The Curious Dance' *was* written by Charles Dickens is both interesting and valuable. Hitherto the authorship had been credited to W. H. Wills, Dickens's assistant on *Household Words*, and nowhere, so far as I am aware, has it been stated in print that Dickens was the author.

The little paper appeared in *Household Words* originally on January 17th, 1852, and the late Mr. Kitton was always under the impression that W. H. Wills was responsible for it. Indeed, he went further, and stated that it had been "conclusively proved" to be so, but did not, however, give the proofs.

I find that Mr. J. C. Thomson, in his excellent bibliography, erroneously states that the article was not reprinted in Wills's 'Old Leaves.' It is included in the volume, and but for Mr. Johnson's information, that would be certain proof that Wills was the author.

Wills dedicated his volume to "the Other Hand whose masterly touches gave to the Old Leaves, here freshly gathered, their brightest tints," and throughout the chapters which received those "masterly touches" are indicated by a miniature hand pointing to the number of the chapter.

'A Curious Dance round a Curious Tree' is No. xxvi. in the volume, and commences on p. 283 of my edition. It also bears this mark that Dickens gave it his "masterly touches." Therefore no reason had hitherto existed to deny that Wills wrote it and that Dickens did to it what he did to so many of his contributors' stories and sketches. The significance of Mr. Johnson's statement that the MS. exists and is in Dickens's own handwriting, if such is the case—and we have no reason to doubt that Mr. Johnson's eyes have deceived him—should be apparent to all Dickensians. One hardly likes to make the suggestion that the MS. may only be "corrected" in Dickens's handwriting, for Mr. Johnson is so emphatic about it. On the other hand, is it not likely that Dickens copied the whole thing out as he improved it from Wills's MS.? At any rate, either of two things happened, viz., Wills claimed the authorship of what he had not written or Dickens copied the MS. out in his own hand when giving it those "masterly touches." It is an interesting question.

B. W. MATZ,
Editor of *The Dickensian*.

MR. LEWIS JOHNSON'S interesting announcement in your issue of the 2nd inst. complicates, rather than clears, the question of the authorship of the 'Curious Dance,' I fear.

The 'Curious Dance' was printed by W. H. Wills in 1860 in his 'Old Leaves gathered from *Household Words*,' and though in a note he acknowledges "portions are by another hand," and the volume is dedicated to "the Other Hand whose masterly touches gave to the Old Leaves, here freshly gathered, their brightest tints," it is almost inconceivable that Wills would have printed the 'Curious Dance' as his own had it been by Dickens. Is the MS. in Mr. Wise's possession the original MS. from which the printers worked when it was first published in *Household Words* in January, 1852? If it is, we may regard one of the few doubtful points in Dickens bibliography as settled.

J. C. THOMSON.

'KNOX AND THE REFORMATION.'

September 9th, 1905.

I AM remote from books, even from my own book on Knox, and am reluctant to occupy more of your space with questions to a great extent verbal. As to Paul's vow, and Knox's double use of it, I am willing to waive the point, though I find that an eminent authority, Presbyterian, takes the view expressed in my book. He is not "blinded by prejudice," and, if I were, I would not be ready to waive the point.

I do not think that Knox, before 1568, thought the Anglican Church "incomparably better than it had been under Mary." The reviewer can find the passage in which Randolph writes that "the preachers" proclaim the Anglican Church "little better than it was when at the worst." I quote from memory, and the date is of 1562, I think. The reviewer will also remember Knox's letter to Mrs. Locke about "Mr. Parson" and his "constrained prayers" and "wicked companions"; and his free comments on the Litany. Perhaps he had not forgiven Cranmer. The quotation from Knox's letter of January, 1559, leaves matters exactly where Dr. Lorimer and I put them. The letter is amazingly intolerant, as Dr. Lorimer says, and he was not "blinded by prejudice."

If the reviewer thinks that, after May, 1559, till July, 1560, Mary "reigned" in Scotland, by "reigning" he can hardly mean "governing." In the phrase of the Brehon Laws, she was a queen "opposed in her government." I adhere to, and can defend, my interpretation of the passage in 'The Historie of the Estate.' It is Knox, unless I have lost my memory, who says (all the "proof" I have) that Lindores was "reformed" during the truce, which he says was not of six, but of eight days. I admit that his authority is worth very little. The Convention of August-September, 1560, was illegal, in my private opinion, but its decisions had not been rescinded, had the force of law, and my private opinion does not rescind them. Indeed, neither I nor any one else has considered, as to this point, the bearing of a passage in Arran's letter to Calvin of September 23rd, 1560. It is curious that our historians, as far as I know, have overlooked the interesting letters of Arran to Calvin, in French, in the 'Corpus Reformatorum.' I have cited one of the two of this period. If the reviewer thinks that "invasion" of Lindores did not "trouble or inquiet" Mary of Guise, I must ask leave to differ from him.

For the letters of Knox and Kirkcaldy to England, in the latter part of June, 1559, I need power to refer to the Calendars of State Papers. Speaking from memory, I think there is an undated letter of Kirkcaldy which I would place on June 21st. There are at least two others of Kirkcaldy between June 23rd and June 28th; there is a letter of Knox, in which he says that he has written another; and there is a letter of Kirkcaldy of July 1st. The fact is plain that these agents of the chiefs of the Congregation were frequently writing to England, and this is the gist of the Regent's charge against them. I cannot prove that messengers as frequently came from England, as she asserted in terms which, surely, need not be taken *au pied de la lettre*, as I said, using, for such modes of exegesis, the phrase "babyish quibble."

A. LANG.

ENGLISH PRONUNCIATION.

WITH regard to the examples you adduced a fortnight ago of changes in the pronunciation of certain English words, may I be permitted to state that it is in obedience to what I believe to be a law of English pronunciation that in course of time, so soon as a word has become naturalized and at home in the language, the accent is invariably, or almost invariably, thrown back to the first syllable? Instances in point are despícable, formídable, hospítable, illústrate, interésting, which are now déspicable, fórmidable, hóspitable, íllustrate, interesting. I recollect when Deuterónomy was pronounced as I accent it. It is now Deúteronomy, a cumbrous, unmanageable word, as is láboratory, but they are bound to obey the law. A curious illustration of this law is furnished by the words refectory (the dining-room of a religious house), confessor, confession, which are pronounced by my brethren of the Roman Catholic religion, because they are much more familiar with those terms than the rest of us, réfectory, cónfessor, cónfession. And, again, anothe illustration. Where we speak of the guardians of law and order as the police, the criminally disposed classes, who are much more familiar with them than we are, poor things! speak of them as the pólis. Some words are on their way to the change, and in due time, I presume, will arrive at it. For example, I, and I daresay most of your readers, have always been in the habit of saying robúst, with the accent on the last syllable; but I once heard the creator of 'Sherlock Holmes' pronounce it róbust, with the accent on the first. The standard of English pronunciation is usage—the best usage of the best people. But it is possible to be too intolerant of minor variations.

J. RICE BYRNE.

THE DOONES OF EXMOOR.

September 9th, 1905.

I AM sorry if I have given any wrong impression of the nature of Mr. Rawle's book or pamphlet bearing the above title; but I do not think I have done so. As I write, his book, bought the other day at Minehead, is before me, headed "Second Edition Revised, One Shilling net." Reared as I was for most of my boyhood and youth, over a period of twenty years, on the confines of Exmoor, and knowing, from constant rides and walks, almost every acre of its great stretches, both in Somerset and Devon, I was naturally staggered at Mr. Rawle's first edition, the very key-note of which was scepticism. Hence I wrote at once briefly to a London paper, under a pseudonym, offering my evidence for what it was worth.

Then this summer, on going down to the district, I found Mr. Rawle's second edition in circulation, and heard more than one visitor express opinions, based on this book, of disbelief as to the Doones ever having had any existence. As I was moving about in the neighbourhood I made a point of asking for the oldest inhabitant, in order that I might find out the current ideas as to the Doones being a real band who really lived on Exmoor. I gave you some of the evidence, as much as I thought you would care to print. In every instance strong testimony was forthcoming of Doone stories in their earliest recollection. Had I met one single case of doubt, I hope I should have been honest enough to set it down.

The kind of thing I wanted to traverse was such a paragraph as this in Mr. Rawle's book, p. 38:—

"It might here be mentioned that the writer's father (William Rawle) was born at Oareford in 1805, his grandfather (John Rawle) born there in 1768, and that their progenitors lived in that parish back to pre-Reformation times. They surely would have known or heard something of the Doones, if

any such outlaws had infested that neighbourhood at the period they are said to have done. Yet they did not."

This paragraph, and others of a like character, I read to a variety of old people, and they were one and all amazed at the possibility of any one on Exmoor or in its neighbourhood knowing nothing of the Doones. It seemed to me that, in the interests of historic truth, their amazement should be set down.

In his second edition Mr. Rawle cites some of my anonymous letter to *The Daily Chronicle* (I have not his first edition by me, but I think it was that letter which gave him the clue to *The Leisure Hour*), but he does not cite the names of two of those, both exceedingly well known in the district, who gave me Doone stories when I was a lad. I can as well remember as if it was yesterday, sitting many a time in the chimney corner of the house at Luccombe of old John Perry, the parish want-catcher, with the peat and wood fire smouldering between us, whilst he spun yarns of the "Doones of Badgery," generally adding, "When you go there, you can see the ruins of their houses." The recollection, also, of my first sight of these ruins from a distance is as vivid as of my visit to the valley last August. I was out on Exmoor on my pony when a young schoolboy, and came across old one-armed Larkham, Sir Thomas Acland's gamekeeper. He was looking out for heathpoults shortly before the shooting season began, and asked me to join him for a long ride. Eventually, on the way back, we found ourselves above Badgeworthy Water, and we went a bit out of our way on purpose that he might point out, down below us, the traces of the place where the wicked Doones used to congregate. I can see him at this moment, laying hold of his pony's bridle with his teeth, as his custom was, in order that he might have his one arm free to point out to me the exact site. The Doones, aye and the Ridds or Reds too, who were almost always named together in many of the stories, were as much a reality to old Larkham as was Dunkery Beacon.

For one like myself, saturated for twenty years with Exmoor traditions, and the constant reiteration all round me of Doone stories, to coincide with Mr. Rawle's fine-spun theories of these being but a corruption of Danes of King Alfred's time, is as amusing as it is impossible.

I am hopeful, but not very sanguine, as to the result of the forthcoming exploration of Taunton records. The reason is that I happen to know a good deal about sessional and county documents, having had the sole work of arranging those of one important county, and having searched others of definite purpose on various occasions. Those who have done the like know how exceedingly fitful and irregular constables' and high constables' presentments are, even when extant. On the very year when you may happen to know that a particular stirring event or definite crime occurred in his parish or district, the lazy or possibly prudent man will perchance be found to have made a mere return of *Omne bene*, "All 's well."

There must, at any rate, be some substantial foundation for these almost universal Exmoor tales of the Doones. Mr. Rawle will probably continue to believe, as he emphatically states in his book, that they were "imaginary beings"; but I doubt if he will get half a dozen intelligent people, who knew Exmoor well in its pre-Blackmore days, to agree with him. I am amply content with the little I have done to stem the tide of scepticism, and hope that Mr. Chanter and others will follow up the matter.

J. CHARLES COX.

'GARDEN CITIES IN THEORY AND PRACTICE.'

Lee, S.E., September 9th.

THERE is, I think, a danger that those who are not already familiar with the "Garden City" scheme, now beginning to take practical shape at Letchworth, will carry away an erroneous impression as to one rather vital point in the present project, from the review of Mr. Sennett's 'Garden Cities in Theory and Practice' in your present issue. Both Mr. Sennett and your reviewer seem to think that the proposed plan for the laying out of the new city is identical with that outlined in Mr. Ebenezer Howard's 'Garden Cities of To-morrow,' the little work from which the present scheme has sprung. This is, however, an entirely mistaken notion. The plans put forward by Mr. Howard, as a reference to his volume will make clear, were intended to be taken tentatively; a special reservation to this effect accompanied each plan, and was further emphasized by a reference in the text. A plan of the proposed street system at the Letchworth Garden City is to be seen in the penny pamphlet 'Garden City in the Making,' issued by the Association, and from this it is, I think, quite clear that the first Garden City is to be no "town of concentric avenues, intersected by radial boulevards," nor is any site allotted to that "other facile and unfortunate inspiration," the Crystal Palace. It is necessary, I think, to distinguish between the author of the scheme, the Association which has brought it before the larger public, and the limited company which is now developing the Letchworth estate—all somewhat vaguely referred to by your reviewer as "the projectors."

F. G. HOWE.

THE AUTUMN PUBLISHING SEASON.

MR. EDWARD ARNOLD

has in hand: Travel, History, and Biography: The Great Plateau, by Capt. C. G. Rawling,—In the Desert, by L. M. Phillipps,—Flood, Fell, and Forest, by Sir H. Pottinger,—Two Years in the Antarctic, by Lieut. A. B. Merwin,—Kipling's They, with illustrations by F. H. Townsend, and Traffics and Discoveries, in an édition de luxe,—Micky, by Evelyn Sharp, illustrated by H. M. Brock,—Esmond, illustrated by Hugh Thomson,—and a uniform edition of Lever's novels. In Science and Philosophy: The Life-History of British Flowering Plants, by Lord Avebury,—Cambridge Natural History, Vol. I., Protozoa, by M. Hartog, W. J. Sollas, S. J. Hickson, and E. W. MacBride,—Observations of a Naturalist in the Pacific, by H. B. Guppy, Vol. II., Plant Dispersal,—System of Medicine, re-edited by H. D. Rolleston, Vol. I.,—Stonehenge Astronomically Considered, by Sir Norman Lockyer,—A Handbook of Metallurgy, by C. Schnabel, translated and edited by Prof. H. Louis, Vol. I.,—Text-Book of Palæontology, by K. A. Zittell and C. R. Eastman, Vol. III.,—The Founders of Geology, by Sir A. Geikie, a new edition,—The Chemistry of the Proteids, by Dr. G. Mann,—A Handbook of Climatic Treatment, by W. R. Huggard,—Essays on Economics, by H. S. Jevons,—The Philosophy of Religion, by Prof. Höffding, translated by B. E. Meyer,—Idola Theatri, by H. Sturt,—and The Philosophy of Martineau in relation to the Idealism of the Present Day, by Prof. Henry Jones. In Theology, Law, &c.: Essays on some Theological Questions of the Day by Cambridge Men, edited by Prof. H. B. Swete,—The Apocalypse of St. John, the Greek Text, edited by Prof. H. B. Swete,—An Analysis of St. Paul's Epistles, by Lightfoot,—The Epistle to the Ephesians, Greek Text, edited by Westcott,—Westcott's General View of the History of the English Bible, revised by W. Aldis Wright,—Conversations with Christ, by the Author of 'The Faith of a Christian,'—An Enquiry into the Evidential Value of Prophecy, by the Rev. E. A. Edghill,—The Work and Life of the Church of Christ, by Prof. A. H. Charteris,—Greatheart: some Talks with Him, by a Pilgrim,—The Pastoral Idea, by the Rev. J. T. Inskip,—Jesus Christ and the Christian Character, by Prof. F. G. Peabody,—Roman Private Law, by R. W. Lenge,—The Religion of Numa, and other Essays on the Religion of Ancient Rome, by Prof. J. B. Carter,—Herodotus, Books VII.-XI., edited by R. W. Macan,—Interludes, Fourth Series, by Horace Smith,—and Great Bowlers and Fielders, by G. W. Beldam and C. B. Fry.

MESSRS. NELSON

announce: Trafalgar Refought, by Sir W. L. Clowes and A. H. Burgoyne,—Smouldering Fires, In Northern Seas, and Uncle Boo, all by E. Everett Green,—The Ghost of Exlea Priory, by E. L. Haverfield,—A King's Comrade, by C. W. Whistler,—The Heiress of Aylewood, by G. Mockler,—Soldiers of the Cross, by E. F. Pollard,—A Naturalist's Holiday, by E. Step,—Red Dickon, the Outlaw, by T. Bevan,—Famous Sisters of Great Men, by M. Kirlew,—John Knox's Bairns, by H. Roberton,—Under Padlock and Seal, by H. Avery,—All that Happened in a Week, by J. H. Findlater. New Coloured Picture Books: Jack Frost and other Merry Sprites, by Ruth Cobb,—Our Diary, The Jolliest Holiday We Ever Had, Regular Romps, and Scampers and Scrapes, all illustrated by John Hassall,—The Golden Sixpence and other Stories, and The Railway Baby and other Stories, illustrated by E. Lance,—John Gilpin, Railway Alphabet, and many other toy-books at cheap prices,—a series of Sixpenny Classics,—and additions to the "New Century Library."

MESSRS. NISBET & CO.

announce: The Story of the Tweed, by Sir Herbert Maxwell, illustrated by D. Y. Cameron, a limited edition,—A Tropical Dependency, by Lady Lugard,—B. R. Haydon and his Friends, by George Paston,—Sir Louis Mallet, by B. Mallet,—Dr. Martineau's Philosophy, by C. B. Upton,—A Son of the Sea, by F. T. Bullen,—The Meteor Flag of England, by Gordon Stables,—Last Year's Nests, a novel by H. A. Darlington,—and Brown, by Dorothea Moore. Coloured Books for Children: Little Olaf and the Bears, by A. Craxford,—Little Red Riding Hood, by Miss Batchelor,—and a new coloured book by the author of 'Little Black Mingo.' Church Publications and Theology: The Church Directory and Almanack and The Church Pulpit Year-Book for 1905,—in the "Church Pulpit Library": My Brethren and Companions, by the Bishop of Durham; Sermons at Southwark, by the Bishop of Southwark; The Intellect and the Heart, by the Bishop of Derry; Sermons at Rugby, by the Bishop of Hereford; Sermons at Gloucester, by Bishop Ellicott; The Claims of the Faith, by the Bishop of Burnley; and The Grace of Episcopacy, by Canon Beeching,—The Old Testament Problem, by Prof. James Orr,—The Failure of the Higher Criticism, by Dr. Emil Reich,—a new volume of Lectures on the Bible, by the Rev. A. T. Pierson,—Autobiography of George Müller, condensed by G. F. Bergin,—The Gist of the Lessons for 1906, by R. A. Torrey,—A World-Wide Mission, by G. T. B. Davis,—The Secret of Comfort, by Mrs. Pearsall Smith,—The Way, by Sir Robert Anderson,—The Master, by Miss Higgs,—From Gloom to Glory, by the Rev. W. Harvey-Jellie,—Ancient Hebrew Names, by Mrs. Jeffreys,—Science the Demonstrator of Revelation, by S. J. Broadbent,—and several additions to various series for the young.

MR. NUTT

has in hand: The Complete Works of W. E. Henley, a library edition in eight volumes,—in the "Tudor Translations": Machiavelli, The Arte of Warre, Florentine Historie, The Prince, with introductions by Harry Cust, M.P.; and Tudor Miscellanies, introduced by Charles Whibley,—The Garden God, by Forrest Reid,—Behind the Veil, by Ethel Wheeler,—The Golden Book: Legends of Saints and Martyrs of the Church, translated by Mrs. Alexander,—The Russian Empire and Czarism, by V. Bérard, translated by F. Greenwood,—The Apostle of India, by the Rev. A. E. Medlycott,—and Epochs of Irish History: II. Early Christian Ireland, by Eleanor Hull. Children's Books: An Old-fashioned Doll, by J. Connolly,—Baby Book by the Sea,—Mr. Ubbledehub and other Stories for Children, by Mrs. W. Thorburn,—Rhymes for Real Children, by Betty Sage,—Babes in Toyland, by G. McDonough and A. Clapin,—and Sa' Zada Tales, by W. A. Fraser. Publications of the Irish Text Society: Leabhar Gabala, edited and translated by R. A. S. Macalister; Heroic Romances of Ireland, translated and edited by A. H. Leahy; and The Place-Names of Argyll, collected and explained by C. Gillies,—and Negro Song and Story from Jamaica, a publication of the Folk-lore Society.

MESSRS. C. A. PEARSON

announce: The Romance of Mining, by A. Williams,—The Romance of the Mighty Deep, by A. Giberne,—The Wallypug in the Moon, by G. E. Farrow,—reprints in the "Illustrated Scarlet Library,"—The Adventures of Princess Daintipet, by Mrs. G. Corbett,—Bluebell and the Sleepy King, by A. Hopwood and Seymour Hicks,—A Rapid Review of the Life of Nelson, by A. R. Cowan,—and new editions of Signors of the Night, Half-Hours with the Microscope, The Admiral, and other books.

Literary Gossip.

MESSRS. LONGMAN will publish in October 'The Life of Granville George Leveson Gower, Second Earl Granville, 1815-1891, by Lord Edmond Fitzmaurice, in two volumes, with eight portraits. The first volume contains the correspondence between Granville and Canning, including the period when the latter was Governor-General of India, and a journal kept by the former during his special mission to Russia after the Crimean war. A full account is also included of the unsuccessful attempt made by him to form a Ministry in 1859. The second volume covers the period from 1868 to 1891, and is full of political interest. The biographer has had access to abundant sources of information, including extracts from the letters of Queen Victoria. Granville left a few notes on his early life, and a sketch of Canning, which are also printed.

THE same firm will publish at the end of this month Vol. X. of 'The Political History of England,' which we have already announced, and which is written by various authors under the editorship of the Rev. William Hunt and Mr. Reginald Lane Poole. This volume, dealing with the period 1760–1801, is by the first-mentioned editor. It will be followed by Vol. II. (1066–1216), by Prof. G. B. Adams.

'MRS. BROOKFIELD AND HER CIRCLE,' which will be published shortly by Sir Isaac Pitman & Sons, contains much fresh information of a gossipy nature. Mrs. Brookfield (the original of Lady Castlewood in 'Esmond') and her husband (Frank Whitestock in Thackeray's 'The Curate's Walk') were the intimate friends of Tennyson, Carlyle, Hallam, Lady Ashburton, Spedding, Venables, FitzGerald, Rogers, and, above all, Thackeray. This book, by their son and daughter-in-law, is based on voluminous family papers hitherto unused. In addition to the photogravure plates, there will be reproductions of several unpublished drawings by Thackeray.

THE sixth volume of the collected edition of Mr. Robert Bridges's poetical works will be published by Messrs. Smith, Elder & Co. on September 26th. It contains 'The Feast of Bacchus'; the second part of 'Nero,' from the death of Burrus to the death of Seneca, comprising the conspiracy of Piso; and Notes.

THE same firm will also have ready on the 26th a new book by Mr. F. T. Bullen, entitled 'Back to Sunny Seas.' The volume describes a voyage through the West Indies, under the auspices of the Royal Mail Steamship Company, and deals not only with scenery and impressions of travel, but also incidentally with a number of the vexed questions of trade and the future prosperity of the islands. It is provided with eight illustrations in colour.

MESSRS. HUTCHINSON & Co. will publish shortly a volume of impressions of literary people and others by Miss Laura Hain Friswell, under the title of 'In the Sixties and Seventies.' The writer of this book is a daughter of the author of 'The Gentle Life.' Friswell was intimately associated with many of the distinguished literary men of his day, and Miss Friswell's impressions cover a wide field, including recollections of Beaconsfield, Gladstone, Sir William Harcourt, Sir Richard and Lady Burton, Tennyson, Charles Kingsley, William Morris, and William Black.

'THE ART AND CRAFT OF THE AUTHOR' is the title of a new handbook on literary work, by Mr. C. E. Heisch, which is to be published during this autumn by Mr. Elliot Stock. Its purpose will be to explain the principles which should guide the author, the objects he should keep in view, and the methods of carrying these out, rather than to supply information as to the technicalities of writing.

MESSRS. MACMILLAN have arranged with Prof. Saintsbury for the publication, in three volumes, of 'A History of English Prosody from the Twelfth Century to the Present Day.' The first volume, which is nearly completed, and which, it is hoped, will be published next year, covers the period from the origins to Spenser. The treatment in the text will be a strictly historical survey of verse forms in all important poets and poems, minor as well as major, with copious illustrations and pertinent extracts at the foot of the page. There will be summaries at the end of each sub-period; and a number of appendixes at

the end of each volume will deal with general points, such as the principal metres, rhyme, alliteration, &c. In the two later volumes it is intended to make the history and discussion of previous theories of prosody an important feature.

Mr. Unwin will publish this autumn a new book by Mr. T. Baron Russell, author of 'A Guardian of the Poor' and other novels. It is entitled 'A Hundred Years Hence—The Vaticinations of an Optimist.' It is an attempt to picture the condition of things after a century of advance in science, invention, and education. Unlike many modern prophets, Mr. Russell takes a hopeful view of the moral future.

Messrs. Putnam write:—

"We notice that in referring to the forthcoming volume on 'Mohammed: the Rise of Islam,' by Prof. Margoliouth, it is announced as the next volume in the 'Story of the Nations Series.' The title of the series should be 'Heroes of the Nations,' not the 'Story of the Nations.'"

We understand, to our surprise, that the note of a correspondent concerning Mr. Graham Easton's forthcoming history of the Grahams in our issue of a fortnight ago, and the subsequent reply by him, with our note, have been taken to imply that we impugn the *bona fides* of the author and his book. Such was certainly not our intention, and we regret that our remarks should have been regarded in that light. We hereby repudiate any such suggestion, and commend the book to lovers of genealogy as one likely, to repeat our phrase of a fortnight ago, "to be of high interest." Mr. Graham Easton has already made considerable advance with his materials, but they are extensive, including full accounts of cadet branches. From the nature of the work he cannot fix a definite date for its issue, but, being constantly engaged on it, he hopes to complete it in about a year.

We regret to learn the death of Mr. G. H. Overend, an assistant-keeper of the Public Records, at a comparatively early age, on the 10th inst. Mr. Overend was a Fellow of the Society of Antiquaries, and for many years an active official of the Huguenot Society. He was deeply learned in the intricacies of the legal records, and had latterly occupied the position formerly held with distinction by Mr. Scargill-Bird, the present Secretary of the Public Record Office.

The summer-tide of the American invasion of our archives and libraries has now begun to recede rapidly, and, contrary to last year's precedent, few, if any, historical workers are likely to remain with us during the winter. Amongst the more recent arrivals the following have been engaged in historical research: Prof. Hull (Cornell), Miss Davenport and Miss Neilsen (two well-known mediæval specialists), and Miss Salmon (Vassar), together with some post-graduate research students who have not yet published any historical work.

Amongst those who have made a longer stay in this country, Prof. Andrews (Bryn Mawr) has nearly completed the collection of materials for a guide to the archives which will almost revolutionize the study of purely American history. Prof. Bright (Johns Hopkins) has been at work on Anglo-Saxon MSS. in the British Museum. Prof. Cheyney (Pennsylvania) and Dr. Baldwin (Vassar) have both sailed for America. The former, who is well known in England, will shortly publish in *The English Historical Review* some results of his recent researches.

We may make special mention here of the researches of two younger students whose methods have made a distinctly favourable impression on English scholars. Dr. Baldwin has discovered much new information regarding the mediæval functions of the King's Council, and is contributing essays on the subject to the *Transactions* of the Royal Historical Society and to the English and American *Historical Reviews*. Miss Bertha Putnam has made a most illuminating study of the procedure connected with the execution of the Statute of Labourers, and the monograph she is preparing on this subject will be awaited with much interest.

Among the photogravure illustrations to Martin Haile's 'Queen Mary of Modena: her Life and Letters,' which Messrs. Dent & Co. are about to publish, special interest attaches to the portrait of Queen Mary's mother, the Duchess Laura of Modena, before her widowhood, taken by the kind permission of the nuns of the Visitation Convent at Modena from a miniature in their possession. Still more interesting is the portrait of Duke Francesco II., the Queen's brother, from the strong family likeness it shows to his nephew, James Stuart. The original engraving is in the Museo Civico at Modena, and is reproduced by the kind permission of the Director, Count Gandini. There will be nine illustrations in all, including, in addition to the above, portraits of Pope Clement X., at whose behest Princess Mary Beatrice renounced her desire to enter a convent, and consented to marry the Duke of York, and of Pope Innocent XI. from the Guarnacci collection of portraits published in Rome in the eighteenth century.

An historical romance, dealing with Greek history, by Mr. Charles Hamilton Bromby, will be published this month by Mr. J. Baker, of Clifton.

In the October *Scribner* President Roosevelt has an article entitled 'A Colorado Bear Hunt.' George Bancroft's letters in the same number give a long description of an interview which he had with Byron; while a gentleman who was in Paris during the Coup d'État publishes his description of that event written at the time. It gives a novel impression of Napoleon III.

Mr. Sidney Lee contributes to the forthcoming number of *Modern Philology* (the quarterly publication of the Chicago University Press) an article on Chapman's poem called 'The Amorous Zodiac.' Mr. Lee prints in parallel columns Chapman's verses from the text of the rare original edition in the Dyce Library and an earlier French form by Gilles Durant. He has discovered that Chapman's work is a literal but unacknowledged translation from the French, line for line!

We are pleased to note that the sum of 500*l.* has been allocated to the Newsvendors' Benevolent and Provident Institution by Messrs. Gilbert W. Thomas and H. C. Scott as executors of the will of Horace Harral.

At the request of the family of the late W. S. Caine, M.P., Mr. J. Newton has undertaken to write his biography. Letters from Mr. Caine would be welcomed by Mr. Newton. They would be copied and carefully returned. They should be addressed to him at Broad Sanctuary Chambers, 20, Tothill Street, Westminster.

The Right Hon. Evelyn Ashley, Messrs. Acland, Awdry, and Max Beerbohm, Sir Homewood Crawford, Sir G. Faudel-Phillips, Messrs. George Grossmith and Gwynne, the Rev. Joseph Hocking, Major Martin Hume, Messrs. C. Harmsworth, and St. John Hornby, Sir J. Lawrence, the Lord Mayor elect, Sir John Macdonell, Mr. C. A. Pearson, Sir J. Clifton Robinson, Mr. E. Harold Spender, Mr. Arthur Spurgeon, Major-General Sir Alfred Turner, and Mr. Fabian Ware are among those who have promised to attend the Newsvendors' Dinner on the last day of October.

The October issue of *Chambers's Journal* will contain a paper on 'The Popularity of Robert Louis Stevenson.' Jeffrey, when he was editing *The Edinburgh Review*, asked Robert Sym, W.S. ("Timothy Tickler"), to review Scott's 'Lay of the Last Minstrel.' For some reason or another the review was never published, although put in type. Some extracts from it, with Scott's marginal annotations, are given, under the title of 'Sir Walter Scott and One of his Reviewers.' In a paper on 'Ruskin and Millais in Scotland' Mr. W. W. Fenn describes his meeting with the two on a holiday.

The firm of Alston Rivers will publish during October a book by Dr. Hugh R. Mill, entitled 'The Siege of the South Pole.'

A paper of great interest to Shelley admirers will appear in *The Century Magazine* for October. It will give reproductions of two almost unknown portraits of Shelley, with a sketch of their history. The artist of these portraits, W. E. West, is well known in England by his portraits of Byron and the Guiccioli. He is stated to have met Shelley at Pisa shortly before the poet's death, and to have made a sketch of him in pencil, from which he subsequently painted another portrait. These two pictures were bequeathed to a relative, from whom they were purchased by the husband of the lady who has written an account of them for *The Century*.

MM. Perrin, of Paris, are to issue in October a new work by M. Gabriel Sarrazin, best known to English readers by his volumes on nineteenth-century English poets, 'Poètes Modernes de l'Angleterre' and 'La Renaissance de la Poésie Anglaise.' The forthcoming work, 'Les Grands Poètes Romantiques de la Pologne,' will deal with the leaders of Polish poesy of the Romantic School, Mickiewicz, Slowacki, and Krasinski.

The death, in his eighty-sixth year, is announced from Schweinfurt of the historian Dr. F. Stein, the author of several valuable works, among them 'Die Geschichte des Königs Konrad I. von Franken und seines Hauses,' and 'Völkerstämme der Germanen nach römischer Darstellung.'

The distinguished writer Dr. Karl von Heigel, whose death, in his seventy-first year, took place recently at Riva, was the confidential friend of Ludwig II. of Bavaria. He was the author of a number of dramas, many of which were specially written for those now historical private performances of which the king was sole spectator. Among Heigel's best-known works are the popular 'Es regnet' and 'Karneval in Venedig.' He also wrote a biography of his royal friend and of Karl Stieler.

SCIENCE

ELECTRICITY, EXPERIMENTAL AND PRACTICAL.

The Theory of Experimental Electricity. By W. C. D. Whetham. (Cambridge, University Press.)—This book is certain to be heartily welcomed by all those who are engaged in the teaching of theoretical electricity in our University Colleges. The recent experimental and theoretical advances which have been made in this science—especially in regard to the conduction of electricity through gases, the phenomena of radio-activity, and the theory of electromagnetic radiation—have entirely changed the aspect of the subject. These discoveries have completely revolutionized our views of the structure of matter, and have shifted the position of electricity from that of a rather obscure branch of physics to that of the most fundamental of the sciences, with the exception of mechanics.

In these circumstances it is not surprising that the older text-books should have become out of date. The present volume appears to fill with considerable success the deficiency thus created. The whole subject at present is in a transitional stage; there are important principles which are not established with certainty, whilst there is very little in the newer branches which can be considered to have received its final form. Whether the present distribution of material among the different branches of electrical science will persist for a long time, or whether it will have to be greatly changed in the near future, it is not possible to foresee. But Mr. Whetham has both made important contributions himself to our knowledge of electrolytic and radio-active phenomena, and has, at Cambridge, been in touch with the Cavendish Laboratory, which may be regarded as a fountain-head of the newer physics; so that he has had unique opportunities for forming a sound judgment. Whatever changes may take place, it seems likely that the more recently discovered phenomena deserve at least as much attention as they receive in this volume.

There are two points on which the book may fairly be criticized. In the first place the treatment of electrolytic phenomena strikes us as more advanced than the rest. The relative importance of this part of the subject seems to be somewhat exaggerated. The second point is the treatment of magnetic induction and dielectric polarization. This somewhat intricate subject does not seem to be made so clear that the student can grasp it easily. A chapter on the general theory of polarized media would probably have improved matters.

On the whole, we have no hesitation in recommending the book to all teachers and students of electricity, while the Cambridge University Press are to be congratulated on having made a desirable addition to their valuable series of works on physics.

Electric Railways. By S. W. Ashe and J. D. Keiley. (Constable.)—The application of electrical power to the requirements of rapid local and inter-urban traffic has in America reached an advanced stage of development. In the United States the engineer and inventor are not hampered by difficulties which in this country impede the road to progress. Money flows more easily, and the capital which has been rapidly amassed is willingly offered for some hazardous but promising scheme. Many of the regulations enforced by our Board of Trade do not exist on the other side of the Atlantic, and thus a new scheme can at least be tried before being condemned. Finally, the question of safety is not looked at from our absolute point of view, but is correlated to considerations of cost and convenience. Not long ago an English visitor to the Western States expressed his surprise that overhead electric transmissions at 40,000 volts were tolerated by the authorities. "Yep," replied his American friend, "we do kill some, but it's cheaper to bury the men than to bury the wire." History does not relate whether the Englishman had been sufficiently long in the country to discern the element of truth underlying this jest. For England, with its complete network of railways and good roads, electric traction constitutes merely an item of general progress; for America it is a question of vital importance, on which the very existence of the outlying districts depends. In this newer country our methods of procedure are frequently reversed. As a town increases in size, the car-lines are extended many miles from the centre, radiating in all directions over fields and through woods. The enterprising builder then arrives on the scene, and erects near each stopping-place a row of houses. In the course of years—few or many, according to the success of the venture—a road will be made. In the meantime a few planks are thrown on the quagmire formed by the builders' carts, and over this narrow track the inhabitants wend their perilous way to the tram-line.

In the preceding remarks we have attempted to outline the causes which have influenced the development of electric traction in the United States. Helped by the enterprising disposition of his nation, and goaded by its pressing need, the American engineer has, through many attempts and failures, achieved a high degree of success. Messrs. Ashe and Keiley's book, giving an authoritative exposition of the most up-to date practice, will therefore be read with considerable interest. The title of the work ('Electric Railways') is somewhat misleading, for it deals exclusively with the equipment of the rolling-stock. There is a great disparity in the thoroughness with which the different parts of the subject are treated, and in some cases the space might have been better employed. We doubt, for instance, the usefulness of devoting an entire chapter to lessons in elementary mechanics, and another to a description of various well-known methods of electrical testing. The important question of brakes and braking receives full consideration. A single section—consisting of a mathematical dissertation on the alteration in the distribution of the weight of the car produced by its retardation—occupies not less than fifteen pages. This detailed treatment seems out of all proportion when compared with the summary way in which other problems are dealt with.

The interest of the book centres round two principal subjects. In chaps. ii. and iii. an excellent description is supplied of the graphical methods of calculus employed in predetermining the acceleration and speed of trains. In chap. vi. the methods of control used in connexion with electric motors are fully discussed. The various types of multiple unit control, by means of which the motors on the several carriages may be operated by a single lever, receive special attention. The automatic apparatus which is used in the case of heavy trains to ensure uniform acceleration is also carefully described.

Science Gossip.

Messrs. Whittaker & Co. announce Steam Turbine Engineering, by H. M. Hobart and T. Stevens,—Wireless Telegraphy and Telephony, by D. Mazzotto, translated by S. R. Bottone,—A Pocket-Book of Aeronautics, by H. W. L. Moedebeck, translated by Dr. W. M. Varley,—Armature Construction, by H. M. Hobart,—Electric Welding, by F. J. Wallis-Jones,—Electricity in Mines, by Percy R. Allen,—Single-Phase Commutator Motors, by F. Punga and R. F. Looser,—Household Applications of Electricity, by S. R. Bottone,—A Text-Book of Botany: Part I. The Anatomy of Flowering Plants, by M. Yates,—Mérimée's Tamango, edited by Prof. A. Barrère,—revised editions of Electricity in its Applications to Telegraphy, by T. E. Herbert; The Alternating-Current Circuit and Motor, by W. P. Maycock; Whittaker's Electrical Engineers' Pocket-Book, edited by K. Edgcumbe; Central Station Electricity Supply, by A. Gay and C. H. Yeaman; The Management of Accumulators, by Sir David Salomons; The Practical Telephone Handbook, by J. Poole; Radiography and the X Rays, by S. R. Bottone; Dissections Illustrated, by C. G. Brodie,—and Dod's Peerage, Baronetage and Knightage, and Parliamentary Companion for 1906.

Although there were several disappointments at the late eclipse, it is likely that when all the observations and photographs obtained are compared and discussed, valuable additions to our knowledge of the sun's surroundings will result. The most successful stations were in North Africa. At Guelma, in Algeria, M. Trépied, Director of the Algiers Observatory, and Mr. Newall, one of the Vice-Presidents of the Royal Astronomical Society, were observing, and report splendid weather, corona brilliant and uniformly distributed, also several fine protuberances seen, and spectroscopic and polariscopic observations taken. Next year, we may remark, though there will be three eclipses of the sun, they will all be partial (at the largest, on February 23rd, only about half the sun's disc will be obscured) and wholly invisible in this country. The next total solar eclipse will take place on January 14th, 1907, but the totality will not be of long duration, and its locality will be confined to Central Asia.

A new planet was photographically discovered by Dr. Götz at the Königstuhl Observatory, Heidelberg, on the night of the 4th inst. That already announced as having been discovered at the same place on the 23rd ult. proves to be identical with Urda, No. 167, which was discovered by the late Dr. C. H. F. Peters so long ago as August 28th, 1876.

A new variable star (period as yet unknown) has been detected by Madame Ceraski in her examination of the plates taken by M. Blajko at the Moscow Observatory, and will be reckoned as var. 103, 1905, Ophiuchi. With regard to the variable or Nova mentioned in *The Athenæum* last week as having been discovered in the constellation Aquila by Mrs. Fleming, it appears that there was an error in its place as given in the telegram. Prof. Max Wolf observed it at Heidelberg on the 4th inst., when its magnitude was found to be 9·3, a little brighter than B.D. − 4°.4661. On the 6th Prof. Hartwig, of Bamberg, and Dr. Guthnick, of Bothkamp, both noted it and found it of the tenth magnitude. Its place is a little to the west of λ Aquilæ. Twenty-two new variable stars were found by Prof. M. and Herr G. Wolf whilst examining plates in the neighbourhood of γ Lyræ; the last of them is reckoned as var. 101, 1905, Lyræ.

XUM

FINE ARTS

John Hoppner. By H. P. K. Skipton. (Methuen & Co.)

THIS is one of the best volumes in the series of "Little Books on Art." Mr. Skipton has an unworked field for his labours, no previous (substantive) biographies to "consult," no "catalogue raisonné" to serve as a guide. In spite of his obvious limitations, he has succeeded in producing an interesting little book which will serve until a better appears. Hoppner was undoubtedly a great artist, worthy to rank with Romney and above Lawrence, each of whom has had his life written many times. His artistic output was considerably less than that of most of his contemporaries, for he was a man of moods, and would only work when the spirit moved. An artist of his temperament could not tie himself down to a working day of so many hours, but the exceedingly few unfinished examples of his works prove that he almost invariably completed a portrait when he had got over the initial difficulty of beginning it.

There are points respecting Hoppner's parentage which may possibly be cleared up in time. One would have thought that the inscription on his mother's tombstone at Hagley, Worcestershire, quoted by Mr. Skipton on p. 13:—

"In memory of Mary Ann Hoppner, widow of the late John Hoppner, Surgeon, and mother to the late John Hoppner, Esq., Portrait Painter to the Prince of Wales"

(she died on April 7th, 1812, aged eighty-three), would set the matter at rest for ever. Unfortunately tombstones have an unenviable reputation, and the rumour, which the artist himself never contradicted, that he was an illegitimate son of George III. (when Prince of Wales), is accepted by Mr. Skipton as probably true. We may say that one of the artist's grandchildren is convinced of the truth of this theory. On the other hand, in some family letters (of which copies are now before us), Richard Belgrave Hoppner (why does Mr. Binyon, in his 'Catalogue of Drawings of the British School' in the British Museum, call him *Robert* Belgrave Hoppner?) refers to the George III. parentage as one "amongst other ridiculous reports circulated respecting" his father, all of which arose "from the fact of his having been brought up in the Palace." "I always heard," he adds,

"he was the son of the Physician to the Household who in that capacity had accompanied George II. to England, and that he was born only a month after the arrival of his parents in the [? this] country. I had in my possession for some time a certificate of the origin of his father, who came from a place called Klein Walthersdorf in the Black Forest, where his ancestors were in some way connected with the mines of that country, but this paper I destroyed some years ago, not thinking it of any use."

As George II. succeeded to the throne of England in 1727, the apparent discrepancy in dates may be explained by the theory that the king may have brought over the elder Hoppner on one of his last journeys from Hanover to England, but we have found nothing to support this theory. It is interesting to note that a General Hoepfner (whence is easily derivable the English form of the name) was in command of the German troops in China in 1900. The question of Hoppner's parentage is one of considerable interest, but remains a mystery.

Although Mr. Skipton appears to be ignorant of the fact, the first portrait which Hoppner painted was, according to Henry Angelo, that of

"an old lady, a relative, which is now in my possession, and is the more estimable, as it was expressly painted for myself. At this period Mr. Hoppner's demand for a head was only two guineas; he subsequently added an infant in the old lady's arms, for which he modestly demanded only one guinea more."

Mr. Skipton also apparently does not know that at the election of an Associate in November, 1792, Hoppner was a candidate, the second ballot showing the following figures: Westall, fifteen votes; Hoppner, five votes. We cannot see how the "royal pressure" on the Academicians in 1791 to elect Lawrence a "supplemental Associate" could have been a "bitter" blow to either Romney or Opie (p. 61), since the former never exhibited at the Academy and did not want the public advertisement of that institution, whilst Opie was a full R.A. in 1788. There was a cause other than "serious ill-health" (p. 115) for Hoppner's absence from the Academy of 1801. He refused, in fact,

"to send any pieces to the Academy while Lawrence is allowed to occupy so much room by such enormous productions as that of 'Kemble in Hamlet,'"

according to a chronicler of the day. In the early summer of this year Hoppner had the misfortune to break his right arm.

There can be no doubt about Hoppner's dislike of Lawrence, whose suave manners and diplomatic discretion must have been singularly irritating to Hoppner's oversensitive nature. It is only fair to add that the antipathy was not reciprocated by Lawrence, who, indeed, paid a most handsome tribute to his rival's genius when he heard of his death, and not only assisted Mrs. Hoppner in putting her affairs in order, but, unsolicited, also seconded R. B. Hoppner's candidature for admission to the Athenæum Club. Hoppner had a caustic wit and an incisive style in writing; like all good haters he was one-sided, and often grossly unfair. He frequently quarrelled with his best friend Gifford, and he was continually at war with something or somebody. There was much that was eminently lovable and good in his nature, but he belonged to the cantankerous species of humanity. He cultivated his enemies, and was always stirring them up. He was feared on account of his ready pen, as may be gathered from the following sarcastic passage, which we have unearthed from a newspaper of 1790:—

"The unusual severity with which the painters at the Royal Academy have been treated this year in some of the morning papers makes many doubt the candour of the critic; but when it is known that Mr. Hoppner, himself a painter, has confessed writing many of them, it must be allowed that every attention should be paid to an artist of his worth and merit, and that he deserves the thanks rather than the censures of the public for so ably pointing out to them the beauties of his own performances, and the defects in those of every other painter."

This passage may have been inspired by the Rev. M. W. Peters, R.A., who resigned in 1790, and who accused Gifford of having introduced Hoppner to Grosvenor House, and consequently ousted him (Peters) from the appointment which he held there. The story is told in the 'Records of my Life,' by John Taylor, whom Mr. Skipton calls "Tom Taylor."

With regard to the identities of the anonymous portraits exhibited by Hoppner at the Royal Academy, Mr. Skipton makes a good many suggestions in the way of nomenclature which must be taken not only with suspicion, but also with absolute distrust. There is nothing whatever to associate the exhibits of 1780 and 1782 with the Cunliffes; and to suggest that the 'Portrait of a Lady' of 1781 was probably the picture engraved under the title of 'The Fortune-Teller' is absurd, for the titles are themselves a sufficient contradiction. The 'Lady of Quality' of the 1783 Academy was certainly not the Countess of Mexborough, but Lady Lewisham, afterwards Countess of Dartmouth. The 'Portrait of a Lady' in the 1784 Academy represented Miss Bailey, not, as Mr. Skipton states, Miss Sophia Williams, if contemporary records are to be taken for anything, and we must confess that we prefer them to Mr. Skipton's somewhat wild guesses at identities. Similarly also the whole-length 'Portrait of a Gentleman' in 1785 is said by the author of this book to be the Rev. John Jebb, but the picture was a portrait of a young sportsman, with a horse and greyhound, pointing with his whip to a dead hare. We saw the original picture some months since. The gentleman, whose name and career are perfectly well known to us, died when comparatively young, and the portrait is still in possession of the family, where it is likely to remain. The 'Portrait of a Lady' in the 1786 Academy is presumed by Mr. Skipton to be Miss Crockatt (engraved by J. Dean in 1786), which it certainly was not; it was of a lady in a Spanish style of dress, and one of the critics of the day suggested that it was a portrait of "a modern Thalestris from the purlieus of Old Drury," which is certainly not suggested by the refined and beautiful woman seen in Dean's engraving. It is also an unwarranted supposition to suggest that the second 'Portrait of a Lady' in the same year's exhibition was of Lady Hamilton as 'Nesera.'

Mr. Skipton does not seem to be aware of the legal proceedings last year in connexion with the Hoppner portrait of Mrs. Jerningham, and its present position is by no means "uncertain." The portrait of Sir William M. Milner is assigned to 1798, but the resolution for the commissioning of the portrait was not passed by the York Corporation until February 4th, 1799. With regard to the 1805 portrait of 'The Hon. Miss Mercier,' which Mr. Skipton (who spells the name "Mercer") "can neither trace nor identify" (p. 129), there can, we think, be no doubt that "The Hon." is an error on the part of the compiler of the Academy Catalogue, for we know of no title in the English peerage

which accounts for such a person as "The Hon. Miss Mercier." The picture is probably identical with the whole-length life-size figure of a little child about three years of age, riding on a stick in a landscape, in white dress with pink sash, at one time the property of M. Sedelmeyer, and at present in the Sprague Collection in America; it is now called 'Master Mercier,' who is described as a "nephew of Hoppner," "by whom the portrait was presented to the boy's mother." Mr. Skipton does not tell his readers that George Hibbert formed a splendid library of rare books, or that he had a fine botanical garden at Clapham, where he lived before he succeeded to Munden. There are many other matters in this little book to which we had intended to call attention, but we must content ourselves with pointing out that Dr. "Paul" Waagen (p. 132) should be Gustav Friedrich; that Lady Charlotte "Pirey" (p. 169) should be Percy; and that January, 1896 (p. 75), is presumably intended for 1796. We may add that the index is poor, and that the illustrations are for the most part indifferent.

Old Coloured Books, by George Paston (Methuen), is designed as an introduction to the "Illustrated Pocket Library," presenting a few details as to the lives and careers of the authors and artists concerned in producing such books at the beginning of the nineteenth century. A good selection of sixteen coloured pictures has been made for the volume, and the biographical notes are good as far as they go. But we wish that the forty-eight pages of large print had been swelled to at least twice that amount, for George Paston writes with good taste and discernment. We should put "Nimrod" Apperley some way above R. S. Surtees as a writer, for if the former "refused to be turned into a scholar," he kept by him such associations of Latin that he gave the lingo of sport a classical touch which it preserves. Surtees is sadly loose and wordy, though his Jorrocks is still a favourite figure, thanks partly, no doubt, to the genius of John Leech. It will be a surprise to many readers to learn that "Phiz" illustrated 'Jorrocks's Jaunts and Jollities' as well as Alken, whose edition has been reproduced for us by Messrs. Methuen. The book concludes with an account of the illustrators of 'Pickwick,' Seymour, the unfortunate Buss, "Phiz," and Onwhyn, whose "illegitimate" designs are not without spirit. Messrs. Methuen's 'Pickwick,' published last year, includes the work of all these four artists. We are much indebted to them for a revival which brings the best results of a period of striking designs within the knowledge and resources of the ordinary reader of to-day.

ARCHÆOLOGICAL NOTES.

THE Babylonian Expedition of the University of Chicago has discovered, in the course of its excavations at Bismya in Central Babylonia, the statue of yet another Sumerian king. It was found among the ruins of a temple built of small plano-convex bricks on a site which had evidently been built over many times since its ruin, and considerably beneath a stratum of objects made in the reign of Sargon of Accad. The name of the temple is given as E-shar, while the king appears to have been named Daudu, a cognomen which is new, but is likened by its discoverers to the Hebrew Dôd or David. The statue itself is of diorite, 88 centimetres high, and represents the king standing, clad in a much flounced skirt measuring 81 centimetres at its greatest width, and with his hands folded in front of him. The bald head is disproportionately large for the body, and there are said to be signs that the eye-cavities were once filled with lapis lazuli or some other precious stone. The shoulder bears an inscription in linear script, which is said to read, "(The temple) Eshar, King Daudu, King of Udnunki." A reproduction of the statue can be seen in *The Scientific American* for August 19th, from which we take the above account with all reserves as to the age and tenor of the inscription. The likeness of the sculpture to statue No. 1 of the Cairo Museum is even more striking than in the case of the Louvre statue of Gudea, referred to in these notes (see *The Athenæum*, No. 4060) last month.

The University of Liverpool's excavations in Egypt last season also met with very satisfactory success. Mr. Garstang was compelled to abandon for the present his digging at Hierakonpolis in view of the extreme dryness of the season, but not until he had succeeded in establishing to his satisfaction that what he calls the Great Fort there was built upon the site of a predynastic cemetery hitherto unworked. Nearly two hundred archaic graves were here uncovered and photographed. Proceeding afterwards to Hissayeh, south of Edfu, he discovered some prehistoric pottery and wooden objects of a type claimed to be different from anything yet found elsewhere, and also some hieroglyphic papyri of late Pharaonic times. The season's work came to an end with Esneh, where the whole site was conceded to the expedition through the courtesy of Prof. Sayce, and some memorials of the Hyksos period were found, together with two tombs of unusual design of the time of Rameses VI. All the objects brought back to England will be exhibited in the Institute of Archæology at Liverpool about the end of this month.

The last two numbers of the *Revue de l'Histoire des Religions* contain a remarkable article by M. Amélineau, in which he labours to prove that the constant representation by the Egyptians of gods in serpent form implies the doctrine that the souls of the gods took refuge after death within the bodies of living snakes. This agrees fairly well with the facts noted by M. Maspero in his essay on 'De Quelques Cultes et de Quelques Croyances Populaires des Égyptiens,' wherein he points out that not only were certain deities—for instance, the goddess Miritskro—alluded to in terms which leave no doubt that they were actual and veritable serpents, but also the worship of the snake is still popular among both Christians and Mohammedans in Egypt at the present day. That this should be so is by no means astonishing, when we consider how widespread is such worship throughout Africa so far south even as Dahomey. This should warn us against looking too exclusively to Asia as the source of Egyptian culture. That M. Amélineau's reasoning is conclusive can, however, hardly be said, and his writings continue to present that confusion of thought and incapacity for clear statement which have gone far to render his really epoch-making work at Abydos of less value than it should have been. The chapters devoted to it in M. de Morgan's 'Les Origines de l'Égypte' still remain the only intelligible record of it yet published, and the perusal of M. Amélineau's four huge volumes on 'Les Nouvelles Fouilles d'Abydos' leaves the reader more confused than before as to what he really discovered there. Yet his latest theory certainly demands careful consideration. The representations of serpents, both divine and demoniacal, on every page, not only in the 'Book of the Dead,' but also in the other funereal texts known as the 'Book of Hades,' the 'Book of the Gates,' and the like, are suggestive, as is the representation—which he does not seem to have noticed—of (the Greek) Sarapis and Isis under the guise of crowned serpents, sometimes with human heads.

M. Salomon Reinach's last contribution to Greek mythology deals with the myth of Actæon. He thinks it originated among a clan of Bœotians, whose women had a stag as their sacred animal. They were, according to him, in the habit of assembling at certain times clad in the skins of hinds, of tearing a stag in pieces, and of eating it with tears and wailings. Such an omophagy certainly formed part of the cult of Dionysus, and can be easily paralleled by instances drawn from primitive rites in other parts of the world. According to M. Reinach, when the Greeks began to worship divinities in human form, the sacramental stag was transformed into the hunter Actæon, first changed into a stag and then devoured by his own hounds. The fable that this was a punishment for having surprised Artemis and her nymphs bathing is, he thinks, an accretion of Alexandrian times, and it certainly bears some of the marks of an over-luxurious and artificial age. The worst of this form of rationalizing is that it is just as applicable to one legend as to another. Does M. Reinach think that the Plutarchian account of the Passion of Osiris, for instance, is to be explained in the same way? Or the Phrygian legend of Sabazius?

The next number of the *Proceedings* of the Society of Biblical Archæology will contain a reproduction of a very curious Hebrew magical MS. with a translation by Mr. P. D. Scott-Moncrieff.

A NEWLY DISCOVERED PORTRAIT OF SPINOZA.

New York, September 1st, 1905.

THE last place one would think of in searching for a portrait of Spinoza would be the United States, yet that has happened which nobody could have expected. The Hon. Mayer Sulzberger, of Philadelphia, President of the Court of Common Pleas of that city, has come into possession of a portrait of Spinoza which, from its pedigree and other indications, has every sign of authenticity.

It bears upon the back an announcement in French that it became the property of the Cardinal de Rohan—him of the diamond necklace imbroglio—as a gift of some Jewish tenants of his. But the painting itself (oil on a panel) is signed "W. V. 1672" (or possibly 1673), and it is not difficult to identify these initials with those of Wallerant Vaillant, who made his reputation as a portrait painter by painting a portrait of the Emperor Leopold in 1658. He settled at Amsterdam in 1662, and died there 1677. Vaillant painted the portrait of the Elector Palatine Karl Ludwig, who, in 1673, invited Spinoza to become a professor of philosophy at Heidelberg. The date affixed to the initials of the painter suggests that the portrait was made for the Elector Palatine in connexion with this offer.

There are at present, apart from this newly discovered portrait, only three pictorial representations of the face of Spinoza: (1) The engraving found in some copies of the 'Opera Posthuma'; (2) the miniature in the possession of the Queen Dowager of Holland, and reproduced in colours at the beginning of Schaarschmidt's edition of the 'Korte Verhandeling'; (3) the painting at Wolfenbüttel, reproduced from a photograph at the beginning of Dr. Martineau's monograph, and etched as a frontispiece in the standard edition of Van Vloten and Land. It is impossible that (2) and (3) can represent the same person. The miniature is of a marked Jewish type, whereas the Wolfenbüttel portrait has no Semitic features, though Dr. Martineau thought he found in it signs of the consumption of which Spinoza died. The

new portrait, though it has been somewhat badly restored, confirms much more the authenticity of the miniature than of the Wolfenbüttel portrait. Now Colerus, the almost contemporary biographer of Spinoza, distinctly declares that his features were of a Jewish type, and this would be borne out by the miniature and the newly discovered portrait. Thus, both from internal and external evidence, the authenticity of Judge Sulzberger's "find" is placed beyond reasonable doubt. It has been reproduced in colour as a frontispiece of the forthcoming eleventh volume of the 'Jewish Encyclopædia.'

JOSEPH JACOBS,
Revising Editor of the 'Jewish Encyclopædia.'

Fine-Art Gossip.

AT the Walker Art Gallery, Liverpool, the autumn exhibition of modern art was opened to the press on the first three days of this week.

THE death at Clamart, at the age of seventy-four years, is announced of M. Alphée Dubois, the well-known medallist and member of the Société des Artistes Français. M. Dubois carried off in 1855 the Grand Prix de Rome with his 'Guerrier mourant sur l'autel de la Patrie.' His principal medals include those struck in honour of Pasteur, Milne-Edwards, J. B. Dumas, Wurtz, Chevreul, and Becquerel. Coins at present in circulation in Tunis and Abyssinia, and three military medals for Denmark, are also among his work, of which a collection is on view at the Luxembourg. He was born in Paris on July 17th, 1831, and was a son of Eugène Dubois, the engraver.

WE are sorry to hear also of the death of M. S. Bing, who probably did more to popularize Japanese art in France and England than any other man. M. Bing was perhaps a dealer rather than a collector, but his enthusiasm for his particular department of fine art was enormous. His knowledge of things Japanese was profound, and his keenness infectious. In Paris he created the Japanese cult, and in the early days at his place in the Rue de Provence were to be seen such men as Edmond de Goncourt, Ary Renan, M. Gonse, Philippe Burt, Gillot, T. Duret, and M. Hayashi. It was Bing who managed the famous sales of the collections De Goncourt, Burty, Duret, Gillot, Hayashi, and many others. In or about 1882 he organized at the Galerie Georges Petit a successful exhibition of Japanese art. He started a periodical, *Le Japon Artistique*, which ran for several years, and we well remember the chorus of praise which greeted the English edition of this beautifully produced periodical. It was something fresh and unconventional. A veto was long ago put on the wholesale exportation from Japan of its finest art treasures, so that Bing's enterprises had of late years been directed into other and less successful paths.

M. LÉON BONNAT, the President of the Conseil des Musées, has addressed to the French Minister of Fine Arts his annual report for last year. The various purchases amount to 518,571 fr., of which 133,442 fr. have been spent on Egyptian antiquities, the "stèle du Roi Serpent" costing 103,400 fr. Two *belles œuvres* of Hoppner and Raeburn account for 150,000 fr., and the now famous picture ascribed to the "Maître de Moulins" was purchased for 62,500 fr.

THE Society of Antiquaries of Newcastle has issued a report by Mr. W. H. Knowles upon the repairs required at the north front of the Black Gate, and the adoption of a site for additions to the museum. The room containing the large collection of Roman sculptured stones is overcrowded, and the proposed additions would relieve the pressure. The lower stage of the Black Gate presents a unique specimen of early military architecture, the gateway and vaulting being in perfect condition. The Castle and Black Gate will be visited by the Royal Institute of British Architects, in connexion with their intended trip to Newcastle, on October 12th. Tynemouth Priory, Hexham Abbey, and Durham Cathedral are also on their programme.

MUSIC

THE WEEK.

THE WORCESTER FESTIVAL.

THE one hundred and eighty-second meeting of the Three Choirs began last Sunday, with the usual special service in the cathedral. The first anthem was 'A Song of Eden,' written for the occasion by Dr. A. Herbert Brewer, organist of Gloucester Cathedral. The music is well written and well scored, and, owing to its comparative simplicity, will no doubt be of general use. The words are taken from 'Paradise Lost.' The second anthem was Spohr's "God, Thou art great."

The festival proper opened on Tuesday morning, but before the performance, the ceremony of conferring the freedom of Worcester on Sir Edward Elgar took place at the Guildhall. Full descriptions of it have been given in the daily papers, so we need only refer to the very interesting speech made by the composer. He gave reminiscences of his boyish days, but afterwards, in a serious vein, said how much he owed to early study of English church music, a sound foundation on which few now build. The early impressions of young composers who live in large cities are of a thoroughly modern and frequently of a dangerous character. Sir Edward also stated that he had tried to influence some of the younger men, telling them that they "do not lose any sign of intellectuality if they take up religious subjects." Of this history offers notable examples in Bach's B minor Mass and Wagner's 'Parsifal,' to which might indeed be added Beethoven's Choral Symphony.

The musical scheme of the festival included three works by Sir Edward Elgar, the first, 'The Dream of Gerontius,' being given on the morning of the first day, Tuesday. At the Three-Choir Festivals it has long been the custom to begin with 'Elijah,' but it was, of course, natural to put in a prominent place a work which in a few years has achieved a great reputation, and, moreover, one written by a composer whose native city is Worcester.

Mr. Ivor Atkins conducted, and his rendering of the work, although here and there open to criticism, deserves praise. The choral portions were ably sung, the quiet passages in the first part being especially impressive. The choir, composed of good voices, is, in fact, notable for sweetness rather than for strength. The soloists were Miss Muriel Foster and Messrs. John Coates and Andrew Black. Miss Foster was not in her best voice, but her conception of the Angel's music is admirable. She would, however, do well to take the 'Farewell' just a shade faster. Mr. Coates is the interpreter *par excellence* of the Gerontius music, while Mr. Black deserves special praise for his reverent and restrained rendering of the Angel of the Agony music. Of the work itself we will say only one word. Every fresh hearing of it convinces us that, in spite of many wonderful passages in the second part, that portion is inferior to the first.

After the interval came a new work by Mr. Ivor Atkins, entitled 'Hymn of Faith,' with words arranged from the Bible by Sir Edward Elgar. It is a cantata of moderate dimensions for mezzo-soprano solo, chorus, and orchestra. The music points to the past as regards two prominent themes, while a third, to which the name 'Faith' may be given, is of firm, diatonic, and, we may add, somewhat Elgarian character. There are, indeed, one or two other places in which the influence of that composer is felt. Mr. Atkins shows skill in musicianship, yet it never becomes unduly prominent. As a rule composers exhibit weakness in solos rather than in choral movements, and it is just the individuality displayed in the solo portions which promises well for Mr. Atkins's future. The 'Hymn' under notice is excellent of its kind, and festival authorities will no doubt soon give its author an opportunity of displaying his powers on a larger scale. The programme ended with Brahms's Symphony in E minor.

The evening concert began with Beethoven's bright Fourth Symphony, of which a good reading was given. Bach's noble cantata "Come, Redeemer of our Race" ("Nun komm der Heiden Heiland"), followed, and it was announced as the first performance of the work in England. There is grand music in it, but we are sorry to say that the rendering was far from good. Some of the choral singing was vigorous, but there was not enough light and shade; the organ accompaniment to the solos was at times too heavy; and the fine tenor and soprano solos were not interpreted in the right spirit. Madame Sobrino was, however, far better than Mr. William Green, whose reading of his solo was unsympathetic, and more than once incorrect. Mr. Dalton Baker sang the short but wonderful *recitativo arioso*, "Behold I stand," with feeling and fervour. The singing of Peter Cornelius's beautiful eight-part motet unaccompanied, 'The Surrender of the Soul to the Everlasting Love,' was admirable. Such fresh, healthy music is a delightful mixture of art and nature, and most grateful to the singers. The programme ended with Mozart's 'Requiem,' of which an unequal performance was given. The soloists were Madame Albani, Miss Edna Thornton, and Messrs. W. Green and Dalton Baker.

On Wednesday morning Mr. Atkins gave a very good performance of Strauss's 'Tod und Verklärung,' after which Sir Hubert Parry conducted his setting of the 130th Psalm for solo, chorus, and orchestra. Performances of this work, displaying masterly skill, have been rare since it was produced at Hereford in 1891. It includes two soprano solos, the quiet charm of which offers welcome contrast to the massive choral sections. Choir and orchestra were at their best. The solo singer was Madame Albani. Next came a large selection from César Franck's oratorio 'Les Béatitudes,' which

was included in the festival programme at Cardiff last year. That the whole would have been better than a part, however great, is undeniable; but there were practical difficulties in the way. The performance, we regret to say, was not satisfactory. The music requires much attention, and, of course, the time for full rehearsal was necessarily very limited. The principal soloists were Messrs. Coates and Frederic Austin. We hope that the whole work will soon be performed at one of these Three-Choir Festivals. After the interval came the ever popular 'Lobgesang,' with Madame Albani and Mr. John Coates as soloists.

Musical Gossip.

At the Promenade Concert last Thursday week Mr. Wood introduced a Jubilee Overture by Felix Draeseke, a German composer who has just celebrated the seventieth anniversary of his birth. The music is clever, but on the whole dry. Little is known in England of Draeseke's music, though his 'Tragic' Symphony was given here a few years ago.—On Tuesday evening Liszt's 'Hungarian Storm March' was performed for the first time in London. Dedicated to Count Alexander Teleki, it dates from 1843, and forms one of the numerous marches which he founded on Hungarian melodies. The themes selected are spirited and picturesque, and they have been decked out in bright, but not garish orchestral attire. In the programme were included also Lalo's 'Norwegian Rhapsody,' founded, to some extent, upon Scandinavian folk-tunes, Felix Mottl's clever arrangement for orchestra of Liszt's 'St. Francis of Assisi's Sermon to the Birds,' and Sir A. C. Mackenzie's 'Britannia' Overture. Sir Charles Stanford's 'Five Songs of the Sea' were carefully rendered by Mr. Robert Burnett.—The third performance in London of Richard Strauss's 'Symphonia Domestica' was given on Wednesday evening. Praise is due to the instrumentalists for the painstaking manner in which they presented a most exacting composition. There is no denying that the symphony contains many fine and moving passages, but the needlessly harsh and tiresome outbursts that occur from time to time offend the ear, and are destructive of enjoyment. Elgar's 'Enigma' Variations were played in excellent style, and Mr. York Bowen, of the Royal Academy of Music, exhibited strength and enthusiasm in his performance of the part for the principal instrument in Tschaïkowsky's Pianoforte Concerto in B flat minor.

Sir Charles Stanford has completed his new symphony, composed in remembrance of G. F. Watts.

Beginning on Thursday, October 5th, a season of Italian opera, extending over eight weeks, has been arranged by Messrs. Frank Rendle and Neil Forsyth, in association with the Grand Opera Syndicate and the San Carlo Opera Company, of Naples. The performances will take place at the Royal Opera, Covent Garden. It is proposed to include many of the following operas: Puccini's 'La Tosca,' 'Madama Butterfly,' 'La Bohème,' and 'Manon Lescaut'; Giordano's 'Andrea Chenier' and 'Siberia,' which have not been performed at Covent Garden; 'Mefistofele,' 'La Gioconda,' 'Un Ballo in Maschera,' 'Don Giovanni,' 'Faust,' 'Rigoletto,' 'Aida,' and Catalani's 'Lorelei,' which will also be a novelty. Among the artists engaged are Madame Melba, Madame Buoninsegna, Madame Strakosch, Mlle. Trentini, Madame de Cisneros, and Madame Giachetti, and MM. Zenatello, de Marchi, Biel, Bada, Giorgini, Stracciari, Niola, Costa, Didur, Wigley, Wulman, and Sammarco. The San Carlo orchestra and chorus will be brought over, and Signor Mugnone will be the principal conductor, his assistant being Signor Tanara. Some matinées will be arranged during the season.

Mr. W. E. Haslam, a professor of singing at Paris, writes:—

"In the notice of the late Signor Tamagno's decease (*Athenæum*, September 9th) one reads: 'Tamagno appeared rarely at the Paris Opéra, for singing in French was for him a matter of considerable difficulty.' Will you permit me to say that Signor Tamagno only gave one short series of performances at the Opéra in the *rôle* of Otello? As the singer did not know French, and as the performances at the Opéra must be given in the language of the country, being a subventioned theatre, these representations were given by the principal interpreters in Italian, and on nights other than those of the regular performances."

Mr. Leslie Hibberd, who has been associated with the Bechstein Hall since its opening in 1901, has resigned his post, and established a concert agency at 17, Hanover Square.

The eighth season, 1905–6, of the Sunday Afternoon Orchestral Concerts, given by the Sunday Concert Society, commences at Queen's Hall on October 1st. The Queen's Hall and the London Symphony orchestras will play alternately, the former under Mr. Henry J. Wood, the latter under Sirs A. C. Mackenzie and Charles Villiers Stanford.

Dr. Saint-Saëns will conduct a new work of his, written for solo, chorus, orchestra, and organ, at a concert to be given at the Trocadéro, Paris, on October 14th.

PERFORMANCES NEXT WEEK.

Sun. National Sunday League, 3.30 and 7, Queen's Hall.
Mon. to Sat. Promenade Concerts, 8, Queen's Hall.

DRAMA

THE WEEK.

Drury Lane.—*The Prodigal Son.* By Hall Caine.

Judged by the ordinary standard of Drury Lane melodrama, Mr. Hall Caine's 'Prodigal Son' may be pronounced respectable accomplishment; regarded as a drama of Icelandic life, it begins better than it continues or ends. It would, we cannot but think, have been improved in most respects had the author cast to the winds all thought of the Biblical parable after which it is named and been content to depict the quasi-fratricidal struggle between Magnus and Oscar Stephensson which the action presents. With a background of existence in what is or is not Ultima Thule this strife would have formed a striking drama of passion, in which our sympathies would have been pretty evenly divided among characters all erring, but all with a claim to commiseration or regard. In order, however, to furnish a parallel to the disorderly life of the Prodigal Son Mr. Caine presents his hero under conditions that deprive him of all claim upon our consideration or regard. From the point of view adopted this is pardonable enough, and the life led on the Riviera by Oscar corresponds closely with that spent with harlots and in riotous living or feeding like swine on "the pods of the carob tree." It is none the less a mistake to deprive Oscar of all claim upon sympathy, especially so since his brother, whose foil he is intended to be, is shown in a light hardly less dishonouring and repellent. Mr. Hall Caine has the dramatic sense, and with a free hand would probably have extracted from his novel a drama with strong claims upon attention. He is, however, heavily handicapped. A cast including many actors who stand high in public estimation and foremost in their own is provided, and each individual insists upon having the stage to himself for a period proportionate to his sense of his importance. To requirements of the sort is attributable the almost interminable length of scenes such as some of those in the second act, in which a main object of the actors appears to be to compete with one another in over-elaboration. Spirited enough is the management, yet it too insists on a species of over-accentuation, deprives the revels in the casino of all spontaneity, and substitutes the concerted action of a recurrent ballet for the impromptu movements of a number of independent pleasure-seekers.

It is not, perhaps, easy to indicate in what other fashion these things could be treated in a play one destined purpose of which is spectacular. We institute, accordingly, no formal complaint, and content ourselves with saying that what might easily have been a product of inspiration becomes a result of manufacture. In the scenes of delirium on the Riviera centres all that is artificial and conventional in a play which without them might have done for Iceland what in her 'Théâtre de Nohant' George Sand has done for Berry, or in prose fiction Mr. Hardy has done for Wessex. Except in regard to excess of length, the domestic scenes are admirable. The human motive is conceivable, simple, natural, and inspiriting. The mistake that is made is the same as Sudermann would have committed had he interrupted the progress of 'Heimat' in order to depict the seduction of Magda. Most of the characters in 'The Prodigal Son' are well played, the two brothers finding specially well-assorted interpreters in Mr. George Alexander and Mr. Frank Cooper. Mrs. John Wood has little to do as Margret Neilsen, but the few words assigned to her are enough to reveal the beauty of an unsurpassed method. Miss Lily Hall Caine as Thora and Miss Nancy Price as Helga are well contrasted. The scenery is excellent, the Icelandic tableaux having remarkable beauty.

Haymarket.—*A Privy Council: a One-Act Comedy.* By Major W. P. Drury and Richard Pryce.—*On the Love Path: a Three-Act Comedy.* By C. M. S. McLellan.

Though wildly improbable, the one-act play of Messrs. Drury and Pryce is a spirited, clever, and ingenious little work, which no visitor to the reopened Haymarket should fail to see. It presents an imaginary, but quite conceivable episode in the life of Pepys. Its date is 1665, and its scene Pepys's house in Seething Lane, the characters being all taken from the immortal Diary. Having packed off his wife to the house of his cousin Roger at Barnet, and proceeded, after his wont, as confided in the semi-obscurity of a foreign language,

XUM

para baiser the fair Mercer and listen to her singing of his 'Beauty, Retire,' Pepys brings home to supper Mrs. Knipp or Knep of the Theatre Royal, a lady of whom, not without cause, Mrs. Pepys was jealous; Sir William Killigrew, the brother of Tom Killigrew; and Admiral Sir Christopher Mings. Returning unexpectedly, Mrs. Pepys is on the point of surprising the party. Mrs. Knipp, however, disguises herself as Charles II., the two courtiers pose themselves as attendants, and the jealous wife is led to believe that she has intruded on a privy council held under the roof of Pepys. Mrs. Pepys is too loud and shrewish, but the piece generally is well played, and, unlike most *levers de rideau*, strengthens greatly the bill in which it is included.

Beginning as bright and fantastic comedy, 'On the Love Path' ends as rather foolish melodrama. Had Mr. McLellan been content to preserve the atmosphere he at first assigned the piece, he would have produced a delicate and fragrant work, almost entitled to rank, music apart, with the lighter plays of Sedaine. During an act and a half out of three acts his comedy is delightful. From that point it falls off, to end in triviality. Three female characters of no special significance are played by Misses Ellis Jeffreys, Beatrice Forbes-Robertson, and Jessie Bateman, the masculine characters being cleverly interpreted by Messrs. Gerald du Maurier, Eric Lewis, A. E. Matthews, Arthur Williams, Edmund Maurice, and Nigel Playfair. In the attempt to fortify a piece which stood in no need of support a pleasing idea has almost miscarried.

TERRY'S.—*An Angel Unawares: a Light Comedy in Three Acts.* By Robert Vernon Harcourt.

MR. HARCOURT'S new comedy introduces us to a clever author, from whom much may be expected. Though bright, it is, however, hopelessly obscure. The dramatist loses sight of the commonplace that a public does not wish to be mystified, but seeks, while sitting itself in the light, to watch bewilderment it does not share. The novelty introduces us to two very acceptable American artists, Miss van Buskirk and Mr. James Carew, and is admirably played by Miss Fanny Brough, Mr. Yorke Stephens, and Mr. Charles Maude. It is possible that as the piece becomes known it may gain in popularity. The first audience was too much occupied in seeking for a meaning to enjoy itself thoroughly.

Dramatic Gossip.

WE hear with regret of the stoppage of the Mermaid Repertory Theatre, though we had never regarded its prolonged existence as probable. Under the direction of Mr. Philip Carr it has given us many works of high interest, including Milton's 'Comus,' Jonson's 'Mask of Cupid,' Fletcher's 'Faithful Shepherdess' and 'Knight of the Burning Pestle,' Congreve's 'Way of the World,' Ford's 'Broken Heart,' Vanbrugh's 'Confederacy,' Jonson's 'Silent Woman,' Beaumont and Fletcher's 'Maid's Tragedy,' Sheridan's 'Critic,' and Gilbert's 'Palace of Truth.' Of this year's no less interesting and promising programme the only item to be realized was Mr. Grundy's 'Late Mr. Castello.' Beaumont and Fletcher's 'Scornful Lady,' which was announced for Monday last, was not reached. A pitiful account is put forward by Mr. Carr, whose receipts for seven performances during last week barely reached 12*l.* But he does not despair of reviving the experiment. The conditions are unpromising, however, the difficulties in the way of obtaining an adequately expurgated and yet living text being not the least. 'The Scornful Lady,' on which hopes seem to have been built, is thus disfigured by indescribable obscenity, with no compensatory passages of poetry or passion such as the authors not seldom supply. A taste far more cultivated than that of the English public, the most unenlightened and barbarous of Occidental Europe, is necessary to render possible a scheme such as Mr. Carr contemplates.

PERFORMANCES began at the Court Theatre on Monday with the promised revival of Mr. Shaw's 'John Bull's Other Island,' which was given with a modified cast as an evening instead of an afternoon entertainment. Mr. Louis Calvert, Mr. Granville Barker, Mr. W. L. Shine, and Mr. A. E. George reappear in parts in which they could not easily be replaced; and Miss Lillah McCarthy as Nora and Mr. J. H. Barnes as the priest strengthen the cast in which they appear.

MISS ANNIE RUSSELL has been secured as the heroine of Mr. Shaw's new comedy 'Major Barbara,' the production of which at the last-mentioned theatre is fixed for the afternoon of November 28th.

WHEN, early in the approaching year, Mr. Cyril Maude opens the reconstructed Avenue Theatre, it will be under the title of the Playhouse. Miss Winifred Emery will be associated with her husband in management, and their joint programme will consist of comedy.

THE Waldorf Theatre will reopen early in October with a translation of Beyerlein's well-known military drama 'Zapfenstreich.' The principal parts in this will be sustained by Mr. H. B. Irving, Mr. H. V. Esmond, and Miss Eva Moore. 'Zapfenstreich,' which has enjoyed much popularity in America and throughout Germany, and has been produced in Paris, was given by the German Company at the Royalty on the 8th of January of last year.

A SEASON of German plays extending over three months will begin in October, presumably at the Great Queen Street Theatre.

'DE LANCY,' a three-act play by Mr. Augustus Thomas, has been given for copyright purposes at the Vaudeville Theatre.

MAURICE MAETERLINCK is at present writing a fantastic play, 'The Blue Bird.'

A NEW play by Gerhart Hauptmann will be mounted during the winter at the Lessing Theater, Berlin.

To CORRESPONDENTS.—F. L.—A. S.—L. R. C.—received.
W. N.—All right.
A. L.—Many thanks.

LITERATURE

The Victoria History of the County of Buckingham. Edited by William Page, F.S.A. Vol. I. (Constable & Co.)

HITHERTO those who were interested in the topography or general history of Buckinghamshire have had to fall back on the four substantial posthumous volumes of George Lipscomb, published in 1847. Though this is a work of no small merit for the time when it was written, it is confessedly not a little out of date in the light of modern research, and is moreover difficult to procure, and costly when found. All, therefore, who take an intelligent interest in the county of Buckingham ought to be glad to extend a welcome to the painstaking scheme of a new history, of which the first volume has just been issued.

Mr. Page is to be congratulated on having secured a continuance of the services of most of those experts who have already supplied essays on different branches of natural history for the opening volumes of other counties of the "Victoria County History" scheme. Thus Mr. Woodward writes on geology, Mr. Lydekker on palæontology, and Mr. Druce, with much charm, on botany. The different departments of zoology fall into the hands of various gentlemen having special local knowledge. The birds are dealt with by Mr. Ernst Hartert, assisted by the Hon. Walter Rothschild.

In the variety of its bird life Buckinghamshire is not so rich as many other districts. As is the case with all inland counties, the list is swelled by the accidental appearance of many a shore or water bird which strictly "has no business to be there"; but the attractions accountable for such occurrences lie for the most part nearly, if not quite, outside the county boundaries. The Thames valley on the southern border must always be a valuable asset—the more so since shooting restrictions have been wisely enforced. Frequent allusion is made by Messrs. Hartert and Rothschild to the Tring reservoirs, with which they are intimately acquainted, although actually these waters belong to Hertfordshire; it is indeed lamentable that they have recently been drawn off to such an alarming extent that their ornithological interest seems in danger of becoming very shortly a thing of the past.

In adhering strictly to the nomenclature of Mr. Howard Saunders according to the general scheme of the editors, Mr. Hartert has felt constrained, in not a few instances, to protest against its increasing acceptance. We would remark that disquisitions on the propriety of recognized Latin names are rather out of place in a work of this sort, and, however interesting to the expert, may strike the average layman as smacking overmuch of the museum. The tendency to magnify local variations into separate species is a common and exasperating fault, and there is too much of it here. The so-called "willow tit," for instance, is now, we believe, buried in oblivion by ornithologists of the highest standing, who recognize it as neither more nor less than a juvenile marsh tit.

Local names are very sparingly included, possibly owing to the lack of intelligent interest among the country people which is here remarked upon. The wryneck is variously known as the pea bird or the nile bird—both rather misleading names, it is suggested, arising from its well-known cry. Careful notes are supplied respecting the haunts of the stonechat and the whinchat, and it is interesting to learn that in certain places the rule that both species are not to be found nesting close together has its exceptions. The description of a goldcrest's nest in the ivy against a tree corresponds exactly with two instances that have come under our own notice this year. Pied wagtails are notoriously erratic in their choice of a nesting site, and we are here told of some which voluntarily brought off a brood in a birdcage that was standing empty out of doors.

So far as Buckinghamshire is concerned, it is noted that the stock-dove is wholly migratory, and visits the county in the breeding season only. The song-thrush, according to the authors' observation, remains for the most part in its ordinary haunts all the year round, although great numbers pass through on migration in autumn and spring.

An enormous flight of bramblings was observed in Stoke Park in 1865, a flock streaming past without intermission for thirty-five minutes. On such occasions it is a matter of extreme difficulty to form the roughest estimate of actual numbers, but we find one observer hazards the suggestion that a vast congregation of departing house-martins at Great Marlow in 1896 might be put at "about a million"!

Goldfinches are ruthlessly kept down by birdcatchers. The present rarity of quail is ascribed to high farming and drainage—doubtless a sufficient cause in itself, apart from the wholesale persecution on the Mediterranean shores during migration.

The twenty pages on 'Early Man,' supplied by Mr. George Clinch, show much industry, and are characterized by a frankly explicit style. The prehistoric remains of the shire are few, so far as they have yet been detected; but they aptly illustrate the different periods into which archæologists usually divide those early days of which there is no written record. So far as the palæolithic age is concerned (we are glad that Mr. Clinch leaves the so-called "eolithic" age severely alone), river-drift implements have been discovered at Burnham, Marlow, Taplow, and other sites within the county in the Thames valley. In the neighbourhood of Hitcham, Taplow, and Bledlow numerous neolithic implements, such as flint axes, lance-heads, arrow-heads, scrapers, &c., have been discovered; indeed, there seems good reason to believe that remains of this character are pretty widely distributed over the county. The bronze age antiquities of Buckinghamshire include the interesting hoard of some dealer in bronze celts, for five socketed celts of a plain character were found together at Lodge Hill, Waddesdon, in 1855. A bronze two-edged sword, 21 in. long, was found in a field in Hawkridge parish in 1851, and is here illustrated. A variety of later bronze finds in the county are carefully described and pictured, including an extensive hoard of sixteen objects found at New Bradwell in 1879, and an important collection from the river-bed near Taplow, presented to the British Museum in 1898. By far the most valuable article in the last collection is a rapier-like socketed spearhead decorated with two studs of gold and a series of punctured dots. This weapon clearly indicates the high state of culture that attended the close of the bronze age, at a time when it probably overlapped its successor. Of the prehistoric iron age, before the Roman occupation, the most remarkable Buckinghamshire trophy is a sword and scabbard of late Celtic character, found at Amerden, on the banks of the Thames, and now in the British Museum. In decoration it closely resembles a yet finer specimen in the Northampton Museum.

Mr. Clinch also deals with two great white crosses or cruciform figures cut in the turf on the steep sides of the Chiltern Hills in the neighbourhood of Monks Risborough and Bledlow. The former, which is the larger, is over 80 ft. long and about 80 ft. across. Mr. Clinch has some arguments to produce in favour of the possible prehistoric date of these crosses, but he has nothing to show in support of his notion that they are probably "modifications of purely phallic forms." His article concludes with some account of ancient British coins, and with a useful topographical list of prehistoric antiquities found within the shire.

Mr. R. A. Smith has a short article on 'Anglo-Saxon Remains,' including an account, with coloured plate, of the remarkable and varied discoveries made in the famous Saxon barrow at Taplow, in 1883, which have been often described.

It is pleasant to find Mr. Round again writing on the great Survey, for he has always something fresh to tell us concerning the light thrown by Domesday Book on the past of every county of which he writes. In the comparatively short space allotted to this county in the Book itself (sixteen pages, as against double the amount

for its neighbours of Bedfordshire and Hertfordshire), Mr. Round finds "a few of those personal touches which make the men and women even of that remote period something more than mere names." Particularly is this the case with the two or three Englishmen who were permitted to remain landholders in Buckinghamshire after the Conquest. Among these was Alsi, an English son-in-law of Wulfward and his wife Eadgifu. Mr. Round is able to show, from Domesday evidence of other counties, that Wulfward, who enjoyed the favour of Edward's queen and had considerable estates in Buckinghamshire, lived almost to the time of the Survey, and contrived to retain lands and royal favour. After his death his lands in this county were divided into three parts, one of which went to the Bishop of Coutances, the second to Walter Gifford, and the third to his son-in-law Alsi. The three Buckinghamshire estates held by Alsi were all received (they amounted to sixty hides) with Wulfward's daughter from Queen Edith. One other Englishman contrived to hold a good estate in this county, namely, Leofwine of Newnham. Among the group of thegns, a few Englishmen retained the small holdings they had before the Conquest,

"but only as the oppressed tenants of a grasping Norman lord. Such was Æthelric, who, at Marsh Gibbon, held his manor at farm *graviter et miserabiliter*; it is one of the most graphic touches that the Survey contains."

The ecclesiastical history of the county, together with the details of each religious house, has fallen to the lot of Sister Elspeth, of the community of All Saints, whose similar work for the county of Bedford has already been spoken of favourably in these columns. These hundred and odd pages are full of a great variety of matter skilfully set forth, strictly local, and in many places including topics which are almost entirely novel, and will prove a somewhat painful surprise to many. The condition of the vast majority of the churches and of everything connected with divine worship was indescribably mean and appalling during the latter part of the reign of Elizabeth and throughout the reigns of James I. and Charles I.

The first of the religious houses dealt with is that of the small Benedictine priory of Luffield, which was suppressed in 1494 to help in the endowment of Henry VII.'s new chapel at Westminster. It was situated in the forest of Whittlebury, on the boundary line of Bucks and Northants. A part of the conventual buildings was in the former county, but the remainder, including the church, stood in the latter shire. Moreover, there is no doubt whatever that the priory was held to belong to Northamptonshire by the authorities of both Church and State. The Bishops of Lincoln always sent their mandates for the induction of new priors to the Archdeacon of Northampton; and the Crown, during a vacancy, placed the temporalities in the hands of the escheator of that county. However, there is no harm done by this account appearing here if the priory is also treated of, as we feel sure will be the case, under the county to which it really belongs. Although the accounts of the religious houses show much research and are a considerable advance upon anything yet published with regard to them, it might in some cases have been well to carry research a little further and increase the information set forth in these monastic annals. For instance, under Luffield there is no mention of the somewhat important grant by Henry III. to the monks, in 1230, of a three days' fair at Luffield; nor is reference made to the curious case of a Luffield monk, who had ruptured himself during work at the monastery, obtaining a dispensation direct from Pope Boniface IX. in 1399, to enable him to visit his friends and relations without any licence from his superior. Surely, too, the highly interesting series of visitations of Premonstratensian houses to be found in Bishop Redman's register at the Bodleian did not omit Lavendon Abbey. Yet there is no reference to his visits in the account of that house. But, broadly speaking, we find far more to praise than blame in these conscientious accounts of the old monasteries and hospitals, every statement being abundantly substantiated by references in the foot-notes. No Buckinghamshire man who wishes to know the facts as to the history of religion in his shire can possibly afford to ignore this volume.

Coryat's Crudities: Hastily gobled up in five moneths travells in France, Savoy, Italy, Rhetia, commonly called the Grisons country, Helvetia alias Switzerland, some parts of high Germany and the Netherlands; Newly digested in the hungry aire of Odcombe in the County of Somerset, and now dispersed to the nourishment of the travelling members of this Kingdome. By Thomas Coryat. 2 vols. (Glasgow, MacLehose & Sons.)

A man who does not share the ambitions of his contemporaries may extract much pleasure from life, but is hardly likely to be appreciated or even understood by them; and if his interests find expression in literature, the voice of his fellows may prevent posterity itself from forming any better judgment on his work. Thomas Coryat is a case in point. He was the son of a country clergyman of some distinction; he passed through Oxford with credit; he was attached in some capacity to the household of Henry, Prince of Wales, and was in a fair way towards public employment and wealth. His tastes were scholarly, and likely to be appreciated in the Court of James I. But he had one failing, which destroyed all his chances of success: not even

"the love of Odcombe in Somersetshire, which is so deare unto me, that I preferre the very smoke thereof before the fire of all other places under the sunne"

(as he wrote, adapting Lucian), could check his desire

to try them all,
The happy roads that take you o'er the world.

Even when, later, preferment came his way, he "conditioned to have no office of charge or neerenesse cast upon him, as a Remora of his future travaile." And so we know little or nothing of him but his work, and of the work the only part that has struck popular attention is a hastily given title; an engraved frontispiece full of what passed for humour with the Right Worshipfull Fraternitie of Sireniacall Gentlemen who met at the Mermaid in Bread Street; and a congeries of appreciations of the author and his work by the small wits of the Court, in which the more serious tributes of Ben Jonson, Campion, Drayton, and Donne stand out pleasantly. But such as it was, the collection attained sufficient popularity to be pirated and issued separately under the title of 'The Odcombian Banquet.'

Foreign travel was in Coryat's days neither the easy nor the customary thing it afterwards became. The chances of return were small, and the expenses high, as we learn from the custom of insuring oneself before starting out. The premium varied from one-third to one-fifth — *i.e.*, the chances of return were estimated as from two to four to one against. Fynes Morison paid 100*l.* to receive 300*l.* if he returned; Shakspeare, in 'The Tempest,' quotes five for one; and Kemp, in his 'Nine Days' Wonder,' tried to obtain the traveller's threefold gain. Coryat himself had insured for 100 marks with a neighbour, "James Starre of Evill in Somerset, Linendraper," but on his return the disappointed linendraper refused to pay, and filed a bill in Chancery against him, with what result we do not know. At the outset it was necessary to obtain leave from the Privy Council to go abroad (unless one was a recognized merchant or sea-farer), and as a rule travel on the Continent was discouraged by Elizabeth and James. Subjects none too well disciplined as it was might imbibe dangerous principles and habits of thought, and communication with foreigners was not promoted. Venice was the only part of Italy unsuspect, and it was well for Coryat that his desires led him thither, otherwise he might have found the licence less easy to obtain. But even then difficulties were only beginning. No one could take out of the kingdom more than 5*l.* in coin or bullion and a single ring. Of course bills of exchange could be obtained—Coryat had one on Venice; but still the system was not convenient. More than that, strangers were not welcome, and in some Italian cities any one bringing in over a certain sum of money was liable to have it confiscated on entrance. The roads abounded with strong thieves, who counted it an alms-deed if they left the traveller a single garment. Four-wheeled conveyances were almost unknown, and for years after were the subject of royal fulminations, and of bitter complaints from the dwellers in the country, because they destroyed—not the roads, but the ruts! Milestones did not exist, and post-horses travelled at a walking pace, except on the few good roads. Bearing all this in mind, and the personal fact that Coryat knew not a word of the languages of the countries he passed through, we are in a position to judge of his achievement.

The linguistic difficulty was not, in truth, so great as it seems to us. Every one above the grade of a servant knew some Latin, and Coryat found no difficulty in being understood except on one famous occasion in Germany, when he had been eating grapes from an unfenced vineyard, and was unable to explain himself to the angry pro-

prietors. Moreover, Coryat's main interest was in the remains of classical antiquity, where these were to be found, or in inscriptions of any kind if classical ones were absent. He was simply born a century before his time, and, *mutatis mutandis*, would have been at home with Addison or any of the bear-leaders on the "grand tour." His hurried passage from town to town left him little time for accurate topographical description, but his accounts of Fontainebleau, of Padua, of Verona, of Venice, and of some Swiss and German towns are not only accurate enough for us to trace his route through them, but are also of value as the record of vanished features in their topography.

It will be a source of pleasure to lovers of the open road to follow Coryat, map in hand, to check his distances and account for them, and to renew memories of little, forgotten wayside towns, far from any railway, and almost unaltered since his day. His latest edition is luxuriously produced, and in every way worthy of him, given the publishers' rule of not altering or pointing out his mistakes, and will stand to the credit of Messrs. MacLehose beside the magnificent Hakluyt and the Purchas which contains the last memorials of one who was the incarnation of the spirit of travel for travel's sake.

EDUCATION, ANCIENT AND MODERN.

Roman Education. By A. S. Wilkins. (Cambridge, University Press.)

The Educative Process. By W. C. Bagley. (New York, the Macmillan Company.)

A PATHETIC interest attaches to the first work before us, as the prefatory note (dated Manchester, May, 1905) having been penned by its author but a short time before his death. We know no other work to which one could go for so complete and accurate an exposition of what is known about Roman education. The late Prof. Nettleship used to cover a great deal of the ground in his lectures on the history of Latin literature to the second century A.D., and on literary criticism in Latin antiquity. The sketch in Becker's 'Gallus' we think, for its compass, very helpful. But Prof. Wilkins has been at pains to piece together the varied information on his subject contained in several German and French authors, such as Bernhardy, Hulsebos, Grasberger, Marquardt, and Jullien. There are six chapters, and of these chaps. iii., iv., and v. contain the gist of the matter. Let us say at once that the author is by no means devoid of humour, and that the amount of modern parallel he allows himself is nicely calculated to import interest into his subject without leading to false analogies. The difficulty of the subject is well known: the historical method must be followed, and yet for the early or purely national stage for five centuries there is nothing like contemporary evidence. Even for the last century of the Republic and the first of the Empire a great deal has to be taken on surmise from the indirect evidence of writers on other subjects than education. The book is therefore necessarily concerned with the educational effect of Greek influence on Rome from the middle of the third century B.C. onwards, and this in two distinct departments—literary (or secondary) education, and the higher (university) training of rhetoric and philosophy. These pages are highly suggestive and tempt us to frequent quotation. We will yield to the allurement in two or three cases only, where we think the author has an important point to advance. Speaking of the class of *grammatici* who taught to write and speak Greek, in contrast to the old *litteratores*, or writing masters, the author says:—

"At first doubtless the language was learnt for practical purposes only: there seems to have been no idea of using the literature as an instrument of mental culture. But by degrees, at first perhaps half-unconsciously, the study of the language was extended to include a study of the works written in it. The importance of the step then taken was enormous, for thus the Romans came to be the first nation to base their culture on the study of literature in a foreign language, and so marked out the lines on which the higher education of all civilised nations was to move down to the present time."

Here is an important principle which we must be content to throw down as a bone of contention between the modern champions of science and humanism. There was no national education at Rome; and yet in the class-room (*pergula*) individualism, so far as the teacher was concerned, was not rampant.

"On the one hand, there was the greatest freedom left to the master; there was no prescribed curriculum, no impending examination, no State interference in any way. On the other hand, there seems to have been in practice remarkable uniformity both in the ideals and in the methods."

On the whole, though there are striking similarities between the ancient Roman and modern English systems of education, the marked differences are the more numerous. The overlapping of different types of school was then, as now, a source of trouble; and the want of elementary schools offering special preparation for secondary schools was felt. The Roman system of teaching how to write essays has been the model on which the art of literary composition has been taught ever since; but geography formed no part of the school curriculum, either elementary or secondary, at least during the years 100 B.C. to 100 A.D. Maps were reserved as a sort of luxury for the walls of private houses. Boys went to school at an unconscionably early hour. In the primary school the chief text-books were the standard poets; in commercial Rome there was no vestige of technical or commercial education; and, at least in the secondary school, in spite of a graduated system of exercises, the boys were far more passive than we should consider in accordance with sound method. They were lectured much as are our modern undergraduates. In education of the university type a salient difference is the fact that

"if a man wished to know about right and wrong, what he had to do and why he should do it, and was not satisfied with the rules which had been taught him as a child, he would go to a philosopher, never to a priest."

We have not space to go into this interesting essay in more detail; but it will repay teachers to read it. There is more of the Roman world in modern educational aims and methods than one would be inclined on first thoughts to admit.

Teachers should inspire as well as instruct. This truth, upon which Dr. Bagley insists in his book, cannot be dwelt upon without depression, since, even if every adult capable of inspiring others in the slightest degree were employed in teaching, a substantial percentage of pupils in a State where education is supposed to be universal would have to make shift with mere instruction. All the more reason, then, is there that the instruction should be raised to the highest possible grade of excellence. Dr. Bagley has made a valuable contribution towards this desirable end by a lucid, methodical presentation "of the basal principles of the educative process." His exposition of the responsibilities and duties of parents and teachers can be accepted with little or no reservation, but some of his illustrative statements and subsidiary generalizations are open to question. For instance, Weismann's assertion of "the non-transmission of acquired characters through the germ cell" should not be cited in reference to human beings without a careful consideration of the possibility of characteristics acquired by either parent or both parents being transmitted during gestation—a period which Dr. Bagley seems to ignore, though he may have thought its possible effects sufficiently implied in the phrase "influences of nutrition" and references to biological works. The statement that "the factor of parental education is quite invariable; the same ends are sought and the same methods employed generation after generation," may be true of intelligent brutes and of savages, but its unqualified application to humanity at large is bewildering. In Great Britain a fluctuation between over-strict and over-lax disciplinary methods with occasional lapses into unredeemed neglect, accompanied by all manner of variations due to changes of employment, locality, social position, and command of money, might be traced for generations in hundreds of families. We are told:—

"It is a matter of commonplace knowledge that Spencer's prophecy has 'come true,' and that England is reaping, in vanishing markets and a decay of commercial prestige, the fruits of her neglect of scientific instruction. Yet, even now, she only hesitatingly acknowledges that the cause of her industrial decline must be laid at the door of her short-sighted educational policy."

If England is suffering as prophesied fifty years ago and has been neglecting scientific instruction as alleged, such neglect would be only one of the several causes contributory to England's present commercial condition.

The statement of the "equivalence of the terms 'social' and 'moral'" seems scarcely consistent with the following passage:—

"Morality has been termed the subordination of individual impulses to remote social ends; but morality is possible only when these social ends can be identified with the highest and most permanent interests of the ultimate self."

Between self-regarding morality and altruistic morality there must ever be in practice either some conflict or some com-

promise. The individual who pursues unflinchingly his highest interests is not regarded by the majority as social. We read:—

"The keynote of morality is self-denial; yet the very term 'self-denial' implies the denial of self to others—the true essence of social spirit."

But self-denial means the denial of the lower self for the sake not only of others, but also of the higher self. Is, then, "the development of the Socially Efficient Individual.....the ultimate aim of education"? Should not the ultimate aim of education rather be the highest moral and intellectual development of which each young member of society is capable, one attribute thus developed in each pupil being social efficiency, of which the average throughout the State is raised concurrently with higher general development? Though the practical difference between these aims is very slight, the theoretical distinction should be rigidly maintained. The idea that the individual is to be sacrificed to society is perhaps due to the comparatively low value set upon individual man by materialists who profess to explain the whole self or ego in terms of neurosis. For purposes of State education "self" may be regarded as an individual entity endowed with more or less intelligence and will-power, and capable of moral and intellectual elevation; while discussion of the immanence in man of a non-material soul or spirit may be left to parents, ministers of religion, and irresponsible psychologists. Dr. Bagley seems to incline towards utilitarian and materialistic philosophy, yet he says:—

"Art, literature (including poetry, the drama, and fiction), music, and religion are the great media for the transmission of ideals, and as such fulfill an educative function far more fundamental than our didactic pedagogy has ever realized."

But then this appreciation of religious teaching need not imply that it has any intrinsic value, as the following passage proves:—

"The classical education of the past undoubtedly had little worth in so far as the intrinsic value of its subject-matter was concerned; but it had immeasurable worth in so far as the ideals that it instilled were concerned. If the new education fails to develop equally effective ideals, its mission will result in a net loss, no matter how thoroughly it may succeed from its own intrinsic standpoint."

As to secondary teaching, we decidedly prefer the views of Mr. Leighton, whose work 'The Boy and his School' was recently noticed in these columns; but all who train teachers and make a study of education or psychology should master this Transatlantic theory of education. At first sight the technical terms may look formidable, but they are carefully explained, and a copious index makes it easy to find definitions as required.

NEW NOVELS.

Starvecrow Farm. By Stanley Weyman. (Hutchinson & Co.)

There is always a certainty that we shall find good workmanship in Mr. Weyman's novels. He is never careless, and he is never clumsy. In 'Starvecrow Farm,' the scene of which is laid in England at the close of the Napoleonic wars, we make the acquaintance of a charming heroine, who passes through many adventures of an exciting character, and wins happiness at last. In one respect the book reminds us of Mr. Weyman's 'Count Hannibal.' In that capital story the hero wins the love of the heroine by maltreating her. In the present volume the brutality with which the hero treats the heroine proves to be irresistible, and she confesses that, in view of the fact that he has severely bruised her wrist, she cannot fail to love him. That this primitive method of wooing survived in England so late as the nineteenth century will be believed with difficulty by Mr. Weyman's female readers. 'Starvecrow Farm' cannot be said to be startlingly original. Neither the plot nor the incidents of the story are strikingly novel. The virtuous men are not particularly admirable, and the villains are perhaps less entertaining than Mr. Weyman's villains usually are. But the treatment of the theme which the author has selected is always that of the clever workman, who never mistakes in the handling of his tools. None of the characters to whom he introduces us can be said to be unreal, and the story never lacks movement. Possibly 'Starvecrow Farm' may be thought by some of Mr. Weyman's admirers to fall somewhat below his other stories; but such an opinion would probably be due to the fact that it is an English story, and we instinctively prefer to go abroad when in search of romance. In point of fact, there is quite as much romance in this story as there is in 'Under the Red Robe.' If we fancy that the latter is the truer romance, it is because the scene is laid in France, and not in England. There is not the slightest reason why any one should be disappointed in Mr. Weyman's latest book. It is as good as any of those which have preceded it from the same pen, and to say this is to pay it a high compliment.

A Servant of the Public. By Anthony Hope. (Methuen & Co.)

The profound student of human nature is rare among writers of English fiction. Anthony Hope is, perhaps, the last to count himself one. But some of his admirers and critics would have us, seemingly, believe otherwise. His new story has more claim to knowledge of the kind indicated above than its predecessors. 'A Servant of the Public' marks an improvement in some ways on 'Double Harness.' The canvas is less crowded, and the attempt to unravel cross-purposes and conflicting motives is less strenuous yet more successful. The motive and action here turn on simpler yet more human impulses. Inelegancies of phrase are certainly fewer; the general expression is on a higher or at least a better sustained level. Most of the people in the story act and talk almost as though in their proper *assiette*, which is not always the case with this author's characters nor those of others. Even so one remarks that the "man of family," aged forty-three, of enormous worldly wisdom and experience, does not during the stress of social life invariably show his qualities. Shrewd and amusing observations on men and women and their mutual tactics may be here and there noted. And there are some touches of humour in the handling of the principal love affair — the affair that ought to be the backbone of the story. The real defect seems to us radical. Instead of relying on the essential side of the heroine's nature and his own capacity to treat it the author calls in external and adventitious aids. In short—not trusting himself for her conduct and evolution, and these are the true problem—he falls back on the exigencies of the theatrical profession and the long-suffering artistic temperament. Now what there is of good (or bad) in his actress is that she is "just a woman." All else called into service is for the moment ineffectual. The book is not a picture of stage life, nor even of one stage person. To attempt to make it so is to fail in that, and to lose as well a possible study in feminine nature. It is not given to every writer to have the penetration to feel this, and the strength to work on simple and severe lines. Most of our novelists suffer from weak convictions or lack of insight. Therefore they ignore or evade essentials, and fling themselves on the accidental. Thinking this story over one realizes that everything really pertinent to the subject could have been managed without the use of extraneous means. The heroine's stage existence is only evoked for us by purely conventional processes. She herself and the man most attracted to her are the people to supply in their own natures the elements of interest, and they are not allowed to enter into what kingdom they might have. There are other people not of much importance, but a good deal elaborated. Side by side with the principals we have a "woman of fashion," scarcely to the manner born, and a whole self-made family. The affairs of these and other people overlap somewhat artificially.

Because of Jock. By E. L. Haverfield. (Allen.)

One defect of 'Because of Jock'—which will prove a disappointment to those who recognized in some of the author's earlier works a promising resemblance to Mrs. Gaskell's novels—is that the story is so long in starting. Not until the middle of the book is reached—and its pages number nearly four hundred — does the patient reader come to the real tale that is to be told. Jock McLeod, banished from a luxurious home by a stony-hearted stepmother, has degenerated into a pickpocket. Major Thornton detects him stealing in a Piccadilly crowd, but, instead of handing him over to the police, carries him to his hotel, and gives him some excellent advice and three five-pound notes. Jock enlists in the Major's regiment, and shows a fitting appreciation of the Major's generosity by saving his life in the South African war. He has a "radiantly lovely" sister, with whom the gallant Major, no longer engaged to the egotistical young lady whose love

affairs occupy the first part of the book, exchanges vows of devotion in the closing scene. The author's mode of telling the story is better than the story itself, though her writing is occasionally marred by odd expressions. She has observation and a certain gift of quiet humour, and some of the minor characters in the book are drawn very neatly.

At the Sign of the Fox. By Barbara. (New York, the Macmillan Company.)

IN this story, written by a lady who has chosen to dispense with a surname, are narrated the brave endeavours of a cultured girl to maintain the members of her family after her father, a New York financier, has fallen on evil days. She opens in a village a sort of tea-garden, to which she gives the name of "At the Sign of the Fox," painting the signboard with her own fair hand. A young Dutch painter was among her admirers when, in the full flow of prosperity, she studied art in Paris. Disguised as a farm labourer—why the talented artist should thus trouble to conceal his identity is not explained—he watches her affectionately in her humble sphere. One day, at the close of the harvest, her gown is set on fire, and her vigilant lover, in extinguishing the flames, has his beard singed away. "Lorenz!" she cries, "Lorenz!" and the story hastens to its cheerful close. The characters are in keeping with the plot; Tatters, "a person, though disguised as an old collie dog," is, perhaps, the only being in the book that has a touch of life. But it would be unjust not to add a favourable word. The author has a strong love of nature, and her sketches of outdoor life have atmosphere and charm.

His Better Half. By George Griffith. (White & Co.)

THE "better half" deserves more than a quarter of the book, which is all that she gets. Clever and well educated enough to discern her admirer's capabilities, in spite of his defective education, and to coach him up for a Staff appointment examination after their marriage, she is withal charming and warm-hearted. As the only cadet of a wealthy family he had been kept from advance by plenty of money and domestic snubbing, and but for his wife might never have risen to be more than an athlete and good fighter in a regiment of Bengal Lancers. When he starts as A.D.C. for active service on the North-West Frontier his wife's overt mission is ended, and he becomes involved in a tangle of mysterious and romantic incident, in which Nana Sahib and Russians figure and a wonderful race of Moslem warriors, who are commanded in the field by a young Englishman. An interlude explains that when two years old he was carried off to a superfine kingdom concealed by impregnable mountains. To this paradise, which is hardly new in fiction, the captain of Lancers would not have penetrated had he not saved his rissaldar's life before he met his "better half," so that he is not entirely beholden to her for his successful career. The development of the hero from "a bit of a fool," though a V.C., into an energetic and skilful leader is depicted by a few lively, expressive touches, which show more insight into character than is usually displayed in tales of sensational adventure.

SCHOOL-BOOKS.

The Mother Tongue, Book I. (Ginn & Co.), is one of a series of three little books whose object is to instruct children in the speaking, reading, and writing of English. It is by Sarah Louise Arnold and George Lyman Kittredge, and is edited for the use of English schools by John William Adamson. The volume is evidently intended for the very young, and aims at training the mental faculties of children by arousing their interest and curiosity from the start, and inducing them to think for themselves. Thus such elementary matters as the purpose and formation of sentences, the use of capitals, stops, inverted commas, and the like, are explained in a manner likely to interest, short fables and extracts from well-known writers in prose and verse being inserted to point the moral. There are pictures to be studied and commented upon; and matters of everyday life, such as letter-writing, are incidentally dealt with. Thus, with the minimum of obtrusiveness, the "parts of speech" and such dry bones of grammar are gradually introduced, so that a child who has been through the book should find himself not only familiar with grammatical rules, but also possessed of a fair amount of general knowledge, and a desire to know something more, of English. The system seems excellent, and should be successful.

Nelson's Literature Readers. Books I. and II. Edited by Dr. Richard Garnett. (Nelson & Sons.)—Dr. Garnett, in his introduction to the first of these books, dwells on the difficulties which always face those who set themselves to compile a volume of extracts which shall suit all classes of infant minds. He holds, however, that it is better to be "a little in advance than somewhat in the rear of the ordinary capacity," and consequently he covers a wider ground than is usual in such cases. Nearly every great name in English literature is represented, while from America we have Poe, Washington Irving, Bryant, Emerson, and Longfellow. It is pleasant to note that Chaucer has not been omitted; the second volume contains extracts from the Prologue to the 'Canterbury Tales,' and the editor has, wisely we think, refrained from any attempts at modernizing the language, for Chaucer ought to be intelligible to any reader of ordinary capacity who is willing to take a little pains over him. The volumes contain short but adequate literary notices of the authors selected, besides brief notes to each selection, and in the first volume is a useful appendix on 'Word-analysis and Word-building.' The illustrations, which are numerous, are in no way remarkable, but the books as a whole are excellent, and give, so far as such a thing is possible, a bird's-eye view of English literature, admirably adapted for luring readers on to more detailed study.

A First Reader in Health and Temperance, by W. Taylor, published by the Church of England Temperance Society, is an excellent idea. We doubt whether it can be made palatable to boys without considerable tact on the teacher's part; but it is sensible in its advice, giving in particular much-needed hints as to clothing.

We are pleased to see an enlarged edition of *The Elements of English Grammar*, by Alfred S. West (Cambridge, University Press). It is a good, solid book which has had wide popularity. This edition contains a new section 'On Essay-Writing,' which strikes us as thoroughly practical, and supplying a needed protest against preciosity and allusiveness. The latter indulgence, common to clever board-school boys, becomes a positive nuisance in the well-meaning adult, who thinks that he is a stylist because he calls Virgil, say, the Mantuan.

In "The Picture Shakespeare" (Blackie) we have *Twelfth Night*. The text is well printed, and the notes are brief and sensible. We are glad to see that some "critical remarks" on the play are included, and that the student is referred to Lamb's admirable essay. The pictures are likely to please, being best in the comic scenes.

Livy V. is one of Messrs. Blackie's "Latin Texts," of which we spoke a fortnight ago. Mr. E. S. Thompson has done his work as editor with skill. The introduction is much more lively than such things usually are, although it is occasionally a little clumsy in expression; or, shall we say, a little elaborate for youngsters?

In the same firm's "Little French Classics" we have *Glimpses of Napoleon*, by A. de Vigny, edited by W. H. Hill; *Les Enfants Célèbres*, by Michel Masson, and *Longer Poems for Recitation*, both edited by L. A. Barbé. The inclusion of the first booklet in the series is an excellent and novel idea. The notes are to the point and sufficient. The "infant phenomena" also provide good reading. Here the notes are well equipped on the grammatical side. The 'Longer Poems,' unlike the two other books, are annotated in French. The pieces chosen are good on the whole, though we think they might have been a little more gay. We should like to have seen, for instance, Béranger's 'King of Yvetot' or his 'Address to his Old Coat.' But it is possible that the editor has his eye on public recitations by pupils, which, every one knows, are bound to be solemn affairs.

The Essentials of French Grammar. By A. Barriball. (Ralph, Holland & Co.)—The main object of the author of this book has been to present French grammar in such a form as will enable a learner to pass as soon as possible to translation. With that end many of the unnecessary details and subtleties which are a source of so much perplexity to the learner are eliminated from the body of the work and given in the appendixes. Though styled the 'Essentials,' the book is a complete grammar of the language, and a student should find little difficulty in working the exercises, into which many idioms are introduced. That the volume has been reprinted five times in as many years is strong evidence that it has met with much success.

Dr. W. Scholle and Mr. G. Smith have compiled *A German Reader for Middle Forms* (Blackie), which we are able to commend. Text and illustrations are both excellent. We do not care, for reasons already often explained, to see a vocabulary included in such books. The selections are suitably varied in verse and prose.

Few people seem over-blessed with memory nowadays, and we hope that the old-fashioned practice of learning poetry by heart has not fallen into desuetude. Mr. W. P. Chalmers has made an excellent selection of *Gedichte zum Auswendiglernen* (Harrap). A few notes are added, which can be had separately in German or in English. We are pleased to see Rückert's 'Der alte Barbarossa' and some charming bits of Uhland, besides the masterpieces of Heine and Goethe which are obviously suitable. We can make only one suggestion as to improving the book. Some of the 'Xenien,' from their

brevity and point, ought to appeal to young folks, who will be apt, perhaps, to miss the charm of 'Über allen Gipfeln ist Ruh.' But we do not wish to complain where all is well chosen.

The Winchester Arithmetic. By C. Godfrey and G. M. Bell. (Cambridge, University Press.)—This collection of examples on the various rules of arithmetic has admirable features; for example, the early introduction of the metric system and decimal fractions, the attention given to graph work, and the appendix containing tables of logarithms, antilogarithms, squares, and square roots. We think, however, there should be more examples of difficult problems, if the book is to be serviceable for the higher examinations. The teachers' edition, containing answers and model solutions, is published at six shillings net, a price somewhat high in these days.

Elementary Modern Geometry—Part I., *Experimental and Theoretical*, by H. G. Willis (Oxford, Clarendon Press), conforms to the new ideas which have ousted Euclid's sequence of problems. Mr. Willis has evidently ample experience of teaching, for his book is admirably lucid and practical. He brings the subject well into touch, too, with actual life. There is a set of exercises attached to each proposition, and the book is a thorough and very satisfactory exposition of the new principles. We expect to see it widely adopted.

Integral Calculus for Beginners, by Alfred Lodge (Bell), deals with investigations that cannot but be difficult to the class for which they are intended. Prof. Lodge has, however, a thorough command of his subject, and leads the learner on judiciously to the insight and practice which alone make this elaborate section of mathematics accessible to the average mind.

On Models of Cubic Surfaces. By W. H. Blythe. (Cambridge, University Press.)—The object of this book is to give an outline of analytical and geometrical methods that are used in treating of cubic surfaces, as far as possible from an elementary point of view, and "considering mainly anything that may help to the construction of models." The models described are sufficient to give an idea of the shape of a cubic surface, and to illustrate the changes that take place under certain conditions. The author points out that many of the diagrams have already appeared in the publications of the Cambridge Philosophical Society and in *The Quarterly Mathematical Journal*.

Graphic Algebra. By J. Lightfoot. (Ralph, Holland & Co.)—Among the books dealing with graphs that have come under our notice, this little volume undoubtedly deserves to be in the front rank. The compiler has set forth the first principles of his subject with great clearness, and, in addition to the solutions of simultaneous and quadratic equations, has applied the graphic method to the finding of maximum and minimum values of expressions. For more advanced students the chapters on approximation and the graphic representation of imaginary and complex numbers will prove most useful. Being carefully written, profusely illustrated with diagrams, and printed in good style, the little book should become a favourite.

An Introduction to Algebra. By R. C. Bridgett. (Blackie & Son.)—As "a first year's course in algebra," which the author in his preface says it was his object to produce, we should recommend this book only to students who have already mastered the principles of arithmetic. For a class-book in our schools the volume is not likely to be adopted with success, as the early portions of the subject are not treated in a sufficiently complete manner.

Algebra. By A. E. Layng. (Blackie & Son.)—The first part of this work is intended to carry the pupil as far as easy quadratic equations, but we doubt whether the author's arrangement will commend itself to teachers. For example, more than fifty pages are passed before reaching the elementary operation of adding together $3a$ and $5b$. Again, the author leaves "long division" for the second part, and gives his reason for so doing; but we think it unwise to defer the process till so late. With a multiplicity of subjects in the modern school curriculum one cannot devote so much time to algebra as this book presupposes, and the strictly scientific order has often to yield to the claim of expediency. We commend the author for his lucid explanations of principles and admirable manner of dealing with graphs. The book, being well printed in clear type, should, under the guidance of a judicious teacher, prove useful in the earlier stages of education.

The "Council" Arithmetic for Schools. By T. B. Ellery. Part VII. (Black.)—This cheap little book, dealing with the higher portions of arithmetic, is suited to the requirements of elementary schools, as is suggested by its title. The problems, though illustrating the main points of the various rules, are not of any great difficulty. We are amused by a page of pictures intended to illustrate the difference between rowing in still water, up stream, and down stream respectively. If the learner's mental capacity is in need of such pictorial aid near the completion of his studies in arithmetic, he must have derived little benefit from his earlier study of the subject.

The Primary Arithmetic. By W. Briggs. (Clive.)—The second part of this work affords young students plenty of exercise in weights and measures, vulgar fractions of the simplest order, practice, and the rudiments of the metric system. Being well adapted for introducing concrete quantities, the little book, which is a marvel of cheapness, will be useful for the second year's work in the subject.

A School Geography. By Charles Bird. (Whittaker & Co.)—This is a commendable attempt to deal adequately with a subject which has of late suffered some neglect in the ordinary school curriculum. Boys are supposed to pick up geographical knowledge naturally as they go through life, with such aid as has been afforded in their school days by the perfunctory tracing of maps, and the learning of lists of countries, towns, rivers, promontories and the rest, with an occasional digression into exports and imports. Mr. Bird's book aims at altering this state of things. He treats the subject comprehensively, opening with chapters on the mathematical aspect of geography—explaining the earth's shape and rotation, latitude and longitude and kindred subjects—passing thence through physical and commercial geography, which latter section contains a chapter on commercial methods, to the beaten track of continents and countries. Countries are described with reference to physical features, climate, people, and industries, and at the end of each chapter are useful questions, designed for turning to account the knowledge already acquired. The whole is admirably arranged and simply written, though there is an excess of *naïveté* in the description of the Ainos of Japan as "an honest and simple, but extremely hairy people." However, this will not militate against the instructiveness of the book itself, which should find considerable favour with those who teach.

OUR LIBRARY TABLE.

China in Law and Commerce. By T. R. Jernigan. (New York, the Macmillan Company; London, Macmillan & Co.)—Those who desire only to be amused will find nothing to satisfy their cravings in the present volume. The time has passed when China used to be considered the "jest and riddle of the world." It has now become a serious factor in the world's history, and the present work is intended to elucidate its position in relation to other nations. Those who have never taken China seriously may perhaps be surprised to hear that she possesses a legal code which for the justice and humanity of its clauses compares favourably with many European systems. Where it fails is that it is unable to secure that its provisions shall be justly administered. Corruption is rife in the Flowery Land, and in the law courts justice is bought and sold with shameless cynicism. So flagrant were these abuses during the earlier years of the present dynasty that unanimous complaints were addressed to the reigning emperor K'anghsi (1662-1723) on the subject, to which that potentate, who was generally regarded as a man of light and leading, returned the following surprising answer. "The emperor," he wrote,

> "considering the immense population of the empire, the great division of territorial property, and the notoriously law-loving character of the Chinese, is of opinion that lawsuits would tend to increase to a frightful amount, if people were not afraid of the tribunals, and if they felt confident of always finding in them ready and perfect justice. As man is apt to delude himself concerning his own interests, contests would thus be interminable, and one half of the empire would not suffice to settle the lawsuits of the other half. I desire, therefore, that those who have recourse to the tribunals should be treated without any pity, and in such a manner that they shall be disgusted with law, and tremble to appear before a magistrate."

Whatever may be thought of K'anghsi's reasoning, the result he aimed at has been thoroughly attained. No greater misfortune can befall a Chinaman than to be haled before a magistrate, and in a popular simile he has expressed his view of the position by likening a court of justice to a tiger's mouth. The principle of mutual responsibility, which enters so largely into Chinese judicial procedure, is unquestionably a blot on the legal code. Not only, in cases such as high treason, is a father held responsible for the crimes of his sons, but even his sons suffer for the sins of their parent. In this particular the law is relentless, and the code lays it down categorically that

> "all the male relatives of the first degree of the persons convicted of the above-mentioned crimes [*i.e.*, acts of high treason], the father, grandfather, and paternal uncles, as well as their own sons and grandsons, and the sons of their uncles, without any regard being had to their place of abode, or to any natural or accidental infirmities, shall be indiscriminately beheaded."

Happily the rigour of the law is somewhat mitigated by the softening influences of bribes, and the Abbé Huc tells a story of a magistrate who defended legal corruption by the direct argument that if it is allowable to make a fortune by trade and commerce, one may also become rich by teaching reason to the people, and by developing the principles of justice. It is doubtful if the means advocated are competent to produce the moral results aimed at, but it is certain that many a prisoner has escaped unjust torture and loss of life by adopting the action indicated by the abbé's magistrate.

In commercial affairs, and notably in the banking business, the principle of mutual responsibility is as universally acted on as in legal matters. Shansi bankers are the Countses of China, and they have a regular system by which, when a man goes to one of their branch

offices, his family is taken possession of by the bank, and is held as security for his fidelity and good behaviour. In lieu of salary at the time all his expenses as well as those of his family are paid. And if at the conclusion of his three years' term of service his accounts are satisfactory, he is liberally rewarded and his family is allowed out of pawn. If, on the other hand, his accounts should be unsatisfactory, his possessions of every kind are impounded, and his family is held in bondage until a suitable fine is paid.

Mr. Jernigan deals at length with the trading customs of China, and has much to say on the subject which is both new and interesting. The recent attempt to boycott American goods in the China markets adds a point to his account of Chinese guilds and the almost omnipotent control which they possess over the sale of articles of commerce. Mr. Jernigan is not an inspiring writer, and he is apt to allow such corruptions of phrases as "to the manor born" to pass uncorrected. But there is a great deal that is valuable in his book, and his statements are accurate and apposite.

Book-Auction Records. Edited by Frank Karslake. Vol. II. Part IV. (Karslake & Co.)—The second volume of this useful publication, of which this is the concluding part, comprises a total of 15,751 entries, and brings the record to the close of the auction season 1904-5. A comprehensive index, compiled by Mr. Arthur Grove, adds greatly to the value of the work. This last part also contains a reproduction of an unpublished drawing by Mr. Charles Martin of the house of Aldus Manutius at Venice as it appeared in 1879, as well as an interesting account, translated from the German, of the career of the great Munich bookseller Ludwig Rosenthal. To the second-hand dealer, as well as to the collector, this publication, which is a boiled-down extract of the contents of scores of auction catalogues, cannot fail to be serviceable. Glancing through its pages, we are enabled to form an idea of the progress of bibliophilism on its commercial side. The "boom" of one year is followed by the "slump" of another, and in no class is this more conspicuous than in the *juvenilia* of some modern authors, which were recently selling at enormous prices, but have now descended to a more moderate level. On the other hand, the authors of the Augustan period are attaining a place in the market which, a few years ago, was occupied solely by the great writers of the Elizabethan age and their immediate successors. The plays of the Restoration dramatists and the folio poems of Pope, Gay, Prior, and their contemporaries, when in clean and uncut condition, are now valued in pounds, whereas five-and-twenty years ago their price was reckoned in shillings. Few books of the first importance are included in this last part of 'Book-Auction Records.' With the exception of a fine copy of Caxton's 'Caton,' which was sold at Sotheby's on July 6th for 1,350*l.*, interest chiefly centres in the Great Missenden group of Shakspearean quartos which came under the hammer at Sotheby's at the close of the season. These six volumes, none of which was in first-class condition, while the majority were seriously defective, realized the sum of 4,600*l.*, which shows an immense advance in value during the last twenty years. It may be remembered that the late Mr. Quaritch, in his catalogue for 1884, offered for the sum of 525*l.* fifteen quartos, including Roberts's 1600 editions of 'The Merchant of Venice' and 'A Midsummer Night's Dream,' Butler's 1608 edition of 'King Lear' (which alone realized 900*l.* on July 29th), and a large uncut copy of 'The Taming of the Shrew,' 1631. But now that the Rowfant collection of twenty-nine quartos has left this country, and that few copies can remain in private hands, if we exclude those in the libraries of the Duke of Devonshire and Mr. Huth, it is not likely that we shall see a larger number in an English sale-room than those which passed through the hands of Messrs. Sotheby last season. To those whose interest it is to watch the shifting of the centre of gravity in the great world of books, Mr. Karslake's publication will afford considerable aid, while his notes at the beginning of these 'Records' are not devoid of piquancy.

History of Hadley, including the Early History of Hatfield, South Hadley, Amherst, and Granby. By Sylvester Judd. With an Introduction by George Sheldon. (Springfield, Mass., Hunting & Co.)—Hadley, Massachusetts, was founded in 1659, a date of hoary antiquity, regarded from an American point of view. Mr. Judd's exhaustive history of Hadley and the neighbouring villages was originally published in 1863; but the present edition has been carefully revised. While the history of a small New England village may possess much interest for those who are descended from its early settlers, or who have other intimate associations with the place, it can hardly be expected to awaken much excitement among English readers. However, there are episodes in the history of Hadley, and other Connecticut valley towns, which cannot fail to interest all who admire heroism and endurance in the face of great peril. For Hadley was a frontier town, and whenever an Indian war broke out it was almost certain to be raided by the savages. A favourite New England legend tells us that during one attack on the village of Hadley by the Indians, an old white-haired man, who was a total stranger to the villagers, suddenly appeared in the street, and, putting himself at the head of the sorely pressed men, drove back the savages. Some thought that he was an angel; but up to the present time it has been generally believed that he was one of the regicides—Whalley and Goffe—who, it is certain, were for a long time in hiding in Hadley. It is rather a pity that Mr. Sheldon, in his introduction to Mr. Judd's 'History,' ruthlessly destroys this legend, showing that it is a mere fable. Mr. Sheldon—whose introduction is, by the way, decidedly more interesting than Mr. Judd's 'History'—is possibly mistaken in saying that Whalley was buried in a cellar in Hadley. Doubtless the two regicides spent most of their time while in America in the seclusion of friendly cellars; but it is probable that after his death Whalley was emancipated from cellars, and was buried in a graveyard in New Haven, where a headstone bearing his initials is still standing.

Modern Masters of Pulpit Discourse. By W. C. Wilkinson. (Funk & Wagnalls Company.)

"'John Hall.' Fix your eye on the name. How foursquare it looks! Speak it. How solid it sounds! Speak it again. What weight it carries! Once more. How evenly balanced it is! Consider it. What freedom from surplusage! What honest scorn of distinction!"

We suppose there are people who like this sort of thing, and even regard it as good writing, or else it would not be possible for a periodical to pay a man to write it. But we must confess that the tendency to produce it augurs ill in a would-be critic of style. It is not, we think, wonderful that the writer of the paragraph above quoted should find John Henry Newman's manner a little lacking in "felicity"—his most eminent characteristic. It is a well-known fact that that master of English wrote a Latin sentence every day as an exercise. We suppose that is why Prof. Wilkinson tells us that Newman could in his opinion have written Greek better if he had written Latin more. The prospect of a Newman purged of his Græcisms by Prof. Wilkinson is, indeed, alluring. Doubtless the author of the John Hall symphony would correct that "tendency to formlessness in style" which he discerns in the writer of 'The Idea of a University.' We have given a sufficient specimen of Mr. Wilkinson's quality to enable the reader to judge for himself whether he wishes to read the book. Those who regard the criticism of Newman as discriminating, or who derive satisfaction from the paragraph at the head of this notice, will win, we dare say, abundant pleasure from this volume. The writer shows considerable acuteness in summing up the qualities of a preacher, and the estimates alike of Phillips Brooks and Henry Ward Beecher are really illuminating. But he writes with the exaggerated impressionism of modern journalism, his egotism is everywhere apparent, and his fondness for chopping up sentences to criticize them word by word is not reassuring as to his possession of any criteria of good judgment. But the book will be useful, for it affords evidence of what a certain kind of "religious" journalism tends to foster. It is fairly characteristic of the world of which it is the symbol: it will do little harm to those who like it, and none to those who do not, and will serve as a landmark to many of the distance that divides us from the Middle Ages. Only the Reformation, which was started by a journalist of genius, could have made a book like this possible. The author evidently enjoyed writing it. But, personally, we prefer the "formless infelicity" of Newman.

In the same style as "The Pocket Stevenson" Messrs. Chatto & Windus publish *The Pocket Richard Jefferies*, passages chosen by A. H. Hyatt, who has made a good selection. Jefferies renders admirably the suffused sense of good derived from the sun, the open air, and the moving things of nature. He proclaims himself an optimist, though he thinks that "every line in my face means pessimism." Colours are impressed very keenly on his retina. But as Mr. Hyatt speaks of "nature's deeper meaning" as revealed to him, we may add that the philosophy of nature as revealed by Darwin and by Tennyson does not seem to have affected Jefferies. His study could not reduce him to the feeling of Maeterlinck, who finds all things in nature sad, the sadder as one looks the closer:—

"At the present hour the duty before us is to seek out that which perhaps may be hiding behind these sorrows; and, urged on by this endeavour, we must not turn our eyes away, but must steadily, fixedly watch these sorrows and study them with a courage and interest as keen as though they were joys. It is right that before we judge nature, before we complain, we should at least ask every question that we can possibly ask."

Thus Maeterlinck; but the very study he commends has frightened great minds. Ruskin wishes, in his weariness of mind, for

"the power of slowly following some branch of natural history or other peaceful knowledge; not that natural history is in one sense peaceful, but terrific; its abysses of life and pain, of diabolic ingenuity, merciless condemnation, irrevocable change, infinite scorn, endless advance, immeasurable scale of beings incomprehensible to each other, every one important in its own sight, and a grain of dust in its Creator's—it makes me giddy and desolate beyond all speaking."

But if Jefferies does not go so deep, he has good counsel to offer. His prose is graceful; he has the artist's eye, being ahead of his time in such suggestions as this:—

"The London atmosphere is, I should fancy, quite as well adapted to the artist's uses as the changeless glare of the Continent. The smoke itself is not without its interest."

This is a delightful little book, full of suggestion which, if vague, is yet good.

We are glad to see in the "Dryden Library" *Selected Poems*, by Austin Dobson (Kegan Paul). It is a charming book, charmingly produced. Mr. Dobson has the light touch

and the scholarship which are so rare in combination. He is the Horace of our time, and has naturally chosen a leisurely period for the best efforts of his Muse. The present selection has a sketch by G. H. Boughton as frontispiece, and, being both choice and cheap, should go far.

In the "Harmsworth Library" (Amalgamated Press) we have *Vanity Fair*, *The Pilgrim's Progress*, *Jane Eyre*, and *The Voyage of the Beagle*. The series is cheap at a shilling; the binding is satisfactory, and there is a short biographical introduction in each case.

We have on our table *The Needs of Man*, by W. Winslow Hall (Sonnenschein),—*It Ringeth to Evensong*, by A. G. Mortimer (Skeffington),—*The Sunday School Hymnary*, Words and Music edited by Carey Bonner (Sunday School Union),—*The Swedish-Norwegian Union Crisis*, by K. Nordlund (Stockholm, Almqvist & Wiksell),—*Sweden for Peace*, by Nils Edén (Stockholm, Almqvist & Wiksell),—*National Defence*, by "J." (Spottiswoode & Co.),—*West Africa before Europe*, by E. W. Blyden (C. M. Phillips),—*The Story of the Harp*, by W. H. Grattan Flood (Walter Scott),—*Guide to Commercial Correspondence and Business Composition*, by W. Jayne Weston (Pitman),—*An Idol of Four*, by E. Pomeroy (Watts),—*Partners of the Tide*, by J. C. Lincoln (Hodder & Stoughton),—*The Chariots of the Lord*, by Joseph Hocking (R.T.S.),—*Heroes and Pioneers: Lives of Great Leaders in Thought and Action*, edited by W. G. Berry (R.T.S.),—*Armstrong College, Newcastle-upon-Tyne, Calendar for Session 1905-6* (Andrew Reid),—and *The Millgate Monthly*, Vol. I., No. I. (Manchester, the Co-operative Newspaper Society). Among New Editions we have *Litanies of Life*, by Kathleen Watson (Brown & Langham),—*The Practical Angler; or, the Art of Trout-Fishing*, by W. C. Stewart (Black),—*The Age of Reason*, by Thomas Paine (Watts),—and *The Wonders of Life*, by Ernst Haeckel (Watts).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Coyle (R. F.), The Church and the Times, extra cr. 8vo, 6/
Hall (C. C.), Christian Belief interpreted by Christian Experience, 8vo, 6/6 net.
Knight (G. H.), In the Secret of His Presence, 3/6
Mozley (F. W.), The Psalter of the Church, cr. 8vo, 6/6 net.
Sanday (W.), The Criticism of the Fourth Gospel, 7/6 net.
Zwemer (S. M.), The Moslem Doctrine of God, 3/6 net.

Fine Art and Archæology.

Moore (N. H.), The Lace Book, imp. 8vo, 21/ net.
Pisanello, by G. F. Hill, cr. 8vo, 7/6
Roberts (E. S.) and Gardner (E. A.), An Introduction to Greek Epigraphy: Part 2, The Inscriptions of Attica, 21/

Poetry and the Drama.

Burns (R.), The Cotter's Saturday Night, illustrated by A. S. Boyd, 4to, 6/ net.
Cowley (Abraham), Poems, edited by A. R. Waller, 4/6 net.
Dante the Way, for, by C. Hare, 8vo, 10/6
Fowler (E. T.), Verses Wise and Otherwise, cr. 8vo, 5/
Fox (A. D.), Sir Thomas More, cr. 8vo, 5/ net.
Golden Reciter (The), cr. 8vo, 3/6
Mariale Novum, by Members of the Society of Jesus, 3/6 net.
Rhymes of the Past and Re-collected Verses, by Dum-Dum, cr. 8vo, 3/6 net.

Philosophy.

Callaway (C.), The Sing David of Israel, extra cr., 2/6 net.

History and Biography.

Burke (Edmund), Apostle of Justice and Liberty, by T. D. Pilans, cr. 8vo, 2/6 net.
Canning (Hon. S. G.). History in Scott's Novels, 10/6 net.
Clough's History of the Stuart Period, 1603-1714, cr. 8vo, 3/6
Curtius (Ernst), by T. Hodgkin, 8vo, sewed, 1/ net.
Drayton (Michael), by O. Elton, cr. 8vo, 6/ net.
Howard Letters and Memories, by W. Tallack, 8vo, 10/6 net.
Lamb (Charles), The Life of, by E. V. Lucas, 2 vols., 21/ net.
Marvell (Andrew), by A. Birrell, cr. 8vo, 2/ net.
Milyonkov (P.), Russia and its Crisis, 8vo, 13/6 net.
Wood (W. B.) and Edmonds (J. E.), A History of the Civil War in the United States, 8vo, 12/6 net.
Wright (H. C. & Hastings), With Togo, 8vo, 10/6 net.

Sports and Pastimes.

Illustrated Game Register, designed by G. G., 10/6 net.

Education.

Adkins (F. J.), Sunday School, cr. 8vo, 3/6
Wilkins (A. S.), Roman Education, cr. 8vo, 2/ net.

Philology.

Arnold (E. V.), Vedic Metre in its Historical Development, roy. 8vo, 12/ net.
Merrick (G.), Hausa Proverbs, cr. 8vo, 3/6 net.
Shahnama of Firdausi, done into English by A. G. Warner, Vol. 1, 8vo, 10/6
Thomas (F.), The Shipping Clerk's, Correspondent's, and Traveller's Handbook, cr. 8vo, 3/6 net.
Thornton (F. Du Pre), Elementary Arabic Grammar, edited by R. A. Nicholson, cr. 8vo, 6/ net.
Weintz (W. J.), Appendix to Hossfeld's Japanese Grammar, cr. 8vo, 3/ net.

Science.

Blythe (W. H.), On Models of Cubic Surfaces, cr. 8vo, 4/ net.
Brown (J. A. Harvie-), Travels of a Naturalist in Northern Europe, 2 vols. 8vo, 63/ net.
Budgett (S. P.), Essentials of Physiology, cr. 8vo, 4/ net.
Carslaw (H. S.), An Introduction to the Infinitesimal Calculus, 8vo, 5/ net.
Euclid, Elements, Book 1, with a Commentary by W. B. Frankland, 8vo, 6/ net.
Gibson (C. R.), The Romance of Modern Electricity, 5/
Metchnikoff (E.), Immunity in Infective Diseases, translated by F. G. Binnie, 8vo, 18/ net.
Morton (E. R.), Essentials of Medical Electricity, 4/6 net.
Pendlebury (C.), Key to the Exercises in the New School Arithmetic, Part 2, cr. 8vo, 3/6 net.
Sabin (L. C.), Cement and Concrete, 8vo, 21/ net.
Sandwith (F. M.), The Medical Diseases of Egypt, Part 1, cr. 8vo, 7/6 net.
Willis (H. G.), Elementary Modern Geometry, Part 1, 2/

Juvenile Books.

Berry (W. G.). Heroes and Pioneers, cr. 8vo, 3/6
Cassell's Natural History for Young People, by A. E. Bonser, 8vo, 6/
Fairy Tales, Old and New, roy. 16mo, 3/6
Furniss (D.), Sky-High, oblong 4to, 5/
Jackson (A. M.), The Brigand's Prey, cr. 8vo, 2/6

GEORGE MAC DONALD.

Dr. George Mac Donald, who died last Monday, had reached a great age, having been born in 1824, and latterly he had been so much out of England and the world of letters that his name rarely came before a public greedy for personalia. He was, however, one of the few men who could boast not only of a well-deserved literary reputation, but also of the tribute of veneration due to a loved teacher and friend. Born in Aberdeenshire, he was educated at King's College, Aberdeen, and later at Highbury as a Congregational preacher; but he was too independent to make a success of his pastorate at Arundel, which he retained from 1850 to 1853, and he became a lay member of the Church of England some time after, preaching, like Socrates, with the more effect because he was not paid for his work.

His first literary work consisted of poetry, published in 1856 and 1857. 'Phantastes,' a charming fairy tale (1858), and 'David Elginbrod,' a novel (1862), may be taken as representative specimens of his other literary activities. In fairy tales he was, perhaps, at his best. His turn for mysticism and his imagination here had free play, and such stories as 'Dealings with the Fairies,' 'The Princess and the Goblin,' and 'At the Back of the North Wind' have in their own line never been surpassed.

As a writer of fiction Dr. Mac Donald was very unequal—too consciously didactic to attain great success, perhaps. A pietistic element, unconventional relations between classes and sexes, sympathy with poverty, especially gentle poverty, and unfeigned dislike of the Philistinism of modern life—these are the general features which distinguish Dr. Mac Donald's fiction, making it strongly attractive to some and repulsive to others. He showed at all times admirable insight into Scottish character, and deserved all the success which came to later and more popular expositors of broad Scotch dialect. 'Robert Falconer' he considered his best story. Here and in 'Alec Forbes' and 'The Marquis of Lossie' he was undoubtedly drawing on his own reminiscences. 'Alec Forbes' is merely the history of some of the inhabitants of an obscure village in the north of Scotland, but the human interest is strong, and the spiritual life of the characters wonderfully done. 'David Elginbrod' is a fine, though wild book, much concerned with mesmerism, but notable for many beautiful passages and descriptions. 'St. George and St. Michael,' a story of the seventeenth century, showed that the writer's historical sympathies were wide, and that he could see what was attractive and heroic in both Puritans and Cavaliers.

Two or three of his short poems are sure of a place in any representative anthology of English, but his religious outpourings in that form, though extravagantly lauded by Ruskin, are not likely to survive. His verse was always a little wanting in polish. He could boast, however, a distinction rarely accorded to poets in the success of some of his translations of Heine. Recently we noticed a reissue of his work of this kind under the title of 'Rampolli.'

He was distinguished for many years above the crowd of authors who were his contemporaries by virtue of the rich dower of lofty ideals and meditative insight which was his. His form was instinct with the nobility of his mind, and he leaves behind him many devoted friends who will cherish his memory.

THE TEACHING OF ENGLISH.

About thirty years ago some slight stir was made in the direction of just a little study, in English secondary schools, of the mother tongue; but to-day educational reformers mean more serious business. The line now being taken by the radical left is due partly to the thoughtful efforts of American teachers to systematize the study of the English language and literature, partly to the crusade against the traditional classical curriculum being carried on by the champions of physical and natural science and modern languages. In the space here available it is impossible to do more than cover a small part of the ground, so I shall restrict my remarks to secondary schools and to boys on the classical side between the ages of fourteen and fifteen. The main thing is to determine how the teaching of English language and literature is to be fitted into the curriculum alongside of classical subjects. It should be by this time obvious that the hours at present allotted to the mother tongue are ludicrously inadequate.

After nearly fifteen years of experience, I say in all seriousness that a boy of the age stated spends on the average some eleven or twelve hours a week (I am reckoning in-school time, because preparation time is generally proportionate to time spent in class) on Greek and Latin, as against one and a half to two on English subjects. I am not counting history, English or other, as an English subject. If, as seems indubitable, this time is inadequate, how ought this state of things to be modified? To arrive at a reasonable answer we must take into account our aim and instruments; the method—though, of course, intimately bound up with both—is a matter of subsidiary importance.

Our aim is to produce a genuine liking for good literature, not as a mere examination subject, but as a permanent and ever-expanding store of enjoyment: in short, our aim is intellectual culture. Few will dispute that the obvious instruments to our hand are grammar, reading, and composition, this last including both the *recte scribendi scientia* and the *recte loquendi scientia*. Grammar has unfortunately been done to death in the past. In the present connexion I do not desire to use grammar directly as a logical training. Euclid and other mathematical studies may be trusted to see to that. Latin and English grammar, taken together, will certainly contribute to a logical training; but it must always be remembered that the study of English is not intended to develope the logical faculty. We want to use grammar mainly as a standard by which to judge good style, and as a help to writing and speaking correctly and pleasingly. In the very earliest stages of secondary education it is well to teach English grammar on lines calculated to help the easy acquisition of Latin grammar when its turn comes, as it is taught in a capital little book by M. Morgan-Brown, 'A First Form Grammar' (Longmans). But in the stage we are now considering it is rather the outlines of the structure and history of the English language that are required, as rightly prescribed by the Board of Education in their new syllabus for the training of teachers. Of the grammatical exercises now in vogue few are necessary beyond the analysis and synthesis of sentences. In the majority of schools I believe the latter exercise is practically unknown. I heartily agree with Sir Oliver Lodge when he writes: "The niceties of grammar and the science of philology make an interesting study for years more nearly mature." As Quintilian argues, such training does not harm those who pass through it, *but only those who linger too long over it*.

To pass on to reading. To-day, at any rate, there can be no difficulty about the supply of cheap and suitable texts. I believe, however, that the objection to plentiful reading of English at schools is due to the supposed difficulty of making it a good class exercise. My experience with all kinds of classes does not confirm this notion. The subject is easy to manage in many ways, and never fails to interest a class. Far more reading and study of good English books is imperatively demanded. I should here make five postulates in connexion with English reading. First, it should by all means be co-ordinated with the period of English history being studied. Second, while some books are taken as general reading mainly for the interest of their subject-matter, others should *pari passu* be studied intensively with a view to details of style and so on. We must combine, in the language of Herbart, concentration and reflection. The motto should be *multa satis, et satis multum*. Third, poetry, well selected according to recognized principles for the different stages (the Board of Education and the Assistant Masters' Association have issued well-considered schemes), should, in my opinion, form the greater part of the study for boys of fourteen. How valuable a thing might be the *poetarum enarratio*, or comment on the poetry, in the hands of a sound teacher! I venture to quote a sample of the Board's suggestions:—

History Scheme.—General study of the History of England from Henry VII. to Oliver Cromwell, inclusive. Detailed study of one of the four following: The reigns of Edward VI. and Mary; the reign of Elizabeth; the Civil War (1642-48); the Protectorate. With this the following Literature Scheme. For general reading—all or most of the following: Shakspeare's 'Macbeth'; Spenser's 'Faerie Queene,' Book I.; Macaulay's 'Essay on Bacon'; Kingsley's 'Westward Ho'; More's 'Utopia'; 'Memoirs of Col. Hutchinson,' by his wife. An Anthology. For detailed study: Shakspeare's 'A Midsummer Night's Dream'; Milton's 'Comus,' 'Lycidas,' 'Arcades,' and 'Areopagitica.' Certain selected essays of Bacon. An outline course on structure and history of the English Language.

Of these schemes I would say only that perhaps the poetry might be in larger proportion, and that the 'Areopagitica,' in spite of its many merits, is too monotonous in rhythm and too long-drawn-out in argument to be entirely suitable.

My fourth postulate is that reading aloud in class should be insisted on. Fifth, memory work, and plenty of it, is absolutely necessary.

As to composition at this stage, let us deny ourselves the aid of each and all of the many manuals offered by enterprising publishers. They are little but a weariness of the flesh. Two opposite pages of a large note-book can be made to contain practically all the definite rules that need be given on matter and style. Further knowledge should be inductively acquired from the pupil's own reading and the careful corrections of his teacher. The secret of learning to write is frequent writing, and instead of once a month an essay should be produced once a week. As to the method to be employed, I think it would be hard to beat the old Roman system described by the late Prof. Wilkins in 'Roman Education': First, the reproduction of the substance of a story told by the teacher; then the paraphrase of second-rate literature; third, the treatment of themes as put into the mouths of definite persons; and last, the writing of little stories from material supplied by the poets. Of these perhaps the second and third are the most suited to a boy of fourteen.

In all three departments the essential thing is that "language should be learnt in the pupil's stride," as Sir Oliver Lodge phrases it. From the three together he is bound to acquire a knowledge of the meaning of words, accurate use of language, and precision of statement, and, by necessary interaction, accuracy and precision of thought. Such should be our aim and instruments. Methods may be left largely to the idiosyncrasies of the teacher.

My last word must be directed to the place of English in the curriculum. As prescribed above, grammar would require 1½ hours, reading 2½, composition 1½; in fact, I must demand 5 hours in place of the present 1½ or 2. I propose to make room by a *jactura vel audacissima*. In a word, I would drop all classical composition up to and including this stage, with the exception of Latin prose. A week of 26 hours in class would then be thus arranged:—Classics: reading of (Greek and) Latin books, 4 hours; Latin prose, 2; Grammar 1. English, 5. Mathematics, 5. Science and manual work, 3. French (or German), 2. History, English or ancient, 3. Other subjects, 1.

I apologize for adding yet another suggested curriculum to the many already offered to a perplexed educational world; but it is emphatically a case of *place aux dames*, and the lady is none other than our mother tongue. In this scheme of class-hours I claim that the humanities get their due (17 hours out of 26). Of course, grammar, as Dr. Gow properly urges, and history are also largely scientific. It remains to urge one point. Whatever hours are allotted to the study of English, the requisite of requisites is the genuine enthusiasm of the teacher for his subject. Are we quite sure of our secondary teachers in this respect?

W.

THE REFORM IN CLASSICAL TEACHING.

The supporters of classical studies have had to meet some very determined attacks of late years — attacks the more dangerous because they come not only from those who dislike classical studies, but also from some who believe in their value. The former class includes that large majority who confuse education with money-earning, who think that children go to school in order to learn a trade, or at least to learn how they may gain a living. The latter are those who think that the day of classics is gone by, and that the force of international competition makes it impossible for us to consider educational questions on their merits.

It must be admitted that such critics can make out a case. Far too much time is generally given to Latin and Greek, and with very poor results. A boy begins these languages at eight or nine years of age, spends the greater part of his time on them, and ten years later he cannot read a Latin or Greek book with pleasure or ease, nor can he write half a dozen sentences correctly. But it does not follow that the fault lies in the subjects; and it behoves us to inquire whether it lies somewhere else. When we look at a school time-table we must be struck with the fact that what may be called the natural subjects of instruction are neglected on behalf of the artificial. It is natural that the young should first learn to express themselves well in their native tongue, and to understand and to enjoy their own literature; to learn by heart tables of paradigms and to be for ever writing translations of disjointed sentences is unnatural. It is also natural that the child's curiosity should be excited by the world around, and his intelligence fed by being taught to understand it. His imagination and his reasoning faculties also need careful attention. But all these matters are neglected and left largely to chance.

I cannot discuss here the whole question of education, or in particular that part which is concerned with observation, reasoning, and imagination; but a few words may be said of the literary side. It is obvious, I think, that the child, whose faculties develope slowly and not all at once, needs a graduated course of work, leading from difficulty to difficulty by short steps. The first step must be to learn the use of the mother tongue, and this implies that a large number of hours must be given to speaking, reading, and writing in English. The first foreign language should be one not too much unlike our own, and those more unlike should be begun later. Moreover, the aim should be complete mastery at each stage, before the next is entered. Nor must more than one language be begun at a time. If, then, a large number of hours be given to English, and a modern language be next taken, this postpones Latin and Greek, and greatly reduces the total time available for them. How can satisfactory results be attained in these circumstances?

Readers probably know that a great reform has been carried out in the teaching of modern languages. The principle of this reform is to consider language as speech, not as something written or silently read. It is not only that the pronunciation of the language is taught; its rules are observed in speech before they are formulated, and they are

largely practised in speech. Not that writing is neglected, for writing is useful to fix in the memory what is learnt, and with a class it is necessary, to prove that the lesson has been mastered. As long ago as 1873 Hermann Perthes, a German schoolmaster, saw that the same principle should be applied to Latin, and not long after, careful experiments were begun in this direction. Parallel classes were arranged, one of which followed the old lines, the other taking a reasoned curriculum which reserved Latin until the age of twelve or so, and Greek until two or three years later. It was found, so we are informed, that at the age for entering the university the boys of the latter class were equal, or even superior, in classical attainments to those who had studied on the old lines. By beginning the classical languages later, the pupils get their minds more developed, and they are able to learn more quickly, and in Greek, for the same reason, more quickly than in Latin; while certain changes of method make the teaching more efficient. Amongst these changes are: study-ing the rule rather than the exception, and exacting approximate correctness at each stage, instead of being satisfied with thirty or forty per cent. of accuracy; together with constant *viva voce* practice, which is ten times more rapid than writing, and therefore makes it possible to give ten times the exercise in a given time. It should be noticed that speech is used for exercise in rules already learnt; reading and writing are used to impart these rules and to fix them in the memory. Also, as far as possible, the lesson is carried on in the language which is being taught, and thus simple syntax becomes so familiar that mistakes are rarely made in it. After such drill the learning of paradigms (which cannot be dispensed with) is easier, partly because the pupil's curiosity has been aroused, and he wants to learn them.

The great advantage of this system is that the intelligence is constantly in play. Quick question and answer, the constant association of speech with life and feeling, train the intelligence far better than anything else. The pupil is for ever being called upon to use what he knows, and in ever-varying circumstances, for which no cut-and-dried book-rule can be given. By a series of questions on one sentence, the use of emphasis and the importance of position are indelibly taught; and these are the root of style in the ancient languages. Those who wish to see the method more fully described, with specimens of work actually done (mistakes and all), should consult a pamphlet by Gerhard Michaelis, entitled 'Welche Förderung kann der lateinische Unterricht an Reformschulen durch das Französische erfahren' (Marburg, 1902). They will be astonished at the mastery shown by pupils in the fourth-form stage: whole pages of Latin composition with hardly a blunder. This pamphlet also explains how the study is organized so as to go through the course of regular grammar. The same experiment has been made in England, with like results, which are briefly sketched in a little book by Mr. W. H. S. Jones, 'The Teaching of Latin' (Blackie, 1904), which has been referred to more than once in these columns. To take, for example, Latin composition, the stand-by of our English schools: The same master, using the same book of extracts, with the same school form, found that boys taught under the ordinary system got an average of about 30 per cent., those under the system advocated from 80 to 90 per cent., of marks.

It will be seen that this plan has a collateral advantage in relieving the overcrowded curriculum. There is plenty of time for English reading, composition, and literature; plenty of time for a complete mastery of French, and better results in classics. When set down to a written examination the pupils are equal to their rivals at the scholarship examination; and they have the advantage over them that they can, and do, read and enjoy classical books, if not of the most difficult kind, and that they can express themselves in speech or in writing quickly, easily, and correctly. I speak here not only of the picked boys of the sixth form, but also of the average boy.

It is necessary also to observe that for such work as this the master must be thoroughly competent. No man can teach Latin and Greek in this way unless he can speak, read, and write them with ease himself. He will need first to train himself, for as things are he lacks the necessary readiness; but it is not impossible, it needs only care and pains. He will be rewarded in finding his work full of never-ending interest, his pupils always alive and keen, not bored and heavy, and in consequence discipline exceptionally easy. He will also have shown that there is room in education for the classical languages and literature, without taking up a disproportionate amount of time. If such a reform can be generally carried out—and there is nothing in the way, if head masters and head mistresses wish to try it—the utilitarian will be made as dumb as he is capable of being, and the furious controversy over compulsory Greek for ever stilled.

D.

THE CRABBE CELEBRATIONS.

On the 19th of January, 1831, a little more than a year before his death, Crabbe wrote to his friend Mr. Crowfoot, of Beccles:—

"Beccles is the home of past years, and I could not walk through the streets as a stranger. It is not so at Aldborough: there a sadness mixes with all I see or hear."

He ascribes this sadness to the passing away of old acquaintances, but it is not improbable that the discouraging attitude which Aldeburgh from the first adopted towards its one famous man had at least as much to do with it. Aldeburgh thought little of its poet then, and to-day it thinks, if possible, even less. The Crabbe celebrations of Saturday, Sunday, and Monday caused a mild surprise in the town—surprise that so much fuss should be made over a man who "had been dead such a long time." Outward symbols of rejoicing were not lacking, it is true. Kindly coastguards had stretched flags from the old Moot Hall to the houses opposite; flags floated from the church tower and along the "front," posters were displayed in shop windows; but enthusiasm there was none. Yet Mr. Thomas Hardy came to Aldeburgh for the occasion, and Prof. Huchon, of Nancy University, was present to do honour to the poet's memory. It may be that there is something in the "frowning coast," which Crabbe detested so heartily, that is hostile to literary taste, or it may be that the inhabitants of the place are so busy as to have no time for such things. Whatever the reason, it is clear that Aldeburgh is, and always has been, indifferent: in the church itself the poet's monument is so tucked away and hidden that the casual visitor—unguided—may go in and out, and never know that it is there. Yet Aldeburgh must needs celebrate. There was a luncheon, and towards it, at the appointed hour, little knots of strangers made their way, casting interested glances this way and that (alas! save for the Moot Hall, there is little to see in Aldeburgh). The absence of crab from the menu caused many a merry jest. Ignorance of the poet's work was a bond of union to many; and by the time Mr. V. B. Redstone was prepared to read his paper on 'Aldeburgh's History' we were on fairly good terms with one another. The paper was listened to with polite interest, and when it was over, and votes of thanks had been exchanged at considerable length, the company scattered, some to wander among the Crabbe relics in the Moot Hall, some to the church, and some to kill time till the departure of the next train. Indeed, Saturday was a day of serious celebrating—a day of papers. There was a paper at luncheon, a paper at the church, and later in the afternoon three papers were read in succession in an uncomfortable building called the Jubilee Hall. The first of these, on 'Crabbe's Aldeburgh,' was by Prof. Huchon, and if it did not tell us anything new about our Suffolk poet (which was hardly to be expected), at least it showed what patient study had been devoted to him on the other side of the Channel. The speaker's intimate knowledge of his subject might well have put apathetic Aldeburgh to shame—but it did not. Next came Mr. Groves, who spoke of Crabbe as a botanist, a mystic subject as far as the majority of us were concerned, but interesting enough even to the unlearned; and then Mr. Shorter ascended the platform, and hastily (for time was getting on) showed the poet to his 'Place in English Literature' in an eloquent paper, wherein the great names of Wordsworth, Tennyson, Shelley, Keats, Byron, FitzGerald, Leslie Stephen, and Jane Austen rumbled to and fro.

With the close of Mr. Shorter's paper the serious celebrating may be said to have concluded. The subsequent programme was made up of tableaux, a church parade, and picnics. The tableaux on Saturday evening were really interesting. In the first Mr. Crabbe, sen., was discovered reading Young's 'Night Thoughts' to his infant son, while Mrs. Crabbe gazed stonily on. In the second Mr. Crabbe, jun., in a yachtsman's jersey, was seen at work on Slaughden Quay. In the third he met Miss Elmy, and the piano helpfully struck up 'Sally in our Alley.' The fourth tableau represented the poet arousing the merriment of the apothecary's daughters at Wickham Brook, by reason of his eccentric wig. To ensure a proper degree of merriment the poet was depicted in a preposterous red wig, and with a leer worthy of the comic page-boy in the pantomime. It spoilt the tableau, but the apothecary's daughters smiled. Others represented Crabbe reading his poems to Dr. Johnson (a tableau in which Lord Chancellor Thurlow was seen sheepishly presenting the poet with the famous 100*l.* note); Crabbe introducing his wife to the Duke and Duchess of Rutland; and his meeting with the Highland chieftains at Sir Walter Scott's in Edinburgh. It will be seen that one of these incidents is fictitious, a point which experts in the front row were not slow to make; but the final tableau aroused the greatest interest. It was entitled 'The Apotheosis of the Suffolk Poet.' Now "apotheosis" is, as Mark Twain would say, a good round word, a satisfying word, and we wondered how it would be treated; but when Crabbe was seen dreaming in his chair, and Phœbe Dawson, Peter Grimes, and others of his creation trotted or stalked by him, until at length a lady held a wreath of something green over the sleeping poet, we began to realize that the "roundness" of the word had beguiled somebody. But I must not cavil at what was undertaken "all for our delight." There were many difficulties, and, all things considered, the tableaux were excellent.

On Sunday there was a Crabbe sermon, and the lines beginning "Pilgrim burthened with thy sin," from 'Sir Eustace Grey,' were sung as a hymn, while in the afternoon enthusiasts drove to Orford, where the poet's father once kept a "parochial school" in the church porch. Monday, the last day of the celebrations, was a day of excursion. The party, which numbered over fifty, and contained, perhaps, a larger proportion of interested persons than that which had assembled on Saturday, drove to various places in the neighbourhood connected with the poet's life, including Sweffling, Parham, and Little

Glemham. There were three brakes of considerable size, and several smaller vehicles, together with some bicycles. Small wonder then that village folk came to their doors to gape. As I followed the procession into Sweffling I met a farmer, wide-eyed with wonder, driving in his cart. "Askin' your pardon, sir," said he, pulling up, "but what might this here be?" I explained that the ladies and gentlemen who had just passed him were driving round the country in honour of the poet Crabbe, who was born one hundred and fifty years ago. My explanation did not help him much, I fear, which was not surprising after Aldeburgh; for "if gold ruste, what shal iren do?" He concluded, however, with a wink, that it was really a day in the country that they were after, and went on his way well satisfied. It was a fine day, and the expedition was very pleasant; but the start was late, and so some of the papers which were to have been read had to be omitted, a circumstance which certain of us did not regret deeply. The slight literary flavour attaching to the journey gave it the air of a pilgrimage, and added much to the pleasure of everybody.

Antiquities, such as Framlingham Church and Castle, which were in themselves unconnected with our purpose, save in so far as the poet had doubtless looked upon them, came in for attention, and we all enjoyed ourselves hugely. We should have been content with another day of it, when we might have taken in Beccles, where the poet's happiest Suffolk days were spent, and Blythburgh, whither, during the short time he was curate at Aldeburgh, he used to go once a week to meet his brother Robert; but at Saxmundham, in the evening, the celebrations came to an end. They were, thanks to the weather, extremely successful. The collection of relics in the Moot Hall included the "Midnight" MS., lent by Prof. Dowden, and the portrait of the poet by Millington of Trowbridge. The contributions from Aldeburgh were few. The place has suffered little change externally since Crabbe passed the most unhappy part of his life in it. The "heath with withering brake grown o'er," the "burning sand," the "stakes and seaweeds withering on the mud," the "half-buried buildings next the beach," remain to-day much the same as they were in the poet's time, except in the case of the last-named, where, by reason of the sea's encroachment, other buildings have taken their place. It is a pity, however, that the spirit of the place should remain unchanged. Yet it is so. The Mayor himself had the courage to admit publicly that until the celebrations were mooted he never had an idea of turning his attention to Crabbe, and all this must have been particularly distressing to one of our number, who came from Trowbridge full of enthusiasm and laden with Crabbe relics and reminiscences. But Aldeburgh is incorrigible. The extraordinarily energetic secretary, Mr. Ganz, had prepared a souvenir, opening with an unremarkable sonnet on Crabbe by Mr. A. T. Schumann, of Gardiner, Maine, U.S.A., and including facsimiles of portraits and handwriting, photographs of tombstones and other relics, besides a catalogue of the Moot Hall collection. But in all probability Mr. Ganz is the only man in Aldeburgh who takes an interest in these things. Crabbe's work is not, in form at least, calculated to appeal to the ruck of modern readers. It may or may not be poetry; Mr. Shorter, happily provided with a definition of the word, claimed that it is, and it cannot be denied that, as a realistic painting of rural character and existence, as it actually is, it is unsurpassed. Crabbe's place in English literature may be here or there, but he is, *par excellence*, the poet of the poor, and withal a perfect craftsman; and it may be that he will be living when Aldeburgh is under the sea.

J. B. D.

'KNOX AND THE REFORMATION.'

Mr. Lang is comforted by the discovery that "an eminent authority, Presbyterian," takes the same view of Knox's use of Paul's vow as he did. Until this authority is named, it is impossible to say whether he has been misunderstood or not. After Mr. Lang's admission that the passage in the Nonconformists' letter "is not clear enough" to warrant the use he made of it, it is somewhat amusing to find him now taking credit to himself for being willing to waive the point.

What Knox thought of the Anglican Church in 1568 can be much better learnt from the letter he penned to the bishops and pastors of that Church in December, 1566, and from the Nonconformists' letter itself, than from Randolph's letter of February 12th, 1561/2. As for Knox's letter to Mrs. Locke, to which Mr. Lang confidently alludes, it refers not to the Elizabethan Prayer Book, but to King Edward's, and therefore destroys Mr. Lang's argument instead of helping it. It is a mere evasion to say that the quotation from Knox's 'Brief Exhortation' of 1559 does not affect the point at issue. The question is not the intolerance of that pamphlet, nor even its amazing intolerance, but whether its language is such that, if its writer had been consistent, he would have advised the Nonconformist brethren in 1568 to kill Elizabeth.

As for the text of the anonymous 'Historie,' any one who has worked much among MSS. of the period knows how erratic the punctuation frequently is, and how readily an incompetent transcriber might take a marginal direction into the text. On such a matter it is useless to argue with Mr. Lang.

Reiteration does not strengthen his statement about the five letters which he alleged were written between June 21st and June 28th. There is no reason to believe that Knox's lost letter was written within that period; and Kirkcaldy's undated one, which Mr. Lang would place on June 21st, was assigned by Father Stevenson to the preceding month. Of the three letters which were dated within the specified eight days, one was enclosed in one of the other two. Mr. Lang does not mention this; but he now admits that he cannot prove that messengers came daily from England at that time. We do not believe that he can prove a single one came during the eight days that he chose as a test; and, in the circumstances, it is perhaps puerile to attempt to justify the Queen Regent's charge.

Mr. Lang's other remarks do not call for any answer; but it may be pointed out that he still ignores his own inconsistency regarding Knox's letter of July 12th, or 19th, 1559.

The Reviewer.

THE REV. S. G. GREEN, D.D.

The influence exerted by the veteran scholar Dr. Samuel G. Green, who died last Friday week in his retirement at Streatham, is not to be measured by any enumeration of his published works or the various positions he filled. He was born in 1822, and it was one of his favourite reminiscences that at the school he attended the head master was wont to read aloud to the boys the monthly parts of 'Pickwick' as they appeared, while a whole holiday celebrated Mr. Pickwick's release from the Fleet! Whether through these alluring influences or not, he became a keen student, and showed to the end of his life an extraordinary power of acquiring and retaining knowledge. He graduated at the University of London, and entered the Baptist ministry in 1844, shortly exchanging pastoral work for the classical tutorship, and later the Presidency, of Horton, afterwards Rawdon College, Yorkshire. In 1876 he came to London, becoming first editor, and then Secretary, of the Religious Tract Society.

In his young manhood he hailed with enthusiasm the genius that was then appearing in English literature, and many anonymous reviews from his pen had no small share in hastening its public recognition. Tennyson, who was not wont to be effusive, wrote him a letter of emphatic gratitude on the publication of an article upon the earlier poems. The writer well remembers, in later years, the ardently expressed pleasure of Jean Ingelow at identifying in him the author of a sympathetic criticism. He was one of the very first to recognize the genius of Browning.

The charm of the intellectual atmosphere in the lonely college among the Yorkshire moors, and the adoration he won from the men whose lives he moulded, are not to be generally appreciated. Though Dr. Green was a Nonconformist, his sympathies were catholic, and he had close friends among men of every creed.

Dr. Green's best-known work is his 'Handbook to the Grammar of the Greek Testament,' which appeared in 1870. It was followed by a primer, which has had a wide and steady circulation. As lately as 1901 he published a 'Handbook to the Hebrew of the Old Testament,' and in 1904 a 'Handbook to Church History.' His latest work was a revised edition of Dr. Angus's 'Bible Handbook.' In the more recent part of these literary labours he was assisted by his son, the Rev. S. W. Green. Dr. Green's Angus Lecture, entitled 'The Christian Creed and the Creeds of Christendom,' was widely appreciated. In a revised edition of the English Bible (Eyre & Spottiswoode, 1877), which prepared the way for the Revised Version, he shared with Dr. Jacob, the former head master of Christ's Hospital, the work of revising the New Testament. But as more than two columns of the British Museum Catalogue are required for Dr. Green's publications, it is hopeless to attempt to notice them briefly. His literary activity was continuous, and uninterrupted to the close of his life. His critical knowledge of books, from the Bible downwards, was exceptional, and he enjoyed the confidence of Mrs. Rylands in the preparation of the John Rylands Library, Manchester, which includes the famous Althorp Collection.

The honorary degree of D.D. was conferred upon him by the University of St. Andrews in 1900. He was one of the Vice-Presidents of the British and Foreign Bible Society.

In Dr. Green were combined the intellect of the student and the innocent simplicity of a child, and many who knew him will regret the death of a wise and profound scholar.

L. W.

ENGLISH PRONUNCIATION.

September 16th, 1905.

The phonetic law which the Rev. J. Rice Byrne points out regarding the accentuation of English words is now a fairly well-known one. It was a marked principle in the pronunciation of Anglo-Saxon, and has continued with the growth of the English language. By an inevitable process of attraction, the majority of words of foreign origin adopted into English have come under its influence. This is especially noticeable with respect to words derived from French and from Latin and Greek. The exceptions to the rule are very few. The subject is carefully discussed in the chapter on 'Accent' in Morris's 'English Accidence.' W. Bayne.

THE AUTUMN PUBLISHING SEASON.

THE CLARENDON PRESS

has the following books in preparation:—Theology, Texts, Church History, &c.: The Criticism of the Fourth Gospel, by W. Sanday,—Rituale Armenorum, edited by F. C. Conybeare, and The East Syrian Epiphany Rites, translated by the Rev. A. J. MacLean,—Schiaparelli's Astronomy in the Old Testament, authorized translation,—An Italian

Version of the lost Apocryphal Gospel of Barnabas, with Arabic Glosses, edited by Canon Ragg,—Concordance of Proper Names in the Septuagint, Part II., by H. A. Redpath,—and Eusebii Chronicorum Liber, reproduced in collotype, with introduction by J. K. Fotheringham. French and German: Ma première visite à Paris, by A. E. Chapman, — in the "Oxford Modern French Series": Nodier's Jean Sbogar, edited by D. L. Savory, and Balzac's Les Chouans, edited by C. L. Freeman,—in the "Oxford Higher French Series": Staël's De l'Allemagne, edited by H. W. Eve; Trois Grotesques, edited by H. J. Chaytor; Hugo's Notre-Dame, edited by L. Delbos; Lamartine's Jocelyn, edited by E. Legouis; and Flaubert's Salammbô, edited by E. Lauvière,—Combined German Reader, Writer, and Grammar, by H. G. Spearing. Greek and Latin: Selections from Plutarch's Cæsar, by R. L. A. Du Pontet,—in the "Oxford Classical Texts": Platonis Opera, Vol. IV. (completion), ed. J. Burnet; Ciceronis Orationes in Catilinam, &c., ed. A. C. Clark; Statius, Silvæ, ed. J. S. Phillimore; Statius, Thebaid, ed. H. W. Garrod; Tacitus, Annals, ed. C. D. Fisher; Longinus, ed. A. O. Prickard; Tibullus, ed. J. P. Postgate; and Theocritus, Bion, and Moschus, ed. Prof. U. von Wilamowitz-Moellendorff. Oriental: Parts XII. and XIII. (completing the work) of A Hebrew and English Lexicon of the Old Testament, based on the Lexicon of Gesenius, edited by F. Brown, S. R. Driver, and C. A. Briggs,—English-Tamil Dictionary, and Tamil Prose Reader, by G. U. Pope,—and Senga Handbook, and Swahili (Zanzibar) Grammar, by A. C. Madan. General Literature, English Language and Literature, and Modern Languages: Shakespeare's Poems and Pericles, a reproduction in facsimile, with Introductions by Mr. Sidney Lee,—A Primer of Classical and English Philology, by W. W. Skeat,—Critical Essays of the Seventeenth Century, by J. E. Spingarn, 3 vols.,—Johnson's Lives of the Poets, edited by the late G. Birkbeck Hill, with memoir of Dr. Hill by his nephew, H. Spencer Scott,—Vols. XIII.-XVI. (completing the work) of The Letters of Horace Walpole, edited by Mrs. Paget Toynbee,—The Lyrical Poems of Blake, edited by John Sampson,—The Plays and Poems of Robert Greene, edited by J. Churton Collins, 2 vols.,—The Minor Caroline Poets, edited by George Saintsbury, Vol. II.,—and further portions of Vols. VI., VII., and VIII. of A New English Dictionary. Law: Corps de Droit Ottoman, par George Young, deuxième Secrétaire de l'Ambassade d'Angleterre, 7 vols. History and Geography, &c.: The Oxford Geographies, Vol. II. The Junior Geography, by A. J. Herbertson,—The Dawn of Modern Geography, by C. R. Beazley, Vol. III.,—Chronicles of London, edited by C. L. Kingsford. Music: in the "Oxford History of Music," Vol. II., The Ecclesiastical Period, by H. E. Wooldridge; and Vol. VI., The Romantic Period, by E. Dannreuther. Art: Selected Drawings from Old Masters in the University Galleries, and in the Library at Christ Church, Part IV., described by Sidney Colvin. Physical Science, &c.: Criminal Responsibility, by Charles Mercier, — a revised edition of An Elementary Treatise on Pure Geometry, by J. W. Russell, — Knuth's Flower Pollination, authorized translation by J. R. Ainsworth Davis, — and Solereder's Anatomical Characters of the Dicotyledonous Orders, authorized translation by L. A. Boodle and F. E. Fritsch, revised by H. D. Scott.

Mr. Henry Frowde will also publish shortly: in the "Florin" series, The Ingoldsby Legends; The Poems of Robert Browning (1833-63); The Complete Poetical Works of Cowper, edited by H. S. Milford; Kingsley's Westward Ho! and Scott's Ivanhoe and Talisman,—in the "Oxford Poets," Shakspeare, with 31 pictures taken from the Boydell Gallery; The Poems of Browning (1833-63), with portrait; Mr. Milford's edition of Cowper; and The Ingoldsby Legends, with portrait and illustrations by Cruikshank, Leech, and others,—three Wordsworth books, viz.: Poems and Extracts, chosen by William Wordsworth for an album presented to Lady Mary Lowther, Christmas, 1819, with introduction by Prof. H. Littledale, and preface by Mr. J. Rogers Rees; Wordsworth's Literary Criticism in Prose, with an introduction by Nowell C. Smith; and Wordsworth's Guide to the Lakes, with an introduction by E. de Sélincourt,—A Supplement to the Glossary of the Dialect of Cumberland, by E. W. Prevost,—and About Hebrew Manuscripts, by E. N. Adler.

MR. GEORGE ALLEN

promises: Bird-Life Glimpses, by Edmund Selous, illustrated by G. E. Lodge,—The Sensitive, and other Pieces, by A. E. Manning Foster,—William the Conqueror, an Historical Drama, by J. F. Waight,—Because of Jock, by E. L. Haverfield,—The Making of Michael, by Mrs. F. Reynolds,—The Bride of a Day, by R. B and Dorothea Townshend,—The True Account of Nelson's Famous Signal, by Lieut.-Col. T. H. Baylis, — Denominational Teaching and the Education Act of 1902, by H. Egerton,—Venetian Sermons, by Alexander Robertson, illustrated,—Patriotism, an Essay towards a Constructive Theory of Politics, by Hakluyt Egerton,—The Electra of Euripides, translated into rhyming verse by Prof. Gilbert Murray, and a new edition of his version of The Trojan Women,—a series of Ruskin Reprints for the Pocket,—the Library Edition of Ruskin, edited by E. T. Cook and A. Wedderburn, 36 vols., illustrated with 1,300 plates and woodcuts, in addition to 100 other drawings by Ruskin not hitherto reproduced, — and a new edition of Sommer's translation of Andersen's Stories and Tales.

MESSRS. BEMROSE & SONS

announce: in the "Memorials of the Counties of England" series: Memorials of Old Hertfordshire, edited by P. C. Standing, and Memorials of Old Hampshire, edited by the Rev. G. E. Jeans,—Longton Hall Porcelain, by W. Bemrose,—Derbyshire Charters, edited by J. H. Jeayes,—The Values of Old English Silver and Sheffield Plate from the Fifteenth to the Nineteenth Century, by J. W. Caldicott, edited by J. S. Gardner,—Old English Gold Plate, with numerous illustrations by E. A. Jones,—Derby, its Rise and Progress, by A. W. Davison,—Smalley, its History and Legends, by the Rev. C. Kerry,—Church Plate of the Diocese of Bangor and Church Plate of the Isle of Man, both by E. A. Jones,—A Litany of Remembrance, by Bishop Ridding, a cheaper edition,—The Children's Book of Old Testament Story, by Mrs. C. D. Francis,—Soldiers of the Cross in Zululand, by E. H. W.,—Harmony of the Proper Psalms with the Fasts and Festivals of the Church Year, by the Rev. M. Scott,—The Confessional, by Canon Meyrick,—Memory Work for all Standards, enlarged edition,—The Clergyman's Ready Reference Diary and Kalendar for 1906, edited by the Rev. T. Johnson, — The Southwell Diocesan Calendar, Clergy and General Almanack for 1906, — and other almanacs and monthly volumes.

MR. EVELEIGH NASH

promises: The Wives of Henry VIII. and the Parts they played in History, by Martin Hume, illustrated,—a new edition, in 16 vols., of Miss Strickland's Lives of the Queens of England, limited to 250 sets, with many illustrations,—The Love Affairs of Great Musicians, by Rupert Hughes, 2 vols., illustrated,—The Life of Sir Henry Vane the Younger, by W. W. Ireland,—and The Siege and Fall of Port Arthur, by W. Richmond Smith, special correspondent with the Japanese army besieging Port Arthur, illustrated. Six-Shilling Novels: He Loved but One, the story of Lord Byron and Mary Chaworth, by F. Frankfort Moore,—The Parson's Wood, by Violet A. Simpson,—Captain Maroon, by Robert Stuart,—Deborah's Life, by James Blyth,—The Third Kiss, by Herbert Flowerdew,—The Flight of Georgiana, by R. N. Stephens,—The Wind-Jammers, by T. Jenkins Hains,—The Web of the Past, by the Countess of Cromartie,—The Paradise of the Wild Apple, by R. Le Gallienne,—Outcasts of the East, by Florence Bailey,—Brothers of Peril, by Theodore Roberts,—The Seven Streams, by Warwick Deeping,—The Nunnery Wall, by Elizabeth Holland,—and a new edition of H. A. Vachell's The Procession of Life.

MESSRS. PUTNAM'S SONS

will issue: General Literature: Romance of the French Abbeys, by Elizabeth W. Champney,—The St. Lawrence River, by G. Waldo Browne,—The Voyageur, and other Poems, by W. H. Drummond, illustrated, — Pictures of Life and Character, by Leech, — Addresses of Frederic Réné Coudert,—Philippine Life in Town and Country, by J. A. Le Roy,—The Kaiser as He Is, by Henri de Noussanne, translated by Walter Littlefield,—a translation, by K. P. Wormeley and G. B. Ives, of Sainte-Beuve's Portraits of the Eighteenth Century,—the third series of Shelburne Essays, by P. E. More,—several additions to the "Ariel Booklets,"—in "French Classics for English Readers," Montaigne, from Florio's version, and Molière, with an introduction by Brander Matthews,—Classified Quotations, by Cuyler Reynolds, — The Choice of Books, by C. F. Richardson,—The Companionship of Books, and other Papers, by F. R. Marvin,—Tibet and Turkestan, by O. T. Crosby,—America to England, and other Poems, by Minot J. Savage,—the Handy-Volume Edition of Poe, 6 vols.,—The Essays of Elia, illustrated,—Gulliver's Travels, with a Prefatory Memoir by Prof. Saintsbury, 4 vols., illustrated,—The Jordan Valley and Petra, by W. Libbey and F. E. Hoskins,—and The Autobiography of a Tomboy, by Jeannette L. Gilder. History and Biography: The United States, 1607-1904, by W. E. Chancellor and F. W. Hewes, 10 vols.,—The Life of Goethe, by A. Bielschowsky, translated by W. A. Cooper, 3 vols., illustrated,—a translation of Arvède Barine's Louis XIV. and La Grande Mademoiselle,—American Political History, 1763-1876, by A. Johnston, edited by J. A. Woodburn, 2 vols.,—The Spanish Settlements within the Present Limits of the United States: Florida, 1562-74, by Woodbury Lowery,—Vol. VI. of The Writings of James Madison, edited by Gaillard Hunt,—The Constitutional Decisions of John Marshall, edited by J. P. Cotton, jun., 2 vols.,—Vol. II. of The Writings of Samuel Adams, edited by H. A. Cushing,—in "Heroes of the Reformation," John Knox, by H. Cowan, and Balthasar Hubmaier, by H. C. Vedder,—and the fourth and concluding part of Dr. Dix's History of the Parish of Trinity Church, New York. Fiction: At the Sign of the Jack-o'-Lantern, by Myrtle Reed,—Our Best Society,—Lady Bobs, her Brother, and I, by Jean Chamblin,—Under Guiding Stars, by Agnes B. Poor,—and A Bookful of Girls, by Anna Fuller. Religion and Theology: The Religion of the Ancient Egyptians, by G. Steindorff,—Irenic Theology, by C. M. Mead,—Man and the Incarnation, by S. J. Andrews,—Jesus and the Prophets, by C. S. Macfarland,—and Life's Dark Problems, by Minot J. Savage. Science, Economics, Art, &c.: The Complete Kano Jiu-jitsu, by H. Irving Hancock and Katsukuma Higashi, illustrated,—What to Have for Breakfast, by Olive Green,—The Principles of the Administrative Law of the United States, by F. J. Goodnow,—Money Inflation in the United States, by M. S. Wildman,—Diagnosis of Organic Nervous Diseases, by C. A. Herter, revised by L. P. Clark,—and Physical Regeneration, by J. Cantlie. New Editions: Ranch Verses, by W. L. Chittenden,—The Home Life of Wild Birds, by F. H. Herrick, illustrated,—and A. K. Green's The Leavenworth Case.

MESSRS. GAY & BIRD

announce: The Florence of Landor, by Lilian Whiting,—three volumes by the Rev. Walter Begley: 1. Francis Bacon: his Nova Resuscitatio; 2. Exit Shakspeare (but not without Honour); 3. Enter Bacon,—The Arab: the Horse of the Future, by Hon. Sir James Boucaut, with a preface by Sir Walter Gilbey,—Made in Heaven, a love story,—Kitty and the Viscount, by Mulvy Ouseley,—and My Lady Clancarty, by Mary Imlay Taylor. Poetry: In Bohemia, by Mrs. T. Sterry Hunt ('Canadienne'),—The Guarding of a Goddess, and other Poems, by J. D. Ware,—The Book of Legends, told over again by Horace E. Scudder,—A Trip to Santa Claus Land, by Vivian Phillipps,—and The Animal Alphabet, by L. Beatrice Thompson. They will also issue new editions of works by Kate Douglas Wiggin, Capt. Skinner, Lafcadio Hearn, Ella Wheeler Wilcox, and J. A. Myddleton.

Literary Gossip.

IN *The Cornhill Magazine* for October the centenary of Trafalgar is commemorated in two articles—'The Picturesque Side of Trafalgar,' by Dr. W. H. Fitchett, and 'Napoleon and Nelson,' by Mr. David Hannay, which throws curious light upon the Emperor's opinion of the admiral. 'Reminiscences of a Diplomatist' tell of life at St. Petersburg before the Crimean War. In 'The Peninsula of Gower' Mr. A. G. Bradley describes a little-known corner of Wales, with its Saxon population set like an island among the surrounding natives. In a third article on 'The New Chemistry' Mr. W. A. Shenstone, F.R.S., discusses the interpretation of radio-active changes.

AMONG the prominent articles in *Blackwood* for October are 'Naval Education, its Past and Future,' by the author of 'A Retrograde Admiralty'; 'My History Vindicated,' by Mr. Andrew Lang; and 'International Perils.' We note also a poem by Alfred Noyes, entitled 'The Cottage of the Kindly Light.' Various records of sporting experiences and 'A Study of the Russo-Japanese War' complete the number. The September issue of *Blackwood* is already out of print.

The Oxford University Press is about to publish 'The Bodleian MS. of Jerome's Version of the Chronicle of Eusebius,' reproduced in collotype, with an introduction by Mr. J. K. Fotheringham. The editor's researches have convinced him that all forms of the 'Chronica' are ultimately descended from one closely resembling that of the Fleury fragments, and that the differences of text between the best MSS. are far from serious. Mr. R. L. Poole and Mr. C. H. Turner each contribute an appendix, that by the latter dealing with Jean du Tillet, a neglected scholar of the sixteenth century.

Under the title of 'Twenty Years in Paris,' Mr. Robert Sherard has written a volume of reminiscences of a literary life in Paris, which Messrs. Hutchinson & Co. will publish during the autumn season. The author has had the advantage of close acquaintance with some of the most prominent of French contemporaries; he has numbered among his friends Victor Hugo, Ferdinand de Lesseps, Eiffel, General Boulanger, Baron Haussmann, Jules Verne, Renan, Daudet, and Zola, of whom and many others he has much to relate which is interesting. The volume will be fully illustrated with portraits and facsimiles.

Mr. Fisher Unwin will publish very soon a volume entitled 'The Siege of Port Arthur: Records of an Eye-Witness,' by Mr. David H. James, special war correspondent with the Third Japanese Army for *The Daily Telegraph*. Mr. James took the field at Dalny at the beginning of August, 1904, and remained with the headquarters of the Third Army until the end of January, 1905. Living under canvas in the actual centre of the besieging line, he saw every action of importance, was present at the capitulation, and witnessed the meeting of Stoessel and Nogi, the march out of the Russian garrison, and the entry of the Japanese. Mr. James's acquaintance with Japan dates from his childhood, and his intimate knowledge of the Japanese and their language should add authority to the book.

In Mr. Augustine Birrell's new book, which we recently announced, will be found an appreciation of Locker-Lampson, entitled 'A Connoisseur,' in which some interesting personal details of that eminent collector's life and pursuits will appear. The title of the new volume of essays will be 'In the Name of the Bodleian, and other Essays.'

The Rev. W. S. Crockett is to write the volume on 'The Tweed' for Messrs. Black's "Fascination of Scotland" series. A third edition of his book on 'The Scott Country' is in the press.

We are glad to hear that Mr. Gregory Smith, whose excellent edition of 'Pepys's Diary' we noticed last week, has been appointed to the Chair of English Literature at Queen's College, Belfast. He has a wide and sound knowledge of the subject, especially of the Elizabethan period.

We congratulate *The Daily Telegraph* on its jubilee, which was celebrated last Saturday. It has set itself to provide for the needs of a particular class, and has built up and retained a firm position by virtue of the admirable way in which it has carried out its programme. It has not now a monopoly of young lions, which roar as loudly, or, it may be, more loudly, elsewhere, but a long list of able correspondents has maintained its traditions of enterprise and descriptive journalism.

We are sorry to notice the death last week of L. F. Austin, who was well known as a critic on *The Daily Chronicle*, and took James Payn's place as the author of the humorous 'Note-book' of *The Illustrated London News*. He published only one book, 'In Haste and at Leisure,' a reprint of articles, and it seems a pity that his considerable powers and knowledge of literature were confined to journalism. However, he did a useful work there in adding to the amount of gaiety in print, which is never large.

Mr. F. Holderness Gale, who has for many years been associated with the editorial staff at La Belle Sauvage in connexion with *The Quiver* and *Cassell's Magazine*, has been selected by Messrs. S. W. Partridge & Co. to succeed Mr. J. A. Hammerton as editor of their magazines.

Temple Bar for October includes a paper by Mr. Edward Manson on 'Bacon's Married Life'; while Count Okuma writes on 'Japanese Problems,' pressing the point that the civilization of his native land is not the mushroom growth it is sometimes considered; and Lady Newdegate on 'Militia Life in Georgian Days,' quoting from a valuable series of unpublished family letters, 1759-64.

M. Eugène Veuillot, who died on Monday last at the age of eighty-seven, was one of the best-known and most able journalists on the Catholic side in France. During the last few years he had devoted much of his time to a work on the career of his brother Louis, whom he succeeded in the editorship of the *Univers* in 1883. He published when a young man a 'Histoire des Guerres de la Vendée et de la Bretagne, 1790-1832,' which is regarded as an important document from the point of view of the Catholics. His son, M. Pierre Veuillot, is the present editor in chief of the *Univers*.

An interesting and important discovery was announced by M. Léopold Delisle at last week's meeting of the French Académie des Inscriptions. The Bibliothèque Nationale possesses the first volume of the famous 'Antiquités de Josèphe,' copied by the Duc de Berry. The second volume was discovered some years ago by Mr. H. Yates Thompson, but the ten miniatures which served as frontispieces to the several "books" were wanting. On Wednesday in last week M. Delisle received a telegram announcing the discovery of the miniatures, which had been found at Windsor in an album presented to Queen Victoria. They are now in the British Museum. These ten superb illuminations are by the great French "primitive" Jehan Foucquet.

The famous municipal library of Strasburg is threatened with extinction, for a project for its suppression is before the Municipal Council. Founded in the eighteenth century, it possessed in 1870 over 400,000 volumes, which were destroyed during the terrible night of August 24th to 25th. Thanks to generous gifts from various parts of the world and to the efforts of M. Reuss, the librarian, the library was reconstituted in 1872, and contained over 100,000 volumes by 1895, in addition to a superb collection "d'alsatiques." It is now proposed to add the "alsatiques" to the municipal archives, to transfer the scientific books to the Imperial Library at the University, and the "récréative books" to the Public Library, and to sell the books "de valeur moindre." It is contended that the public utility of the library does not correspond to the cost of its maintenance, and that its organization leaves much to be desired. Whatever its defects may be, it is not conceivable that such a drastic change will be effected without a loud protest. It may be questioned, indeed, whether the Municipal Council has the legal right to hypothecate in the manner indicated the many handsome donations which the library has received at various times from private benefactors.

Recent Parliamentary Papers include Report on Education in Scotland, 1904–5, (4*s.* 11*d.*); Reports of Queen's Colleges, Cork and Galway (2½*d.* each); and Trinity College (Intermediate Scholarships), Correspondence between Trinity College, Dublin, and the Board of Intermediate Education (1*d.*). The Forty-Ninth Report of the Civil Service Commissioners (4*d.*) gives, as usual, a view of the various departments, and this year contains a full account of the recent changes as regards the Indian Civil Service. A Treaty Series paper, price ½*d.*, 'Declarations between the United Kingdom and Greece with respect to Commercial Matters,' forms a delightful exercise in modern Greek, the texts being given side by side. Two important Parliamentary Papers are named in our 'Science Gossip.'

SCIENCE

OUR LIBRARY TABLE.

British Rainfall, 1904: On the Distribution of Rain over the British Isles during the Year 1904, as observed at about 4,000 Stations in Great Britain and Ireland. Compiled by Hugh Robert Mill, D.Sc., LL.D. (Stanford.)—This is the forty-fifth year of these annual reports. We are glad to notice that the army of observers continues to increase. The exceptionally heavy rainfall of 1903 gave a great impetus to the interest felt in meteorological inquiries. Remarkable rainfalls, however, like remarkable eclipses, do not occur every year, and 1904 seems to have been rather commonplace in this respect. But it is the essence of scientific investigations that they should be regular and continuous; many important questions depend upon an accurate knowledge of the distribution of the rainfall in various parts of our islands; and the difference is often very striking between the general impression produced in a particular season and the result derived from actual measurement. The labour of collecting, tabulating, and editing the results must have been great; but the author, evidently from a feeling of its importance, desires to go further. It may be mentioned that when the late Mr. Symons began in 1860 to publish the statistics of rainfall, his records were obtained from 168 stations in England and Wales;

Dr. Mill receives similar accounts now from about twenty-four times that number, distributed over the British Islands. He greatly regrets the cessation last October of the observations which had been carried on for twenty years on the summit of Ben Nevis, and gives a view of the observatory as a frontispiece to this volume, the second which appears under his exclusive responsibility.

British Progress in Municipal Engineering: a Series of Three Lectures. By William H. Maxwell, Assoc.M.Inst.C.E. (Constable & Co.)—These interesting lectures form vol. i. of "National Engineering and Trade Lectures, assisted by the Board of Trade, Colonial and Foreign Offices, Colonial and Foreign Governments, and Leading Technical and Trade Institutions, edited by Ben. H. Morgan." The first deals with 'Road Engineering and Maintenance,' the second with 'Main Drainage, Sewage Disposal, and Destructors,' and the third with 'Water Supply.' Mr. Maxwell takes as his subject, it will be seen, only such kinds of works as come legitimately within the scope of municipal action. Considering that one lecture each is an absurdly small allowance for the due treatment of matters so important, we wonder that the author has managed so well. He has relied greatly on illustrations. These are admirably selected, and by their means the eye is made to take in innumerable details which it was impossible for the lecturer to do more than indicate in his allotted time. This copious use of diagrams, maps, and photographs has made the text much more readable and interesting to non-professional readers than could otherwise have been the case. Taking one of the lectures as an example — that on 'Water Supply'—we find first an excellent map showing the gravitation supplies of the large cities of Great Britain (including the great Welsh scheme proposed for London). Then come beautifully reproduced views of the Glasgow Corporation aqueducts near Culegarton and near Duntreath Castle, of the highly ornamental dam and tower of the Liverpool Vyrnwy Reservoir, of the mighty cataract overflowing from the Gouthwaite Reservoir of the Bradford Corporation, and of the "Venturi" Meter House at the East London Waterworks at Leyton. Besides these, there are over fifty elaborate scale diagrams of mechanical contrivances actually in use in connexion with the great systems of water supply referred to. Altogether, to any one wishing to find, in reasonable compass and in fairly non-technical language, an account of what the vast expenditure incurred in providing the people of our huge towns with water is doing efficiently at the present time, we could recommend nothing better than this lecture of Mr. Maxwell's, and the same may be said, *mutatis mutandis*, as to the two other lectures. Mr. Maxwell's style is clear, his statements are precise, and he appears to be as free from fads and prejudices as may be expected from any active member of a scientific profession. Long lists of British manufacturers of engineering plant and material are added to the lectures, but only serve, it seems to us, to give the work a character from which the lectures themselves are commendably free. The book is handsome in form, and exceptionally well got up in every way.

THE INTERNATIONAL CONGRESS OF RADIOLOGY.

THE First International Congress of Radiology and Ionization, at Liège, turned out to be a somewhat modest affair, no man of science of the first rank, save its prime mover, M. Henri Becquerel, being present. The absence of Prof. Arrhenius, Prof. Birkeland, Sir William Ramsay, and Prof. Righi, all of whom had hoped to attend, but were unable to do so, was especially felt. This was no doubt in part due to the lack of hotel accommodation in Belgium generally at this time of year, and in particular at Liège, where the crowds attending the Exhibition made it very difficult to depend on a bed beforehand. As, moreover, this was only one of sixty congresses held in connexion with the Exhibition, it did not, perhaps, appeal to men of science so forcibly as it might otherwise have done. The connexion in question seemed to be limited to the assumption that men of science would be coming to the Exhibition in any case, and to the provision of free passes there for its members. The Congress itself was held, as was fitting, in the buildings of the University.

Among the communications were a lecture by M. Becquerel on the analysis of the radiations of radio-active bodies, which contained nothing very new, and an excellent paper by Sir William Ramsay (read by Prof. Blanc, of Rome) arguing that the radio-activity of thorium was due to an element not yet isolated, which he proposes to call radio-thorium. Prof. Muncz del Castillo, the delegate of the Spanish Government, and Prof. Tommasina of Geneva, both contributed bold theories on the cause of radio-activity and the constitution of matter which seemed hardly convincing, and the last-named, who was very much to the fore throughout the Congress, detailed his experiments on the supposed radio-activity of living animals and plants. The deflections on which he relied for the proof of his theory seemed, as measured by the electroscope, to be so slight as to be either negligible or due to some cause other than that to which he would assign them. Prof. Himstedt, of Fribourg, read a valuable paper on the spectroscopy of the light emitted by radium, a subject which would probably repay further investigation. Prof. Guye, of Geneva, gave a discourse on the disruptive discharge in gases at high pressure, which was in effect a summary of his papers on that subject now appearing in the *Archives de Genève*. Prof. Hurzumescu, of Bucharest, also read a valuable paper, comparing the discharge of a charged body by the rays of Röntgen and those of radium respectively, and suggesting that in the last-named case some transformation of the rays occurs. Finally, Prof. Riecke, of Göttingen, described the researches of Profs. Retschinsky and Wegger into the rays of radium and polonium, and Prof. Piltschikoff, of Moscow, those of his countryman, Prof. Moser, into a species of secondary radiation which he wished to call the "Moser rays"; while Mr. Makower, of the Victoria University of Manchester, read a noteworthy paper on the transmission of excited activity to the cathode, which the breakdown of the lantern provided by the University prevented him from illustrating by slides.

On the biological side most of the papers appeared to be concerned with the therapeutic use of radium, and to be better suited for a medical congress than a purely scientific one. Prof. Lassar, of Berlin, however, gave a clear and impartial account of the usefulness in this respect of both the Röntgen and the radium rays; and the interesting devices described by M. Contremoulins, of Paris, for measuring the force of the rays, and localizing foreign bodies lodged within the organism, were certainly models of ingenuity. Mr. Butler Burke, who was to read a paper on molecular aggregation, did not appear, but M. Raphael Dubois, of Lyons, sent a paper on eobes and "radiobes," which will, no doubt, be printed in due course. The Congress in full session agreed that its successor should be held in five years' time, and that its organization should be entrusted to a committee composed of most of the leading men of science in Europe, including, among other names, Sir William Crookes, Sir William Ramsay, Lord Rayleigh, and Prof. J. J. Thomson. An address was also voted to the different Governments of the world praying them to adopt measures for the preservation for scientific uses of the raw materials from which the radio-active elements are extracted. This may have some effect in Austria, whence comes pitchblende, but so far as democratically governed countries are concerned, the prayer might as well have remained within the bosom of the Congress.

ANTHROPOLOGICAL NOTES.

PROF. MARCELLIN BOULE has contributed to *L'Anthropologie* an important memoir on the origin of the eoliths. In quarries near Mantes he found a vast heap of flints, washed out of the chalk by machinery, exhibiting the same features of apparent retouching which have been held to show intentional human workmanship. His conclusion is that while, as a palæontologist, he firmly believes in the existence of Tertiary man, and does not doubt that traces of that existence will be found some day in some part of the globe, those traces will require a greater validity than that of the eoliths if they are to be accepted as irrefutable evidence.

Lieut. R. Avelot presents a study of the musical instruments of the Pahouins and neighbouring tribes of the French Congo, comprising tom-toms, a harp of eight strings, a musical bow, a drum, a fetish trumpet, and other instruments. Their tunes consist of a single short phrase indefinitely repeated.

Dr. L. G. Seurat furnishes an account of the fishing tackle of the ancient Paumotu, of the islands now (since 1852) known as Tuamotu, in Polynesia.

Dr. Bouchet contributes a description of two skulls of the Bronze Age found in the cavern of Courchapon (Doubs), and compares them with two others previously found there. One was hyper-dolichocephalic, having an index o 68·39.

In a review of Dr. Munro's 'Archæology and False Antiquities,' Prof. Boule adheres to his belief in the genuineness of the drawings of the mammoth published by Louis Lartet in 1874, notwithstanding the scepticism of M. de Mortillet and Dr. Munro, and urges that the maxim of the latter, that objects belonging to types not already known in the same region must be viewed with suspicion, should be held with much qualification, or it would negative all progress.

M. Émile Cartailhac warmly appreciates the work of Mr. Clarence Bicknell on rock inscriptions in the Italian Maritime Alps, a *résumé* of which has been communicated to the Society of Literature, Science, and Arts at Nice.

Recent issues of the portion of the *Journal* of the Asiatic Society of Bengal devoted to anthropology and cognate subjects contain valuable contributions to knowledge. In a paper on 'Totemism among the Khonds,' Mr. J. E. Friend-Pereira adduces evidence to show, contrary to the belief hitherto held, that the system of totemism does greatly influence the social and religious life of these people. They are particularly reticent in all matters relating to it, but it enters largely into their prohibitions of marriage and of food. Major P. R. T. Gurdon, Superintendent of Ethnography in Assam, contributes a note on the Khasis, Syntegs, and allied tribes inhabiting the Khasi and Jaintia hills district in Assam, illustrated with views of some of their memorial stones. These exist in immense numbers on the hills, and are erected either by the family in accordance with the Khasi custom of ancestor-worship, or by children in honour of a deceased parent. Mr. N. Annandale notes the superstitions and folk-lore connected with hair-worms in the Malay peninsula, corresponding with the strange belief in Europe that they represent a stage in the development of a horsehair into

an eel, and asks for information as to the existence of similar beliefs among the native races of Asia.

In the last issue of the *Revue de l'Histoire des Religions* Mr. A. van Gennep furnishes a critical account, extending over fourteen pages, of the papers and other communications contained in the *Journal* of the Anthropological Institute and in *Man* during the years 1903 and 1904.

A Congrès International d'Expansion Économique Mondiale is to be held at Mons, under the patronage of King Leopold and the Belgian Government, from the 24th to the 28th of September. One of the subjects to be discussed is, What are the best methods of making ethnographic and sociological observations of uncivilized peoples?

Science Gossip.

WE regret to hear of the death of the Comte Pierre Savorgnan de Brazza, the explorer, who was born in Rome on January 26th, 1852, but became a naturalized Frenchman. Brazza was the pioneer of French expansion in the Congo, and in this respect he was Stanley's most powerful rival. He added a huge colonial empire to the dominion of the Republic in the course of his several expeditions. He was by instinct an explorer, and brought to a successful conclusion many treaties which, but for his great tact, might have resulted not only in failure, but also in disaster. His methods have been described as "humanitaire et persuasive." He was for some years "Honorary Governor" of the French Congo, but from January, 1901, until lately had retired into private life. A short time since the French Minister of the Colonies sent him on a commission of inspection to the Congo, and it was whilst engaged in this work that he contracted dysentery, to which he succumbed.

THE Report, just received, of the Government Astronomer of Natal (Mr. E. Nevill) for 1904, deals chiefly, as in previous years, with the meteorology of the colony, which does not show any remarkable features.

AMONG recent Parliamentary Papers are Supplement to the Thirty-Third Report of the Local Government Board (1903–4), containing the Report of the Medical Officer (4*s.* 9*d.*), in which plague and cholera are dealt with; and the Minutes of Evidence and Appendixes of the Committee on the Fruit Industry (4*s.* 2*d.*).

PROF. TODD, of Amherst College, reports great success in his observations of the total eclipse at Tripoli on the 30th ult. By permission of Mr. Dickson, Vice-Consul, the instruments were erected on the terrace of the British Consulate, as on the similar occasion in 1900. The sky was of the highest possible optical transparency, and the climatic conditions, except for the intense heat, almost perfect. Great attention was paid to the observation of the shadow-bands, which were seen as early as ten minutes before totality, wavering and narrow, waxing and waning five times in eight minutes, at right angles to the wind, their length with it. The coronal sketches revealed nothing out of the ordinary. The largest instrument was a photographically corrected lens by Clacey, of 12-inch full aperture. About twenty exposures were made, and Baily's beads were excellently shown. The large Clark cameras were mounted, and plates taken, on which are depicted a great number of stars, which have not yet been fully examined. A 3½-inch Görz doublet was also used, which had, after removing the back lens, a focal length of 33½ in. This was attached to one of the automatic movements used by Prof. Todd in previous expeditions; it was geared up to a rate of 265 photographs during the 189 seconds of totality, the exposure being about a quarter of a second for each, and most of the pictures obtained were very good. The general impression produced by the corona was thought to be less striking than on previous occasions.

THE small planet Urda seems to be subject to variations of brightness. At previous oppositions it has scarcely exceeded the thirteenth magnitude; but when refound on the 23rd ult. (as mentioned in our 'Science Gossip' on the 9th inst.) it was nearly of the eleventh, from which it had sunk to the twelfth on the 5th inst. The inclination and eccentricity of its orbit are both small.

FINE ARTS

NOTES ON THE CHURCHES OF BLYTHING HUNDRED.

II.

THE beautiful form of architecture that gradually developed throughout the reigns of the first three Edwards, to which the often inappropriate nickname of Rickman's—Decorated—so persistently clings, made a certain impression on the village churches of East Anglia, and was not wholly swept away by the rebuilding rage of the next century. So far as the Hundred of Blything is concerned, work of this period may be noticed in the chancel of Thorington, the south porch of Walpole, the priest's door of Theberton, the east window and other parts of Knodishall, the south chancel window of Cookley, the chancel and other parts of Blythford, and some parts (including the main features of the tower) of Heveningham. The great tower of Blythburgh is certainly a plain example towards the end of the fourteenth century, whilst the finer tower of the ruined church of Covehithe is probably of about the same date. At Bramfield, a church remarkable in other ways, it is clear that the whole fabric (save the isolated round tower) was rebuilt in the first half of the fourteenth century. Westleton is also a plain example of that date; and there is much work of the like period about the church of Uggeshall, and the chancels of Holton and Little Linstead, though rendered somewhat doubtful by careless restoration. But the one piece of really fine church work of the fourteenth century in the Hundred is the church of Westhall. The proportions and details of the chancel are so good that I am sure no ecclesiologist will be disappointed at my drawing attention to it. It is a distinctly striking piece of building, and this seldom-visited church is also noteworthy for various other reasons, such as the beautiful remnants of fourteenth-century glass.

The only "Decorated" font of this district is, I believe, the one at Bramfield.

The wave of church building that passed over England at large in the latter half of the fifteenth century more especially affected East Anglia and the West of England. It was due, doubtless, to a variety of causes, one of which was the rest after a long period of civil strife. But here, as in the West of England, the main action at work was that of commercial prosperity, and the rise of the burgess and merchant class over the noble or lord of the manor. About the truest of recent terse sayings as to England's Gothic architecture is that of Mr. Prior, who has remarked that the priest ruled the building in the thirteenth century, the noble in the fourteenth, but the craftsman in the fifteenth. The mason was then ready to work in accordance with the opinions of the wealthy traders, or of the strongly developed parochial gilds in the smaller parishes. Art had become democratized, the church was more than ever the great house of the parish, and a wholesome rivalry of development fell upon village after village as they tried to fall into line, according to their powers, with their bigger neighbours.

Older ports on the shifting, perishing eastern seaboard were silting up or disappearing under the waves, and a remarkable group of new ports, fed to a great extent by the thriving wool and woollen trade, sprang up on the margin of Blything Hundred. Within a few miles of each other, four splendid churches, of fine proportions, were built: Covehithe and Walberswick, now mostly in ruins, and Blythburgh and Southwold, still glorious in their dignity. As to Blythburgh, one or two writers, who ought to have known better, started the theory that the splendid features of that church, both within and without, were due to the "monks" of the adjoining priory, and the ordinary run of guide-books now ceaselessly perpetuate this foolish story. There were, however, no monks at Blythburgh; the priory was but a poor cell of the not very wealthy abbey of Austin Canons of St. Osyth, Essex. We know that the numbers at Blythburgh were very few, and their income exceedingly slender. Their priory, a little to the north-west of the great parish church, was but a small building, of which a few relics yet remain in a cottage and a garden. Not only was the income of Blythburgh Priory very slender, but it was heavily burdened with debt. There were only four canons there, in addition to the prior, in the fifteenth century, and only three at the time of the last visitation. They were not able even to have a sung mass in their own church, and they had no chapter-house, so that when the bishop came to hold a visitation, they had to meet in a chapel of their church which they irregularly used for that purpose. It thus is highly improbable that the canons of either the distant mother-house or of the local cell put a penny piece into the magnificent work of the great parish church, the very roof of which, as well as the few remains of coloured glass and the bench-ends, is still stamped with the arms of the families who gave of their best to the worship of God. So, too, it is with Southwold; even the noble screen, the best example of old gesso work left in England, bears the merchants' marks of donors; whilst the great grave-slabs at the east end of the portion of a single aisle which is all that remains in use of the once vast church of Walberswick are similarly stamped with the trade-marks of wealthy benefactors, mariners, and merchants who died (as two of them state) "in ye rayn of Kyng Harry the 8."

Considering that the material is in the main mere flint and pebbles, there are no finer churches as examples of the later Perpendicular work than those of Blythburgh and Southwold. And yet there is sufficient left to enable us to judge that their two almost destroyed neighbours of Walberswick and Covehithe were finer as well as larger. The length of Blythburgh church is about 127 ft., and Southwold a little less; but Walberswick was 130 ft., and Covehithe 150 ft.

The passion for rings of bells, at that time almost peculiar to England, took strong hold in this well-to-do part of our country in the same way as it did in the West, and there were capable local bell-founders only too anxious to foster the desire. Hence it came to pass that strong well-built towers, of flint with imported stone quoins and flush-work on the battlements, and sometimes on the base-courses and buttresses, sprang up in every direction. Fifteenth-century west towers are to be seen at Benacre, Blythford, Brampton, Chediston, Cookley, Cratfield, Darsham, Henstead, Halesworth, Huntingfield, Knodishall, Leiston, Middleton, Peasenhall, Reydon, Sibton, Southwold, Walberswick, Wenhaston, Wrentham, and Yoxford; and they have been rebuilt in two or three other parishes. Those of Uggeshall and Westleton, of the same date, are ruined. The towers of Middleton and

Yoxford are crowned by lead-covered spires, the former of some height and grace.

Wrentham has a singularly fine tower, with good "sound holes," a usual characteristic of the best Norfolk towers, but uncommon in Suffolk; its height is said to be 75 ft., but it looks higher. The summit of Wrentham tower commands an exceptionally wide prospect. At the time when the country was alarmed at the idea of a French invasion, our Government used this tower for the erection of a semaphore telegraph apparatus. It is named in some MS. church notes of the year 1809.

Southwold tower is magnificent, and by far the best feature of the whole church; the great south porch is also specially noteworthy. The tower is about 100 ft. high. There is a somewhat peculiar look about the top stage, and it will be found on closer observation that the great bell-chamber windows are divided down the centre by narrow buttresses, which reach from the coping to the string-course below the highest stage. So curious an arrangement might be expected to yield a top-heavy look; but the proportions of the whole tower are so good that it is able to carry off this daring innovation. The flint and flush-work of the west face of the tower is particularly rich, and yet not overcrowded in its ornamentation. Over the large west window is a bold inscription, each letter surmounted by a crown, and carved in stone filled in with dressed flints; it runs—*Sce Edmond ora pro nobis.*

Evidently the same hands that were at work in this large lettering and in the monograms of the Blessed Virgin produced the long line of inscription, in great crowned letters, *temp.* Edward IV., below the large east window of the chancel of Blythburgh. This latter inscription has so far proved a puzzle. The most ingenious attempt at solution is that of Sir W. R. Gowers, as elaborated in a paper in the *Proceedings* of the Suffolk Archæological Institute. But this solution is obviously faulty in several respects. I am bold enough to attempt one of my own, but the subject is too intricate to permit of explanation in these columns. Below the west window of the mutilated tower of Uggeshall church is an inscription cut in black letter on the freestone of the sill. The letters are of unusual and somewhat ornamental shape, and not easy to read. The rector assured me that it had hitherto defied interpretation; but after taking a rough rubbing it came out with fair clearness as—"Orate pro aiab' Johis Hoile et Mariane ux' ejus." I have some doubts about the first letter of the surname, which is of exceptional shape. Doubtless these are the names of the builders or chief benefactors of the tower. Had they merely provided the glazing of the window, the inscription would have been inside. Immediately after the end of the inscription are two small shields, within which are incised certain emblems that seem to be intended for a set of masons' tools. They are certainly not armorial bearings, neither are they merchants' marks. The suggestion that they are the marks of a gild of working freemasons is probably correct. The noble tower of All Saints', Derby, was chiefly constructed by "John Otes fremason fonde of charite."

East Anglia is somewhat noted for its mediæval church inscriptions, apart from monuments. When the fifteenth-century fonts of this Hundred are considered, it will be found that three of them have inscriptions on the steps, in each case hard to decipher.

Though there is not so much church brickwork of the end of the fifteenth century and beginning of the sixteenth to be seen in Suffolk as in Essex, the use of the local clay for such a purpose is by no means unknown. In this district a really handsome west tower and a south porch of good red brick may be noticed at Ubbeston, *c.* 1500. Brick battlements and general repairs are to be noticed, of a like period, on several of the towers, round and otherwise. Occasionally windows were inserted in the bodies of the churches, with brick mullions and casings. There is a sixteenth-century brick clerestory to the nave of Heveningham church, and the east gables of the chancels of Spexhall and Brampton are of later brickwork.

The same features are often found reduplicated in fifteenth-century architecture in any given group of churches, testifying to the employment of the same band of masons or designers. In Blything Hundred, in addition to the remarkable similarity of many of the fonts, one of the striking points of resemblance is in the finely developed doorways of about the time of Edward IV. or somewhat later. These doorways have well-designed squared hood-moulds over them, with ornamented spandrels, and with terminals, usually of lions sejant, carried down exceptionally low. These are to be noted at the western entrances to several of the best towers. They may also be seen at the porches of Wisset, Blythburgh, and Westhall, and at the north entrance to Benacre church. In most of these examples the two shields of the spandrels bear, respectively, symbols of the Passion and the ordinary design indicative of the Trinity.

The churches of Suffolk, as well as Norfolk, are notable for their unrivalled roofs, usually of hammer-beam design. Contrary to the practice in most parts of the country, the beautifying of the ordinary village church of East Anglia did not include a clerestory, doubtless from the scarcity of stone; but the frequency of oak enabled the inhabitants to reroof their churches after an enriched steep-pitched fashion. It is only in the greater churches of this Hundred that clerestories and comparatively flat roofs are to be found. At Bramfield the tie-beams and king-posts of a fourteenth-century roof can still be noticed; but, for the most part, the roofs, when unrenewed, are of the next century. Good examples of East Anglian village church roofs, with well-carved wall-plates, may be noticed at Chediston, Cookley, and Ubbeston. The nave of Heveningham has a good double-hammer-beam roof. Huntingfield is worth visiting to form an idea of the beauty of the old Suffolk roofs when the hammer-beams were enriched with angels bright with paint and gilding. The decorating of this roof, on the old lines, was a patient labour of love to the wife of a late rector for a period of many years. The wonderful painted roof of Blythburgh, beautiful even in its decay, glowed with the armorial bearings of its benefactors, shining among the outstretched wings of the angel host; whilst Southwold's roof is still magnifical over the great rood-loft, with subject paintings illustrative of St. Ambrose's triumphant Christian hymn, the 'Te Deum.'

As to the outer coverings of East Anglian roofs, it may be noticed that thatched church roofs still linger, I am glad to say, in some of the villages of Suffolk, as well as of Norfolk. It is stated that fifteen such roofs remain in this county. If this is the case, the Hundred of Blything possesses more than half of the number, for thatch is to be noted on the churches of Bramfield, Covehithe, Henstead, Middleton, South Cove, Theberton, Uggeshall, and Westleton. There are several cases in which thatch has disappeared from churches within the last half century, as at Leiston, Blythford, and Sibton. It was pleasant to notice, in connexion with some contemplated repairs at Uggeshall, that it was intended to renew the thatch.

J. CHARLES COX.

HOPPNER'S PORTRAIT OF MISS MERCER.

I AM without the necessary acquaintance with the portrait of 'Master Mercier,' now in the Sprague Collection in America, to say whether it is identical with that of 'The Honble. Miss Mercier,' exhibited at the Royal Academy in 1805. Mr. Skipton, however, may be well excused for altering the name to "Mercer." At that time there was in existence, aged seventeen, the Hon. Margaret Mercer, who, a few years later, was to make a reputation in the world of fashion. She was the daughter and heiress of Lord Keith, of Stonehaven Marishal, by his first wife Jane, daughter and coheir of William Mercer, formerly Nairne. Miss Mercer was born in 1788, married in 1817 the Comte de Flahault de la Billardrie (whose mother was the celebrated Madame de Souza), and in 1837 became *jure suo* Baroness Nairne. Her only daughter, Emily Jane, who succeeded to the title, married, in 1843, Henry, fourth Marquess of Lansdowne. If Hoppner's picture be of the first-named Baroness Nairne, it would possess, beside the artistic, a considerable historical value. Possibly some of your readers may be able to clear up this point.

L. G. R.

Fine-Art Gossip.

WE receive the announcement of the formation of a new body, "The Society of Twenty-Five English Painters," which includes the following members amongst others: Mr. D. Y. Cameron, Mr. J. Charles, Mr. Melton Fisher, Mr. Lee Hankey, Mr. Dudley Hardy, Mr. J. L. Henry, and Mr. Alfred Withers, who is the honorary secretary. The object of the Society is to hold exhibitions of cabinet pictures inside and outside London, and abroad. The first exhibition is to be held during October at Messrs. Dowdeswell's Galleries. Two distinctive features of the Society are embodied in the following rules: "The works of all members are subject to the approval of the Council," and "Every three years all members must stand for re-election." The second exhibition of the Society will be held in Berlin during January.

MR. JOHN BAILLIE writes from 1, Princes Terrace, Palace Court, W.:—

"It is my intention to hold an exhibition of the earlier work of the late Simeon Solomon, and I should be glad if any of your readers could give me any information of the whereabouts of any pictures, and to know if owners are willing to lend them for exhibition."

MR. C. F. HARDY is preparing an exhaustive account of the animal painter Jacques Laurent Agasse (1767–1849), who came from Geneva to London in 1800, and remained in this country until his death. He exhibited at the Royal Academy from 1801 to 1845, and appears to have enjoyed considerable popularity in his own special line of art; but the story of his life is a blank. A biographical and critical account of Agasse appeared some months ago in the second series of 'Peintres Génevois' by M. D. B. Bory, in which work Mr. Hardy collaborated, collecting all the English materials for it. Since then Mr. Hardy has obtained additional information direct from one of the very few intimate friends (still living and in full possession of his faculties) of Agasse. Perhaps the most important discovery is the artist's chronological catalogue of his own works from 1800 to the time of his death. The work will be illustrated with reproductions of some of Agasse's best paintings, many of which are in private hands in Geneva.

THE October number of *The Antiquary* will include, among others, the following articles: 'British Historical Numismatics,' by Mr. P. W. Carlyon-Britton (President of the British Numismatic Society); the conclusion of 'Notre Dame de Brou,' by Miss E. C. Vansittart (illustrated); 'Letters from a Westmorland Man in London, 1719-34,' by Mr. L. H. Scott; 'Roman Remains at Harpham,' by the Rev. C. V. Collier; 'Master John Skelton, Laureate,

Parson of Disse, 1504,' by the Rev. C. N. Manning (illustrated); and 'The Monastery of Subiaco.'

MUSIC

THE WEEK.

THE WORCESTER FESTIVAL.

Of the evening concert given in the Public Hall last Wednesday week little need be said. With the exception of two songs, the programme included no novelties. The first of these was a tuneful ballad, 'In the Wood,' by Mr. Alban Claughton, and a vigorous song, 'Comrades,' by Mr. Thomas F. Dunhill, each with an orchestral accompaniment in keeping with the spirit of the poem. They were both well sung by Mr. Frederick Austin. Sir Edward Elgar's 'Introduction and Allegro for Strings,' Op. 47, produced last March at a London Symphony Concert, was performed under the composer's direction. The subject-matter is delightful, and the treatment thereof clever, and yet, at the second hearing, we felt, as we did with the composer's 'Alassio,' that, in spite of much that was clever and attractive, the work was not thoroughly organic.

On the following morning 'The Apostles' was performed in the cathedral, under the direction of the composer. Since its production at Birmingham, two years ago, we have heard it several times, but cannot say that each time we feel more and more impressed. The first part of 'Gerontius' is inspired from first note to last; in 'The Apostles' the glow is intermittent. This, we believe, is caused to a large extent by the fragmentary character of the text. But the rendering here of the work was fine, and it certainly makes a stronger appeal in a cathedral than it would in a concert-room. Palestrina's music in the latter place appears cold to musicians, because they listen to it under totally wrong conditions; so is it, we believe, with 'The Apostles.' The Rev. H. C. Shuttleworth, in a sermon preached at a festival of choirs in King's College, Cambridge, described music "as foremost among means and helps to devotion." To listen in the right spirit to 'The Apostles' the music must thus be regarded. While speaking of music suitable for performance in a cathedral, we may say that the selection at the festival in question was in this respect admirable. The name of Richard Strauss is not readily associated with sacred art, and, so far as we are aware, he has not set any Bible words to music. But the very title of 'Tod und Verklärung,' the work given on the opening day of the festival, deals with a solemn subject. There is a nobility in the latter part of the tone-poem capable of touching the hearts of men who might listen coldly to the most eloquent sermon. The soloists in 'The Apostles' were Madame Albani, Miss Muriel Foster, and Messrs. John Coates, William Higley, Dalton Baker, and Plunket Greene, all of whom sang with feeling and fervour. The choir was at its best.

Thursday evening was devoted to 'Elijah,' and Friday morning to 'The Messiah.' The festival was one of interest, if not musically of great importance. The prominence given to the works of Sir Edward Elgar was natural—his native city has good reason to make much of him. It may be noted that his two oratorios attracted the largest audiences of the week—'Gerontius,' 3,053, and 'The Apostles,' 2,933. By the side of these figures those for 'Elijah' and 'The Messiah' made a poor show. But the circumstances were exceptional; the success of 'Gerontius' has been world-wide, so that, apart from its merits, it would draw, while the same may be said of 'The Apostles.'

Musical Gossip.

A symphonic poem, 'Sir William Wallace,' by a namesake, Mr. William Wallace, was produced at the Promenade Concert on Tuesday evening. There is clever writing and good scoring in the work, but it is an uncomfortable specimen of programme music without a programme. The third section, a slow movement, proved the most poetical.—On the following evening there was no novelty, but the able performance of the solo part of Brahms's Pianoforte Concerto in D minor by Mr. Howard-Jones deserves recognition. His technique was irreproachable, and the rendering of the music was not only intellectual, but also sympathetic.

Numerous violin recitals by new-comers are announced. Miss Norah Thomsen, a pupil of Dr. Joachim, will make her *début* at Bechstein Hall on October 16th; Miss Edith A'Vard, who has studied with Prof. Sevcik, will appear at the Æolian Hall on October 18th; while on November 10th Miss Lilian Crow, a violinist from Yorkshire, also a pupil of the Bohemian teacher, comes forward at Bechstein Hall. Mr. Goldsborough, an American violinist who has studied in Germany, announces a recital on October 23rd; and Herr Carl Klein, a German artist, has arranged an orchestral concert at Queen's Hall on November 14th.

Miss Grace Sunderland and Mr. Frank Thistleton announce another series of concerts of Old Chamber Music. They will take place, as usual, at Messrs. Broadwood's, and on the following dates: October 24th, November 21st, December 19th, January 23rd, February 20th, March 20th, and April 17th; the first two and the last in the evening, the others in the afternoon. On November 21st, the anniversary of Purcell's death, the programme will be entirely devoted to his music.

The Sunday Orchestral Society has been formed to provide high-class afternoon symphony concerts at the Coronet Theatre, Notting Hill. There will be an orchestra of sixty performers, and the first six concerts will be under the management of Mr. E. Howard-Jones. Popular prices will be charged, but there will be a certain number of free seats. The profits of the concerts will be distributed among local charities.

A Hambourg Conservatoire of Music and School of Modern Interpretation and Virtuosity has just been established at 2, Clifton Gardens, Maida Vale, under the direction of Prof. Michael Hambourg, who will personally supervise all preparatory classes for children and beginners. Of Prof. Hambourg it is sufficient to say that he was the sole teacher of his son, Mark Hambourg, until the latter went to Prof. Leschetizky at Vienna for final tuition. MM. Paderewski, Leschetizky, Mark Hambourg, and Eugène Ysaye are patrons and honorary examiners.

The Royal Choral Society commences its thirty-fifth season at the Albert Hall on November 9th with 'Elijah.' The other dates are December 7th, January 1st and 25th, February 28th, March 22nd, April 13th, and May 3rd. The performance of 'The Messiah' on Good Friday (April 13th) does not form part of the subscription series. Three works will be given for the first time by this Society: Brahms's 'Requiem,' Sir E. Elgar's 'Dream of Gerontius,' and Sir Hubert Parry's 'Blest Pair of Sirens.' The programme of the second concert will consist of Sir Charles V. Stanford's 'The Revenge' and Sullivan's 'Golden Legend.' Sir Frederick Bridge will, as usual, be the conductor.

A volume of poems by Richard Wagner, mostly of lyrical character, will shortly be published. They have been collected by the composer's biographer, Herr Glasenapp.

The competition for the two scholarships, one for female, one for male voice, offered by Messrs. Elkin & Co., Limited, will take place at the Bechstein Hall next Wednesday. The scholarships consist of one year's free tuition.

The British Symphony Orchestra has been formed to provide artists and societies with a body of players accustomed to accompany. Mr. W. Sewell is the conductor. Detailed information can be obtained from the secretary, care of Messrs. Rudall, Carte & Co., 23, Berners Street, W.

The seventieth anniversary (October 9th) of the birthday of Dr. Camille Saint-Saëns will be duly celebrated at Paris. Three grand concerts are to be given, also a *réunion* at the Académie, and a banquet. Hector Berlioz died at the age of sixty-six, but even had his life been prolonged four years no such notice would have then been taken of him and his art work. It is therefore a satisfaction to find that Paris intends to pay due honour to the most prominent of living French composers.

The hundredth anniversary (November 20th) of the production of Beethoven's one opera, known as 'Fidelio,' will be celebrated at Berlin in a most interesting manner. The composer was persuaded to make various cuts and alterations in the work after its production at the Theater an der Wien in 1805. It is now to be given in the original version, and under the title 'Leonore,' as desired by Beethoven.

In the number of *Die Musik* for September 2nd, in an article entitled 'Fünf ungedruckte Briefe an die Fürstin Carolyne Sayn-Wittgenstein,' there is a letter from Berlioz, of the year 1857, in which E. Silas, the well-known composer, is mentioned. The passage runs thus:—

"Two years ago a young Dutch pianist (Silas) was commanded to play before the King of Holland, and he selected a Beethoven sonata. After a few bars the king interrupted him. 'Stop! stop! What the devil are you playing?' 'A Beethoven sonata, sire!' 'I thought as much, it is hideous. An old fool! For me there are only two composers: Donizetti and Thomas.'"

The King of Holland, by the way, was not the only monarch who preferred Italian to German music. The last of the five letters is from Minna, Wagner's first wife. It is dated Dresden, January 11th, 1859, and in it occurs the following interesting and also pathetic passage:—

"I listen to the Wagner operas 'Rienzi' and 'Tannhäuser' with great delight and with mixed feelings. I cannot suppress a certain pride, as these operas, together with 'The Flying Dutchman' and 'Lohengrin,' which have made his name famous, were written during our early wedded life. For me there are two periods in Wagner's art-work. The first, which belongs to me, comprises the four operas just named. But in the second—the 'Ring,' and especially 'Tristan and Isolde'—I was unfortunately not able or allowed to influence him."

PERFORMANCES NEXT WEEK.

Sun. National Sunday League, 7, Queen's Hall.
Mon. to Sat. Promenade Concerts, 8, Queen's Hall.
Sat. Herr Kreisler's Violin Recital, 3, Queen's Hall.

DRAMA

THE WEEK.

DUKE OF YORK'S.—*Clarice: a Comedy in Four Acts.* By William Gillette.

IN itself 'Clarice,' in which Mr. Gillette reappears in London, is a simple, primitive, and pleasing love story of no particular significance, credibility, or point. Acted in customary fashion, it might make an hour's agreeable entertainment. By processes which we hesitate to describe as American, and hope never to have to accept as English, it is made to stretch over something approaching to three hours. The processes in question are simpler even than the piece. They consist first in lighting up the stage piecemeal. Lamps flicker in and out as if in fairyland, and objects are submitted to a partial, but augmenting illumination. Characters then show themselves, do little, and say less. A domestic enters, picks up a paper or two, and places them aside. What follows is, to use Hamlet's not too easily comprehensible words, "as swift as meditation or the thoughts of love," and almost as reposeful. Towards the close some action is managed, and it may be gains by contrast with the listlessness of what has gone before. That things in real life may sometimes occur in similar fashion we concede. When they do so, however, they do not constitute drama. Pretty, accordingly, as are some little touches which are introduced, and delicately flavoured as is the acting, the general effect is somnolent and in the main depressing. We heard much at one time of the teacup-and-saucer drama. Compared with the present, this now all-but-forgotten style of work may be regarded as madly exhilarating.

Living in the same house with a young, pretty, and fascinating ward, Dr. Carrington has fallen in love with her. Under the influence of some strangely and inexplicably malignant motive, the girl's aunt tries to separate her from her lover, and brings on the scene another suitor, also a physician. When Clarice refuses to part from her guardian, the aunt, an Iago in petticoats, induces her ally to bring about a fraudulent consultation, the result of which is to persuade a man —himself, be it remembered, a physician— that he is in the last stages of consumption, and that marriage with him would be dangerous, perhaps fatal, to the girl. With more ingenuity than is elsewhere displayed, the author makes his hero meet craft by craft, and by counterfeiting suicide extort from his rival an avowal of his baseness. Slight and wildly improbable is this. It leads, however, to some pretty scenes of love-making, presents an agreeable though rather fantastical view of an interior in Virginia, supplies one or two good types of character, chiefly subsidiary, and permits of some very artistic acting. Though too reposeful in style, Mr. Gillette plays capably and even inspiredly; Miss Marie Doro, the Clarice, is specially winsome; Miss Lucille la Verne shows a picturesque type of mulatto servant; and Mr. Thomas H. Burns exhibits genuine humour in a species of bourgeois part. The acting generally has attributes by the study of which our stage might profit, and the entertainment, though it stands in need of quickening, is a thing to be seen.

ST. JAMES'S.—*Dick Hope: a Play in Three Acts.* By Ernest Hendrie.

IN reappearing at the St. James's, the autumnal management of which has almost lapsed into their hands, Mr. and Mrs. Kendal have opened their season with 'Dick Hope,' a piece in which, during the past two years, they have been seen in the country, and in which they made a short appearance at the Coronet, Notting Hill. Written by a member of their own company, with a close knowledge of their potentialities, 'Dick Hope' supplies Mr. and Mrs. Kendal with parts thoroughly suited to their respective styles. This is its chief—it may almost be said its only—merit. A moderately sympathetic central interest is surrounded with comic scenes which miss fire and serve little purpose but that of delaying the action. Desire of wine, which Milton tells us

> Many a famous warrior overturns,

may count among its distinguished victims Major Richard Hope, a veritable Rip van Winkle in his helplessness to resist temptation. He has maintained a rather maundering attachment to Marjorie Lyall, who has, naturally, declined to link her fate with a drunkard. On her birthday he renews his advances, and at length extorts from her a promise that if he can abstain from drink for twelve months she will be his wife. So soon as she has thus compromised herself, the Vicar, whom she really loves, proposes to her. Not without difficulty, she persuades the new-comer that it is his duty not to press his own suit, but to aid her in reclaiming the penitent. Thus helped and supported, Dick accomplishes the promised feat. When the time is all but up he learns the true state of affairs. He naturally will not exact from Marjorie what he sees will be a penalty. Fortunately this discovery, instead of blowing to the winds his resolution, as at one time seems likely, proves fortifying, enabling him to walk alone and unaided on the path he determines henceforward to tread. That he will persist in his virtuous resolution the spectator is encouraged to hope. All this is not only sympathetic, but even edifying. The fact that it moves us less than it ought we attribute to inexperienced workmanship rather than to inherent weakness of theme, though something may be urged in favour of the view that the kind of incapacity from which Dick Hope has suffered is of the nature of a physical or mental infirmity, and not too well suited to dramatic exposition. At any rate, move us it does not, and the whole, in spite of a very fine performance by Mr. Kendal, is depressing. Mrs. Kendal displays once more her superb method, and Mr. Bassett Roe gives a realistic picture of the self-denying vicar. In what is intended to be comic relief the author and other actors take part. In this case also the result is disproportionate to the effort that is made.

Dramatic Criticism.—Vol. V. *1903.* By J. T. Grein. (Nash.)—Mr. Grein, the fifth volume of whose reprinted criticisms has appeared, stands alone in his endeavour to supply the English reader with something like a continuous chronicle of current theatrical events. Since the days of Diderot and of Lessing, France and Germany, the former country especially, have devoted constant attention to the acted drama. In France newspaper reports have frequently been reprinted, and there is scarcely a French critic of eminence, from Geoffroy to Catulle Mendès, whose reprinted *feuilletons* or commentaries have not taken a place in literature. Of Geoffroy, earliest in date, who goes back to pre-revolutionary days, it was unkindly said in a dialogued epitaph on his death in 1814:—

> Nous venons de perdre Geoffroy.
> —Il est mort?—Ce soir on l'inhume.
> —De quel mal?—Je ne sais.—Je le devine, moi.
> L'imprudent, par mégarde, aura sucé sa plume!

In England reprinted criticisms, though not unknown, have rarely met with much encouragement, and Mr. Archer and Mr. Grein stand alone in seeing their revived comments reach a fifth volume. As chronicle Mr. Grein's successive volumes leave much to be desired in respect of completeness. In this regard, however, the present is an advance upon previous issues, and we have nothing to urge against the book except Mr. Grein's rooted disinclination to narrate the plot. Accepting the work from the author's own standpoint, the critical, we are struck with the superiority of the judgments passed upon foreign works as compared with those uttered concerning English. The reason for this is little flattering to national vanity. Of the original English plays with which Mr. Grein deals, not one in a dozen approaches mediocrity. 'Whitewashing Julia,' by Mr. Henry Arthur Jones, and 'Letty,' by Mr. Pinero, represent as best they may the output of our leading dramatists; 'Mrs. Gorringe's Necklace' and 'Cousin Kate' constitute the accomplishment of Mr. Hubert Henry Davies, who, having soared out of obscurity, seems to have retired with wearied wing; Mr. George Bernard Shaw is represented only by 'The Admirable Bashville; or, Constancy Unrewarded.' To these plays may perhaps be added 'The Light that Failed,' 'Little Mary,' and 'The Man who Was,' the whole constituting a very moderate year's harvest. Against these may be pitted, in the original or in translations, works such as 'When We Dead Awaken,' 'Glück im Winkel,' 'Resurrection,' 'Sunken Bell,' 'Es Lebe das Leben,' 'Old Heidelberg,' 'Der Sturmgeselle Sokrates,' 'College Crampton,' 'Zwillingsschwester,' 'The Lower Depths,' 'The Man and his Picture' ('Sodom's Ende'), 'La Robe Rouge,' 'Francesca da Rimini,' and many others. In the judgments he pronounces upon these works we are not seldom at disaccord with Mr. Grein. Nothing could, indeed, be wider apart than the estimate he expresses of the 'Francesca da Rimini' of Gabriele d'Annunzio and that we have ourselves formed. Mr. Grein seems, indeed, more accessible to dramatic than to poetical influences, to say which, in regard to the functions he discharges, is eulogy rather than censure. Some of his utterances concerning actresses — notably Duse as Hedda Gabler and Paula Tanqueray, and Bernhardt as Andromaque — are models in their line, leaving little to be added, and nothing to be excised. In dealing with English artists he is, like all of his craft, too lenient. It is to be trusted that the series will be continued. If we should prefer a more sustained chronicle such as is now rather fitfully supplied in 'Les Annales du Théâtre et de la Musique' of M. Edmond Stoullig, a work which has enjoyed an existence of twenty-one years, we are asking for what Mr. Grein does not undertake nor seek to supply. Taking 'Dramatic Criticism' for what it claims to be—which is, after all, the only just way of treatment—we welcome it as fulfilling the modest promise of its title.

ELIZABETHAN DRAMA.

Of the large output of reprints and editions of "Elizabethan" books Ben Jonson continues to have the lion's share. The most important of recent publications are the first instalment of Dr. Bang's reprint of the folio of 1616 and his and Mr. W. W. Greg's reprint of the 1601 quarto of *Every Man in his Humour*, being Vols. VII. and X. of "Materialien zur Kunde des älteren englischen Dramas" (Louvain). In both, as in all the contributions to this useful series, the intention of the editors has been to reproduce the originals in the most faithful manner, even to the details of "turned letters and wrong founts." The volumes are intended as "material" for editors and students of Ben Jonson who may not have access to the originals. Both have been printed with all scholarly care. As the edition is limited to three hundred copies, and as some effort has been made to reproduce the originals in facsimile, it is a pity that better paper and ink have not been used. The quarto is pleasing, but the folio has been printed on a cold blue-white paper which jars with the antique lettering, especially with the photo-typed portrait and title-page; and the large dull-red letters of the general title-page suggest a weather-beaten theatre-poster rather than a thirty-franc reprint.

To the "Yale Studies in English" (New York, Holt & Co.) have been added editions of *Bartholomew Fair* and *The Poetaster*, the former by Dr. C. S. Alden, Instructor in English in the U.S. Naval Academy; the latter by Dr. Herbert Mallory, Instructor in English at Yale. Though much labour has been spent on both, they are but university theses, constructed and printed according to the pattern of the series to which they belong. They will be useful to American students as trustworthy texts and as guides to the bibliography of the subjects. Dr. Alden supplies an introduction on the editions of his text, on Bartholomew Fair and on Jonson's attitude to the Puritans; and Dr. Mallory has some interesting observations on the quarrel and the personages involved. The introductions are fair restatements of familiar matter.

It is difficult to understand the purpose which Mr. W. H. Williams and the Clarendon Press had in issuing *Specimens of the Elizabethan Drama from Lyly to Shirley*. There are always objections against anthologies, even the best of them; but the selection of poems, each complete in itself, from a series of authors, is a reasonable exercise compared with the compilation of isolated scenes from two dozen dramatists. Had the collection been made for purely linguistic purposes, it might have proved useful. We may be reminded of Lamb's well-known volumes. They served a good purpose in their day, by introducing and popularizing the study of the Elizabethan drama, and where that purpose is still valid, Lamb's editorial labours may be of use. Nor may we forget that the older venture owed more of its success to Lamb's critical insight than to the mere plan of the book. Mr. Williams at once invites us to make comparisons when he writes: "It seemed unnecessary to include.....extracts contained in Lamb's 'Specimens.'" The text of the volume does not exceed 400 pages, if we exclude the head-notes from the actual total of 441. Within these limits we have twenty-four dramatists and eighty-nine plays represented. Thus from Ben Jonson we have one scene from 'Every Man in his Humour,' 'Volpone,' 'Epicœne,' 'Bartholomew Fair,' and 'The Sad Shepherd,' and two from 'Sejanus' and 'The Alchemist'; from Shirley, one from 'The Brothers,' 'The Traitor,' 'Hyde Park,' 'The Lady of Pleasure,' and 'The Cardinal.' Mr. Williams must know, and the learned Press should know, that plays cannot be sampled by one scene, and that four-and-twenty of Shakspeare's contemporaries, if baked together in this way, will make but printers' pie. The production is a regrettable waste of editorial zeal.

Mr. R. B. McKerrow's edition of Barnabe Barnes's *Devil's Charter* (another of the "Materialien" series above mentioned) is a welcome contribution. The text is carefully edited from four different copies of the only known edition. Much trouble has been spent on the notes, a task of exceptional difficulty. Towards the end of the introduction Mr. McKerrow discusses in a fresh way the general bibliographical problem of the variants found in copies of early seventeenth-century books bearing the same title-page and date, and he makes some valuable observations on the treatment of these differences in absolute reprints. Most editors have had a notion, more or less hazy, that corrections were made as a book passed through the press; but they have too often assumed that one copy of the extant set was in every respect superior to its fellows. Mr. McKerrow points out that correction was not made merely sheet by sheet, but that it was sometimes made between the drying of one side of the sheet (outer forme) and the printing of the other (inner forme); that the printer was often liberal in "overs," generally first pulls or trial sheets cast off before the number limited by the Stationers' Company; and that the binder, with a pretty indifference to the author's interests, made up the copies indiscriminately. The modern editor has, therefore, a new task before him. He must go over every sheet and the pages of the inner and outer forme of each, and judge between the "most corrected," the "intermediate," and the "least correct," and piece together all the "most corrected" portions as the true representatives of the "author's" edition. This is a nice issue for the bibliographers, for such a text, though called an accurate reprint, represents no known edition, and does not give us the author's edition at any stage. But it has much to commend it from the critic's point of view, and it offers all that is necessary for practical purposes, unless we are prepared to have half a dozen texts representing the actual state of the MS. in the printing office at each successive visit of the troublesome author. Mr. McKerrow has followed out his plan with excellent results.

Mr. Moore Smith has printed, in the same series, the Trinity College comedy of *Pedantius*. His knowledge of Gabriel Harvey and his associates has been turned to good account in unravelling the problem of authorship and date of this interesting play. Four Cambridge men have been credited with the authorship—Edward Forsett, Anthony Wingfield, Thomas Beard (of 'The Theatre of God's Judgments'), and Walter Hawkesworth. Mr. Smith reviews all the available evidence, and inclines, with some reason, to the first, who is named on the authority of the Caius MS. Mr. Smith dates the production of the play "between the winter of 1580 and July, 1581." In the concluding section on '"Pedantius" and Gabriel Harvey,' he makes out a good case for Nash's statement that Gabriel's character was drawn, with little reserve, in the "concise and firking finicaldo fine schoole master." The critical apparatus and notes are full and accurate.

SOME MARLOWE RIDDLES.

Early editions of the various works attributed to Christopher Marlowe are met with so infrequently that the Shakspearean quartos may fairly be described as common by comparison. During the past twenty years, twenty-three copies of old, though in most instances late, editions of Marlowe's works are chronicled as having been sold by auction. 'The Jew of Malta,' 1633, appeared nine times; 'Ovid's Elegies,' 1596 or 1598, five times; 'Hero and Leander,' 1622 or 1637, also five times; 'Edward II.,' 1598 or 1612, twice; 'Lust's Dominion' (perhaps by Marlowe), 1657, and 'Tamburlaine the Greate,' 1605-6, once each. Such is the tale. Nothing has been seen or heard of 'Dido, Queene of Carthage'; 'Doctor Faustus'; 'The Massacre at Paris,' ascribed sometimes to this author; 'The Rape of Helen,' from the Greek of Coluthus, stated by Wharton, Lowndes, and Watt to have been printed in 1587; 'The Atheist's Tragedy,' apparently a spurious publication; and 'Edward III.' Of 'The True History of George Scanderbage,' which was entered in the books of the Stationers' Company in July, 1601, not a trace remains; no copy is known of 'The Rape of Helen' above mentioned. It seems at least probable that Marlowe's beautiful song 'Come, live with me and be my Love,' was in print before it partly appeared in 'The Passionate Pilgrim' of 1599, and if so not a trace of that remains. It is also probable that Marlowe wrote more than is attributed to him, and on the whole the book-lover has here a magnificent field of enterprise, partly in searches for fresh pieces and partly in checking the statements of the bibliographers and others who have from time to time applied themselves to an extremely difficult series of problems.

Mr. John H. Ingram's bibliography appended to his recently published work, 'Christopher Marlowe and his Associates,' is the only one of any note, and, like the proverbial ladder, it is full of holes. This is not the fault of Mr. Ingram, but of time and circumstance, which have together played havoc with remembrance as though to blot the record out. According to this authority and others, Marlowe's first play is supposed to have been 'Tamburlaine the Great,' first presented on stages about 1587, entered in the Stationers' books on August 14th, 1590, and published the same year. At the Duke of Roxburghe's sale in 1812 a copy of this edition, described as "very rare," was sold to Richard Heber (not to Kemble, as invariably stated) for nearly 6*l*. This is now in the Devonshire collection. The authorship of this play is ascribed to Marlowe on the authority of Gabriel Harvey, the same who wrote a furious funeral invitation to poor Robin Greene; but then Harvey's evidence is confined to a mere reference to the title. Some authorities have it that Nash collaborated with Marlowe in its production, others that it was entirely the work of Marston, though this can hardly be. On the whole, however, 'Tamburlaine' stands on a tolerably sound foundation, the very reverse being the case with regard to 'Doctor Faustus.' That play, undoubtedly by Marlowe, was entered in the Stationers' books on January 7th, 1601. The earliest edition yet traced is that of 1604 (Bodleian Library), but it is more than questionable whether it is the first. The real first edition appears to have been printed without date, probably in 1601, but here lurks a very difficult riddle, set first of all by Graf in his 'Studii Drammatici' and never solved.

'The Rich Jew of Malta' was licensed for printing on May 17th, 1594. Yet the earliest known edition is that of 1633, often described as "the first and only edition." That it is not the only edition is certain, for another appeared in 1780, nor is it at all likely to be the first. That a book should be licensed for printing in 1594 and not make its appearance till 1633 is apocryphal. The unique copy of 'The Troublesome Raigne.....of Edward the Second,' 1594, in the library at Cassel, may belong to the original edition, though the point is doubtful, as the work was entered in the Stationers' books

in July, 1593. So, also, it is quite likely that the two "sestiads" of 'Hero and Leander' were printed prior to 1598, the date usually given as that of the first edition, since the entry of registration was made in September, 1593. The complete work as finished by Chapman has sometimes been confounded with Marlowe's fragmentary portion, which, as a matter of fact, was printed separately. The copies sold by auction of 'Hero and Leander' have, during recent years at all events, generally been dated 1637, but there are several other editions. Only the other day a hitherto unknown edition, dated 1622, was sold by auction for 30*l.*, the highest price paid publicly for one of Marlowe's works for many years, though not a record price by any means.

Marlowe is supposed to have written a play called 'The True Tragedie of Richarde Duke of York and the Death of good King Henrie the Sixt,' printed in 1595. 'The True Tragedie of Richard the Third,' a quarto printed in 1594, which Shakspeare used for his tragedy, may or may not be by Marlowe. He could hardly, one would think, have written both, though I have heard them described as one and the same, "with variations." He is also supposed to have written 'The Massacre at Paris, with the Death of the Duke of Guise,' which Henslowe says was played for the first time on January 3rd, 1593; and 'Lust's Dominion; or, the Lascivious Queen,' printed in 1657, and described on the title as being by "Cristofer Marloe, Gent." Whether he really wrote either or both of these or neither is another riddle. So also the question whether the book burnt by order of Archbishop Whitgift was the "Epigrammes and Elegies, by J. D. and C. M.," printed at Middlebourgh, without date, or "All Ovid's Elegies, 3 books by C. M. and J. D.," also printed at Middlebourgh, without date, is by no means clear. The first contains a portion of the elegies only; the latter has them all, as the title discloses. Perhaps Whitgift burnt both, but the order dated June 1st, 1599, might well apply to either. At one time Shakspeare's 'King John' was put to the credit of Marlowe, but that must have been on the strength of a play bearing that title, printed anonymously in 1591, and described as "a poor spiritless chronicle play." If this description of its merits approximates to the truth, then Marlowe was and perhaps is a scapegoat.

A play entitled 'A Pleasant Conceited Historie called the Taming of a Shrew,' printed in 1594, and supposed to be the foundation or "precursor" of Shakspeare's comedy, has also been assigned to Marlowe, who, if he really was the author, must have borrowed very extensively from his own 'Tamburlaine,' a very improbable circumstance. 'Edward III.' too has been ascribed to the same author "on a question of style," Shakspeare being sometimes credited with one of the scenes. But then Shakspeare's earlier style bears such a close resemblance to that of Marlowe that he may very well have written the whole play or none of it. The question of style can only be half answered, like the riddle of the Sphinx, and it is further complicated by the fact that imitation was a literary vice even in 1596, and that Marlowe had his imitators.

There is a bibliography of 'Doctor Faustus' extant, but so far as I know a serious attempt to extend the principle to the whole of Marlowe's acknowledged or reputed works has only been made by Mr. Ingram. Some day, perhaps, further material in the form of the early quartos, which appear to have almost entirely vanished, may be discovered, but until that time arrives the substance of these and some other riddles seems likely to do duty as the bases of probabilities, supplemented by conjectures and a profound appreciation of "style" as it is supposed to have been in Marlowe.

J. HERBERT SLATER.

Dramatic Gossip.

THE Scala opens this evening with 'The Conqueror,' the four-act dramatic fantasy of Mr. R. E. Fyffe. In addition to the parts of Mr. Forbes-Robertson and Miss Gertrude Elliott, the play has twenty speaking characters.

'THE TEMPEST' will be revived on Thursday afternoon for a solitary occasion at His Majesty's, with Mr. Tree as Caliban and Miss Tree as Ariel. One or two changes will be made in the cast. Ibsen's 'An Enemy of the People,' given at the Haymarket on June 14th, 1893, will be revived at His Majesty's on the afternoon of October 12th.

THE promised production of 'Lights Out,' an English rendering of 'Zapfenstreich,' is now fixed at the Waldorf for October 2nd.

'A LOYAL REBEL,' a four-act play by Mr. Edward Knoblauch, a dramatist untried as yet, is in the hands of Mr. H. B. Irving for production when required in London, presumably at the Waldorf.

'WHAT THE BUTLER SAW' is to be removed to the Savoy early in next month.

ON October 5th a new comedy by R. C. Carton will be produced at Wyndham's with a cast comprising Miss Compton, Miss Annie Hughes, Mr. Henry Kemble, Mr. George Giddens, Mr. Athol Stuart, and Mr. Fred Kerr.

SOMETHING has been said about the possibility that 'The Prodigal Son' may in the pantomime season be transferred to the St. James's.

THE reappearance at the Comedy of Mr. William Collier in 'On the Quiet,' by Mr. Augustus Thomas, will take place on Wednesday next under the management of Mr. Arthur Chudleigh. The company seems to be wholly American.

MUCH interest is inspired in France by the forthcoming production at the Théâtre Sarah Bernhardt of 'Le Masque d'Amour' of M. Daniel Lesueur.

UNDER the title of 'Julius Sterne' Mr. Hare is playing on tour a revised version of Mr. Sydney Grundy's 'An Old Jew.'

'MAN AND SUPERMAN' has been given at the Hudson Theatre, New York, with Mr. Robert Loraine as John Tanner, and Miss Fay Davis as Ann Whitefield.

MR. W. L. COURTNEY will, it is said, visit New York next month to superintend the production by Miss Olga Nethersole of his rendering of 'Le Dédale' of M. Paul Hervieu.

LITERATURE

The Life of Charles Dickens as revealed in his Writings. By Percy Fitzgerald. 2 vols. (Chatto & Windus.)

A LITERARY critic of some importance gave utterance at the beginning of this century to the opinion that for him the years had "robbed Dickens of any shred of interest." Such is not the general view; and he must be somewhat amazed and overwhelmed by the flood of Dickensian literature which continues to pour from the press. We had a new life of Dickens by F. G. Kitton in 1902; Forster's 'Life,' revised by George Gissing, in 1903; 'Synopses of Dickens's Novels' in 1904; and only a week or two ago a new solution of 'The Mystery of Edwin Drood,' which is the cause of another, duly announced, from the pen of Mr. Andrew Lang. The public which buys picture-postcards has now facsimiles of the original title-pages of Dickens's novels within its reach, thanks to Messrs. Chapman & Hall; and recently even millionaires have been supposed to take a keen interest in Dickens, for have they not their edition with every possible kind of illustration and comment at the wonderful price of 14,000*l.*? *The Dickensian* reached its ninth number this month, and appears to be already in vigorous life. The London County Council have named various streets in the Borough after Dickens's characters, such as Dorrit Lane and Quilp Street; and last, not least, admirers can join both the Dickens Fellowship and the Boz Club.

Mr. Fitzgerald alone and unaided founded this last organization, and reached the "proudest moment of his life" when, in 1903, a memorial tablet to Dickens was unveiled at Bath, and he was the guest of the night at

> "the banquet in the long card-room of the Assembly Rooms, lined from end to end with the flower of Bath society—a flattering show."

He is almost the last of the friends and pupils of Dickens who survive, now that John Hollingshead is gone, and this certainly gives him a claim to tell us what he knows of his subject. He has already made 'Pickwick' the occasion of a good deal of writing. He comes, in fact, to his task with heartfelt admiration for his subject, and considerable experience as a writer on Dickens and other great men.

But we regret to say that we find very little that is new in these volumes, a good deal that is borrowed or trivial, and much that is merely irritating. We have been obliged, in noticing previous books by Mr. Fitzgerald, to call attention to his inaccuracy, and cannot say that on this occasion he alters our general opinion of his work. Like all readers of long experience, we are, we hope, not easily irritated; but we must protest against the extraordinary amount of repetition which inflates this book. There is no index; but if Mr. Fitzgerald or his publishers had only begun to make one, they might, we think, have detected extensive doses of *crambe repetita*, and much other carelessness. Our author, speaking of some of Dickens's mistakes, wonders "that the corrector of the press did not 'query' them." What, we wonder, was that useful functionary doing when the pages before us were prepared for the press? Why did he not add to the paltry list of errata, or—even before that latest form of apology was reached—point out that such names as Pumblechock, Lang (for Laing), Lamport, Madaleine Bray, Cradock, Mayling, Fox (for Tox), Lovell the Widower, Tuppins, Woodlock, Sir *Herbert* Stanley, are all wrongly spelt or sadly distorted; that necessary words are missing and grammar is defied; that an absent comma has turned two of Dickens's sons into one; and that the quotation from Shakspeare on the title-page is repeated in i. 206 with two errata, only one of which has been noted? Facsimiles can be obtained of Dickens's last letter to Charles Kent, now deposited in the British Museum. It includes a happy Shakspearean quotation which is tolerably familiar; but of this Mr. Fitzgerald gets a word wrong, and Dickens's prose which introduces it is wrongly copied out too.

Mr. Fitzgerald, in spite of all his work on 'Pickwick,' has not learnt the details of the book accurately yet. In chap. x. he writes: "Sooner or later, as Mr. Whiffers said, 'a showy servant's uniform must tell on the ladies.'" This is stupidly wrong; it is not likely that the fine world of the "Swarry" would tolerate the word "servant," any more than the word "mississes," which was cried down. The real sentiment was, "A good uniform must work its way with the women, sooner or later"; and it was due not to Mr. Whiffers, who wore orange, but to a gentleman in blue.

It is nothing, we suppose, to Mr. Fitzgerald that Lamb says of Munden, "He understands a leg of mutton in its quiddity," not, "He sees a leg of mutton in its quiddits."

Such points may be regarded as trifling, since few people nowadays take the trouble to verify their references. But we are sorry to see that our author is so determined to praise Dickens that he must credit him with an encyclopædic eminence over other authors which he did not possess. One would imagine that Boz had a monopoly among authors of fervent piety and the description of field sports. But expression is not to our English ideas a safe proof of striking piety, nor taciturnity in such matters of its absence. We remember Chadband, Stiggins, and Schiller's epigram:—

> *Spricht* die Seele, so spricht ach! schon die *Seele* nicht mehr.

As for field sports, a backwoodsman who had never seen a gun could with a little imagination have written the scene of shooting in 'Pickwick'; an intelligent Australian, new to ice, might have similarly sketched the skating; and the cricket match in 'Pickwick' is so badly done that we do not see how Dickens could at that time have grasped the game at all.

To depreciate other men in order to heighten the repute of your hero is, we think, an error in tactics. Mr. Fitzgerald does this with Scott. There was, he points out, a connexion between Scott and Dickens, as "a clever Scottish solicitor named George Hogarth" gave advice to Scott in his embarrassments, and "gave the young Dickens employment and finally one of his daughters." The connexion is pleasant. Not so pleasant is the suggestion that Scott was hard in business matters; we see no grounds for such an accusation, and we think that Scott's limitations, as suggested by our author, indicate that it is some time since he looked up the Waverley novels. We do not think that Dickens's letters are better than Scott's, nor do we think that all modern authors refuse to write what would be "good copy" in a letter. Mr. Fitzgerald has about forty of Dickens's letters, and remarks of them that they

> "overflow with good humour and pleasant conceits. It might almost be said that he [Dickens] did his best to please."

Surely an anticlimax that, since letters worth keeping are written to friends, and to please friends is hardly a merit, being one of the chief pleasures of life. To give of your best in this way to the bore and the stranger would be a feat deserving special notice.

In stating that of Scott's novels there are "only two or three modern editions," Mr. Fitzgerald is absurdly below the mark. We recall ten, as we write, and there are doubtless more. It is possible to claim for Dickens that he invented "the novel with a purpose" in 'Oliver Twist.' But the terrible progeny of preachers with lop-sided views who have succeeded him have made such fiction a byword. How complicated and unsatisfactory, from the craftsman's point of view, the plot of 'Oliver Twist' is, may be discovered in the dramatized version at the Waldorf, where the necessary explanations are tedious beyond belief. We do not regard 'Oliver Twist' as "compact," and, unlike some fervent admirers, we detect a distinct advance in Dickens's style as he went on, an advance that was needed to correct his clumsy exposition of facetious paraphrase. Dickens, we learn, imparted to dogs almost human feelings and sym-

pathies, and Mr. Fitzgerald has called him in a paper "the Landseer of fiction," a title that, if it is meant for a compliment, belongs with better right, we think, to Dr. John Brown. But Mr. Fitzgerald, for all his keenness about Dickens's dogs, is slack, as usual, when it comes to detail. He speaks of Sikes's dog as "unnamed, I think." It is called Bullseye twice in a few lines in chap. xvi. of 'Oliver Twist.'

Gissing, in his revised edition of the 'Life' by Forster mentioned above, and his excellent little 'Charles Dickens: a Critical Study,' indicates the changes which mark the competent opinion of later generations concerning Dickens. But let no such iconoclasts hope to prevail with our author. He does, it is true, virtually admit that Boz was a Philistine as regards art, but he prints in regular lines as verse some of the blank verse into which Boz's prose fell at great moments, and calls the result "a noble poem." Similarly the blank verse at the death of Little Nell is likened to "an awful religious service." We get a very pleasant idea of the master's geniality and kindliness, though the author somewhat discounts his effect by repetition of adjectives; for instance, it conveys to us a somewhat feeble effect when we find Dickens called "amiable" twice within a few lines. It is certain, however, that Mr. Fitzgerald's enthusiasm has led him to some conclusions which are novel. Thus:—

"This adoption of the Cheerybles, two charitable merchants, as the heroes of a story could only have occurred to one of Boz's tender feelings and sympathies. There could be nothing suitable for fiction in the description of persons aiding and relieving others in distress; it is simply a page from real life or from a newspaper."

What does the shade of Henry Fielding or the immense army of modern novelists say to that? Have not heroes come through innumerable distresses and been wondrously aided by the benevolent time out of mind? As at solo whist, so in fiction misery is much more interesting than affluence, and we must apologize for repeating so banal a commonplace.

Mr. Fitzgerald thinks that "most novelists find their material in themselves, in their invention and fancy." That is not our experience of them. We find that they take hints and corners, so to speak, from living people, though generally they do not go so near the *roman à clef* as Dickens did. Their method is similar, but their practice less personal, the difference being in their favour, for to put recognizable characters into fiction is now generally admitted to be both bad taste and bad art.

Our author brings Jane Austen, as a lover of Bath, into connexion with Dickens. He praises the latter for "improving the occasion" with sermons at deathbed scenes. We praise the former for leaving her characters to the discretion of the reader, for not supplying comment, laudatory, depreciatory, or "improving." Perhaps the present age is a little more nimble-witted than the early Victorians were. At any rate, it has been taught by its best novelists to make its own judgments on the characters presented.

Though, as we have hinted, Mr. Fitzgerald's personal reminiscences convey a pleasant odour of goodwill, they are throughout more ecstatic than informative. His wife was, it appears, like the Dora of 'David Copperfield,' and much appreciated by Dickens, also by Forster, whose elephantine style descended to lightness when he spoke of her. Our author, too, was a favourite with Dickens we are told twice, and often went to Gadshill:—

"Gadshill! At this moment the name works with the potency of a charm. It has become a shrine, known all over England and America. Yet I recall the time when it was hardly at all familiar; and I also remember well the mystic enchantment of my first visit, which afforded me one of the prettiest, most entrancing pictures of a literary man's domestic life—golden and glittering and almost fascinating."

It is a fine example of bathos to begin with "mystic enchantment" and end by hardly admitting fascination! Much writing in this vein gets wearisome, and there is a great deal of it here.

Equally attractive to the enthusiast and more tolerable to the average reader is the game of identifying places and persons in Dickens's wondrously populated world. Mr. Fitzgerald tells us that a model of the White Horse Inn at Ipswich, which was as large as the original, was sent all the way to the Chicago Exhibition. It is certain from the text of the master that "The Old Curiosity Shop" near Lincoln's Inn Fields is spurious, though we heard a party of Americans eagerly asking for it a few days ago as the veritable prototype of Little Nell's home. We do not believe that Dickens had any special building in his mind, whatever Mr. Fitzgerald or anybody else says. Our author has made some fortunate discoveries in this way—in particular the house at Chertsey where the burglary was attempted with the help of Oliver Twist—but we do not agree with all his conclusions, though we cannot afford space to dispute them. We think enthusiasts for such research should remember that Dickens, like Lamb, may well have confused his trail purposely. To expect details to correspond pretty closely is to have a poor idea of the novelist's imagination.

Perhaps Dickensians share their discoveries more readily than the average specialist. Anyway, most of the identifications of characters here supplied are familiar to us already. We know all about Micawber, and Rose Maylie, and Harold Skimpole. Still, we are pleased to see the connexion of Forster with Podsnap. There is a chapter included on the "harbitrary gent," which would be of high interest if it were new. Unfortunately, an anonymous writer, who was without question Mr. Fitzgerald, produced in 1903 a little book we were able to praise, 'John Forster, by one of his Friends.' We now find paragraph after paragraph of this book reproduced here without a word of alteration, a proceeding which is hardly fair to the reading public.

We will give as a specimen of Mr. Fitzgerald's manner some of his remarks on Dickens's Christmas writings:—

"There was a regular series of these graceful little books. 'A Christmas Carol,' 'The Cricket on the Hearth,' 'The Chimes,' 'The Haunted Man,' and 'The Battle of Life.' The four last were decorated with exquisitely fanciful illustrations by Doyle, Maclise, and others, some delicately intermingled with the text. But it was noted that the Christmas flavour gradually evaporated, the last two stories rather flagged, and lacked inspiration. Still, allowing for this exhaustion, they are tender, elegant trifles—unique in their way—and which we would not part with. All were dramatized. One regards these little Christmas volumes with a wonderfully tender affection. The very look of them in their genial, crimson binding—elegant-looking little things—sets all the Christmas flowers aglow. Boz puts his whole self, his faith, his enthusiasm, into each."

Now hear what Ruskin has to say, in a letter to Charles Eliot Norton, about Dickens:—

"I knew you would feel deeply the death of Dickens. It is very frightful to me—among the blows struck by the fates at worthy men, while all mischievous ones have ceaseless strength. The literary loss is infinite, the political one I care less for than you do. Dickens was a pure modernist—a leader of the steam-whistle party *par excellence*, and he had no understanding of any power of antiquity except a sort of jackdaw sentiment for cathedral towers. He knew nothing of the nobler power of superstition—was essentially a stage manager, and used everything for effect on the pit. His Christmas meant mistletoe and pudding—neither resurrection from the dead, nor rising of new stars, nor teaching of wise men, nor shepherds. His hero is essentially the ironmaster; in spite of 'Hard Times,' he has advanced by his influence every principle that makes them harder—the love of excitement in all classes and the fury of business competition, and the distrust both of the nobility and clergy, which, wide enough and fatal enough, and too justly founded, needed no apostle to the mob, but a grave teacher of priests and nobles themselves, for whom Dickens had essentially no word."

It is a severe indictment, somewhat overcoloured, we think, but the book before us does not encourage us to believe that critical discussion of it would be advisable.

In pointing out various mistakes and oddities of Dickens, Mr. Fitzgerald is ingenious and amusing. Here and there, too, we come across interesting notes such as this:—

"Mrs. Nickleby wished Nicholas to have strings to his nightcap, 'and wear it like a Christian, instead of sticking it on the very top of your head like a Bluecoat Boy.' We have long been accustomed to seeing Bluecoat boys going about capless; but in the old pictures they are shown with a very small tam-o'-shanter perched on their heads in the way described by Mrs. Nickleby."

One trifle we do not remember to have seen mentioned was new to so great an expert on 'Pickwick' as Walter Wren, and may therefore be noted here, though we dare say Mr. Fitzgerald knows it. It will be remembered that Mr. Pickwick ordered "chops and tomata sauce" of Mrs. Bardell, and this order was discussed at the trial. Dickens always regretted that he had not made much of the fact that the tomato was known in his day as a "love apple." It was a great chance missed.

Osborne's Adelphi Hotel, where Wardle and his party stayed in town after Mr. Pickwick's release, has, Mr. Fitzgerald says, "a faded, old-fashioned look of respectability—rather dingy, in short, and dark within." We knew the place well a few years ago, when this description was correct, but now a modern bar has been added, which disturbs the Georgian air of the place, an air irresistibly

conveyed to us before we knew of its Pickwickian associations.

We must add a word or two as to our author's style and arrangement of his matter. We have mentioned his repetitions, and it is only fair to support our censure by instances. Mr. Hammond Hall is mentioned twice as the author of a Pickwickian volume; twice we hear of Mr. Pickwick's lighting his candle before reading a story, and then lighting it again, as if he had never lit it (a well-known error in the book); twice we are told that the house of Watts's Charity has been refaced with new stone, and that Gadshill did not, on being revisited, look so big as it used to do when Dickens was there to brighten it with his magic touch. We are asked in the 'Errata' to remove a statement in vol. i. p. 92 that Dickens expressed a wish in his will to be buried in Rochester Cathedral, but a similar statement flourishes untouched on vol. i. p. 14.

Of the style of the book specimens have been given. It is impossible to view it with favour. *Clichés* are introduced everywhere, sentences are left in the air without verbs, and distressing instances of "and which" abound. Our author talks of people being "niched" into "temples of fame" by Dickens, and lacks everywhere the restraint which marks the artist. Mr. Fitzgerald's favourite adjectives are not forcible. He characterizes Ainger, for instance, as "Master of the Temple; genial, amiable being, clever and brilliant also." A note on the same page calls him "a cultured, interesting man," and adds, "there was something really engaging in his ways, and he was truly amiable." The whole book is so discursive and lacking in arrangement as to be hardly intelligible without some previous knowledge of Dickens's life.

We notice two facsimiles of letters. One, by John Dickens, the novelist's father, somewhat in Micawber's vein, has appeared before, both in *The Illustrated London News* and in F. G. Kitton's 'Life of Dickens' (1902). The transcription here teems with error. The facsimile of a letter by Dickens himself is characteristic, including the writing out of the date, "Friday Second," in his usual manner, and some graceful words on Mr. Fitzgerald's book on Lamb. The frontispieces to the volumes—a portrait of John Dickens, and another of the novelist, by Uwins—are of distinct interest.

Altogether, we think an enthusiast who is tolerably new to the subject is needed to appreciate this book, with its verbosity and sentiment. It cannot be called a critical work, or a revelation of any importance, and to find such a rambling performance without an index is a real annoyance.

From the Cape to the Zambesi. By G. T. Hutchinson. (Murray.)

MR. HUTCHINSON'S book is the fruit of a trip to South Africa. We will not call the trip hasty, nor its fruit premature: the author has evidently spared no trouble in observing, or in collecting information, and is almost painfully anxious to do justice to all the various points of view which have been pressed on his attention in the course of his travels. The man who starts with a strong bias has a decided advantage—at any rate, as far as his own peace and comfort are concerned. Equally to be envied, though not more so, is he of encyclopædic memory and penetrating intellect, who not only knows everything that has been said or written on his subject, but also has so mastered his materials as to come to a clear and reasoned conclusion of his own.

Mr. Hutchinson conscientiously sets down what he has been told on behalf both of the Rhodesian settlers and the Chartered Company—the fluttering hesitation noticeable in these chapters affects the reader who has been through something of the same experience with sympathetic discomfort—but he abstains from coming to a decision on his own account. Elsewhere he is less afraid of dogmatism, notably in the latter part of his work — a circumstance which perhaps suggests some approach to unity of inspiration. The discussion of economic problems does not come within the province of the present notice; yet we can hardly think it of good omen for the future of a colony — especially considering how the energy, enterprise, and adventurous character of the Rhodesians are lauded in chap. iv.—that its settlers should be continually crying out for Government help, without which they can do nothing. A careful analysis of this and the following chapters leaves a curiously contradictory impression. The people cannot develope self-reliance, for want of an autocratic head! Again, after a description of the magnificent public buildings, offices, suburban residences, &c., of the capital, we read:—

"In a word, Bulawayo is the 'boom city' familiar to our American cousins—it has the same mixture of barbarism and civilization..... And the fact that it has its counterpart in the land of the best business men in the world at once disposes of the statement that all this is useless extravagance."

The pages which follow, however, suggest that, in his heart, Mr. Hutchinson is by no means sure that the statement is "disposed of." Something of the same uneasily apologetic frame of mind comes out in his reiterated assurances (see pp. 40, 41, 75, 196) that the mining industry is a necessity in order to provide a market for agricultural produce. At the same time it is admitted that in Cape Colony butter, meat, eggs, corn, and timber are largely imported (pp. 15, 16), though the country is perfectly capable of producing them; and (p. 76) that "the most permanent of all sources of wealth, the land," has been neglected "in favour of the possibilities of the mines." From any but a violently partial standpoint, the assertion that "the first care of the Government must be the mining industry, for the strength of South Africa is Johannesburg, and the strength of Johannesburg is the gold," seems strong. The rashness of premature prophecy is illustrated by a passage which we cannot refrain from quoting (p. 189):—

"It would be unwise in this connection to say anything of a controversial nature about Chinese labour, *for happily the controversy is at an end.* Up to now the much-criticized experiment has been completely successful, the men, if carefully handled, proving to be good and willing workers. In the compounds they appear to be surprisingly happy under their 'conditions of slavery'.....they are very comfortable in their new quarters, and certainly have no cause to complain of their food."

As if slavery and material well-being were necessarily incompatible! Apart from the more effectual criticism subsequently supplied by facts, we may remark that no notice is taken of the objections to the system of contract labour *per se*. An industry which cannot afford to engage its labour in the open market does not possess the means of adequately remunerating both the capitalist and the worker.

The chapter on 'The Native Question' contains a great deal of amiable and sympathetic commonplace, and some time-honoured fallacies. One passage may be considered in detail, because, strange as it may seem, we are continually meeting with its arguments in the daily and weekly press, and seldom see a reference to some obvious facts which would considerably modify the conclusions drawn:—

"It is fortunate for those concerned with the native question in South Africa that they are not altogether without a precedent, for they have before their eyes the example afforded by America, and should be able to draw their own conclusions from it. The native there, when first imported as a slave, inherited a character which in many respects resembles that of his cousin in South Africa, though he did not belong to the Bantu race."

This, though not affecting the sense of the passage, is not quite accurate. Many of the slaves imported into Louisiana, at any rate, came from the Lower Congo, and this can be traced in Bantu personal names and some few words preserved in their patois.

"He was in his own country an opportunist: it was easy to live from day to day, and the future could well be left to look after itself. Such a life increased the laziness and irresponsibility which civilized races believe to be inborn in the native. Thus the period of slavery was a school in which the master—the astute, enterprising American—was in every way the antithesis of his pupil. The school was a hard one, but it at least taught the pupil the primary lessons of civilization. Then came emancipation ..... But what he really required was discipline, and the period of discipline had not been long enough: he had no sense of responsibility, and was like a child in questions where money was concerned. Indeed, it is often said that since he obtained his freedom he is economically in a worse position than before. Morally, too, he has no progress to record, for the controlling power was removed before he had developed the quality of self-control."—Pp. 159–61.

We wonder how long it takes for slavery to develope a sense of responsibility and self-control. As for morality, we need go no further than the elementary and notorious fact that, under slavery, family life was not merely disregarded, but deliberately destroyed. When we remember that native African tribal law and custom do and did, in however rough and primitive a way, recognize the sanctity of marriage and the rights of parents, while United States law made the marriage of slaves impossible, and the relation between parents and children entirely dependent on the personal character of the slave-owner, it is hard to see where the beneficent discipline comes in. Another fact which is

insufficiently recognized is that a large number—if not the bulk—of the slave population consisted of "undesirables," deported by their own people—so that it is unfair to take them as a standard of comparison for Africans in Africa, or to leave this circumstance out of account in estimating the progress made since emancipation. Of course, this must not be applied too sweepingly; a certain number were supplied by the tribal wars and raids encouraged by the slave-dealers, and these probably included all whose names have emerged from obscurity—Toussaint l'Ouverture, Christophe, Phillis Wheatley, and others. When all adverse circumstances are allowed their due weight, we cannot think that an unbiassed observer will concur in Mr. Hutchinson's conclusion that the American negroes "can only be regarded as a deteriorating race." We recommend to his perusal that remarkable book 'The Souls of Black Folk,' the author of which, though no doubt he holds a brief on behalf of his own people, does not shrink from recognizing their weak points.

We hardly think the somewhat patronizing sketch of what is supposed to be "the average Boer," contained in the last chapter, is likely to make for inter-racial cordiality; in fact, it contains one or two sentences which would have been better omitted. The best of the volume, to our mind, is to be found in the two chapters headed 'The Victoria Falls' and 'On the Veldt'—they are freshly and pleasantly written, and free from thorny problems. The photographs, too, are interesting, though not on a sufficiently large scale to give details clearly.

TWO SAINT CATHERINES.

St. Catherine of Siena as seen in her Letters. Translated and edited, with Introduction, by Vida D. Scudder. (New York, Dutton & Co.; London, Dent & Co.)

St. Catherine de' Ricci: her Life, her Letters, her Community. By F. M. Capes. With a Treatise on the Mystical Life by Father Bertrand Wilberforce. With Portrait of the Saint, a Facsimile Letter, and other Illustrations. (Burns & Oates.)

THE American editor and translator merits unalloyed thanks for the selection from the correspondence of St. Catherine of Siena. Those who cannot read Italian, or are unacquainted with the original correspondence in its entirety, could not wish a better introduction to it than these specimens. For once we are in the pleasant position of finding nothing to blame; and this because the editor has not only done what was needful, but also (a rarer thing in editors) refrained from doing what was unneedful. The translation is good, and the selection made with excellent judgment to illustrate the several sides of Catherine's epistolary activity and of her mind and character. Besides the introduction, each letter has a very useful account of the circumstances that evoked it—an account brief and clear. In place of an intrusive memoir, Mr. Scudder supplies a chronological table of the leading incidents in the saint's life. These aids furnished, he leaves the letters free from the fretting commentary of notes. His introduction, in matter and manner, has the stamp of a cultivated mind; it presents a view of Catherine sanely sympathetic, admiring with measure and restraint. He has, in fine, performed his own part well and without obtrusion.

It is impossible to read the book without admiration and sometimes marvel. It is not necessary to know Catherine's life, beyond the bare facts set down in the volume; if we are aware that this was no Lady Jane Grey, no highly cultivated woman of the age, but a mere untrained recluse, cloistered in her own home till she went forth about her Father's business, the letters themselves are matter for admiration enough. They are to all conditions of men, and each hears in his own tongue. To each she speaks after his own kind, while behind, and breaking by flashes through all, is *her* tongue, something—"all a wonder and a wild desire"—which we discern as very Catherine. The letters to her two Popes are striking merely as exhibitions of practical secular and political wisdom, no less than by their adroit appeal to the diverse natures of the two men. The timidity of the first she does not fear to rebuke with bitter satire—the sole bitterness in these letters. He has been warned against the removal from Avignon, which she was ever urging, because poison is prepared for him in Rome. She exposes, with clear sense, the character of the adviser, and then tells the Pontiff plainly that the man is practising on his cowardice. Poison, doubtless, can be found at Rome—nay, in the Vatican itself—and just as well on the table of Avignon. Fear, she hints, can anywhere find matter for fear. Yet to the same man she writes with charming child-like coaxing: "Then, sweet my Babbo, you will fulfil your holy desire and the will of God by making the holy Crusade." It is the petting Italian diminutive for "father," this "Babbo." Of like almost lisping innocence and *naïveté* is the delightful letter which persuades Sir John Hawkwood, since he loves fighting so much, to fight the infidels instead of his brother-Christians. So well did she gauge him, this innocently cunning Catherine, that the terrible Free Companion made what he considered a reformation in his warlike courses, though it was probably more satisfactory to himself than to his admonitress.

But it was to her fellow-religious that Catherine unreined the ardour of her very self, in language which it needs the numbers of a Crashaw to reconcile with the ear of our staid North. Thus she bids her director, Fra Raimondo of Capua, lock himself in the side of Christ:—

"There rests the sweet Bride on the bed of fire and blood. There is seen and shown the secret of the heart of the Son of God. O flowing Source, which givest to drink and excitest every loving desire, and givest gladness, and enlightenest every mind and fillest every memory which fixes itself thereon!.....Blood and fire, immeasurable love!"

Do you startle at this? Yet it is not so new to you, nor is it after all so irreconcilable with English ears. For have we not here the source of those "Blood and Fire" proclamations which have flared from the wall of every Salvation Army meeting-house?

But there is one expression of Catherine's self, at least, which needs no reconciling. In that most exquisitely touching letter on the death of Niccolo Tuldo her love for God and man meets in one beautiful flame. Other letters may show her intellect; this is the whole heart of the virgin of Siena. It happened thus. A young gentleman of Perugia, Niccolo Tuldo, had uttered hasty criticism of the *Riformatori* who ruled Siena. He was tried and sentenced to death. In bitter and resentful revolt against the tyrannical sentence, he was out of tune with all religious ministrations, when Catherine learnt his case and condition. Tuldo was one of many victims: the tyrants had put a man to death for not asking a member of the *Riformatori* to a feast. But Catherine visited Niccolo, and his rebellious resentment gave place to submission: he confessed, and for the first time in his life received the Sacrament—a fact that shows how indifferent to religion his life had been. He forgave his judges, and prepared for death. That death Catherine relates to Fra Raimondo, with the youth's blood wet upon her. The reader will surely pardon us for much quotation, where our compelled omissions are a regrettable loss.

"Only one fear was left, that of not being strong at the moment. But the measureless and glowing goodness of God deceived him, creating in him such affection and love in the desire of God that he did not know how to abide without Him, and said: 'Stay with me, and do not abandon me. So shall it not be otherwise than well with me. And I die content.' And he held his head upon my breast. I heard then the rejoicing, and breathed the fragrance of his blood; and it was not without the fragrance of mine, which I desire to shed for my sweet Bridegroom Jesus. And, desire waxing in my soul, feeling his fear, I said: 'Comfort thee, sweet my brother; since we shall soon arrive at the Wedding Feast. Thou shalt go there bathed in the sweet Blood of the Son of God, with the sweet Name of Jesus, which I will never to leave thy memory. And I await thee at the place of justice.' Now think, father and son, his heart then lost all fear, and his face changed from sorrow to gladness; and he rejoiced, he exulted, and said: 'Whence comes such grace to me, that the sweetness of my soul will await me at the holy place of justice?' See, that he had come to so much light that he called the place of justice holy! And he said: 'I shall go wholly joyous and strong, and it will seem to me a thousand years before I arrive, thinking that you are awaiting me there.'"

That was their parting; but at the place of blood, when the condemned man reached it, the "sweetness of his soul," true to her promise, awaited him with the headsman. She tells the end:—

"Then he came like a gentle lamb; and seeing me, he began to smile, and wanted me to make the sign of the Cross. When he had received the sign, I said: 'Down! To the Bridal, sweetest my brother! For soon shalt thou be in the enduring life.' He prostrated him with great gentleness, and I stretched out his neck; and bowed me down, and recalled to him the Blood of the Lamb. His lips said naught save Jesus! and, Catherine! And so saying, I received his head in my hands, closing my eyes to the Divine Goodness, and saying, 'I will!'"

After that unimaginable narrative, words of reviewer are mere intrusion. Let us leave the last word with Catherine herself.

St. Catherine de' Ricci's life, Miss Capes tells us, is taken mainly from the French life by Père Hyacinthe Bayonne, published in 1873. The letters are a selection from the latest and fullest edition published by the Dominican nuns of Oullins in 1900, translated, however, direct from the Italian. Miss Capes says that she has abridged the *longueurs* and floridities of the French life. But while floridities are happily absent, her own Life would have profited by more succinctness, a less diffuse and malleable style. Not observably copious, she nevertheless does not always know when a sentence has said all it needed to say, and tends to say a thing in many words rather than few. Otherwise the book is written in a common-sense manner, with but rare deficiencies. Once, for example, a sentence grammatically hangs in the air. Once, also, she uses the journalese "wended her way," instead of "went"—the true preterite of the verb "to wend." But these things are few in a biography mainly well-written, if without actual distinction of style.

Father Bertrand Wilberforce's introductory treatise sets forth the Roman Catholic view of the mystical life with great practical clearness and precision, though without imaginative or emotional insight. It does not, of course, attempt the subject from any but the Catholic standpoint, nor discriminate between the various conceptions of mysticism; but in regard to the life of a Roman Catholic saint no more was requisite.

Catherine de' Ricci belonged to an enclosed community of Dominican Tertiaries, who (unlike the ordinary Tertiary) held intercourse with the world only through the *grille*, and led an entirely cloistered life. A daughter of Tuscany, the child of a man of ancient and noble family, who held an official position which obliged him to take a considerable part in public affairs, she was of those few who seem born to sanctity:—

> A happy soul, that all the way
> To heaven has a summer's day.

Not, indeed, that she lacked her trials; but they never interfered with her spiritual sweetness. She spent her life in one convent, honourably distinguished amidst the religious laxity of the sixteenth century, and her outward life was quiet and undistinguished enough.

The phenomena which made her extraordinary, and her convent a focus of power, even as they form the leading feature of the present book, belong to that class which various minds will view variously. But those best acquainted with modern experiment on the influence of mind over body will be least disposed to the vulgar wisdom of incredulity. Constantly meditating on the Passion, she—like the Assisian and others since him—exhibited on her own body the Stigmata, the marks of Christ's wounds, even to the traces of the thorny crown, and the long bruise of the cross on shoulder and back. But this was the least striking of her manifestations. The most extraordinary was that she began regularly and periodically to fall into ecstasy on the day and at the hour of the Saviour's Passion, and during this state followed in vision the whole sequence of His sufferings, from the Last Supper to the giving up of the ghost. She not only accompanied everything with the spontaneous words and exclamations of an eyewitness, with moving and appropriate prayers often drawn from Scripture, but also in her own person showed the reflex signs and tokens of the agonies she spiritually witnessed. At the close she exhibited a corpse-like pallor and exanimation, appearing more dead than alive. It was, in effect, a kind of Passion Play, so vivid that the beholders seemed to have before them the suffering Christ, and were moved to impassioned devotion and tears. She even at times addressed those present in the person of our Lord, with whom she became identified. This extraordinary drama soon brought down on her the Church authorities, but, summoned before them, she answered with a humble and submissive prudence beyond her years and sex, which confounded their suspicions. They came to judge, and ended by admiring approval. The highest and noblest from all parts of Italy flocked to witness the phenomenon—incredulity went away converted and moved to reformation of life. The obscure nun became, single-handed, an incalculable force against the Reformation which was secretly undermining Catholicism in its centre and stronghold, Italy. One illustrious Tuscan only held aloof, the Duke Cosmo, and it is the most potent witness to Catherine's efficacy that he did so because he feared lest he should be subdued to reformation of life against his will.

Catherine herself ended the manifestation. When she assumed rule over the convent, she considered that the influx of visitors was marring the spirit of recollection and solitude in the community, and, after the united prayers of herself and her nuns, the ecstasy no longer came. In harmony with the clear, good sense that dictated this action, her letters and private life display a side of her which will appeal to those who might be merely repelled by singular phenomena. The letters are very attractive. Without the elevated sagacity, the political and public breadth, of the Sienese Catherine's, they have a homely wisdom, a domestic and tender practicality; while the style reflects the matter. As with that other Catherine, religion is so vital a thing to her that it informs every sentence; yet asceticism nowise prevents the letters to her father from being as full of daughterly and family love as of tact and wisdom in the difficult position of a child counselling a headstrong parent. Nor does it prevent her from scolding Filippo Salviati for wilful neglect of health: "We are not to aim at dying, but at living to do good." Nor yet did it withhold the saintly religious from energetically forwarding the love affair of Maddalena Vettori with young Ludovico Capponi against the legal court which opposed it; and the good match-maker was successful. One trait her letters sometimes have in common with Catherine of Siena's; perhaps it is a national trait, for we find a kindred character in more than one Italian saint: a certain divine childlikeness, a playful innocence. To her convert Filippo Salviati, whom she called and regarded as a father, she sends a basket of chestnuts, that he may "eat at least four every evening," since she fears "no one now will think of giving you bread and biscuit for supper." When he is put to unforeseen cost over a religious erection, she explains that she had feared it might be too easy a charity, and had wished him to secure the merit of the widow's mite. Now, she is delighted to hear, he has been put to real inconvenience:

> "O my dear little widow! how delighted was I to see that Jesus had not suffered my father, like the rest, to place his superfluities in the treasury, but, in order that his work should not be vain, had allowed him, with the widow, to give of his necessity! Thus, my dear little widow, you will share the reward of the widow in the Gospel," &c.

Could there be a more charmingly unexpected and *naïf* way of consoling a man for the loss of money? While people were flocking to see the all-talked-of religious, she absconded from them as a clever child hides with shame from the parade of its gifts to strangers. In one desperate emergency she climbed into the hen-coop, where, after the baffled visitor's departure, she was found in ecstasy, with the hens perched on her head and shoulders. "Did you see those dear birds?" she asked, when they brought her to consciousness of earth and hen-coops. Of her wise rule and wide influence, her power over others, her friendship with men like Philip Neri; of the convent as she made it, where the death-day was a *festa* with singing of canticles, as others joy over the coming into the world; of these things and much else must be read in the book—a book which will have interest for all religious minds, whatever their attitude towards those features which it shares with the life of the friar of Assisi.

The Civil War in the United States. By W. B. Wood and Major Edmonds. (Methuen & Co.)

To the large and closely printed volume before us Mr. Spenser Wilkinson contributes an introduction of six pages. Although he has written elsewhere on the Civil War, we wish that his contribution had been longer and also that the authors had done their work in the spirit of his preliminary remarks. We agree with him in what he says here of military history, and of the value of that of the Civil War in particular. We do not find the text of Mr. Wood and Major Edmonds so clear or so striking as it would have been if Mr. Spenser Wilkinson's principles had been thoroughly applied. Moreover, we note much difference of tone between the introduction and the contents, not only in respect of how military history should be written, but also in regard to the view taken of the war selected for treatment. To Mr. Spenser Wilkinson, as to most recent writers on the Civil War, Lincoln is the great figure, and Grant, Sherman, and Sheridan the fit executants of the firm purpose. To Mr. Wood and Major Edmonds seem, in some degree, applicable the words Mr. Spenser Wilkinson has used of others: "The brilliant personalities of Lee and Stonewall Jackson have been the magnets which have biassed judgment."

The story is told by our authors with

exact and scrupulous care; but the work seems to us to have been done, though excellently, rather from books than from the original authorities to be found in the official records of the armies of both sides as now completed under the direction of Congress. At the same time we admit that perusal of the memoirs of the leading actors continues to be essential, as the habits of General Lee and the absence of the method of a German or Austrian army often deprive us, in the case of the Confederacy, of the essential guidance afforded by written orders.

Whatever may be the cause of the want of clearness which we have named, it deprives the book of some of that value which, given its accuracy, would otherwise have attached to it as a text-book. The strategy is there; but it is overlaid by masses of confused fighting which do not even convey any tactical lesson.

Lee, Stonewall Jackson, and Stuart are the heroes, as they were in all the earlier books upon the Civil War. Justice is done to Sherman and to Sheridan; somewhat less than justice to Grant. By extracts from this very volume we could, we think, make out a case against the authors' statement that

"in Lee, more than in any other general on either side, was to be found that happy combination of qualities which go to make up a great commander."

The human interest which eloquence of style and also little details of biography give to some other writings upon the Civil War is somewhat lacking in this volume. If we compare, for example, Henderson's account of the death of Jackson or Capt. Battine's account of the death of Stuart with the rendering of the same episodes in the book before us we find how much is lost. When we recently reviewed Capt. Battine's book 'The Crisis of the Confederacy,' we pointed to evident signs of haste in execution; but in Henderson throughout, and in Capt. Battine occasionally, to name English writers only, there is a certain dignity of style which relieves the pages of mere fighting, and holds the interest of the reader.

Another example of the manner in which such a work as that before us may be lightened is afforded by an examination of the references to certain generals who have had a distinguished career since the termination of the war. When we consider many of the details of doubtful value with which both text and notes are crowded, we cannot but think that it would have been permissible to give one or two lines to the life of such a man as "Lew Wallace." This would have been wise not only in the interest of the general reader, but even in that of those who have regard to the bearing of the facts of the Civil War upon high politics and upon our own Volunteer force, pointed out in Mr. Spenser Wilkinson's introduction. "Lew Wallace" is only named (usually in this American fashion) as commanding a division, but it was worth recording the fact that he became both a considerable diplomatist and the writer, first of the best historical novel of modern times, and afterwards of one of the worst, but altogether the most popular. So, too, with Sheridan: even if the volume is to be used chiefly for lecture and for examination purposes, we should have liked to see an allusion to his subsequent career in the Franco-German war as Bismarck's chosen friend. In the summary of later American history which the authors rightly add at the end of their book, it would have been well to record the noteworthy fact of the employment of ex-Confederate officers as generals in the United States army during the war with Spain.

We notice in this, as in most books on the Civil War, some peculiarities of style, caused, we think, by the use of the work of others. It is difficult, for example, to defend the phrases "details largely unfit for active service," and "the best officer of his grade in the army." We suppose that "corduroyed" is intelligible in the sense of crossed by tree-trunks used as "sleepers," but are certain that a "turnpike" is not yet English for a main road.

We have to congratulate our authors upon their index, the compilation of which has evidently been most careful, to the great advantage of the volume. The result of this labour is that the book will be permanently useful for rapid consultation.

NEW NOVELS.

The Hundred Days. By Max Pemberton. (Cassell & Co.)

The last effort of Napoleon has not been exhausted as a topic for historical romance. This story of 'The Hundred Days' is but the setting of a love-tale, yet the glimpses of Napoleon are vivid. Perhaps less like the "fat and talkative" penitent reverting to Liberal ideas than the lean champion of Revolution, the Man of Destiny shows himself but incidentally, though the acclamation of his name forms the burden of all speech and action, until silenced by the guns of Waterloo. The story tells how Yvonne de Feyrolles, in spite of her kindred of the faubourg, "kilts her coats," as the Scotch say, for very love of the Corsican, and how she and Bernard de St. Armand, English exile of French extraction, forgather in the woodland chalet near Grasse; how Bertrand saves Yvonne (in her saucy uniform) from Royalist hussars; how they are involved in the flood that sweeps to Paris in those days; how thence, after a pause, in which the Englishman becomes director of the artillery factory at Vincennes, they drift together to the crowning scene which settles all public and private difficulties. It is a stirring tale, and the characterization is skilful. Occasionally the author's style fails him. We do not think a suggested landing at Nice would have suited Napoleon, as that place had just been restored to Sardinia; and we are sure that St. Armand's engagement at Vincennes would have exposed him to the penalties of treason. But we will not cavil at details in a lively story.

Helena. By Mrs. H. O. Forbes. (Blackwood & Sons.)

New Zealand is not by any means hackneyed material for a *mise en scène*, and Mrs. Forbes has a good eye for its possibilities. Her scenic references do not always bear so directly upon the situations of the narrative as to form that refrain with which the elect few have sometimes delighted us; but the snowstorm is an apposite instance of the right use of nature in fiction. The author handles well, too, the characters in her very domestic drama. Her style is generally good, as it had need be when so much turns upon dialogue and social detail. Jane Austen was no excessive purist; yet she, "after" whom the chronicler of 'Helena' seems to have drawn her study, would never, we think, have penned "'Where is she?' '*Whom?*'" But the patient reader (this is no book for the runner) will condone some slips for the clear presentment of the heroine and the two men who love her in sincere and manly fashion. Helena, since her orphanhood in infancy, has been brought up in England by maiden aunts, being their brother's daughter by a Maori wife. When she returns to the colony the decadence of her mother's race affects her painfully. She dreams of living for them, and attempts to live her dream, and the result complicates her relations with the two men, who fail, in spite of their love, to fathom her inborn sentiment. Though rather prolix, the story is well told and was worth telling.

The Coming of Billy. By Margaret Westrup. (Harper & Brothers.)

For those who like studies of child life in which sentiment plays a leading part, this is the very book. It tells how a family of four or five spinster ladies received and cared for the little son of a brother in India. The scene is laid in England, we are to suppose, but the colouring, atmosphere, and treatment are American. The youngest of the spinster aunts, Miss Primrose, has an affair—leading to an irreproachable and happy ending—with the local curate; and this is relied on to supply the grown-up interest. Yet, apart from this, the reviewer fancies that the whole book is much more likely to interest mature, and even elderly readers, than children—a quality it shares with very many of our modern studies of child life. The cynically inclined will find the sentiment, as the walrus found the butter, "spread too thick"; Little Billy of the title is a lovable creation, and true enough to life to be pretty intolerant of sentimental demonstration himself. The little girl who is his playmate is also well drawn and realized. The author has made no great effort to sustain the interest of her story, or to connect in a natural sequence the various episodes which divide it into chapters. But the whole thing has a pleasant, domestic flavour.

A Maker of History. By E. Phillips Oppenheim. (Ward, Lock & Co.)

Mr. Oppenheim is ingenious as ever as a weaver of webs. The mysterious doings of an amateur political police in France, aided by the regular civil power, sufficiently obscure the convoluted threads of narrative. By a clever irony the maker of history is an ingenuous English youth, of the well-dressed, well-nourished, unsuspicious kind, who all unconsciously becomes the witness

of a dramatic meeting between the Kaiser and the Tsar, in the early dawn, upon a frontier line of railway. As he has also become the involuntary custodian of a leaf of the secret treaty there arranged, he is soon the object of the best attentions of all the detective sleuth-hounds of Europe. His adventures lead to an alliance between France and Britain, and the course of them is marked by kidnapping, murder, poison, assault, and ingenious violence by motor. It is an amazing medley, highly characteristic of the author. Without trenching on politics, one may be permitted to doubt the wisdom just now of accentuating the jealousies of nations.

At the Sign of the Jack o' Lanthorn. By Myrtle Reed. (Putnam's Sons.)

THE irresponsibility of youth and high spirits may have something to do with this story. It is at least one of its characteristics. The American sense of humour also prevails, likewise the American language. The book is not without a wayward attraction of its own. The manner and matter are original and unequal. If it were not for unexpected and irrelevant sentiment it would be a sheer extravaganza. It is a disconcerting, but not displeasing blend of folly and shrewdness. The idea is to get together under one roof (more or less ingeniously) a band of eccentric and incongruous human beings. Their presence gives the author an opportunity for rollicking fun and good-humoured horse-play. The link that binds the oddities together serves also as a disintegrating influence. All are poor relations, come to sponge on a dead man, as they did when he was alive. Hence every man or woman's hand is against his or her neighbour. The scene of action is an extraordinary house, where all these people have been accustomed to come, if not to go, at their own good pleasure, to the great disgust of the late proprietor, who, though dead, yet is heard in a manner by means of posthumous letters. Some readers will think the book a mere tissue of nonsense, others may take a fleeting pleasure in its very absurdity.

A London Girl. (Alston Rivers.)

THIS little book appears anonymously, though it is indicated that its author has already achieved some success. One is not unnaturally mistrustful of such notices as this. There follows an author's introductory note, in which 'A London Girl' is described as being the first of a series called "Tales from the Great City," which is to inaugurate "a return to that wholesome and robust realism of English literature which began with Chaucer and disappeared with Fielding," it being held by the author that

> "signs are not wanting to prove that English people have become of late restless under the miserable and cramping affectation which Wesley, and those who followed him, unconsciously laid upon our imaginations. The Victorian age is dead, and the land revives. The romance without passion, the novel without criticism of life, no longer command the public admiration."

One is naturally chary of anything in the way of destructive or discouraging comment where an avowed attempt at the founding of a new literary school is concerned. Movement is good, and we have seen, perhaps, too much literary stagnation of late. Yet we cannot help resenting somewhat the position taken up by the anonymous author of this not very well-considered story of a London prostitute's life. If he aims sincerely at a new and worthy departure in the fiction of the day, his manner of introducing it to the public is unfortunate. He begins with a sneer at the great writers of the generation which produced his own, and he puts forward as the first of his "Tales from the Great City"—his first sample of the "wholesome and robust realism" which he holds to have disappeared with Fielding, and which he hopes to recreate for twentieth-century readers — a short, rather melodramatic story of a London barmaid who deliberately chooses prostitution as a means of having a "good time," and ends miserably and drunkenly in a fifth-rate lodging-house. We would not say that the picture is fundamentally untrue to life; but we do say that its title, considered in the light of the author's portentous preface regarding his intentions to depict the real daily life of the great city, is something of an insult to the girls of London, and shows a faulty vision, a want of the sanest kind of sense of proportion. The vicious, shallow girl who forms the central figure in this tale of London bars and restaurants is no more worthy to be called a typical London girl than the loafing, parasitical men who make her career possible are typical. Is Piccadilly Circus fairly typical of London's streets? Let us have honest realism by all means; let us even have harlotry in our fiction, because, and in just the proportion that, harlotry unfortunately enters into the life of our cities. But that a series of tales which aims at introducing a new departure in the form of realistic study should open with this melodramatic story of a prostitute's life, with all the form and ceremony of an attempt to set forth typical London life in fiction, is, we think, to be regretted. The key-note struck is not noble or inspiring; it is not Browning's "c major" of life, but a minor key, made the less wholesome by the author's apparently marked sympathy with the ill-digested hedonistic theories which influence his heroine in her choice of the squalid career referred to with bitter irony as a life of pleasure. The telling of the tale is tolerably workmanlike, but not distinguished, and its style rather suggests that of the writer of a recently published book of London impressions. If the series is continued, we hope it will show realism of a more truly "wholesome and robust," and less exotic character than this story. The working side of London is far larger and more typical, as well as far more wholesome and sane, than the life of its bars and second-rate restaurants.

ANTHOLOGIES.

ANTHOLOGY-MAKING is a pleasing and not too laborious diversion, more especially when it is confined to the literature of a single subject. So much has been written, both in verse and in prose, about mountains that it is rather surprising that no more has been done in the way of compiling snippets therefrom. The idea of doing so has now, however, occurred, it would seem, simultaneously to Messrs. E. A. Baker and F. E. Ross, of the Climbers' Club, and to Signor Salvatore Besso of the Club Alpino Italiano. The two books serve to show the various manners in which the idea can be worked out. The English compilation, under the title of *The Voice of the Mountains* (Routledge), contains mainly poetry, with a few fragments interspersed of prose, descriptive either of scenes or the moods evoked by them. All is sentimental and serious. The note is given by Wordsworth, Byron, Tennyson, for the verse, Ruskin or Goethe for the prose. Leslie Stephen, indeed, is drawn upon once or twice; but it is Stephen in his less esoteric mood. The same may be said of the contributions levied on Moore and Mummery, not to mention living Alpinists. Of course there is no fault to be found with this. The most flippant of climbers has his serious moments—if, indeed, his flippancy be not nine times out of ten the guard of an emotion too sacred to be flung about at random. Here the poet has the advantage. Sentiment is expected of him. Unfortunately, he is rarely a climber; he does not really "enter into the treasures of the snow," and so what to many is the most quickening inspiration of the mountains has to find its expression, perhaps a little shamefacedly, in prose. On the whole, the selection, both prose and verse, has been well made. We should, if we had been making it, have included "All along the valley, stream that flashest white," and "Ueber allen Gipfeln ist Ruh'," both of which pieces bring to us certain moods of the hills as vividly as any. On the other hand, among the less obvious things, the compilers deserve great credit for including Keble's "Where is thy favoured haunt?" and perhaps even more for a delightful letter of Lamb's, expressing, as no other could have done, the feelings of the rambler returned to the city from the mountains. We do not quite see why Victor Hugo and Lucretius should be given in their own proper tongues, while Dante, Heine, and Goethe have to put up with more or less inadequate translations. The growing practice of acknowledging (with due parade of publishers' names) every scrap taken from any work of which the copyright has not expired is here carried to a degree which we have not noticed before. It becomes ludicrous when it reaches the point of thanking Mr. A. B. for permission to use a translation of a dozen lines of a sixteenth-century author "appearing in his —— published by Mr. Y. Z." The pieces are all duly asterisked in the table of contents. Surely it would have been enough to return general thanks to the authors or owners of the copyright of all so marked.

Signor Besso's collection *Alpes* (Milan, Treves) is of a very different character. The prose largely predominates, and of the poetry a good deal, we venture to say, is less poetical than the English prose. The prose extracts are of greater length—mostly complete stories or narratives—herein recalling a recent work of Mrs. Le Blond. Many of them are interesting and well told, one or two are facetious. With the exception of a translation of Petrarch's well-known letter describing his ascent of Mont Ventoux, none of the authors drawn upon is earlier than Manzoni, while foreign talent is represented only by Mr. Whymper's story of the first ascent of the Matterhorn, and this appears in an Italian dress. For the rest, the publishers tell us, in a ready-made review which they are good enough, after the modern Italian fashion, to circulate with the book, that it is "all air and light, all pervaded with the most elevated sense of nature," and that it has been brought out by them in the most elegant style (the copy that has reached us is worse stitched than usual), so we had better leave it at that.

XUM

Beaconsfield: Maxims is published by Mr. A. L. Humphreys in the luxurious style we have learnt to expect from him. We do not, however, find divisions as to subjects, or index of any kind giving a clue to the contents. But the ordinary reader knows that Disraeli was a master of the art of saying clever things, and will not be disappointed wherever he opens this collection. Disraeli is neither original in thought, nor philosophic in outlook, nor concerned with higher ideals. But his cultured cynicism and his *savoir vivre* are, perhaps, more to the point nowadays. And does not Mr. Humphreys provide an "Ethical Series" as well as that to which this volume belongs, which, we presume, is the "Belles - Lettres" section? Marcus Aurelius, we notice, is commended both to the philosopher and the drawing-room, but that is a privilege given to few. Much of Disraeli's thought is derivative, though he always puts it into new and effective form. One might imagine La Rochefoucauld saying,

> Something unpleasant is coming when men are anxious to tell the truth.

The following contains a truth which many literary people cannot see. They have heard of Johnson's obsolete 'Dictionary,' and wonder why this made him the man of his time, forgetting that

> A great thing is a great book, but greater than all is the talk of a great man.

Society has, we believe, much the same standards from age to age, though hypocrisy and moral indignation vary, the latter being expected on the part of the great-hearted British public every five years or so. Consequently these maxims are mostly as applicable to-day as they were forty years since. But in the prescription,

> A canter is a cure for everything,

we must now read *motor* for "canter." It looks as if the horse would soon become, as in the days of Æschylus, an ornament of luxury, and give way to mechanical traction, unless its long and treasured association with swindling keeps it enshrined in human affection; for man, alas! as Beaconsfield says, is "a predatory animal."

Messrs. Methuen promise a series of "Day Books," derived from the works of Emerson, Dante, St. Francis, Keats, Lamb, Montaigne, Shelley, &c. Uniform in style with these volumes is *A Golden Dial: a Day Book of Prose and Verse*, compiled by Ethel M. Hewitt for the same publishers. Two or three quotations in verse and prose are supplied for each day, and the collection can certainly claim to be more "up to date" than any, since it includes select passages from novels by Mrs. Frances Harrod, Miss Iza Duffus Hardy, Mr. Rider Haggard, Father Sheehan, Ellen Thorneycroft Fowler, Ella Wheeler Wilcox, and Mrs. Humphry Ward. That all these authors have that combination of form and spirit which makes writing fit for daily contemplation we cannot affirm. Still they do not occupy much space in the book, and the compiler has cast her net wide among religious writers with good results. We are glad, in particular, to see much of Whittier, who is far superior to Longfellow. The compiler herself supplies several pieces of verse which show a true devotional spirit, but inadequate grasp of expression. Foreign writers, in translations, figure to advantage—Marcus Aurelius of course, the mystic Tauler, and Fénelon.

EGYPTOLOGICAL BOOKS.

A History of Egypt from the XIXth to the XXXth Dynasties. By W. M. Flinders Petrie. (Methuen.)—The concluding volume of Prof. Petrie's part of this history of Egypt is out at last, and certainly does not err on the side of verbosity. The complaint that has been brought against it by foreign critics, to the effect that it is not so much a history as a catalogue of monuments, is here more justified than ever, a period of more than a thousand years—neither the least eventful nor the worst documented in Egypt's history—being jammed into a small volume of 400 pages. The delay in its appearance is, we are told in the text, almost entirely due to the great quantity of monuments remaining to us from the reign of Rameses II., which apparently made it necessary for Prof. Petrie to go carefully through the list, and to throw out such as he considered either appropriations of the works of earlier kings, or for some other reason unworthy of note. In this, as in some other matters, he apparently thinks that his *ipse dixit* must be taken as settling the question.

The same feature is noticeable in his preface, where he tells us that

> "as some persons still continue to quote Dr. Brugsch's chronology, I ought, perhaps, to point out that it entirely rests on two certainly false assumptions, and [that] it is only rendered possible by freely making any number of arbitrary omissions. In short it is no system and has no reason";

while, after discussing the two assumptions in question, he concludes that "no one who uses it can be supposed to know of [!] the facts of the history which are stated in this volume." There have been nearly as many systems of chronology in Egyptian history as historians, and Brugsch's system is, like all the others, in great measure a system of inferences from rather slender foundations. But Brugsch was a man of deep and wide learning, as well as an Egyptologist who had spent his life in the study of his subject; and as the founder of demotic studies he possessed a knowledge of the language of the monuments far greater than any of which Prof. Petrie can boast. We think, therefore, that his theories should be treated with respect, and that it will require something more than Prof. Petrie's pronouncements *ex cathedrâ* to dispossess a system which still has much to recommend it. This apart, Prof. Petrie is, in other respects, unusually tolerant of the opinions of others in this volume, and it is good to find him actually referring with courtesy and even with approbation to the works of those whom he is pleased to consider his rivals. Thus he not only speaks with approval of certain work of Mr. H. R. Hall, but also says, with regard to the supposed route of the Exodus, that "the result of Naville's discussion of it is reasonable and generally accepted." We think, however, that he might have devoted a little more space to Dr. Breasted's very clear and careful account of the battle of Kadesh.

From its extremely condensed form it is impossible to review the book in detail, but it may be said that the evidence quoted is fairly up to date, although Prof. Petrie does not seem to have examined M. Legrain's discoveries at Karnak. Had he done so, we fancy he would have found it necessary to make a considerable change in his genealogy of the Sheshonkide kings. Yet, on the whole, he seems to have chosen the facts recorded with care, and we are glad to see that he will have nothing to do with Prof. Winckler's Musri theory. He takes, perhaps, too professional a view of ethics when he tells us that Seti I.'s character was one of the best in history, because, apparently, he left monuments in honour of his predecessors, and usurped no monuments without recording the name of the king under whom they were originally inscribed. Later, he characteristically uses the reputation with which Seti is thus generously presented in favour of his own arguments, saying that "the general character of this king is so honourable in his works, that we are bound to credit his statements if we cannot show them to be wrong." We do not think that Prof. Petrie's identification of place and other names shows much acquaintance with the Semitic, or, for that matter, with the Aryan languages, and we have noticed some mistakes, such as "cieling" for ceiling, "Revillont" for Revillout, and a Greek *pi* for an *eta*. His English is still slipshod. The lists of the monuments of every king, with provenance and abiding place, that he gives will be extremely useful to students; and for the care and pains that he has bestowed on their compilation all Egyptologists should be grateful.

The Rock Tombs of El Amarna. Part II. By N. de G. Davies. (Egypt Exploration Fund.)—In this, the fourteenth volume of the Archæological Survey, Mr. Davies continues his researches into the curious city left by the heretic king Khuenaten. The frescoes here copied are little different from those given in the preceding volume, and represent for the most part Khuenaten seated on a throne for the adoration of a crowd, who are in some cases actually tumbling over one another to do him homage. Mr. Davies draws attention to the fact that the number of his daughters gradually increases in these pictures until at last we have no fewer than seven royal princesses shown as taking part in the public ceremonies of the Court. He also notices that about ten years formed the limit of Khuenaten's activity as a builder in his new capital, and that of all the splendid tombs here figured none is entirely finished, while in some the artists have contented themselves with painting on the walls designs which were intended to be, but were never, executed in relief. Otherwise they are full of information concerning the life at this strange Court, the occupants of which seem to have deliberately set themselves to break with all the traditions of the seventeen previous dynasties. Mr. Davies thinks it likely, from the later inscriptions, that "the doctrine," as the new religion was called, underwent a change during the latter part of its career; that it became more a worship of the visible sun, and that it gave greater prominence to the deification of Khuenaten himself as the sun's vicegerent on earth. This is very likely, but we see nothing to justify his description of it as "a strange anticipation of Christian Trinitarian worship in its most popular form." At any rate, Khuenaten appears to have avoided the error of persecuting as a means of spreading the new faith, and one of the frescoes shows his sister Nezemut-mut (the pleasant one of the goddess Mut) looking coldly on at the worship in which she declines to share. The tombs here given are those of Panehesy, "Chief Servitor of Aten," and the younger Mery-ra, apparently the royal chamberlain. We are sorry to hear that this is the last work that Mr. Davies will do for the Fund.

The Inscription of Mes. By Alan H. Gardiner. (Leipsic, Hinrichs.)—This is the reproduction in autotype, together with a translation and commentary, of the inscription on a tomb discovered some years ago by M. Victor Loret at Saqqara. The text was published by its discoverer, and a translation and commentary by M. Moret followed close upon it. Mr. Gardiner, one of the most painstaking of our younger Egyptologists, who has attached himself to the Berlin School, thinks that M. Moret's work can be improved, and to this we owe this publication. The subject of the text is a lawsuit, in which one Mes succeeded in establishing on appeal his title to lands of which he had been deprived at a former trial by forged evidence and the falsification of official registers. As the chief point of difference between M. Moret and Mr. Gardiner is whether the evidence is to be taken as given in the first person, or in the form of a recital in the mouth of one of the parties, it does not seem of much importance,

but Mr. Gardiner manages to make out an excellent case for the correctness of his reading, which perhaps makes better sense than the other. Otherwise, the main interest of the inscription lies in the insight it affords into the forms of Egyptian judicial procedure, which has been already exemplified by the Papyrus Lee and Rollin and the researches of M. Revillout. It is amusing to note that while the male witnesses in the "Great Qenbet," which appears to have been a court presided over by the chancellor or vizier in person, swear under the penalty of becoming "slaves in Kush"—*i.e.*, Ethiopia—the women imprecate that, if perjured, they may be "sent to the back of the house"—that is, may become servants where they are now mistresses. A reference to Khuenaten as "the enemy of El Amarna" is also noticeable.

The Religion of the Ancient Egyptians. By Georg Steindorff. (New York, Putnam.)—This small book is a reprint of a series of lectures delivered by Prof. Steindorff during the winter of 1903-4 in America under a trust formed in imitation of the Hibbert Lectures in England. Although it is somewhat slight, no fault can be found with Prof. Steindorff's general arrangement of his subject or with the way he has treated it. He seems, indeed, to have avoided, as far as possible, all contentious matter, and almost the only piece of dogmatism that he allows himself is when he states that in primitive ages Egypt "was peopled with African negroes," and that in pre-dynastic times "there burst upon the land a flood of Bedouins, streaming across the Isthmus of Suez from Arabia." No evidence is supplied in support of this assertion, the first part of which is disproved—so far as can be done—by M. Zaborowski's late declaration that the series of pre-dynastic Egyptian skulls which he has examined present no negroid characteristics; while the rest is plainly dictated by the necessity of supporting the strange theory of the Berlin Egyptologists that the language, culture, and other characteristics of the ancient Egyptians were Semitic. We do not think such statements should be made to a popular audience without a warning that they are matters of controversy, not of generally accepted fact.

OUR LIBRARY TABLE.

MR. FISHER UNWIN publishes *Russia and its Crisis*, an important volume of the Chicago University Press, containing lectures by a thoughtful Russian, who will prefer that we should style him "Mr." Milyoukov. We differ from the author—as we do from those, with the exception of Sir D. Mackenzie Wallace, who have recently given us the best books on Russia—on the main point, that they believe, while we do not, in peaceful reform. As to the value of the central chapters of the book before us, which deal with the religious tradition and the political tradition of Russia, there can be no doubt, and we heartily commend to our readers these historical disquisitions. With regard to the next chapter, entitled 'The Socialistic Idea,' there may be more difference of opinion. Our author holds that in English-speaking countries Socialism is only at "the threshold," and finds before it organized Liberal and even democratic opinion in which it has no part. In Germany and in Russia Socialism has, he thinks, no rivals, while the machine of centralization is "ready. The only task remaining was to take possession of the steering-wheel." In Russia, moreover, the peasantry have been prepared, by a past which the author explains, for a ready reception of a kind of Socialism. We do not agree with his opening words, in which he declares of "the movement known outside of Russia under the nickname of 'Nihilism'" that "this really was never its party title." Later, however, he himself points out how the name, after its invention and its explanation in the novel 'Fathers and Sons,' came to be adopted by the youthful representatives of the crudest form of the old pessimism of Russia. Here, again, we differ as regards the suggestion that "'Nihilism,' though peculiar to Russia as a psychological disposition of mind," is "of foreign extraction."

Our pleasure at the thought and learning displayed in the lectures of which this volume is composed is marred by the extraordinary fancies of its author on the transliteration of names. In his preface he declares that he has a "system":—

> "For instance, I write Keeyev, where an English writer is accustomed to find the spelling Kiev..... An English reader is justly entitled to his own transliteration founded on the English pronunciation."

He proposes to adopt "a merely phonetic method." Our complaint is that he has no "system" and no "method"; that he disfigures well-known names which have a settled place in literature and history, and renders them sometimes unintelligible—invariably ridiculous. If he were able to carry out his "system," it would be reactionary. The geographers of the English world have long since rejected every vestige of his theory, and, pointing out that we assign in English no regular value to our vowels, have adopted the Italian sounds.

Our author sometimes goes even outside Russian. In Japanese he puts "oo" for "u," though "bushido" is now at home in the British and American press. We find also "spahee" for spahi or sepoy. But he continues to write "Mr. Bunge," which, on his "system," his readers will rhyme with a bath-sponge, when the "method" would require "Boongay." He will reply that the final "e" is not rendered by our "ay." We admit it, and do but apply his "system." He renders the Russian final "i" by "ee"—sometimes. Thus we find "skoptsee" and "Dookhobortsee," "Minister Veeshnegradskee," and "Zemskee Sobor." In another passage the author has "Zemsky," in defiance of himself. "Novekov" and "Noveekov" are both used. "Mr. Svyatopolk-Mirskee" is grotesque. "Old Count Orloff" would have wondered to find his other name written "Daveedov," while the adjective European appears as "Yevropee." The reforming patriarch and saint becomes "Neekon," and, with still less wisdom, the well-known Grand Duke appears as "Vladeemir." Why not "Vladeemeer"? After such examples we can hardly wonder at "Pooshkin" for the poet, or at the rebel "Poogachov." The "system" is violated in "Leontiev" and "Pobedonostsev."

The Russian *Tch* is rejected—we know not why. Thus we have "Prince Cherkassky." The famous Mayor of Moscow, Governor of Great Bulgaria, wrote his name in French and English as we should write it. But here we admit that it is the same word which we also write Circassian.

What are we to make of "Hoodyakov"? There is no aspirated *h* in Russian proper, and the *kh* of the south cannot be represented by any English letter. In Northern Russia Dr. Hopkins is called "Gopkin," and Mr. Hope becomes "Gospodin Guppy," for the untrained Russian tongue can get no nearer.

The "system" can only be meant to help the schoolboy, and will mislead him. Perhaps it has suffered in printing, for we find "Lord Redstock" for the peer whose prayers and preaching had so extraordinary an influence on Petersburg society thirty or more years ago.

WE noticed some time ago a preliminary publication by Miss Mona Wilson and others on behalf of the Social Enquiry Committee of the Dundee Social Union. We have now received their *Reports on Housing and Industrial Conditions* (Dundee, John Leng & Co.). The medical reports, chiefly on the working children, confirm the views set forward in recent reports on physical deterioration. The Committee in their preface point out that Dundee is a town which employs women and children rather than men. Miss Mary Walker and Miss Mona Wilson deal in the present volume chiefly with the women workers, and their most important conclusions are those on the connexion between the work of mothers and infant mortality. These Dundee papers are, of course, brief as compared with the well-known York inquiry or with the Charles Booth volumes on London, but they are clearer and better arranged.

The Brassworkers of Berlin and of Birmingham (King & Son) is a joint report by Mr. Best, an employer in the brass trade, Mr. W. J. Davis, the well-known Secretary of the Brassworkers, and a third gentleman, who has to do with Birmingham hospitals. They have visited Berlin, and with a view, no doubt, to procuring reforms in their own city and country, enumerate many points in which we are behind. There is little in their volume which is peculiar to the brass trade or to Birmingham, or even to Berlin. The superiorities in Berlin to which they call attention are all of them such as may be matched in almost all the principal countries of the Continent except Belgium, and the greater part of Italy. That we have fallen behind as regards the condition of our labouring population there can be no doubt. The interested reader will find confirmation of this opinion in a photograph of Berlin brassworkers at the beginning of the book—unless, indeed, these men and boys were "picked." Those portrayed represent a high level of intelligence, and, with the exception of three obvious Jews, also of weight and comfort. We may add that from examination of the types we should set them down as Social Democrats—to a man or boy we should have written, but for the fact that our certainty applies only to twenty out of the twenty-one.

WE have before us the second volume of *Wild Flowers Month by Month in their Natural Haunts* (Warne & Co.), by Mr. Edward Step, the first instalment of which we noticed on July 1st. The illustrations are again of great beauty, and are particularly successful in the case of the various orchids which abound on the chalk. The present instalment, which completes the book, takes the reader from June to September. Mr. Step includes a great many interesting pictures of insects. Occasionally he deals with flowers which are to be seen in favoured districts only, and there are, as he says, more left unnoticed of equal interest, if not beauty. We hope he may give us a winter volume of fungi and mosses and trees, but he seems to doubt if sufficient popular interest will be aroused to justify a hunt with the camera after these. We expect a great success for his present volumes, and that may, perhaps, induce him and his publishers to continue the tale of the colder months.

John Wesley, Evangelist. By the Rev. Richard Green. (Religious Tract Society.)—Mr. Green modestly states in his preface that "with the recollection of the many 'Lives' of Wesley already before the public, I should not have presumed to add another. This, however, is not designed to be in any true sense a life." Mr. Green's aim is to present two aspects of Wesley's life-history. The first embraces his earlier career, in which prominence is given "to those events and

XUM

circumstances which in so remarkable a way prepared him for his great work." The second object has been to set forth "his evangelistic appeal to the heart and conscience of this nation." In this volume of five hundred pages the author has with much care fulfilled his object, and has added a valuable contribution to the history of the Wesleys. He renders just tribute to Tyerman's monumental work; at the same time he disagrees with him as to his "hasty conclusion" that "Wesley entered the Charterhouse a saint, and left it a sinner." Wesley in his journal pronounces a severe judgment on himself as to the years he spent at the school, where, "outward restraints being removed, I was much more negligent than before, even of outward duties, and almost continually guilty of outward sins, which I knew to be such, though they were not scandalous in the eyes of the world." What he hoped to be saved by was "not being so bad as other people; having still a fondness for religion, and reading the Bible, going to church and saying my prayers." Dr. James H. Rigg, in his work 'The Living Wesley,' says, in reference to Wesley's sentence on himself, "It was at a time when all Wesley's judgments as to such cases were far more severe than they became as revised, after many years' experience, in his later life." Wesley left the Charterhouse with a school exhibition of 40*l.* per annum, and entered Christ Church, Oxford, as a commoner on July 13th, 1720. Mr. Green contends against Tyerman's "pessimistic view of Wesley's religious state during his early years at Oxford. But Tyerman was better at collecting facts than at drawing inferences from them," for Wesley's "heart was held too firmly in his mother's hand for him to have been easily dragged downwards," and "he probably walked on the highest plane of Oxford life, far above the depth of immorality which characterized many of those around him." Wesley took his Master's degree on February 14th, 1727. On leaving Oxford he went to assist his father at Epworth; but at the close of 1729 Dr. Morley, the Rector of Lincoln, summoned him back to take pupils. Here he found that his brother Charles and two companions had formed a society, which he immediately joined. Under his guidance the little community gradually increased in number and influence. In 1735 Whitefield joined them. The practice of all the members was for those who had no family to keep, after having provided for themselves, to give away all that remained. Wesley began with thirty pounds a year; he lived on twenty-eight, and gave away forty shillings. In the fourth year his income had increased to one hundred and twenty pounds; his personal expenses remained the same, and he gave to the poor ninety-two.

On May 1st, 1738, the Methodists founded their first home in London. This was in Fetter Lane. It was here that Lord and Lady Huntingdon first attended the Society's meetings. It was the custom of the members to go to St. Paul's to receive the Sacrament as a testimony that they adhered to the Church of England. Mr. Green gives an account of the marvellous activity of Wesley at this period. His Sunday's work began at five in the morning, when he would preach at Fetter Lane; afterwards he would preach at Moorfields, where some ten thousand persons would be assembled; in the afternoon he would preach on Kennington Common to twice that number; and there were other services in the evening. Being asked at this time by a clergyman in what points the Methodists differed from the Church of England, Wesley answered: "To the best of my knowledge in none; the doctrines we preach are the fundamental doctrines of the Church, clearly laid down in her Prayers, Articles, and Homilies." But he pointed out in what respects they differed from "that part of the clergy who dissent from the Church, though they own it not."

The volume contains many interesting portraits and other illustrations, and a good index, for which Mr. Green accords his thanks to Mr. Francis M. Jackson.

THE large-type, fine-paper edition of *St. Ives*, by R. L. Stevenson (Heinemann), has reached us, and we have been tempted by the handiness of the form and the excellence of the print to re-read that capital romance. We have done so with much satisfaction, both in the author—or rather authors, for Mr. Quiller-Couch's share in the story must not be forgotten—and the publisher.

MR. FROWDE has sent us a new edition of *The Complete Works of Shakespeare*, edited, with a glossary, by Mr. W. J. Craig. As it is printed in large type, on Oxford India paper, and neatly bound in limp cloth, we expect that it will become a favourite among the editions in one volume.

MESSRS. MACMILLAN have sent us an excellent edition of *Harry Lorrequer*, with twenty-two illustrations by H. K. Browne, whose work is too well known to need commendation.

THE same firm are likely to have a large return for their enterprise in publishing Mr. Morley's *Life of Gladstone* in fifteen monthly parts. The first of these is before us, and, though it costs only sixpence net, is well printed.

MR. LANE has added to his neat set of Beaconsfield's novels in his "New Pocket Library" *Henrietta Temple*, a book which always pleases us in spite of its extravagance, as it represents perfectly "the silly sooth of love."

WE have on our table *The Representative Men of the New Testament*, by George Matheson (Hodder & Stoughton),—*Sermons at Gloucester*, by the Right Rev. C. J. Ellicott (Nisbet),—*Echoes and Pictures from the Life of Christ*, by R. H. Thomas (Headley),—*The Church and the Times*, by the Rev. R. F. Coyle (Hodder & Stoughton),—*Service of the Synagogue: Day of Atonement*, Part II. (Routledge),—*A Dictionary of Saintly Women*, Vols. I. and II., by Agnes B. C. Dunbar (Bell),—*Richard H. Thomas, M.D., Life and Letters*, by his Wife (Headley),—*Gustaf Adolf, the Father of Modern War*, by Lieut.-Col. Hon. E. Noel (Bale, Sons & Danielsson),—*The Chief of the Clan Donald, who is He?* by Angus R. Macdonald (Privately printed),—*From the Yalu to Port Arthur*, by O. E. Wood (Kegan Paul),—*The Apsley Cookery Book*, by Mrs. J. J. Webster and Mrs. F. W. Jessop (Churchill),—*Wagner*, by John F. Runciman (Bell),—*Jewellery*, by C. Davenport (Methuen),—*Macmillan's New Globe Readers*, Book VI. (Macmillan),—*The Junior Geography*, by A. J. Herbertson (Oxford, Clarendon Press),—*Plato: Crito*, edited by A. F. Watt (Clive),—*Some Fruits of Solitude*, by W. Penn (Headley),—*The Shrine of St. Cuthbert, and other Poems*, by F. A. Judd (Kegan Paul),—*A Cumberland Vendetta*, by J. Fox, jun. (Constable),—*Jock and I and the Hydra*, by M. Ellen Thonger (Digby & Long),—*"Noreen," a Romance*, by Galloway Douglas (Drane),—*The Doom of the House of Marsaniac*, by Winefride Trafford-Taunton (Digby & Long),—*The Romance of the Fountain*, by E. Lee-Hamilton (Unwin),—*The Dreamer*, by Lucas Cleeve (Digby, Long),—*A Heart of Stone*, by Gertrude Warden (Digby & Long),—*Bess of Delany's*, by L. T. Meade (Digby & Long),—*Six Months of Hell; being Extracts from my Diary*, by G. Fauvel George (Drane),—*The Sin of Laban Routh*, by Adeline Sergeant (Digby & Long),—*Six Heroic Men*, by D. Alcock, W. G. Blaikie, E. Paxton Hood, and S. S. Pugh (R.T.S.),—*Verses, Wise and Otherwise*, by Ellen Thorneycroft Fowler (Cassell),—and *I Giuochi della Vita*, by Grazia Deledda (Milan, Treves). Among New Editions we have *The Resultant Greek Testament*, by the late R. F. Weymouth (Clarke),—*Supernatural Religion, an Inquiry into the Reality of Divine Revelation* (Watts),—*Walks in Rome*, by Augustus J. C. Hare (Kegan Paul),—*Indigestion*, by George Herschell (H. J. Glaisher),—and *La Fatica*, by Angelo Mosso (Milan, Treves).

GEORGE HENRY OVEREND, F.S.A.

MR. G. H. OVEREND, F.S.A., of the Public Record Office, whose death on September 12th has been already mentioned in *The Athenæum*, was not only deeply versed in the contents of that vast collection of MSS. of which he was one of the Assistant-Keepers, but was also a man of extensive knowledge in comparatively untrodden fields of research, historical and genealogical. For the past twenty years he had found scope for utilizing his astonishing mastery of details in his work for the Huguenot Society of London. Appointed assistant-secretary of the Society at its foundation in 1885, he did an immense amount for it in many ways, including the contribution to its *Proceedings* of papers on such little-known subjects as 'The Field Preachings at Antwerp in 1566,' 'The First Thirty Years of the Foreign Settlement in Axholme, 1626-56,' and 'Strangers at Dover, 1558-1661.' Besides these more elaborate essays, Mr. Overend was continually able to bring to the Society's notice particulars bearing on the history of the foreign refugees in England, drawn from the stores of the Record Office and elsewhere. But beyond all this, he was, perhaps, chiefly distinguished by the ever-ready help he gave to all who had occasion to ask it in the course of their researches. The most reserved and modest of men, he was always willing to impart to others, without a thought of winning credit for himself, every possible piece of information he could, and many will feel keenly the loss they have sustained by his death. None will do so more than the members of the Society he served so long and so devotedly.

R. S. F.

'A CURIOUS DANCE ROUND A CURIOUS TREE.'

43, Marlborough Hill, N.W., Sept. 18th, 1905.

IT is a very curious dance indeed that has for the last few years been danced about that curious bifurcated tree which is known to bibliographers as a pink-wrappered pamphlet bearing the title "A Curious Dance round a Curious Tree by Charles Dickens." While one authority repeats the statement made in *The Athenæum* on September 11th, 1897, that it is "not the work of Dickens at all, but was written by W. H. Wills for *Household Words* of January 17th, 1852," a second (who, by-the-by, describes an exceptional copy of a common book as "unique" because he does not chance to know of another example in the same state—though there may be many) states roundly that the 'Curious Dance' "*was* written by Charles Dickens" and that he has "seen the original MS.....now in the possession of Mr. Wise"; a third lays down that "either Wills claimed the authorship of what he had not written or Dickens copied the MS. out in his own hand"; and a fourth points to Wills's statement that, of his 'Old Leaves gathered from *Household Words*,' "portions are by another hand," and says it is "inconceivable that Wills would have printed the 'Curious Dance' as his own had it been by Dickens."

Quite inconceivable! Any one who knew Wills will admit that at once. And yet the choice does not lie between misrepresentation by Wills and transcription of Wills by Dickens, although, paradoxical as it may seem to say so, it is absolutely certain that no collection which does not include either the pink pamphlet or the paper from *Household Words*, reprinted in it with one from *The Times*, can properly claim to be a complete collection of the writings of Dickens.

It is as obvious from internal evidence as it is certain from external that the case is one of joint authorship, and that all that is worth reading in the little pamphlet is, in fact, from the "Other Hand"—the hand of Dickens, whose name it bears. The 'Curious Dance' occupies the first twelve pages of the twenty composing the pamphlet; and about half of the twelve may be safely attributed to Dickens, the rest having, perhaps—only perhaps—a touch from his hand here and there. The dry data were doubtless compiled by Wills, and set out skilfully enough in sub-editorial fashion. Two men, one of whom was Dickens and the other Wills, appear to have visited St. Luke's Hospital together at Christmas, 1852, to see the festivities of the lunatic inmates, including their Christmas tree. The paper shows a more minute examination of the whole place than one man would have been likely to get through in an evening; and the inference is that Wills and Dickens divided the actual labour of examination and note-taking. Once or twice in the first seven pages the dry data and journalistic setting are irradiated by a subtle presence—once you seem to see Dickens for almost a page—and at last there is a sudden burst of sunshine, and for the rest of the time the narrator is Dickens.

If "the original MS.," held to fix the whole work on Dickens, were really in Mr. Wise's collection, I am quite sure that any lover of letters and truth would be welcome to go and see it for himself; but as a matter of fact it passed, not into his collection, but some other, although it was to his kindness that I was indebted, when the MS. was discovered, for an opportunity to do what I am doing now, but was interrupted in performing then—the duty of settling this question of authorship. The MS. which Mr. Wise brought to show me—and, indeed, left with me for some days—was not a MS. of this pamphlet, but only of something like a half of it. It represented the burst of sunshine. It was wholly in Dickens's autograph; it was not a transcript of anything; it *was* the printer's copy of that part of the paper; and it showed the author in the act of composition. Erasures and corrections abounded; and no one could see it, knowing anything at all about literature and handwriting, and doubt for one moment that the relative pages of 'A Curious Dance round a Curious Tree' were the work of Dickens, and Dickens only. The important point is, Where is the MS. now? It is supposed to be in some American collection. I regret that I did not even preserve (or cannot find that I did) a note of the exact words with which it began; but I believe they corresponded with the first new paragraph on p. 8 of the pink pamphlet.

It is no disparagement of Wills's gratitude or his integrity to assume that he knew perfectly well that he was rather more indebted to Dickens in this paper than in others. He may easily have forgotten, after a lapse of some years, precisely how much more. The proportion of Dickens's work in the mass of the 'Old Leaves' which he had touched up was probably not very large, including these few pages of 'A Curious Dance.' Had Wills known how inquisitive posterity would be, he would doubtless have been obliging enough to mark the passages, if he knew them for certain. But after all how could it affect the fame of him whose vast gallery of inimitable full-length portraits is for all time, if a few exquisite thumb-nail sketches of inmates of St. Luke's, bathed as they are in the sunshine of his great sympathetic soul, escaped that identification which the master had not decreed for them? No, no! Wills was all right; and, if Dickens could have been asked, he would assuredly have made his esteemed colleague heartily welcome to what this pamphlet had from the "Other Hand."

H. BUXTON FORMAN.

ENGLISH PRONUNCIATION.

9, Whitehouse Terrace, Edinburgh.

I VENTURE to offer a correction to Mr. Byrne's ingenious observation regarding the placing of the accent in certain words used incessantly by Catholics. It may interest Mr. Byrne to know that Catholics distinguish "cónfessor," a man having faculties from the Ordinary to hear confessions, and "conféssor," a species of (male) saint. To confess one's sins, however, is invariably "confession." Whoever lives to hear "cónfession" will find, no doubt, the martyr's tomb and the altar above it still called a "confession."

I suspect "Deúteronomy" to come from the same place as "Jérusalem." "Pólis" is dialectic.

JOHN GRAY.

THE LATE MR. L. F. AUSTIN.

16, Norfolk Square, Brighton.

IN your record of the death of Mr. Louis Austin it is stated that he published one book only, 'In Haste and at Leisure.' I was not aware of the existence of this volume; but in my former capacity—or incapacity—of literary adviser to Messrs. Ward, Lock & Co. I had the pleasure of very warmly recommending to Mr. James Bowden, who was then managing director of that firm, a volume by Mr. Austin. It was entitled 'At Random,' and was accepted and published, I think in 1896. I ought to add that it was my friend Mr. Clement Shorter who

first suggested that a selection of Mr. Austin's essays and papers would make an acceptable volume. It is invariably among the files of *The Athenæum* that one looks for literary data, so you will, I am sure, pardon me for putting the facts on record. COULSON KERNAHAN.

THE AUTUMN PUBLISHING SEASON.

THE CAMBRIDGE UNIVERSITY PRESS

are publishing: in Theology: The Psalter of the Church, edited by F. W. Mozley,—The Coislin Octateuch, edited by the Rev. H. S. Cronin,—The Greek Text of Ecclesiasticus, edited by J. H. A. Hart,—The Prayer-Book Explained, by the Rev. P. Jackson, Part II.,—and Forty Facsimiles of Dated Arabic MSS., edited by A. S. Lewis and M. D. Gibson. In Philology and Antiquities: The Jātaka, Vol. V., translated by H. T. Francis; Vol. VI., translated by E. B. Cowell and W. H. D. Rouse,—Vedic Metre, by E. V. Arnold,—Elementary Arabic, by F. Dupre Thornton, edited by R. A. Nicholson,—Bacchylides, Poems and Fragments, edited by Sir R. C. Jebb,—Translations into Greek Verse and Prose, by R. D. Archer-Hind,—Horatius and other Stories, edited by G. M. Edwards,—An Eighth-Century Latin-Anglo-Saxon Glossary, edited by J. H. Hessels,—The Early Age of Greece, by Prof. Ridgeway, Vol. II.,—An Introduction to Greek Epigraphy, by E. S. Roberts and E. A. Gardner, Vol. II.,—and The Care of Ancient Monuments, by Prof. G. B. Brown. In History, Law, and Education: Vol. IX. of the Cambridge Modern History, Napoleon,—De Republica Anglorum, by Sir T. Smyth, edited by Prof. F. W. Maitland,—The Second Athenian Confederacy, by F. H. Marshall,—The General Principles of the Law of Corporations, by C. T. Carr,—Pioneers of Modern Education, by Prof. J. W. Adamson,—and Early English Printed Books in the University Library, Vol. IV. In English, &c.: The Plays of Beaumont and Fletcher, Vol. I., edited by Arnold Glover,—The Poems of Crabbe, edited by Dr. A. W. Ward, Vol. I.,—Bunyan's Life and Death of Mr. Badman, and The Holy War, edited by the Rev. John Brown,—The Poems and Prose of Prior, edited by A. R. Waller, and The English Poems and Plays of Cowley, edited by the same,—Ben Jonson's Underwoods in the "New Type,"—and The Modern Language Review, edited by Prof. J. G. Robertson. In Mathematics and Science: Tables and Constants to Four Figures, compiled by W. Hall,—The Theory of Sets of Points, by W. H. Young and G. C. Young,—The Elements of Solid Geometry, by C. Davison,—Collected Papers of J. J. Sylvester, Vol. II., edited by H. F. Baker,—Index to Lord Kelvin's Baltimore Lectures,—continuation of The Fauna and Geography of the Maldive and Laccadive Archipelagoes, by J. S. Gardiner, and of Reports of the Anthropological Expedition to Torres Straits, edited by A. C. Haddon,—Immunity in Infective Diseases, by Prof. Metchnikoff, translated by F. G. Binnie,—Histological Studies on the Localization of Central Function, by A. W. Campbell,—in the "Cambridge Biological Series," The Origin and Influence of the Thoroughbred Horse, by Prof. Ridgeway; Fossil Plants, by A. C. Seward, Vol. II.; Trees, by H. Marshall Ward, Vols. IV., V. and VI.; and The Morphology of Plants, by J. C. Willis,—An Introduction to Geology, by J. G. Marr,—and the following Scientific Journals: Biometrika, edited by Francis Galton and others,—The Journal of Hygiene, edited by G. H. F. Nuttall,—The Journal of Physiology, edited by Sir M. Foster,—The British Journal of Psychology, edited by Prof. James Ward, W. H. R. Rivers, and others,—and The Journal of Agricultural Science, edited by Prof. T. H. Middleton and others.

MESSRS. BLACKWOOD

are publishing The Siege and Capitulation of Port Arthur, by E. Ashmead Bartlett,—Village, Town, and Jungle Life in India, by A. C. Newcombe,—The Forester, by John Nisbet,—My Strange Pets, and other Memories of Country Life, by R. Bell,—The Hearseys, by Col. Hugh Pearse,—The Forest of Wild Thyme, by A. Noyes,—A Study of the Russo-Japanese War, by Chasseur,—Life of John Collingwood Bruce, by his son, Sir Gainsford Bruce,—Christian Prayer, by the Rev. W. A. Reid,—The Letters of Warren Hastings to his Wife, edited by S. C. Grier,—Footpaths thro' the Veld, and other Songs and Idylls of South Africa, by F. C. Slater,—The Rake's Progress in Finance, by J. W. Cross,—The Development of Tactics from 1740 to the Present Day, by Lieut.-Col. W. H. James,—Euchologion, edited by the Rev. G. W. Sprott,—Day Book from 'The Faerie Queene,' by Alice Cowell,—Saints and Savages, by Robert Lamb,—Herbart's Psychology and Educational Theory, by John Davidson,—new editions of An Introductory Text-Book of Logic, by S. H. Mellone, and The Yellow War, by O.,—and in Fiction: Richard Hartley, Prospector, by D. Blackburn,—The Vrouw Grobelaar's Leading Cases, by Perceval Gibbon,—Madame, Will You Walk? by Beth Ellis,—Where Angels fear to Tread, by E. M. Forster,—Helena, by Mrs. H. O. Forbes,—In the Hands of the Czar, by Garrett Mill,—Miss Lomax, Millionaire, by Bessie Parker,—and His Indolence of Arras, by W. J. Eccott.

MESSRS. METHUEN

announce: in Fiction: The Black Spaniel, and other Stories, by R. Hichens,—The Passport, by R. Bagot,—A Nine Days' Wonder, by B. M. Croker,—The Shadow of the Lord, by Mrs. Hugh Fraser,—Divers Vanities, by A. Morrison,—The Brown Eyes of Mary, by E. M. Albanesi,—The Valley of Inheritance, by V. Langbridge and C. H. Bourne,—Aglovale de Galis, by Clemence Housman,—The Lady of Lyte, by Graham Hope,—The Improbable Idyll, by D. Gerard,—Behind the Throne, by W. Le Queux,—A Tragedy in Commonplace, by M. Urquhart,—and many new volumes in "Methuen's Shilling Novels," including novels by S. Baring-Gould, Jane Barlow, G. Bartram, Mrs. W. K. Clifford, G. M. Fenn, R. Marsh, W. E. Norris, Adeline Sergeant, and others. In History, Biography, &c.: The Life of Charles Lamb, by E. V. Lucas, 2 vols., illustrated,—A Book for a Rainy Day, by J. T. Smith, edited by W. Whitten,—A History of the American War, by W. B. Wood and Major J. E. Edmonds,—Madame Geoffrin: her Salon, and her Times, by Janet Aldis, illustrated,—Jane Austen and her England, by G. E. Mitton, illustrated,—The Life of Walt Whitman, by R. Askham, illustrated,—England under the Tudors, by A. D. Innes,—England under the Normans and Angevins, by H. W. C. Davis,—Howard Letters and Memorials, by W. Tallack,—Mary Stuart, by F. MacCunn,—Master Workers, by H. Begbie,—Dan Leno: his Life and Achievements, by J. H. Wood,—The Imperial Drug Trade, by J. Rowntree,—Sea Life in Nelson's Time, by J. Masefield,—The Green Sphinx, by B. Kennedy,—The Tragedy of South Africa, by A. M. S. Methuen,—and new editions of Millais's Life and Letters, by J. G. Millais; A History of British Colonial Policy, by H. E. Egerton; and The Life and Principate of the Emperor Nero, by B. W. Henderson. In Fine Art and Archæology: Social Caricatures of the Eighteenth Century, with many illustrations, by G. Paston,—English Furniture, by F. S. Robinson, illustrated,—Old Oak Furniture, by F. Roe,—Thomas Gainsborough, by W. B. Boulton,—Sir Joshua Reynolds, by the same,—The Royal Forests of England, by Dr. J. C. Cox,—The Cities of Umbria, by E. Hutton,—How to Identify Old Chinese Porcelain, by Mrs. W. Hodgson,—Claude, by E. Dillon,—and Jewellery, by C. Davenport. In Verse, Belles-Lettres, and General Literature: The Poems of Cowper, edited by J. C. Bailey, with illustrations by Blake,—The Psalms of David, with commentary by Dr. W. F. Cobb,—The Bible and Christian Life, by Walter Lock,—Songs of the Real, by M. Doney,—Up Along and Down Along, poems, by Eden Phillpotts, illustrated by C. Shepperson,—English Love Poems, edited by E. Hutton,—A Milton Day Book, by R. F. Towndrow,—Poems of the Lower Life, by E. Crompton Jones, a new edition,—Songs of the West, by S. Baring-Gould, H. F. Sheppard, and F. W. Bussell, a new issue, edited by C. J. Sharp,—Readings on the Inferno of Dante, by W. Warren-Vernon, 2 vols., a new edition,—A Gun-Room Ditty Box, by G. S. Bowles,—The Friendly Town, by E. V. Lucas, and a new edition of The Open Road, by the same,—Hours with Rabelais, edited by F. G. Stokes,—The Secret of Popularity, by E. Holt,—Richard Wagner's Music-Dramas, by A. L. Cleather and B. Crump, Vol. III.,—The Purgatorio of Dante, translated by C. G. Wright,—The Devout Life of St. Francis de Sales, translated and edited by T. Barry,—Dickens's Christmas Books, new volumes in the "Arden Shakespeare," and other reprints. In Local History and Travel: new editions of The Norfolk Broads, by W. A. Dutt, and Naples, by A. H. Norway,—Oxford, by H. C. Minchin and R. Peel, illustrated,—The Riviera, by S. Baring-Gould, illustrated,—Canterbury, by Dr. J. C. Cox,—and The Land of the Black Mountain, by R. Wyon and G. Prance. In "The Standard Library": Select Works of Burke; Works of Ben Jonson; The Plays of Marlowe; The Poems of Chatterton; The Works of Sir Thomas Browne; The Plays of Massinger; The Poems of Keats; The Republic of Plato, translated by Taylor and Sydenham; and other volumes. In Science, Economics, and Education: Nature in Eastern Norfolk, by A. H. Patterson, illustrated by F. Southgate,—Wealth and Poverty, by L. G. C. Money,—The Student's Modern and Historical Atlas of the British Empire, by C. G. Robertson and J. G. Bartholomew,—Civil Engineering, by T. C. Fidler,—Monopolies, Trusts, and Kartells, by F. W. Hirst,—The Cotton Trade, by Prof. S. J. Chapman,—The Iron Trade, by J. S. Jeans,—A Junior Magnetism and Electricity, by W. T. Clough,—A New Junior Arithmetic, by H. B. Smith,—A New Trigonometry for Beginners, by R. F. D'Arcy,—An Elementary Text-Book of Inorganic Chemistry, by R. L. Whiteley,—Examples in Physics, by C. E. Jackson,—A Junior French Prose, by R. R. N. Baron,—Nouvelle Grammaire Française, and Exercises on the same, by J. G. Anderson,—A School History of Surrey, by H. E. Malden,—A School History of Middlesex, by V. Plarr and F. W. Walton,—and The Gospel according to St. Luke, edited by W. Williamson.

MESSRS. W. & R. CHAMBERS

are publishing Chambers's Effective Reciter, containing selections from George Meredith, Sir A. Conan Doyle, Anthony Hope, &c., edited by R. C. H. Morison,—A Bevy of Girls, Wilful Cousin Kate, and Dumps, all by L. T. Meade,—Shoulder Arms, by G. Manville Fenn,—Steady and Strong, stories by G. A. Henty, G. M. Fenn, John Oxenham, Louis Becke, &c.,—The Boys of Badminster, by Andrew Home,—Baby Birds, by Miss Parker,—The Girls of St. Gabriel's, by May Baldwin,—Crab Cottage, by Raymond Jacberns,—Chums in the Far West, by Everett McNeil,—Buster Brown Abroad, and Buster Brown and his Dog Tige, both by R. F. Outcault,—That Little Limb, by May Baldwin,—Foxy Grandpa Up to Date,—The Book of the Dog,—Pets,—Mammy's Li'l Chilluns,—Advanced German Grammar, by Dr. Aue, revised by Dr. Otto Schlapp,—Dr. Mackay's Plane Geometry, Practical and Mechanical, Part II.,—The Thorough Arithmetic, by William Woodburn,—Dr. Knott's Four-Figure Mathematical Tables,—Children of the Empire, Part II., by John Finnemore,—"Academy Shakespeare": Henry V., edited by D. M'Gillivray; As You Like It, edited by L. R. Boyd,—Chimes for Children, words and music by B. and R. W. Hawkins,—and The Business-Hand Copy-Books.

MR. ELKIN MATHEWS

announces: The Gods of Pegana, by Lord Dunsany, with illustrations by Sidney H. Sime,—King William I. the Conqueror: a Chronicle Play, by Arthur Dillon,—The Pastor of Wydon Fell, by A. M. Buckton,—The Little Mermaid, a play, by A. von Herder, with vignettes by Edith Calvert,—Shadow and Gleam, by Lilian M. Street,—Studies in Rhyme and Rhythm, by Charles F. Grindrod,—Ways of Verse, by Arthur Lewis,—Poems, by P. Wheeler,—Fancies, by H. A. W. Wood. The following in the "Vigo Cabinet" Series: Poems in Prose from Baudelaire, translated by Arthur Symons; Shadows, by Elizabeth Gibson; Sea Danger and other Poems, by R. G. Keatinge; An Hour of Reverie, by F. P. Sturm. And in the "Satchel" Series: The Fancy, a selection from John Hamilton Reynolds, edited by John Masefield, and illustrated by Jack B. Yeats; Admissions and Asides, by A. St. John Adcock. Also new editions of Admirals All, by Henry Newbolt,—The Poetry of Tennyson, by Henry Van Dyke,—and Dante: Six Sermons, by P. H. Wicksteed.

MESSRS. OLIPHANT, ANDERSON & FERRIER

announce: The Walk, Conversation, and Character of Jesus Christ our Lord, by Dr. Alexander Whyte,—St. Cuthbert's of the West, by R. E. Knowles,—The Village Artist, by A. M. Teskey,—St. Cecilia of the Court, by I. R. Hess,—The Rapture of the Forward View, by J. H. Miller,—The Moslem Doctrine of God, by S. M. Zwemer,—The Pen of Brahma, by B. M. Harband,—The Children's Own, by J. Aitchison,—Gospel Milk and Honey, by the Rev. C. Jerdan,—Take this Child and Nurse it for Me, by the Rev. B. J. Snell,—Eternal Elements in the Christian Faith, by the Rev. D. Butler,—Holy Himalaya, by the Rev. E. S. Oakley,—The Misty People of Skye, by J. A. MacCulloch,—Helpful Words for Daily Life, by Prof. S. L. Wilson,—A Thousand Miles in the Heart of Africa, by J. Du Plessis,—Catholic Ireland and Protestant Scotland: a Contrast, by Michael J. F. McCarthy,—Margaret, Queen and Saint, by J. B. Mackie,—Christ's Ministry of Good Cheer, by J. Coomos,—Kenneth S. MacDonald, by J. M. Macphail,—Gordon Ogilvy, by A. Smeaton,—Flats and Wyhola, by E. Everett-Green, and other books in the "Butterfly" Series,—and new editions of Warneck's Outline of a History of Protestant Missions from the Reformation to the Present Time, revised and edited by Dr. G. Robson; Hinduism and Christianity, by Dr. John Robson; and John Knox and his House, by C. J. Guthrie, K.C.

MESSRS. T. & T. CLARK

have in the press English Church History, 1509-75, by the Rev. Alfred Plummer,—Comparative Religion, its Genesis and Growth, by the Rev. L. H. Jordan,—The Growth of Christian Faith, by the Rev. G. Ferries,—The Christian Doctrine of Salvation, by Prof. G. B. Stevens,—The Use of the Scriptures in Theology, by Prof. W. N. Clarke,—The Philosophy of the Upanishads, by Prof. P. Deussen, translated by Prof. A. S. Geden,—James, the Lord's Brother,

by Principal W. Patrick,—Bread and Salt from the Word of God, by Prof. S. T. Zahn,—A Grammar of New Testament Greek, by Dr. J. H. Moulton: Part I., The Prolegomena,—The Book of Job, with introduction and notes by the Rev. J. Aitken,—and Hebrew Ideals from the Story of the Patriarchs, Part II., by the Rev. James Strachan.

MESSRS. TREHERNE & CO.

announce: Queer Things about Sicily, by Douglas Sladen and Norma Lorimer, illustrated,—Three Thousand Miles in a Motor-Car, by H. R. Maxsted, illustrated; and Through Brittany in a Motor-Car, by the same, illustrated,—Harry Furniss's Christmas Annual, with articles by Rider Haggard, Max Pemberton, George Bernard Shaw, G. R. Sims, Louis Wain, and others,—Children's Books: The Wallypug Book, by G. E. Farrow, with illustrations by Harry Furniss; Ten Little Jappy Chaps, by the same, with illustrations by John Hassall; The Hippopotamus Book, by Lily Schofield, illustrated: The Jack Book, by Dorothy Furniss, illustrated; What Nancy saw in the Rainbow, with text and drawings by Barbara Housman; No. 1 and the Others, text by J. H. Irvine, and illustrations by Jean C. Archer; and The House that Jack Built, drawn by R. Rigby and J. H. Myrtle.

Literary Gossip.

CAPT. ROBERT F. SCOTT'S account of his voyage towards the South Pole in the Discovery has been anticipated with considerable interest. Messrs. Smith, Elder & Co. will have the book ready on October 12th, in two volumes, with 260 full-page and smaller illustrations by Dr. E. A. Wilson and other members of the expedition, twelve coloured plates in facsimile from Dr. Wilson's sketches, panoramas, and maps. The writer's main object has been to produce material for the guidance of future voyagers. But he has endeavoured as far as possible to avoid technicalities, and his volumes, notably the portion describing the extended sledge journeys, are full of adventure.

MR. JOSEPH JOHNSON has written a critical and biographical appreciation of George Mac Donald, the proof-sheets of which he was passing through the press at the time of the poet's death. Sir Isaac Pitman & Sons are the publishers, and announce that a new crayon portrait of Dr. Mac Donald, reproduced in photogravure, will form the frontispiece to the memoir. It is written from personal knowledge, indeed, is the outcome of long friendship.

MR. UNWIN will publish before long a volume by Lord Hindlip, entitled 'British East Africa: Past, Present, and Future.' In this work, which contains a criticism of the administration of our Protectorate and a survey of its present conditions and prospects, the writer deals at length with the conditions of settlement that have hitherto obtained, and contends that they have been obstructive. The demands of colonists, the problems of the native, labour, and taxation, are discussed, and the country is described. There is also a chapter on the preservation of the fauna of British East Africa.

LUCAS MALET (Mrs. St. Leger Harrison), who is now residing at Eversley, where her father, Charles Kingsley, wrote some of his best-known works, is at present engaged on a new novel, which is to be issued by Messrs. Hutchinson & Co. early in the spring of next year.

THE new volume of 'Book-Prices Current,' which is the nineteenth, will be published immediately by Mr. Elliot Stock. This issue is notable as containing the record of an unusually large number of scarce and valuable books, as compared with recent years, which have been noteworthy for large rather than intrinsically valuable sales.

MR. UNWIN will announce the name of the winner of the prize in his "First Novel Competition" next Saturday, October 7th. The prize story will be published almost immediately.

MESSRS. ELLIS have in the press a bibliography of the writings of Rossetti, by his brother, Mr. W. M. Rossetti. The edition is limited to 250 copies.

NEXT week we shall insert an article dealing with the yearly output of books in Spain.

MISS WILLIS-SWAN is compiling a history of the quaint parish church of Chaldon, Surrey, with chapters on the families and rectors that have been connected with it from its foundation, about the year 800 A.D. The volume contains illustrations, and a description of the curious wall-picture called 'The Ladder of the Salvation of the Human Soul and the Road to Heaven.' This picture was painted in tempera, and was discovered in 1870 during the execution of some repairs. As an appendix, complete copies of the registers of Chaldon, copies of the clerks' accounts, and a valuable map of the parish will be given.

MR. R. K. WEEKES writes:—

"In your kind notice of my book 'The Fall of the Cards,' on the 16th inst., you say that the story 'is apparently American in its origin.' May I be allowed to say that the publisher's name is the only thing American about it? I myself am entirely English, and have never even set foot in the States."

C. D. writes as to Capt. William Symson's 'A New Voyage to the East-Indies,' 1715:—

"Mr. E. D. Ross is mistaken in supposing (*ante*, p. 211) that this book is not in the British Museum Library. A copy of this first edition is to be found there, and also one of the second edition, 1720, which is identical with the first excepting the title-page."

THE Cambridge University Press announce the publication, under the editorship of Mr. John G. Robertson, of *The Modern Language Review*. This will appear four times a year, in October, January, April, and July. An "Advisory Board" of sixteen names is attached to the scheme, which guarantees the best possible work. The first number, due in October, will include: 'Some Notes on the Comparative Study of Literature,' by Mr. Gregory Smith; 'English Translations of Dante in the Eighteenth Century,' by Dr. Paget Toynbee; 'Notes on Passages in Shelley,' by Prof. A. C. Bradley; 'The Authorship of the Songs in Lyly's Plays,' by Mr. W. W. Greg; 'Shakspeariana,' by Prof. G. C. Moore Smith; and 'A German Version of the Thief-Legend,' by Mr. J. Crosland. The paper will be open to short notes by contributors, and all longer reviews will be signed. We wish the scheme every success, and are glad to notice that "English language and literature will receive a large share of attention." A section on 'What is Believed' concerning this last little-studied subject might be both useful and entertaining.

THE Ven. George Hans Hamilton, Archdeacon of Northumberland and Canon of Durham, died last Saturday. He was educated at Shrewsbury School and Dublin University, and was successively curate of Sunderland, vicar of Berwick-on-Tweed, and Archdeacon of Lindisfarne. His 'Church of Ireland' had reached a twenty-fifth edition in 1868.

AMONG the lectures announced by University College, London, are a course on 'Advanced Psychology,' by Prof. G. D. Hicks, beginning on October 10th; a laboratory course in experimental psychology, by Mr. W. McDougall, beginning on October 11th; and 'Comparative Law,' by Sir John Macdonell, who begins his course on October 31st, and will deal with some recent changes in international law.

Macmillan's Magazine, which is the oldest of the shilling monthlies, will join the ranks of the "sixpennies" in the November number. The new series will contain as many pages as the old, but the type will be larger and clearer, and the double-column page will be discarded. Each number will be printed on thin paper, so as to be within the penny postage, and will contain a list of the recent and forthcoming publications of Messrs. Macmillan with notes.

THE demise of *Longman's Magazine*, which is announced in the October number, is a sign of the times. An 'Editorial Note' explains that

"the reproduction of drawings and photographs has called into existence a number of magazines and papers depending largely upon their illustrations. Competition for the patronage of the sixpenny public has become very severe, and the mere endeavour to keep up a high literary standard is nowadays not sufficient."

LAST Sunday died at his rectory of Wootton Rivers, which he had held since 1860, the Rev. William Jackson Brodribb. He was sixth classic in 1852, and did a considerable amount of learned journalism. He will be chiefly remembered for the translation of the works of Tacitus which he published in collaboration with the Rev. A. J. Church. This is, on the whole, a satisfactory performance of a task of extreme difficulty.

PROF. ARMINIUS VAMBÉRY contributes an article on the projected Parsi Colony to the September number of *The Parsi*. We have more than once referred to this magazine, which has already made for itself a prominent place among the periodicals of India.

COL. COLOMB, author of 'The Cardinal Archbishop of Granada (1588) and the Spanish Armada' and 'For King and Kent (1648), a Romantic History,' is completing a prehistoric Egyptian romance, which he laid aside a few years ago.

THE compiler of the index to 'Book-Auction Records' should have been called Groves, not Grove, as it was printed in our last number.

AT the monthly meeting of the Board of Directors of the Booksellers' Provident Institution held on Thursday week last the sum of 104*l.* was voted to fifty-eight members and widows of members. Two

members were elected and one fresh application for membership was received.

THE death is announced, at the age of eighty-one years, of M. Amédée de Margerie, the *doyen* of the Faculté Catholique des Lettres of Lille, and at one time a professor at Nancy. He was the author of numerous books on philosophical and literary subjects, including 'La Philosophie Contemporaine' and 'La Fontaine Moraliste,' and also on religious history. His last work was a notice of one of his old friends, the Comte de Lambel. He was a great student of Dante, and translated the 'Divine Comedy' into French verse.

THE poet Ernst Scherenberg, whose death in his sixty-seventh year is announced from Eisenach, was best known as a writer of fine lyrics, but his political verses, collected under the titles 'Gegen Rom,' 'Dem Fürsten Bismarck,' &c., exercised considerable influence in their time, and went through numerous editions. Scherenberg was for many years engaged in journalistic work, and was editor of the *Braunschweiger Tageblatt* and of the *National-liberale Elberfelder Zeitung*.

THE death in his seventy-fourth year is also reported of Dr. Lamping, one of the most prominent Dutch journalists and politicians, and for many years chief editor of the *Nieuwe Rotterdamsche Courant*.

AMONG recent Parliamentary Papers is An Appendix to the Report of the Trinity College, Dublin, Estates Commission, containing the Evidence and Maps (*5s. 5d.*); also an important publication named under 'Science Gossip.'

SCIENCE

Electromagnetic Theory of Light. By Charles Emerson Curry, Ph.D. Part I. (Macmillan & Co.)

THE history of that theory of the nature of light which at present meets with general acceptance affords so admirable an example of scientific progress that it cannot be retold too often.

The electromagnetic theory originally appeared as a by-product of the researches of Clerk Maxwell on the electric field. The distinctive feature of the hypothesis put forward by that most brilliant of physicists consisted in the assumption that all circuits through which electric currents can flow must be closed—that a current cannot flow in one direction between two points without a precisely similar current flowing in the opposite direction through some other path; if the circuit cannot be completed in a conductor, it must be completed in the dielectric. From this simple and apparently obvious assumption followed, as a natural consequence, the proposition that it must be possible for periodic variations of electric and magnetic force to be propagated with a finite velocity through all non-conducting media. In regions free from matter this velocity would be the same as that already found experimentally for light in similar conditions; but the velocity in material media calculated for these electric disturbances did not invariably agree with those found for light in the same media. Moreover, these periodic variations or waves would be polarized, reflected, or refracted according to well-known optical laws. Maxwell had no hesitation in identifying the electric waves with light waves, but his work did not become widely known immediately, and his views received little support outside England until the publication of the famous researches of Hertz—in which the existence of the electromagnetic waves predicted by Maxwell was demonstrated experimentally—established them beyond reasonable doubt.

So remarkable a confirmation gave an impulse almost too violent to the new ideas, and since 1887 discussion has been less concerned with proving the validity of the theory than with reconciling experimental facts with it. A difficulty arose at once with regard to the discrepancy between the observed and the calculated values of the velocity in material media. An explanation was soon found in the properties of the molecules, each of which can absorb and emit rays of a particular frequency of vibration. This natural frequency differs for the molecules of different substances, and modifies profoundly the passage of light through a space containing them. Indeed, we find it surprising nowadays that there should be an approximate agreement in so many cases between the velocity of such very long waves as those to which Maxwell's calculations apply directly and that of the much shorter waves of visible light.

The study of these natural frequencies, which are those of the chief lines in the spectra of the molecule to which they belong, has led to many interesting results in the hands of Zeeman, Rubens, Drude, and others. It is now evident not only that all the phenomena may be explained by the electromagnetic theory, but also that it will aid us in determining the internal structure of atoms, and in breaking down the barrier that separated chemistry from physics.

Dr. Curry proposes to treat this theory in two portions; the first of these is before us, and deals with those parts that can be adequately described by the simple Maxwellian theory. Much of it is excellent, but the author has fallen into the error, only too common, of not confining himself within any definite limits. There is certainly need for a complete treatise on modern optical theory: the work of Drude is beyond all praise, but does not pretend to give more than the outlines of the subject, and much has been done since it was published. We hope that this need will be supplied by the second volume of Dr. Curry's work, but we fail to see what useful purpose the first can serve. All that is "electromagnetic" in it could be compressed into fifteen pages; no larger space is required to deduce the equations of wave motion from those of the electromagnetic field, and to prove the simple laws of reflection, refraction, and polarization. When these results have been established, the development of the laws of optics consists in the application of the theory of wave motion; electromagnetism has nothing to do with it. The work of Fresnel and McCullagh is as valuable as ever, though the assumptions from which their fundamental equations are deduced have been changed. Opening ten pages of Dr. Curry's book at random, on none of them did we find anything that might not have been written in pre-Maxwellian days.

Now there is no need for a treatise on what is improperly known as "physical optics." The works of Preston and Schuster treat the subject from the experimental side, and the recent work of Walker supplies the mathematical developments. Any justification for a new treatise on a branch of science so amply described could only be found in the addition of much new and valuable matter, or in the adoption of a wholly new treatment. The author himself suggests that the new portion may be irrelevant, and his treatment seems based almost entirely on that of Drude.

The first chapter is introductory; the second deals with spherical wave motion, and includes a considerable discussion of "secondary waves." Then follow polarization and interference, Huyghens's principle, treated exactly as in Drude, and diffraction. Here the author is unfortunately prevented by considerations of space from giving a full account of Sommerfeld's work. Reflection and refraction come next, and lastly, crystalline media. The discussion is entirely mathematical; only the briefest references are made to experimental results, and none at all to experimental arrangements.

The author's treatment is adequate for the most part, but we are not much impressed by it; his mathematics are heavy, of the "sledge-hammer" order, but they are stronger than his physics. Thus it is stated that the emission theory is discredited by the absence of a large quantity of momentum in a beam of light: the quantity of momentum would depend entirely upon the mass attributed to the particles; it might be as small as desirable. We are plunged into the usual confusion of explaining mechanics by ether, and then ether by mechanics. The distinction perpetually drawn between light and Hertzian waves is misleading; the longest "Reststrahlen" of Rubens and the shortest waves excited electrically only differ in wave-length by a factor of 10. The identification of Röntgen rays with secondary rays is very fanciful. It seems chiefly to rest on the remarkable statement that the intensity of the former rays decreases more rapidly than the inverse square law would predict; we can only imagine that the author is confusing the wholly different phenomenon of the absorption of Röntgen rays in air. Moreover, the laws of reflection, refraction, and polarization are wholly different for the two kinds of disturbances that Dr. Curry would connect. On p. 349 the author points out that the term "ray" is introduced to render conception easier, and then supplies a definition of a ray that can be of no value for this purpose.

On the other hand, we are glad to see that Dr. Curry recognizes that there are limits to the useful application of mathematics to physics; he refuses to investigate analytically the vanishing of the light vector at the origin, on the ground that a natural phenomenon occurring at a mathematical point is meaningless.

There is one department of physics in

which originality is certainly not desirable, and that is nomenclature. The book is not overburdened with novelty, yet we regret to see that the author thinks fit to give to what is generally known as "electric displacement," "induction," or "polarization," and to "magnetic induction" the names "electric" and "magnetic moments." Surely there are enough words in use for these vectors already. It is at least desirable that a scientific term should be used in a sense analogous in some degree to that of ordinary language; but what resemblance can there be between electric displacement and "moment," as the word is used in mechanics or in non-technical writings? Similarly, it is unfortunate to use the letters *D* and *M* for the constants always known in England as *K* and μ.

The examples are a useful feature of the work, and are mostly half worked out at the end of each chapter. The volume is well produced, and we have noticed only a few harmless misprints. But there is one damning fault—the absence of an index.

RESEARCH NOTES.

The note which M. Raphael Dubois has addressed to the Académie des Sciences (see the *Comptes Rendus*, 3 July, 1905) disposes effectually of Mr. Butler Burke's so-called "radiobes." In a summary of it—communicated to the *Revue des Idées*, and copied into *Le Radium* of the 15th of last month—M. Dubois tells us that

"les faits signalés en Angleterre, en ce qu'ils ont de fondamental, ont été annoncés par moi l'année dernière dans deux communications à la Société de Biologie. Dans une des séances de la Société, j'ai même présenté des photographies des corps organisés que M. Burke appelle 'radiobes' à divers degrés de leur évolution. J'ai développé mes idées dans le discours que j'ai prononcé le 3 Novembre dernier.....et aussi, un peu plus tard, dans la *Revue des Idées* (15 Mars, 1905)."

M. Dubois further says that he has tried the same experiment with chloride of barium, which is *not* "radiferous"—at least that is the way I read his words—and that it has produced exactly the same bodies, which he prefers to call "éobes." This announcement destroys Mr. Burke's pretensions to priority either of discovery or of publication, and makes it clear that radio-activity has nothing to do with the phenomenon. One would be glad to think that Mr. Burke had not this note before his eyes when he so cavalierly alluded in his *Fortnightly* article to the remarks made by M. Raphael Dubois "in abstracting my work for the *Revue des Idées*." In any case, it is to be hoped that we have heard enough of "radiobes." The ignorant clamour raised about them in the press, with, at any rate, the approval of their self-styled discoverer, has been most deplorable for the credit alike of British science and of the Cavendish Laboratory, of which more than one foreign journal has hailed Mr. Burke as "Director."

Meanwhile, researches into the nature and cause of cytogenesis have been proceeding under the care of trustworthy investigators, and everything seems to point to the conclusion that it is the union of some mineral salt with one or more colloids which first makes inorganic matter "viable." M. Raphael Dubois finds that, besides radiferous and non-radiferous chloride of barium, chloride of manganese will produce "éobes" in gelatine, though apparently of a different and less organized form than those first discovered by him. So Dr. Loeb, of Chicago, in his noteworthy experiments on the parthenogenesis of Asteria, found that a solution of the same salt could with advantage replace sea-water, in which it is found in only infinitesimal quantities. M. Icovesco also finds that the evolution of oxygen in catalysis by organic colloids produces a succession of phenomena which seem oddly to resemble the formation of membrane—a hint of which we may hear more later. In this, as in the experiments of M. Stéphane Leduc and of Dr. Le Bon, previously noted here, we are, of course, very far from anything like a proof of spontaneous generation. In other words, the reactions noted appear to make inorganic matter fit for life, but there is as yet no proof that they make it living.

The Alpha rays of radium, now generally identified with the "positive" electrons of a year ago, are beginning to receive some of the attention lately showered upon their negative congeners. M. Becquerel, in a communication to the Académie des Sciences, reaffirms his belief that the pencil of Alpha rays behaves as if it were homogeneous, and that all its particles are equally deviable in a strong magnetic field, his proof resting on photography. Prof. Bragg and Mr. Kleeman (both of the University of Adelaide) in a noteworthy article in *The Philosophical Magazine* give a series of experiments showing that the Alpha particle, when just discharged, passes through the atoms of all bodies it meets, whether in the solid, liquid, or gaseous state, without suffering any deflection. The loss of energy which eventually brings it to a standstill is, they say, chiefly caused by its work in forming ions on its passage, and the variation in conductivity which sometimes occurs in ionized gases is due to the fact that the ions cannot always get free from the molecule in which they are made. They also quote with approval the suggestion of Lothar Meyer, in his 'Kinetic Theory of Gases,' that the atom has a disk-like form, and can only make ions on its edge. Hence if the Alpha particle strikes it anywhere except on the edge of the disk, it passes through it without loss of energy. It should not be forgotten in this connexion that the Alpha rays form the greater part of the emission from radium, and that, in the opinion of Prof. Rutherford and Mr. Barnes, virtually the whole heating effect of radium is due to the bombardment of matter by them.

Two remarkable experiments have been recorded within the last month. One, on the effect of an electric charge upon the speed of light, is detailed by Prof. Worthington in the periodical last mentioned. By an ingeniously devised apparatus he succeeded in passing the light of a mercury-vapour lamp through two long and similar tubes carrying charges of high and low potential respectively. According to certain theories, the passage of the light should have been retarded by the charge of high potential. But the experiment enables its author to say that under a charge of 60,000 volts the retardation, if any, must be less than a fifty-third part of a millionth of a centimetre within a given period of time. It would be interesting to see this repeated in the case of sunlight. The other is described by M. Turpain in the *Comptes-Rendus* of the Académie des Sciences, and shows how, by employing a revolving mirror, with the axis set at an angle of 45 degrees to the pencil of light cast by a plane mirror, a direct and a reflected image can be made to fall at the same time on a photographic plate. This can be used, as he says, for the study of a "luminous phenomenon of varying intensity," such as, for instance, an electric spark. It is obvious that, if this be so, it could be made a crucial test of the objective existence of the N rays.

Another very interesting experiment was shown at the general meeting of the Société Hollandaise des Sciences in May last, and is described in the *Archives Néerlandaises*. Dr. Einthoven's string galvanometer, which has been several times alluded to in these Notes, is, it appears, in constant use in the hospital of the University at Leyden for the purpose of taking what its inventor calls "electro-cardiograms," or curves showing the heart-beats of patients. But the instrument is difficult to set up, and still more difficult to transport safely, while its appearance, by terrifying patients unused to it, is apt to falsify its own indications. By an ingenious system of connexions, however, Dr. Einthoven succeeded in coupling it, without removing it from his own laboratory, at once with the patients to be exhibited and with the projection lantern in the theatre where the meeting was held. Hence, while the patients remained comfortably in bed in their own wards, the curve formed by the heart-beats of each was exhibited on the screen in the theatre to illustrate the lecturer's remarks.

F. L.

Science Gossip.

The Chemistry Department of University College, London, announces some lectures which are likely to attract wide interest—by Sir William Ramsay on 'The Inactive Gases of the Atmosphere,' beginning on October 17th. Two days later he also starts a course on 'The Physics and Chemistry of Colours.'

The death, in his sixty-ninth year, is announced from Berlin of Dr. W. von Bezold, Professor of Physics and Meteorology at the University, and Director of the Meteorological Institute. He did much valuable work in the investigation of problems connected with electricity, and was the author of several important books—'Die Meteorologie als Physik der Atmosphäre,' 'Über Wolkenbildung,' &c.

A Parliamentary Paper of unusual width and price (8s. 9*d*.) is that entitled 'Fishery Board for Scotland, Report on Investigations conducted in co-operation with the International Council for the Exploration of the Sea,' under the superintendence of Mr. D'Arcy Thompson. The Report contains a great deal of Norwegian work. Prof. Nansen is in charge of the central laboratory of the International Council, which is at Christiania, and is in receipt of a subsidy from Norway. It appears from the map that the Aberdeen fleet fishes on the coast of Norway. The Scotch are more adventurous than the English or Irish fishers, who let the French catch our fish. In the Scilly Islands the police notices are posted in French, on account of the number of the French fishermen who fish where the British and Irish seas meet.

The 'Rapport Annuel' on the Observatory of Paris for 1904, which was presented to the Council on the 11th of last March, comes to hand somewhat later than usual. M. Lœwy begins by chronicling the sad news of three deaths—those of M. Callendreau and M. Barré in the months of February and June, 1904, and of M. Paul Henry on January 4th, 1905, just as the 'Rapport' was being printed. Two prolonged absences from ill-health have also contributed to the necessity of special energy in completing the programme of work for 1904. The volumes for 1901 and 1902 having been cleared off, much time has been devoted to the new great catalogue of stars; and the proposed determination of the solar parallax by observations of the small planet Eros has also occupied much attention. The improvement of other important data could not be neglected; and in particular M. Bigourdan's observations of nebulæ with the equatorial of the east tower were temporarily interrupted in order to prepare the instrument for the determination of the absolute constant of aberration by M. Lœwy's new method. The work for the astrographic catalogue has made good progress; and all regular departments of observation have been systematically continued. The large photographic

atlas of the moon approaches completion; but delay has occurred in producing the eighth fascicule, the work for which was finished in 1904. A study of the plates seems to throw light upon the question of the solidification of the bodies of the solar system, making it probable that this took place in the moon, and inferentially in the planets, from the surface towards the centre.

The moon will be full about an hour before noon (Greenwich time) on the 13th prox., and new about five o'clock on the morning of the 28th, a few hours after being in perigee. The planet Mercury will be at superior conjunction with the sun on the 12th. Venus is a morning star, and will move during next month from the contellation Leo into Virgo, passing very near β Virginis on the 18th, and near the moon on the 26th. Mars is in Sagittarius, and sets about nine o'clock in the evening; he will be in conjunction with Uranus on the 8th prox. Jupiter is brilliant in the evening, situated a few degrees to the north-west of Aldebaran. Saturn is in the constellation Aquarius: on the meridian at nine o'clock in the evening on the 6th prox., and at eight o'clock on the 21st.

Mrs. Fleming has discovered that the star B.D. +27°.623 in the constellation Taurus is a variable of the Algol type. When at normal brightness it has the photographic magnitude 7·14, being brighter than the adjacent double star +27°.618, the magnitude of which is 7·5. At intervals of 2·77 days its light is reduced to the eleventh magnitude, thus giving it a range of nearly four magnitudes, which is much greater than that of any other Algol star yet discovered. It is not far to the north-east of the Pleiades, and will be reckoned as var. 102, 1905, Tauri; and, owing to its brightness, it has been found registered on no fewer than 572 photographs, from November 11th, 1885, to April 6th, 1905.

Madame Ceraski, examining photographic plates taken by M. Blajko at the Moscow Observatory, has discovered a variable, to be called var. 105, 1905, Camelopardalis. Its magnitude changes between 8·4 and 9·2, with a period which cannot yet be fixed, but is probably short.

MEETINGS NEXT WEEK.

Mon. Society of Engineers, 7½.—'Machine Drills for Hard Rock,' Mr. A. H. Smith.
Wed. Entomological, 8.—'The Blind Coleoptera of Australia and Tasmania,' Mr. A. M. Lea.

FINE ARTS

OUR LIBRARY TABLE.

English Table Glass. By Percy Bate. (Newnes.)—The author is very enthusiastic, and has much knowledge of his subject, and his guide-book will be a welcome help to the large body of students of an attractive subject. Moreover—and this is unusual—he is most generous in his expressions of gratitude to those to whom he is indebted for encouragement or assistance.

Although at first sight beginners might think that Mr. Bate is a little too involved, and his book not so simple as a guide-book should be, a careful study of his pages and of the admirable series of 254 photographic illustrations will convince them that this tasteful and pleasantly written volume contains indeed a vast amount of information not dreamt of in the philosophy of ordinary collectors of old English glasses.

We rarely find Mr. Bate at fault, and we make the remarks which follow rather with the view of saying another word on a point of much interest in glass-making than with any idea of captious criticism. In the study of English eighteenth-century stemmed glasses—the "Stengel Gläser" of Germany—it is desirable to have knowledge of those made during the same period on the Continent, on account of the intricate interchanges as regards vessels, fashions, and workmen. Thus—without going now into technical details, for which we have not the space—we consider that Mr. Bate's Nos. 48 and 83 are derived from Holland, and that No. 86, probably with a "ring" like English "metal," and very different from Dutch examples, is of Liège make. In this matter, unlike Mr. Bate, we are in agreement with Mr. Hartshorne's conclusions. Similar methods of manufacture would produce great similarity of stem in English and continental glasses, and we consequently take it that Mr. Bate's new classification by stem is far from being sound, particularly as regards the opaque white twisted stems. In English stemmed glasses the bowl presents far greater individuality and variety than are found in specimens from abroad, and it is, therefore, a more trustworthy feature for classification than the standard.

No doubt the time has arrived when a comprehensive international exhibition of old glass should be held in London. And only in this way can the characteristics or peculiarities of the glasses of the different countries be made manifest. It would be a fascinating show.

Mr. Bate has been led sadly astray in describing a glass, No. 224, engraved DE NEGOTIE ANNO 1772. The form of the vessel at once marks its Dutch origin, NEGOTIE simply meaning *Trade*, the glass being one in which success to trade was drunk. It was, in fact, one of the Wel Waaren series, of which the glasses inscribed T'LANDES WEL WAAREN, DE GOEDE VRINT-SCHAP, &c., are examples. How Mr. Bate can have accepted this "cryptic inscription" as marking the liberation of the fugitive slave Somerset in 1772, and the inscription engraved by the diamond point—the special Dutch method—as done at the order of a Bristol Quaker, and "commemorating a notable step in the anti-slavery crusade," we are at a loss to imagine. The book has an excellent index, but it is odd and inconvenient to find it paged at the bottom instead of in the usual place.

Filippino Lippi. "Newnes' Art Library." (Newnes.)—We have already commended the idea of these albums of reproductions of the works of great masters. And they are, in effect, good enough to make one wish they were better. Unfortunately, the Germans have lately established in the series of "Classiker der Kunst" a standard of excellence, of which the albums of Messrs. Newnes fall very far short. The aim should be in the first place to include every work of the master, and in the second to include doubtful works in a separate appendix. Now in the work before us there are inserted a number of pictures which no responsible critic would now give to Filippino Lippi, such, for instance, as the 'Virgin and Child with St. John' of the National Gallery, or the three 'Adorations of the Magi' in the same gallery, which are all either by Botticelli or his immediate circle. On the other hand, the omissions are serious, and, we think, gratuitous. It would, for instance, have been a real boon to students to reproduce—and that we believe for the first time—the marvellous allegories at Christchurch, Oxford. Then Mrs. Warren's tondo is of first-rate importance, while the two tondos of the Annunciation at San Gemignano are among the best things of the artist. These are not even mentioned in the list of works.

Livraisons 6 and 7 of *L'Art Typographique dans les Pays-Bas, 1500–1540* (The Hague, Nijhoff), have appeared. The types illustrated are principally from Amsterdam, Antwerp, Leyden, and Louvain. Among them are some fine woodcuts. Three facsimiles of early Greek type are given: one from De Keizer, of Antwerp (1528), and two from Louvain, Theodoric of Alost (1516) and Rutger Rescius (1536); the latter is leaded. A curious italic letter is used by Lambrecht of Ghent in 1536, of homely design. The woodcuts figured are of great interest, and show in many cases an independent development on good models. The reproduction of the various printers' marks is a useful feature of this work.

EXHIBITION OF EGYPTIAN ANTIQUITIES AT LIVERPOOL.

The exhibition of antiquities discovered last winter by Mr. Garstang and Mr. Harold Jones at Hieraconpolis and Esneh was duly opened by the Earl and Countess of Lathom on Friday week last at the University Institute of Archæology at Liverpool, and will remain on view until the 14th of next month. The objects shown range from pre-dynastic to late Roman times, and, although not very numerous, are of great interest. Among the earliest in date is a fragment of pottery bearing the *srekh* or cognizance of Narmer, without either the hawk or the *mer*-sign, the inscription having been roughly incised before the vessel was baked. There are also from the same stratum at Hieraconpolis a pot in singularly perfect condition, and of most peculiar form, rather resembling a modern teapot with down-turned spout, and a fine black-and-red vase with pointed base. A large stone hammer, excellently worked, and the fragment of another of great finish and polish, may well go back to neolithic times. Of the same provenance are some beautiful and unusual necklaces—one of baked clay beads, another formed of small cylinders of carnelian, and a third of shells of helical form. A fragment of a large black granite vase may also be of the same period; while there are shown some neolithic hairpins and an ivory spoon with a most artistically carved handle, with the fragment of a figurine bearing the archaic sheath or braguette in unusually perfect condition. From Esneh we notice an extremely handsome shallow cup or tazza in what is said to be blue marble, with handles formed of the heads of geese, their bodies being grouped round the small raised disk which forms the base. Its workmanship apart, this is a curious example of the pains taken by the artist to decorate even those parts of the object which would necessarily be out of sight when in use. There is also an alabaster vase from the same find of exactly the shape of a modern egg-cup, though of slightly larger size. These both appear to be of about the twelfth dynasty, as is a wand much resembling the magic ivories or phylacteries discovered at Thebes and elsewhere, having, like them, a jackal's head at the point, but bearing no inscription or figures. Some mummied rams' heads were also found here, together with an ostracon bearing a note of their number and a description in hieratic. Among a great many dated objects may be mentioned a beautiful life-sized head in black granite, which is assigned by Mr. Percy Newberry to Thothmes III., and a stele of the Ankh-en-nut (dweller in town—or citizen?) Mentu-heteps, son of one Dehusenb and the Lady A-ab. There is also a stele containing a prayer to the triune god Ptah-Seker-Osiris for the *ka* of Ab-aa, who is described as a doctor, probably of laws. Both these steles can be assigned to the thirteenth dynasty.

The exhibition, of which the objects which we have mentioned form only a small part, is fairly representative, and both Mr. Garstang and the subscribers who furnished him with the funds for his excavations are to be congratulated on the result. It is a pity that no catalogue of the exhibition is issued, for the exhibits, after the 14th prox., will be distributed to the subscribers. Although many of them, as, for instance, Mr. Hilton Price and the Rev. William MacGregor, have always been most generous in showing their collections to authorized scholars, yet the tracing alike of the

destination and the provenance of any special object is not always possible after dispersion. It is to be hoped that this defect will be amended next year.

Fine-Art Gossip.

The "Society of 25 English Painters" are holding their first show on Thursday next at the Dowdeswell Galleries.

Messrs. H. Graves & Co. invite us to the private view of landscapes in oil by E. Cavé at 6, Pall Mall, next Monday. They are also exhibiting engravings printed in colours after the eighteenth-century method.

The Black Frame Sketch Club are holding their annual exhibition at the galleries of the Royal Society of British Artists in Pall Mall from October 2nd to 14th.

Mr. C. A. C. Jeffcock will have water-colour drawings on view at the Modern Gallery also from October 2nd to 14th.

The Royal Scottish Society of Painters in Water Colours opened their exhibition at Glasgow to the press yesterday.

The frontispiece of *The Burlington Magazine* for October is a photogravure of Metzu's 'Letter Reader,' which is compared by Prof. C. J. Holmes, in an article on 'The Use of Japanese Art to Europe,' to some specimens of that art also reproduced. Mr. Herbert Horne publishes, with an account of its history, an altar-piece painted by Baldovinetti for the church of St. Ambrose at Florence, which he has recently discovered in the sacristy of that church. Dr. W. Martin continues his series of papers on 'The Life of a Dutch Artist in the Seventeenth Century,' and Miss Cecelia Waern begins some 'Notes on Mediæval Palermo'; while Mr. Egerton Beck continues 'Ecclesiastical Dress in Art.' Father Herbert Thurston publishes some eighteenth-century drawings, now in the British Museum, of two works of art (made for two Popes) which were melted down in 1797. In the American section Mr. William Rankin writes on the early work of J. S. Copley; and the other articles include a review of the art sales of the past season, and the first part of a treatise on 'The Classification of Oriental Carpets.'

An exhaustive bibliography is announced under the title of 'The Whistler Compendium.' It is compiled by Mr. S. D. Shallard, and is about to be published by Messrs. Otto Schulze & Co., of Edinburgh. The edition will be limited to 500 copies, and includes a list of 130 exhibitions in which Whistler figured from 1859 to 1905. There will be references to more than five hundred articles in periodicals, English, American, and continental.

The death is announced from Berlin of the talented young portrait and figure painter Meyer Lüben.

The death a few days ago, after a long illness, is announced of the eminent Italian architect Giuseppe Zacconi, at Pistoia, in Tuscany, in a *maison de santé*. The Italian journals publish long obituaries, describing him as one of the most distinguished of modern Italian architects. His great work was the monument to Victor Emmanuel II. at Rome, which, after many years' labour, is not yet finished.

MUSIC

Musical Gossip.

The incidental music written by Mr. Edward German for the dramatic fantasy 'The Conqueror,' produced at the Scala Theatre last Saturday, is excellent of its kind. Everything—overture, songs, choral and melodramatic strains—is kept within proper bounds. We never feel that the music is there for its own sake. There is a very natural tendency in composers to make much, and at times too much, of their art under similar circumstances; hence the merit of this music. The songs sung by Amoranza and her maid Evadne are tasteful and piquant, and, though appropriate in their place, will well bear transplanting to the concert platform. The dainty scoring of these two numbers adds much to their effect.

Mr. Cecil Forsyth's new orchestral work, 'Four Studies from Victor Hugo,' was produced at the Promenade Concerts last Saturday evening. The Studies bear the following superscriptions: Jean Valjean, Cosette, Fantine, and Gavroche. There is no need to read through the French poet's novel of interminable length to catch the meaning of the various sections. The headings indicate moods and the sources whence the composer sought inspiration; the music is perfectly clear in itself. The work is clever and interesting, and we are glad to hear that it is to be repeated next Thursday. It would be well if similar treatment were extended to other British novelties.

Herr Richard Strauss will conduct his 'Domestic Symphony' at the first Symphony Concert at Queen's Hall on November 4th. The programme will include Bach's sixth 'Brandenburg' Concerto, which "it is believed has not been played in this country before." Mozart will be strongly represented at the second and third concerts, November 18th and December 2nd. Beethoven's Ninth Symphony, with chorus, will be given March 3rd; also Strauss's 'Taillefer,' for soli, chorus, and orchestra, for the first time in London.

At the Albert Hall Sunday Concerts, which commence on October 8th, the conductors of the London Symphony Orchestra will be Señor Arbos, Dr. Cowen, Messrs. A. W. Payne, A. Randegger, and Landon Ronald, also Mr. Ivor Atkins and Drs. Herbert Brewer and G. R. Sinclair (the organists of Worcester, Hereford, and Gloucester, also festival conductors of the Three Choirs in those cities). Mr. Henry J. Wood will, as already announced, conduct the Queen's Hall Orchestra, which appears alternately with the one named above.

The second series of Popular Concerts for Children and Young Students will begin at Steinway Hall on October 14th. The half of each programme (from thirty to forty minutes) will be devoted to the works of one composer; at the first concert Beethoven will be represented. The aim of these concerts is excellent, and we are glad to find them continuing.

Mozart's 'Grand Mass in C minor' is to be performed at the forthcoming Bristol Festival. The composer did not complete the work, but that task was undertaken by Alois Schmitt for the first performance given of it by the Mozart Verein at Dresden in 1901. The 'Kyrie,' 'Gloria,' 'Sanctus,' and 'Benedictus' are all Mozart's, but only a portion of the 'Credo'; the 'Agnus Dei' was not even sketched. The 'Credo' was completed with the help of some of the composer's sacred music; for the 'Agnus' the music of the opening 'Kyrie,' as in the case of the 'Requiem' completed by Süssmayer, was used. The vocal score has been published by Messrs. Breitkopf & Härtel.

The eleventh season of symphony concerts at the Winter Gardens, Bournemouth, begins on Thursday next. There will be in all thirty, one every week. Mr. Dan Godfrey gives a long list of works to be performed for the first time, and British composers, as usual, are well represented. Sir A. Mackenzie, Drs. F. H. Cowen and Charles Maclean, and Messrs. Granville Bantock, Harry Farjeon, Edward German, George Halford, Arthur Hervey, Coleridge Taylor, and William Wallace will conduct their own works. Among works of foreign composers we note a Fantasia for Piano and Orchestra by Schubert, which is evidently Liszt's arrangement of the so-called 'Wanderer' Fantasia for pianoforte; it ought, therefore, to have been announced as such.

The grand organ at Queen's Hall has been for several months in the hands of the builders, Messrs. Hill & Son, for cleaning and repairs. This afternoon Dr. W. B. Ross will perform on it the solo part of Boellmann's Fantaisie-Dialogue for organ and orchestra, also solos by Guilmant and Grison.

A brass in memory of Alfred James Hipkins has been placed in St. Margaret's Church, Westminster, in "recognition of his lifelong services to the art and science of music." It is the work of Sir L. Alma Tadema, and a worthy memorial of a man who not only served his art well, but also loved it. Though a man of learning, he made no parade of it.

Performances next week.

Sun. Sunday Society Concert, 3.30, Queen's Hall.
— National Sunday League, 7, Queen's Hall.
Mon.-Sat.—Promenade Concerts, 8, Queen's Hall.
Sat. Herr Kubelik's Violin Recital, 3, Queen's Hall.

DRAMA

THE WEEK.

Scala.—*The Conqueror: a Dramatic Fantasy in Four [Five] Acts.* By R. E. Fyffe.

Did any interest attend the question of the scene and period of the action of 'The Conqueror,' we might be safe in putting both in the times (whatever those were) of Fingal. Morven, the name of the hero of the new drama with which Mr. Forbes Robertson has opened the Scala Theatre, suggests the realm of the Ossianic writings, and the character of the hero, with its combination of valour or bloodthirstiness and sentimentality, may trace its paternity to Macpherson. Whatever its source, the drama itself might be inspired by La Motte Fouqué, and seems to pride itself in such a pedigree when it is described as a fantasy. Whatever importance it can claim is assigned it by the performance of Mr. Forbes Robertson, our first and perhaps only exponent of chivalric and romantic character. Unfortunately the piece is inconsiderable both as poetry and drama. A couple of generations ago our stage was flooded with pieces written in blank verse in imitation of the Elizabethan and Tudor dramatists. Few, if any, of these survive, though a few of them held the stage for a while, and some of them, like the best of Sheridan Knowles, are embalmed in the memories of older playgoers. Most modern blank verse deserves Pope's appellation of prose run mad, or that later and subtler, though jocose, description of "prose and worse." Literary merit is but a secondary consideration in the selection of an acting play, but it is difficult to understand why a theatre aiming at the highest has no one with an elementary knowledge of what is and is not poetry and literature. As the work of R. E. Fyffe is, so far as we are aware, unprinted, and as the delivery of all but one or two actors failed to transmit it across the footlights, we are unable to say more than that we could trace nothing of inspiration. The story told is not easily conceivable. We are presented with a warrior, Morven, to wit, who has

XUM

some attributes of a soldier of fortune, but makes war apparently on his own account and with purely predatory aims. In the course of sacking a city he meets with a little girl of ten years old whom his sword fails to appal. Fruit so immature is little likely, it might be thought, to appeal to the palate of a seasoned warrior. Morven, however, divines in her the coming beauty, and, with less knowledge of feminine possibilities than we expect in him, sends her to one of the remotest and most picturesque of his castles to ripen until she is a fit morsel for the mouth of a hero. After ten years thus spent, he comes to claim her, evidently expecting to find her ripened, but in other respects the same as before. A study of Boccaccio, who had not then written, might have taught him better. When he arrives at the castle he finds his place occupied. At first he breathes fire and slaughter. But so deeply have her infantile charms and promise moved him that he surrenders all for her, and, having made her happy with her new lover, dies of heart-break. Heroes of this stamp and mettle are indeed uncommon, and we know not where to seek a predecessor for so self-denying a leader. Mr. Forbes Robertson presents Morven in matchless style. The better he acts, however, the less contented are we to see him in characters of the kind. When will he get, we ask, a part worthy of his high reputation and his pre-eminent gifts? *Non tali auxilio* will he take the place in which we long to see him. Miss Gertrude Elliott was delightful as the heroine, who, of course, is perfectly natural, though the more gracious female characters are all a little too skittish. Other parts are well played, and the music, the scenery, and general environment are beyond praise. As a spectacle nothing is wanting; but the piece is unworthy of Mr. Robertson.

COURT. — Afternoon Performance. — *The Return of the Prodigal: a Comedy in Four Acts.* By St. John Hankin.

THE new piece of Mr. St. John Hankin, given in tentative fashion at the Court Theatre on the 26th inst., and announced for repetition on half a dozen subsequent afternoons, is void neither of novelty nor ingenuity. It is uncertain and inconclusive in workmanship, and more than a little cynical in tone. These are, however, venial faults, and the whole occupies a respectable position in modern dramatic effort. A failure in all respects, Eustace Jackson, a ne'er-do-weel, returns to the domestic hearth after a short career in Australia, in the course of which he has dissipated a very moderate portion, and manifested an unconquerable aversion from hard work. His arrival is singularly inopportune, since it interrupts and embarrasses schemes of social and political advancement on the point of being realized by his father and his elder brother. Trading on his knowledge of their snobbery and his own worthlessness and shamelessness, he establishes a system of domestic *chantage*, and is, in the end, bought off by relatives who think a few annual hundreds a small sum to pay as the price of his disappearance. The piece shows invention and observation. We feel, however, that the ingenious devices to which the returned prodigal resorts are insignificant, since his unblushing impudence renders any use of them superfluous. Some satire upon modern society is clever and humorous. Many of the characters are at once conventional and out of date, and the action seems rather laboriously excogitated. The whole hits, however, the public taste, and may be seen with amusement. In the part of the prodigal Mr. A. E. Matthews follows rather closely the method of Mr. Charles Hawtrey. Mr. J. H. Barnes gives a good picture of an enriched and ambitious tradesman.

Dramatic Gossip.

AT the close of Monday night's performance of 'Oliver Twist' Mr. Tree announced that the discovery of a structural defect in the theatre necessitated a suspension of the performances. On the following day, accordingly, the piece was removed to the Waldorf Theatre, at which it will be given for a time until the necessary alterations are made in the old house.

MR. TREE has accepted from Mr. Louis N. Parker a blank-verse play on the subject of Joan of Arc, the heroine of which will be played, presumably at His Majesty's, by Miss Viola Tree.

SIR HENRY IRVING will shortly give in Sheffield 'King René's Daughter,' with Miss Edith Wynne-Mathison as Iolanthe. We know not if this announcement means that the rendering thus named, by Sir Theodore Martin, from the Swedish of Heinrik Herry, in which Lady Martin (Miss Helen Faucit) played at the Haymarket, July 6th, 1855, will be substituted for 'Iolanthe,' by W. G. Wills, in which Miss Terry appeared at the Lyceum on May 20th, 1880.

MR. PINERO has selected Miss Irene Vanbrugh as the heroine of the new play, now all but finished, in which at Christmastide Mr. George Alexander will, it is anticipated, return to the St. James's Theatre. This announcement casts doubt upon mysterious statements that have been disseminated concerning Miss Vanbrugh's American engagements.

'THE BEAUTY OF BATH' of Messrs. Henry Hamilton and Seymour Hicks will succeed the revival of 'Bluebell in Fairyland' at the Aldwych.

'AN ANGEL UNAWARES' was withdrawn on Saturday from Terry's Theatre, to which on Monday Mr. Weedon Grossmith transferred 'The Duffer.' With the latter piece was given a monologue by Mr. Frank Curzon.

'PUBLIC OPINION' is the title fixed on for the new play by R. C. Carton, to be produced next Saturday at Wyndham's.

AT the Coronet 'An Ideal Husband,' by Oscar Wilde, has been revived, with Mr. Edward O'Neill as Sir Robert Chiltern.

DR. P. M. CHAPMAN writes :—

"I have but just returned from Paris, and notice a letter in *The Athenæum* of September 2nd, in which the writer says: 'Patelin himself has now disappeared from the boards. During long sojourns in Paris I have never seen the play in the bills either at the Français or at the Odéon.' If it is of any interest, I may say that I saw 'La Vraie Farce de Maître Pathelin' last week at the Français, and that I found it extraordinarily amusing. It was, of course, acted most brilliantly, especially by Leloir and Madame Kolb."

LITERATURE

SPANISH LITERATURE.

THE TERCENTENARY OF 'DON QUIXOTE'

In the bibliographical chronicle of the last twelve months publications issued in connexion with the tercentenary of 'Don Quixote' must occupy the first place, not only because of their number and (in some cases) their importance, but also because they deal with a subject of peculiar interest to foreign readers. And, first of all, let me note a curious circumstance not easily explained. There are in Spain reviews—not many, but still some—which count among their contributors the leading representatives of our national culture. It might have been expected that these reviews would observe the tercentenary by publishing special numbers entirely devoted to Cervantes and 'Don Quixote.' The opportunity was neglected. No doubt, either during the tercentenary, or before or after it, every review published an article on the event; but these essays were lost in a maze of articles on other topics, and were not important enough to convey the idea that the review was celebrating the three-hundredth anniversary of a world-famous classic. The *Revista de Archivos, Bibliotecas y Museos* is, however, a distinguished exception, for it issued an interesting special number containing a lecture by Menéndez y Pelayo, a bibliography of Spanish publications produced on the occasion of the tercentenary, and various documents referring to 'Don Quixote.' The very full bibliography compiled by Señor Cotarelo is a most useful guide to Cervantistas, though it lacks critical notes, which, in any case, could not have been provided in the limited time available. Among the documents is one which proves how speedily the fame of Cervantes's book spread in Germany: from this we learn that the figure of the Ingenious Gentleman of La Mancha was introduced at jousts and courtly festivals.

CRITICAL STUDIES

Menéndez y Pelayo's 'Discurso,' to which I have already alluded, was read by its author at the special session of the University of Madrid on May 8th, and is unquestionably the most complete, judicious, and adequate contribution which Spain has made to the literature of the tercentenary. For this kind of composition Menéndez y Pelayo has exceptional gifts: a perfect mastery of the matter from the historical and literary point of view, delicate artistic taste, and a style which I do not hesitate to describe as superior to Valera's—more varied, more vitalizing, more pregnant and thrilling, and yet of a natural fluency, untouched by rhetoric, which produces all the effect of oratory. The author's fine taste is accompanied by a deliberation and a serenity of judgment which save him from the eccentricities, paradoxes, subtleties, and even extravagances to which modern critics and not a few Cervantistas are inclined. Restrained in form, embodying the results of ample culture, the 'Discurso' lays down the broad lines of a study on the position of 'Don Quixote' in Spanish literature, its exact relation to its predecessors, and the subsequent evolution of romance.

Very different, as might be imagined from the personality of the author, is Don Juan Valera's posthumous 'Discurso' which was read before the Spanish Academy. So far back as 1864, and often since that date, Valera had said his say respecting 'Don Quixote,' and it is therefore not surprising that his last work contains scarcely anything which will be new to his constant readers; but the interest of this 'Discurso' by the author of 'Pepita Jiménez' lies in the reflections which the subject suggests to a spirit drawing near its end, weighed down by pessimism and by a presentiment of that approaching death which, in fact, was not long in coming.

BIOGRAPHY AND PHILOLOGY

Besides the bibliography already mentioned, Señor Cotarelo has written 'Efemérides cervantinas, ó sea, Resúmen cronológico de la vida de Miguel de Cervantes Saavedra,' a useful summary of the most recent data drawn up with the clearness which the chronological method involves. Had Señor Cotarelo confined himself to a plain record in this form, there would be no fault to find with his book; but he has overshot the mark by a too free interpretation of certain documents. This arises from his inexplicable persistence in maintaining the untenable opinion of Pellicer and the Academy that Cervantes corrected the 1608 edition of 'Don Quixote.'

A truly monumental work is the 'Gramática del Quijote' by Señor Cejador, a very learned philologist of original views (perhaps not always acceptable to specialists), an indefatigable and praiseworthy worker whose previous writings have gained him a high position. The first volume of his 'Gramática,' the only one which has appeared so far, gives an idea of the magnitude of his linguistic enterprise.

Though suitable to scholars, and convenient as a book of reference regarding the plain facts of Cervantes's biography, Señor Cotarelo's volume has not the graceful, fluent form which attracts the general public. Señor Navarro Ledesma appeals to the average reader in his 'Ingenioso hidalgo Miguel de Cervantes Saavedra,' an artistic reconstruction of the life and times of the author of 'Don Quixote,' effected (in Taine's manner), by grouping the relevant historic data, and giving an ideal impression of reality which the plain and simple exposition of facts cannot attain. Thus the biography gains in vivacity, charm, and significance, though it occasionally runs the risk of failing in the strict accuracy which one expects in an historical study. The chief recommendation of Navarro Ledesma's book is the artistry of its execution, which will diffuse a general knowledge of the incidents in Cervantes's career.

GEOGRAPHY

The editors of *El Imparcial* conceived the happy idea of sending one of their contributors, Señor Martinez Ruiz, to visit the places in La Mancha made famous by Don Quixote's adventures. In a series of articles collected under the title of 'La Ruta de Don Quijote' Martinez Ruiz has described his journey and—what is more important—his vision of the geographical and social surroundings in which the deeds of the Ingenious Gentleman were performed, as well as the reflections to which they give rise. It is true that in some of the chapters there is less of Don Quixote than the reader would expect, but the transcription of the Manchegan landscape is impressive, and in many pages the author's intensity of expression is remarkable.

Señor Blazquez affords a scientific complement to this work in 'La Mancha en tiempo de Cervantes,' a monograph full of original research. The part of La Mancha where many of Don Quixote's adventures took place is less known than is generally supposed, and Señor Blazquez endeavours to throw light on the point by indicating the doubts and difficulties which investigation reveals.

COMMENTARIES

As to commentaries, it will suffice to name three works. The 'Vida de Don Quijote y Sancho, segun Miguel de Cervantes,' expounded and commented on by Señor Unamuno, Rector of the University of Salamanca, is rather a manifestation of an individual attitude to 'Don Quixote,' or of the series of ideas which the book suggests to Señor Unamuno. As many of the views advanced here were not Cervantes's and could never have occurred to him, Señor Unamuno's volume will be more interesting to the psychologist than to the Cervantista. In 'La Filosofía del Derecho en el Quijote' Señor Carreras, a young Catalan Doctor of Laws, has sought to distil the legal significance of 'Don Quixote' much as the Italian Costa has endeavoured to extract juridical ideas and facts from classical Latin authors. This work is extremely learned and suggestive, and, though occasionally too bold, is the most complete study of the kind yet published. The

eminent criminologist Señor Salillas has attempted to prove the theory, disputed by many, that Huarte, the well-known author of the 'Examen de ingenios,' directly inspired Cervantes with respect to the bearing and psycho-physiological doctrine of Don Quixote and other fantastic personages presented in the novel. The thesis is supported by Señor Salillas with his usual learning and dexterous ingenuity.

To record all the tercentenary publications worth studying would exhaust my space. I cannot dwell on the 'Apuntes escénicos cervantinos' of Diaz del Escobar, or on the various monographs by Benedicto, Apraiz, Berjano, Chaves, and others, and will end by drawing attention to the editions and bibliographies which the tercentenary has called forth.

EDITIONS

Two of these editions deserve special mention: one issued by the Centro del Ejército y la Armada, the other by Señor Cortejón. The first is noticeable for its typographical excellence and elegant form. The second has qualities of a higher order, for it proposes to follow the initiative set by Mr. Fitzmaurice-Kelly, and supply a critical edition of the text, with a collation of previous historical and linguistic commentaries, and a dictionary of all the words used in 'Don Quixote.' This will be a colossal work in eight folios (two of them devoted to the dictionary), and it constitutes the most considerable effort yet made to produce in print something worthy of Cervantes. Experts will tell us in due time how far Señor Cortejón has succeeded in his object. Meanwhile, judging from the first volume, I can commend the edition to Cervantistas, and applaud the courage and patriotism of Señor Cortejón and his publisher Señor Suárez. Another issue of 'Don Quixote' is announced under the editorship of the well-known Cervantista Señor Máinez, but so far we have only a few of Jiménez Aranda's illustrative plates, more striking as examples of technical accomplishment than as interpretations of the characters in the novel.

BIBLIOGRAPHY

The series of bibliographical publications is relatively numerous and important. The foremost place must be given to the third volume of the familiar 'Bibliografia critica de las obras de Miguel de Cervantes' by Don Leopoldo Rius, the first part of which was printed in 1895: the most complete work of its kind, it is indispensable to all bibliophiles and scholars. Supplementary to it in some respects is the 'Iconografia del Quijote,' published by a firm of Barcelona. This is a sumptuous reproduction of the title-pages of the 611 editions in the collections of Señor Bonsoms, Señor Cortejón, and Señor Asensio: among these is an edition (by Manuel Martin, Madrid, 1765) omitted by Rius. A very important book of the same class is the Catalogue of editions exhibited at the Biblioteca Nacional in Madrid. In this volume I find information concerning certain editions hitherto unknown (for instance, one issued at Lisbon in 1605) together with phototype reproductions of pictures and tapestries—some of which are now exhibited for the first time—representing scenes from 'Don Quixote.' The Catalogue of the Asturian Exhibition of 'Don Quixote,' organized by the Comisión de Monumentos of Oviedo, is a much humbler publication which, owing to the fact that it was set up and distributed within forty-eight hours, is disfigured by numerous misprints (though, fortunately, these do not extend to the dates); it mentions a considerable number of rare editions, including one (of 1777) unrecorded elsewhere.

FICTION

Authors of books not connected with Cervantes will forgive me if the importance of everything relating to 'Don Quixote' compels me to curtail the space usually allotted to them. I must confine myself to naming their most striking productions. Respecting novels I have nothing to note in the way of new departures or new writers of distinction, with the exception of the Catalan author whose pseudonym is Victor Catalá: her tales and pictures of provincial life are excellent examples of realism. In 'La Quimera' Emilia Pardo Bazán writes what many consider to be an experiment in symbolism: this does not prevent its being also a vivid presentation of Spanish aristocratic society, and some passages and descriptions recall the best pages in 'Los Pazos de Ulloa.' Galdós continues his 'Episodios nacionales' in his 'O'Donell,' in 'Aita Tettauen,' and in 'Carlos VI. en la Rápita.' The first of these includes some interesting historical portraits; the second is a picture of Moroccan customs and a recital of episodes in our African campaign; the third is important on account of the guerrilla priest who figures in it. This is no repetition of a familiar type; Galdós has here created a new and delightful character. In 'La Bodega' Blasco Ibáñez has tried to describe the Andalusian peasant and the agrarian crisis; in 'La Horda' he portrays the proletariat huddled in the outlying quarters and suburbs of Madrid. Though these two tales are not lacking in the artistic qualities to which the Valencian novelist owes his well-deserved fame, critics are agreed in thinking that they do not reach the level of many of his earlier works. Valle Inclán has speedily gained a leading position among our novelists. His latest books, 'Sonata de Otoño,' 'Flor de Santidad,' and another now appearing in *El Imparcial* under the title of 'La Corte de Estella' (the Court of the Spanish Pretender, Don Carlos), are exquisite in point of style: the first and third are particularly admirable for the calm objectivity of the story, which seems suffused by an experience of life as wide as it is gently pathetic. Pio Baroja continues his picaresque and revolutionary narratives in 'Aurora roja.' And in this paragraph special mention should be made of the masterly translation of Kipling's 'Jungle Books' by the Catalan writer Señor Perés. English readers will assuredly be pleased to know that, thanks to the uncommon skill and artistic instinct of Perés, we can now enjoy in Castilian the profound poetry of Kipling's original works, which were almost unknown before to the Spanish public.

POETRY AND THE DRAMA

Castilian poetry has recently undergone a grave loss. The young poet Gabriel y Galán, whose verses express the very essence of the Castilian country-side, has died at the moment when most might be expected of him: his name will be memorable among the diminished company of bards, to some of whom I have referred in former years. A very similar talent is that of Vicente Medina, who in 'La Canción de la Huerta' presents, with intense feeling and brilliancy of colour, types and scenes of the Murcian orchard-land. The volume is attractively got-up with photographs from nature taken and selected by the author himself.

Among dramatists the leading names are those of the brothers Quintero and of the Catalan Iglesias. Besides several amusing, light *sainetes*, the former have brought out two works of real artistic excellence in which is displayed the singular power these authors possess of striking the deepest and most dramatic chords of human sentiment without any resort to catastrophes or far-fetched incident. 'El Amor que pasa' and 'La Musa loca' are both models in this respect. Analogous qualities, informed by a didactic or idealistic intention which at times becomes pronounced (for example, when dealing with social problems), are observable in the plays of Iglesias, who in 'Fructidor,' 'La Festa dels Aucells,' and other works, has crowned his reputation as a dramatist. Another Catalan author, Rusiñol, in 'La Lletja' emphasizes his satirical manner and the profoundly revolutionary tendency of his drama. Guimerá's play 'La Miralta,' produced in Castilian, contains one admirable act, but is marred by an ending which, though tragic, is false to nature. Echegaray adheres to his established methods in 'A fuerza de arrastrarse,' which has been appreciated by the public. Galdós likewise pursues his symbolic and radical system in 'Bárbara,' with which criticism is busy. Another symbolic play, difficult to interpret and deficient in dramatic qualities, though full of fine things, is 'El Escultor de su alma' by Ganivet. I can do no more than refer in passing to the work of Linares, Oliver, and others who are coming into notice as writers for the stage.

ARCHÆOLOGY AND HISTORY

Among archæological publications I must select for mention Morera's monograph 'La Catedral de Tarragona'; a second by Moret entitled 'El Monasterio de Poblet'; a third by Cabello entitled 'La Capilla del Relator ó del Oidor' (of Alcalá, where Cervantes was baptized); and a fourth by Lampérez on the ancient churches of Spain. Two historical works stand out from the rest: Rodriguez Villa's 'Ambrosio Spinola,' rich in results of new researches and in unpublished documents, and E. Hinojosa's study 'El régimen señorial y la cuestión agraria en Cataluña,' which not only supplements in the most satisfactory way the studies of Brutails, Kovalevsky, Piskorsky, and others, but also presents new points of view regarding the history of provincial slavery in Europe during the Middle Ages. I have space to note only the 'Ordenanzas del Consulado de Burgos (1538),' published with a learned preface by Señor Garcia de Quevedo; the 'Crónica de Enrique IV.' of Alfonso de Palencia, translated from the Latin by Señor Paz y Melia; Pulido's curious book on Spanish Jews in the East; Bonilla's monograph 'Luis Vives' and his

'Anales de literatura española'; the 'Estudi critich de follets publicats a Catalunya ab motin de la guerra de sucesió' by Clapés; and the 'Historia de la industria lanera catalana' by Ventalló.

MISCELLANEOUS

Before closing I must recommend to English readers two books of travels in Spain by Prof. Eduardo Soler, entitled respectively 'Sierra Nevada, Las Alpujarras y Guadix,' and 'Por el Júcar,' both beautifully illustrated; the edition of Raimundo Lulio's 'Felix de les Maraulles' by Señor Roselló; the original 'Epistolario' by Ganivet, and 'Castilla' by Williams, now one of the best publishers in Madrid. Señor Williams has issued a translation of Rusiñol's 'El poble gris,' as well as works by Martinez Sierra, Ruben Dário, Martinez Ruiz ('Los pueblos'), and several other rising Spanish writers.

RAFAEL ALTAMIRA.

The Expansion of Christianity in the First Three Centuries. By Adolf Harnack. Translated by James Moffat. 2 vols. (Williams & Norgate.)

DR. MOFFAT, who has done good work in the field of New Testament interpretation, is a competent translator of Prof. Harnack's notable work. Since its publication in Germany in 1902 the book has commanded attention; and as it is the first exhaustive history of the Christian mission, it is well that it should be in the hands of those English readers whose ignorance of German does not interfere with their interest in the beginnings of Christianity and the advance of the early Church. These readers—at least many of them—will be grateful to Dr. Moffat for his English versions of the Greek and Latin passages quoted by Prof. Harnack. Book I., which is introductory, deals with such subjects as "the internal conditions determining the world-wide expansion of the Christian religion" and "the transition from the Jewish to the Gentile mission"; while Book II., styled 'The Mission-preaching in Word and Deed,' treats of such problems as "the religion of the Spirit and of power" and "the religion of authority and of reason." It hardly requires to be said of any work by Prof. Harnack that it is marked by richness of historical detail; and it may be confidently asserted that this one will maintain his high reputation as an ecclesiastical historian. His theories, however, are not so certain of approbation as his historical presentations. One of the most conspicuous of these theories deals with the universal mission prosecuted by command of Christ, and is thus stated:—

"The real facts of the case lead us to conclude that Jesus never issued such a command at all, but that this reading of his life was due to the historical developments of a later age."

This severe judgment is tempered by the admission that,

"a protest against the official religion and its champions, the Gospel did break up the Jewish Church. The King of the Jews who was nailed to the cross had to become lord of a new kingdom. Thus it was the spirit of Jesus, as indeed the disciples felt, which led them to the universal mission."

Elsewhere we are told that

"all that Jesus Christ promulgated was the overthrow of the temple, and the judgment impending upon the nation and its leaders. He shattered Judaism and brought to light the kernel of the religion of Israel. Thereby—*i.e.*, by his preaching of God as the Father—he founded the universal religion, which at the same time was the religion of the Son."

One other relevant statement may be quoted. "Historically," it is affirmed,

"Paul the Pharisee dethroned the people and the religion of Israel; he tore the Gospel from its Jewish soil and rooted it in the soil of humanity."

The Synoptic Gospels, Luke especially, make for the conclusion that Jesus did command a universal mission; while, on the other hand, in the Acts of the Apostles there is evidence that the disciples did not understand the command, or did not at first obey it. For the establishment of Prof. Harnack's theory it is, of course, necessary to get rid of the awkward passages in the Synoptic Gospels which contradict it; and this is done on the supposition, which is also applicable to the Fourth Gospel, that after the success of the Gentile mission writers deliberately, or tradition unconsciously, expanded the horizon of Christ's preaching. It may be, and is, argued from the evidence in Acts that the disciples, before the appearance of Paul, organized no mission to the Gentiles, and consequently that no such mission had been commanded. On the other hand, since Jesus preached the fatherhood of God, and thereby, according to Prof. Harnack's contention, founded the universal religion, it is not easy to believe that He limited to Israel the mission for the promulgation of that religion. It may be conceived, though it may not readily be admitted, that Jesus organized neither a Jewish nor a Gentile mission, and in no sense founded a Church, but simply announced the religion for the world; yet this conception is very different from the contention that He who had the idea of universality contradicted His own thought by limiting the preaching of the universal religion to a particular people. The disciples, viewing Jesus as the Jewish Messiah, and without express direction from Him regarding a mission and its extent, may have preached to the Jews little or nothing beyond His Messiahship; and it may be at once admitted that, in contrast to them, Paul the Pharisee rooted the Gospel in the soil of humanity. The contrast, however, ceases with the admission, since there is nothing to show that Jesus rooted His religion in Jewish soil alone. Texts such as "Go not into the way of the Gentiles" may be got rid of, were it expedient to follow Prof. Harnack's method, on the supposition that those who wrote them narrowed—through error or for a purpose—the horizon of Christ's preaching. The evidence, however, obtained from the Gospels, and not contradicted by the writings of Paul the Pharisee, leads to the conclusion that the universal religion which was first preached to the Jews was not limited to them alone; and the mind of Christ, with its conception of the universality of His religion, is in no way opposed to the conclusion.

Prof. Harnack, in setting forth the work of the Apostle of the Gentiles, does not make him the real author of Christianity. M. Renan, as Emanuel Deutsch pointed out in a review of 'Les Apôtres' (*Athenæum*, May 12th, 1866), protested against what he called the fashionable notion of his day—of looking upon Paul, rather than upon Jesus, as the founder of Christianity; and it was he who styled the Apostle "a labourer of the second hour, almost an intruder." Prof. Harnack is alive to the value of ideas, and while for him the Apostle is the organizer of the Gentile mission, who rooted the Gospel in the soil of humanity, he sees that Jesus, and not another, is the founder of Christianity. No one, however, will deny, whatever conclusion may be reached, the importance, in an account of the expansion of Christianity, of an accurate historical determination of the nature of the work of Paul the Pharisee.

One of the most valuable parts of Prof. Harnack's book is that which deals with the extension of Christianity down to 325 A.D. Actual statistics are not furnished, so far as the number of Christians in a district or city is concerned, but there is a notice of every place mentioned in the literature of the period where the new religion obtained a footing. Gibbon estimated the number of Christians in the reign of Decius at about a twentieth of the population; and other writers, such as La Bastie and Chastel, have tried to determine the proportions of the Christian and pagan elements in the Roman empire at different periods. Prof. Harnack, however, recognizes the limitations of the evidence, and avoids generalization. His statements are definite. "It was during the fifty or sixty years," he says, "previous to Diocletian's persecution that the first notable expansion of the Church took place"; and, again, "Christianity was a religion of towns and cities." By an analysis of the evidence at command he shows us four classes of provinces or districts: (1) Those in which Christianity numbered nearly one-half of the population, and represented, at the opening of the fourth century, the most widely spread religion; (2) those in which Christianity formed a very material portion of the population, influencing the leading classes; (3) those in which Christianity was sparsely scattered; (4) those in which the spread of Christianity was extremely weak.

The absence of rashness which marks Prof. Harnack's statements in these volumes may be illustrated by the following words:—

"It baffles us to determine the relative amount of impetus exerted by each of the forces which characterized Christianity: to ascertain, *e.g.*, how much was due to its spiritual monotheism, to its preaching of Jesus Christ, to its hope of immortality, to its active charity and system of social aid, to its discipline and organization, to its syncretistic capacity and contour, or to the skill which it developed in the third century for surpassing the fascinations of any superstition whatsoever."

The last words of the book are notable:

"By this sign it conquered; for on all human things, on what was eternal and on what was transient alike, Christianity had set the cross."

Essays in the Art of Writing. By R. L. Stevenson. (Chatto & Windus.)

This meagre volume contains more of the philosophy of literary technique than any other book published of recent years. The articles comprised are somewhat sporadic, but everywhere are scattered sound sense and evidences of a profound insight into the art of letters. It is well to have these pieces reprinted in volume form, for hitherto they have not been collected, except in the limited "Edinburgh Edition." There was no particularly good reason for the republication of the last volume of 'Tales and Fantasies,' which marked Stevenson's work at its lowest level. But three at least of these essays are pre-eminently skilful as expositions of the point of view of the writer, and two at least have a legitimate personal interest for lovers of Stevenson's work. These may not altogether be attracted by the account of books which influenced the novelist, though insight into the education of an imagination is always of value. One knows offhand, however, that Dumas must be among Stevenson's favourites, and that D'Artagnan will be his hero. Is not the influence of D'Artagnan manifest in the characters of the English writer? What strikes one as most singular about his selection of influences is their disparity and haphazard variety. Shakspeare and Dumas mingle with 'The Pilgrim's Progress' and the Bible; and these neighbour Montaigne, Walt Whitman, Herbert Spencer, and George Meredith. But if any one were to analyze his own early tastes, probably he would discover as reckless an incongruity.

The history of the writing of 'Treasure Island' will always be of interest for its frankness and its sincerity. Stevenson allows us to see the machinery at work. The parrot, he confesses, undoubtedly belonged to Robinson Crusoe, but, embroidered with that shrill "Pieces of eight! pieces of eight!" Capt. Flint took on fresh and gorgeous feathers of his own. "The skeleton is conveyed from Poe." Well, if he had not told us we should not have suspected it; and is it possible that he was morbidly conscientious, and wanted to make more than a clean breast of it? There are people who give themselves up for imaginary offences. "The stockade, I am told, is from 'Masterman Ready.' It may be, I care not a jot." Nor do we. Still in the confessional, he declares "Billy Bones, his chest, the company in the parlour, the whole inner spirit, and a good deal of the material detail of my first chapters" to be the property of Washington Irving. How few writers could make analysis thus of their sources! But Stevenson's mind was eminently analytic, which is precedent of synthesis at its best. And it was consciously so, which is not always the case, and this led to the defects in his style and quality. One must accept those defects for the sake of the rare style and rare quality. Read the origin of 'The Master of Ballantrae,' and you will see how all works of fiction are necessarily compounded. The method is in part accident and in part organic growth. The mind hits on an idea by chance, but, if it is to be a living idea and invested with living people, it must be planted and grow like nature. Here is the deftness of the born artist, who at times practises honourable evasion:—

"My story was now world-wide enough: Scotland, India, and America being all obligatory scenes. But of these India was strange to me except in books; I had never known any living Indian save a Parsee, a member of my club in London, equally civilized, and (to all seeming) equally occidental with myself. It was plain thus far that I should have to get into India and out of it again upon a foot of fairy lightness; and I believe this first suggested to me the idea of the Chevalier Burke for a narrator. It was at first intended that he should be Scotch, and I was then filled with fears that he might prove only the degraded shadow of my own Alan Breck. Presently, however, it began to occur to me it would be like my Master to curry favour with the Prince's Irishmen; and that an Irish refugee would have a particular reason to find himself in India with his countryman, the unfortunate Lally."

Thus naturally, almost inevitably, is the author driven on by his own invention to the close.

The artistic self-consciousness of Stevenson, his deliberate cultivation of style, has brought him depreciation from critics who had not even a style "from which to refrain." But he makes his position clear in one of the most acute and interesting essays on technical elements of style which have ever been written. His very preface should have stalled off denunciations of this kind. He says:—

"There is nothing more disenchanting than to be shown the springs and mechanism of any art.....I must therefore warn that well-known character, the general reader, that I am here embarked upon a most distasteful business: taking down the picture from the wall, and looking on the back; and, like the inquiring child, pulling the musical cart to pieces."

Yet it is necessary for the maker at least to know how the cart is made, and the knowledge may be of value to others than the maker. Stevenson, at any rate, was frankly interested in the mechanism of his own art, and his investigations are marked by extraordinary insight and clarity of judgment:—

"The sister arts enjoy the use of a plastic and ductile material, like the modeller's clay; literature alone is condemned to work in mosaic with finite and quite rigid words. You have seen the blocks dear to the nursery; this one a pillar, that a pediment, a third a window or a vase. It is with blocks of just such arbitrary size and figure that the literary architect is condemned to design the palace of his art."

And these blocks, one must remember, are battered with everyday use and debased in the markets. Hence the business of the artist is to take them,

"and by tact of application touch them to the finest meanings and distinctions, restore them to their primal energy, wittily shift them to another issue, or make of them a drum to rouse the passions."

This is very finely said, and recalls the analysis of another supreme artist—Horace in the 'Ars Poetica.' All the arts meet on one common platform; their end is to make a pattern, and "music and literature, the two temporal arts, contrive their pattern of sounds in time." Stevenson's own style has been charged with Corinthianism, but it was rarely overloaded with colour. He could be as austere on occasion as a hermit. His own keen taste discovers that "the genius of prose rejects the *cheville*," the *cheville* being "any meaningless or very watered phrase employed to strike a balance in the sound"; and we believe that it would be difficult to find in his work any outrage of this admirable canon. Stevenson always predicated "form" as the first essential of art, since obviously nothing can exist before it takes form. And in letters form becomes the web or pattern—"a web at once sensuous and logical, an elegant and pregnant texture: that is style, that is the foundation of the art of literature." It is true that a good pattern, a good style, may co-exist with indifferent matter. Well, the stylist will continue to be read for his own narrower perfections, as some would say of Stevenson himself. Such a passage as the following is not only beautiful English, but also luminous sense, and the combination spells a great writer:—

"Here is a great deal of talk about rhythm—and naturally, for in our canorous language rhythm is always at the door. But it must not be forgotten that in some languages this element is almost, if not quite, extinct, and that in our own it is probably decaying.....The beauty of the expected beat in verse, the beauty in prose of its larger and more lawless melody, patent as they are to English hearing, are already silent in the ears of our next neighbours; for in France the metrical accent and the pattern of the web have almost or altogether succeeded to their places."

Concordanza delle Opere Italiane in Prosa e del Canzoniere di Dante Alighieri. Pubblicata per la Societa Dantesca di Cambridge, Massachusetts, a cura di E. S. Sheldon coll' aiuto di A. C. White. (Oxford, Clarendon Press.)

We must begin by congratulating Messrs. Sheldon and White most heartily on the completion of their great work. It is some seventeen years since, in noticing Prof. Fay's concordance to the 'Commedia,' we called attention to the great want of a similar companion to the minor works. Of the two, indeed, it was the latter that was the more needed; for not only would the standard 'Rimario' serve the turn in most cases where it was desired to refer to a word or phrase, but also most readers with a fair memory find it easier to carry what may be called the "topography" of a poem in their heads than that of a prose treatise. Besides, from very early times the vocabulary of the 'Commedia' has been a subject of interest to grammarians, rhetoricians, and other students of language: learned men like Acharisio and Liburnio were compiling catalogues of words in the first half of the sixteenth century; while in our times the works of Castrogiovanni, from the rhetorical, and Blanc, from the philological point of view, have registered, with due reference, every important word or phrase. But not one of these authorities has taken any account of the 'Vita Nuova' or the 'Convito,' so that the student who wished to locate a word in either of these books had to rely on his memory, or, failing that, turn over the

pages laboriously until he found it. Now this is at an end; and now for the first time will it be possible, without an enormous expenditure of time and trouble, to compile an adequate lexicon to Dante—an aid still sorely needed.

The main uses of a concordance, as we understand, are two: first, the more obvious one, of enabling a reader to discover the whereabouts of any passage of which he can remember a word; and to this end we think that every word occurring in the work should be recorded, whether in quotations or not. In this the compilers have allowed themselves a little laxity, omitting Latin words distinctly coming from Latin works. If the Latin words appear to be Dante's own they are given. Thus we find "fortior" ('V.N.' §2) duly entered, but not "civitas" from §29. This seems a little over-minute, especially as one cannot be sure that "Ecce deus fortior me" and the rest of it is not equally a quotation.

But perhaps even a more important use of a concordance lies in the facility it affords for comparing various shades of meaning in which a word is used, and in this way arriving at a conclusion as to its meaning in some passage under consideration. If, to take the first example to hand, Landino had had the chance of looking up "mezzodì" in Messrs. Sheldon and White's pages he would never in all probability have perpetrated the absurd note on 'Inf.' xxiv. 3, which has led every Italian commentator astray from his day to ours. At the same time we feel sure that the compilers of the present book have done wisely in not following Prof. Fay in the attempt to arrange the references to every word according to the sense in which it is used. These shade into each other, in many cases so imperceptibly that it is often difficult, as we remarked when reviewing Prof. Fay's work, to be sure that the reference is correctly classified. It is far better to leave the reader to judge for himself, and merely give the references, as has been done in the present case, in order of occurrence. Something may be gathered from this arrangement too. It is suggestive, for instance, to find that the word "abbellire" occurs only in the 'Paradiso' and in books ii. and iv. of the 'Convito'; or to compare the different employment of the words "fiero," "fiera," in the latter treatise and in the 'Commedia'; and generally the distribution of given words among the various works. A study of the evolution of Dante's vocabulary would, we suspect, throw light on various debated questions of chronology, though no doubt it would have to be checked by a due regard to common sense and literary judgment.

The Oxford text has been followed, with occasional recognition of variants. For convenience of reference this was no doubt the best course to take; but it was perhaps superfluous to append corrigenda, as seems in at least some instances to have been done, in order to comply with a change of reading adopted in the latest edition of that excellent work. With all its merits, it can hardly be accepted as yet in the light of a definitive recension, at any rate for the 'Convito.' Apart from this, the list of addenda and corrigenda is very short, testifying to the care with which the work has been done. Nor does such examination as we have given to the book by the method of sample enable us to extend it further than by suggesting that it should in some way have been indicated that the "cera" of 'Ball.' iv. and 'Son.' xxix. is a totally different word from the "cera" of 'Conv.' ii. and iv. The former, which Dante uses in only those two places, is a survival from the early poetic vocabulary of the thirteenth century, which borrowed it from the French.

The arrangement of the page, with the poetry above and the prose below, seems to us very sensible; and we must also commend the compilers for having given inflexions under the primary form of the word, verbs under the infinitive, plurals under the singular. It was a distinctly annoying feature of Prof. Fay's work that a plural, for instance, was often divided from its singular by two or three intervening words, and that the parts of verbs had to be hunted up and down before one could be sure that every use had been noted. In the case of the commoner words, too, while it has not been thought necessary to quote every passage in which they occur, a reference to every one has been inserted. Cross-references are also given to variants, and to various forms of the same word. On the whole, we feel most grateful to the compilers, and no less sure that our feeling will be shared by every Dante student.

Place-Names of Ross and Cromarty. By W. J. Watson. (Inverness, the Northern Counties Printing and Publishing Company; London, Nutt.)

This is in some respects a model treatise on its subject. The author, the Rector of Inverness Academy, brings to his task the equipment of a scholar who is in touch with the best authorities on comparative philology, and—a most important item of efficiency—he appears to have also a good working knowledge of the modern speech prevailing in the districts he describes. A sound vernacular knowledge would often save philological experts from pitfalls, while, on the other hand, fluent speakers of Gaelic too often have little general culture, and are apt to run wild after analogies.

Mr. Watson might have taken "Thorough" as the motto of his book, though he is too wise to claim finality of interpretation. But he does claim (and it would seem with justice) that

> "in every case the genuine native Gaelic forms of names have been ascertained with absolute accuracy. In addition the old spellings found in charters, &c., have been given, when such were available."

Personal travels over all the county—except Lewis, where the place-names are largely Norse—have made him indebted, as he says, to hundreds of people. One of the results is a well-ordered introduction, in which the canons of interpretation are laid down, the formation of names classified, and the equivalents in Gaelic of vocables derived from other sources, and especially ("as a pioneer piece of work") the treatment in Gaelic of the Old Norse vowels and consonants, systematically discussed. The physical features; the English-looking plain of Easter Ross; the indented maritime district of the west; the glens, straths, and streams of Mid-Ross, extending from the western watershed to the uplands of Alness and Rosskeen, are lucidly described. The information supplied by Ptolemy in 120 A.D. is still suggestive. From it we learn that in the first century the names were Celtic. The natives were those who were known as Picts in later Roman times.

The Picts, the Dalriad Scots from Ireland, the Norsemen—these, in Ross as elsewhere, have left their traces both on race and language. As to race, there are many indications of a strain of pre-Aryan blood among the Pictish Celts. Like every other race, they were modified by the blood of those whom they supplanted.

As to language, Mr. Watson rightly says that most authorities now agree that the Picts spoke a Celtic, not of the Gaelic, but of the Welsh or Brythonic (we should prefer the Kymric) type. And his difficulty is that of all who are not authorities—how did the language of the Gaels (Dalriad Scots) supplant that of the Picts? The legend of conquest, certainly of extermination, is exploded. Kenneth MacAlpin, the hero with the Pictish name, succeeded to the Pictish throne, assisted by his father's folk, the Dalriads. Granted the superior civilization of the Scots, granted the influence of Christianity and the contact with continental Christendom, granted the steady pressure of Scottish immigrants, of Scottish priests and bards, is it possible the lesser people should so leaven the more numerous as to make their speech a problem, only to be solved by reference to river-names and lists of kings? Gaelic was the speech of Fife (in landward parishes it is believed to have lingered till the beginning of the seventeenth century), as it was of the "Picts" of Galloway. Can all these nooks and corners have been scotticized from Ireland? The answer is that the Irish Gaelic never supplanted its kindred speech. At this day there are peculiarities about the Gaelic of Caledonia which can only be accounted for by the survival of a language naturally nearer to the neighbouring Kymric, but fundamentally the same as that of Ireland. The language of the 'Book of Deer' is two hundred years apart from the Irish, contemporary in point of time. Yet no one can doubt that it is Gaelic, in spite of "petto meic Garnait," *cc* for *ch*, and the other peculiarities. Again, the "ogams," according to the most recent interpretations, present a dilemma. If they are Pictish, and Pictish is Kymric, Mac and O are loan-words—a device one thought peculiar to the most recent interpreters. If they are Irish, the purer Gaelic retains the ostracized and discredited *p*.

We suggest, with much diffidence, that there is a tendency to neglect negative instances among our best authorities. The general truth of the law that the Indo-European *p* is discarded in Celtic, and that the substituted *p* for *q* is an indication of a Kymric affinity, we should be the last to deny. Yet may it not be more logical and philological, in dealing with Pictish elements, to say surviving, rather than borrowed?

Apart from these misgivings, we have nothing but praise for the exhaustive treatment of individual instances. Old written

forms are more helpful here than in many parts of Scotland, though here too their authority is discounted by their having been recorded by scribes who knew no Gaelic. Their value is greatest when they can be controlled and interpreted by the modern Gaelic. The oldest record forms belong to the first half of the thirteenth century. But

"Ptolemy, the Alexandrian geographer, mentions two names of places which seem to be rightly located in Ross: Volsas Sinus, for which cf. Lochalsh, and High Bank, identified with Norse Ekkials-bakki, modern Oykell."

Oykell is compared with W. *uchel*, and, of course, the Ochils.

Space will not allow us to pursue the classifications of extensions or terminations added to primary words, *-ach*, *-adh*, *-ag*, *-an*, *-as*, &c., and combinations of these. It is worth noting that a great number of words are in the locative, not the nominative, case, and that most purely Scoto-Gaelic words prefix the article. The diminutive in *-aidh* is frequent. Probably the Lowland *-ie*, common now even in England for personal names, is hence derived. Another point to be remembered is that—though in modern Gaelic the adjective always follows the substantive, except in a few monosyllables (*sean duine*, &c.)—the old language was freer in this respect, and in place-names the adjectives not seldom precede the nouns.

We may give some instances of our author's manner:—

"Meig is the river of Strathconon.....The Gaelic is Míg (i long and nasal). The long vowel before 'g' points to compensatory lengthening from the dropping of an original 'n,' while the 'g' itself is reduced from an original 'c.' This gives a primitive 'minc,' with which we may compare the Mincius, the stream of Cisalpine Gaul which flows by Virgil's birthplace. It is a curious coincidence that our Meig flows through Loch Beannacharan, while the Mincius comes from the lake Benacus. The root I take to be that seen in Latin mingo, mic-turio; Old English migan; Lithuanian miglà, mist; Welsh migen, a bog; the root in all cases being mic-, and the notion involved that of pouring forth. Cf. the Fife Strathmiglo, with its river,.....perhaps also," &c.

"Dingwall—Dingwell in Ross 1227, Dignewall 1263, Dingwal 1308, Dingwall 1382. Norse Thing-völlr, Field of the Thing, the Norse general court of justice. Dingwall was therefore the centre of the Norse administration in Ross. The most southerly Norse place-name in this direction is Eskadale (Beauly), but Norse influence doubtless extended further. A mound, supposed to have been the actual meeting-place of the Thing, is referred to about 1503, when James, Duke of Ross, resigned the earldom, and reserved to himself the moot-hill (montem) of Dingwall beside the town, in order to preserve his title as Duke. Dingwall is in Gaelic In'ir-pheofharan, Inver-peffray, and Inverferan appears in a bull of Pope Alexander IV., 1256 (Theiner, 'Vet. Mon.')."

"Struie. G. an t sruidh.....before railways this was the usual road from the south. John Munro of Creich, in his 'Oran Ducha,' on leaving Glasgow to visit his native place, says [we spare the Gaelic for the hardness of the reader's heart, but it is a right good rhyming lilt].....Strùidh appears to be best regarded as a contracted form of sruth-aidh, an extension of the root of sruth, stream ('t' euphonic).....At *Lòn'na Strùith* [we suggest *str* is *Pictish*], moist flat of Struie, is *fuaran an òir*, a well strongly impregnated with iron, and reckoned to possess healing properties, but it has been insulted chaidh tàmailt a chur air) and is not what it once was; so called from a gold ring having been lost in it in course of cleaning."

The author's mesh is minute if his net is wide, and we thank him for a good book. Among others to whom he acknowledges obligation we are glad to notice Dr. Macbain, of the 'Dictionary,' and Mr. J. Mathieson, of the Ordnance Survey, our gratitude to whom is an expectation of favours to come. At present O.S. maps are useless to philologists.

NEW NOVELS.

A Nine Days' Wonder. By B. M. Croker. (Methuen & Co.)

This book bears a title calculated to raise expectations in the reader. On investigation we find that the author has not feared to use the well-worn motive of the "child changed at nurse." On the whole, we think she might have made a more dramatic use of the situation. It is the story of a girl of "high degree" on both sides, whose foster-mother on the death of her own baby passes off the "Lady Joseline" for the dead child. Consequently she takes on the name and status of Mary Foley, and is brought up in an Irish cabin instead of in the ancestral halls for twenty-one years. Then the family solicitor, aided by an ancient gardener (the humble worshipper of the girl's own beautiful mother), takes the matter in hand. Their story is almost proved by the extraordinary resemblance between the living and the dead. The girl is restored to her father the Earl, whose grief at the death of his idolized wife had made him careless of the destiny of the child so unknowingly responsible for his loss. Here the true story begins, though the author has already told a long tale and introduced some rather superfluous persons. We think the beautiful wild Irish girl, transported to her new surroundings, hardly makes a success of her "manners," considering that she is said to have "parts," and has had some weeks' careful training in the way to go from an amiable lady. In this connexion lapses in speech and deportment are more numerous than humorous. There is a want of the writer's usual vivacity and lightness of touch (when dealing with the soul of things Irish) in the way she presents the girl's surprise and consternation at the customs and habits of the "smart set" wherein her lot is cast.

Susan Wooed and Susan Won. By Emma Brooke. (Heinemann.)

The general characteristics of this able and vigorous novel are hardly indicated by its somewhat idyllic title, for the wooing and winning of Susan can claim in themselves only a subordinate interest in the story, which is, in the first instance, a study of crime and temperament. The author has handled that well-worn theme with considerable originality. She possesses an independent judgment, and much of the philosophy of life to which she gives expression in the book is striking and unconventional. Whether it will commend itself to the general reader of fiction is another matter, but in any case it is not allowed to interfere with the interest of the story, and that is the main point. The plot, which is distinctly ingenious in spite of some crudities and improbabilities, offers several good sensational situations and is well worked out, and the characters are excellently drawn. Susan's father, the rigid, forceful, ungenial man of business; his son Arthur, with his curious blend of strength and weakness; and young Martin Pottage, the narrow, upright Nonconformist, who is finally brought to a more liberal way of thinking, are none of them attractive characters, but they are all portrayed with unusual insight, and the interaction of one on another is cleverly presented. Susan herself strikes us as rather colourless, but is not devoid of charm. The book is well written, though it does not altogether escape the prevalent vice of forced phrasing; now and then, when dealing with strong emotion, the writer achieves a passage of real power.

Brendle. By M. Pickthall. (Methuen & Co.)

In a sense Mr. Marmaduke Pickthall may be reckoned of the literary heirs of Mr. Meredith; but he is rather an adopted son than an heir of the body. That is to say he has been influenced by the methods, but not by the atmosphere of the living master. His theme is such as would commend itself to the author of 'Beauchamp's Career,' yet it is by no means followed up in a similar manner. There is the rigid, grim, and somewhat humoursome father (as we had the uncle Lord Romfrey in Mr. Meredith's book), and there is the rebel son (correspondent to the nephew). With these two women make play, but there is no point in common between the women of the two books. Possibly Mr. Meredith might have fathered Stephanie, but we are not certain. Again, in the treatment of the working classes there is some resemblance in the methods of the veteran and the younger writer. But it would be impossible to say that Mr. Pickthall is imitative. On the contrary, he gives one an impression of frank individuality. Like Mr. Meredith, he moves large masses of motive across the stage, but it is in Mr. Pickthall's own way that he does so. He is ironic, but again the irony is his own. The theme to which we have referred is quite simple. John Ashford, brewer, the guardian of the Liberal party, is the tyrant of Brendle, and affects the airs of the successful British tradesman. Incidentally, he wishes to crush his own son, whom he considers to require licking into shape. Hammond is not "a chip of the old block," but is sensitive, and has the temperament of the artist. He is affronted by the treatment of this bluff tyrant, and sets up for himself as a designer and manufacturer of artistic furniture. Thenceforward the plot resolves itself into a struggle between father and son, the young man to retain his independence and the elder to bring him to heel. The fight is productive of dramatic incidents, and the reader must perforce read on to the conclusion to learn the end. But this is by no means the best of Mr. Pickthall's story; that lies in his characterization. The hero, Hammond Ashford, is most subtly conceived and

limned. In a way he is a most unsatisfactory person, for he deliberately turns his back on the good of life for scruples which are negligible. Also, he is over-impulsive and a little too feminine. Yet he is a wonderfully successful portrait of a certain type of modern man. His father also, in his breadth and violence and crudeness, is singularly individual; and the women are all admirable—an excellent thing in a novelist. Says a young and shrewd M.P. of Stephanie, the heroine, "You're wrong about Miss Revel. She's not the sighing furnace you imagine, but rather a cold, critical young woman." And there is the secret of the book, and also the proof of Mr. Pickthall's insight. Stephanie is pseudo-romantic, and her ultimate marriage is precisely natural. She would have made Hammond a beautiful and serviceable wife; but she never would have married him, although she thought she would. As for the general temper of the novel, it is an ironic tragedy, for in his death the brewer triumphs, and Hammond in the darkness of the grave is once more engrossed by the shadow of his more virile father. The novel is written as literature, and shows the products of a fine imagination on every page. It is only Mr. Pickthall's second novel of modern life, and it promises for him a great career. It is a large advance on 'Enid.'

The Human Touch. By Edith M. Nicholl. (Kegan Paul & Co.)

A CENTURY ago no American girl who had not made a "sampler" was held to have justified her existence. The American girl of to-day is no longer so occupied. She prefers to write novels. It is not clear that much has been gained by this change of occupation. The "sampler" was undeniably useless, but not more useless than a commonplace story constructed after an entirely conventional model. Miss Nicholl's novel 'The Human Touch' is obviously American in its origin, and contains little that has not been used in countless previous "samplers"—we should say novels. The hero, who owns a ranch in the south-west of the United States, has a wife addicted to nerves, who spends most of her time in Europe in order to "rest up." On hearing that she has been drowned he marries the heroine, who goes to live with him on his ranche. A little later the wife, who unfortunately has escaped drowning, comes home, and resumes for a time her rightful position in the household, the heroine gracefully retiring. In the end the wife obtains a "quick divorce," for no specified reason, except that she is tired of her husband, and he remarries the heroine. The way in which the author takes it for granted that for a wife to divorce her husband for no sufficient cause, and for a scrupulous girl to marry the divorced man, is a natural and satisfactory solution of the situation in which the hero and heroine of her book find themselves, will strike the English reader as rather curious. The incidents of the story are nearly as familiar as the plot, although it may be said that the description of a fight including the hero, and a sheriff, who is evidently own brother of Bret Harte's "Sheriff of Calaveras," is fairly well written.

The Improbable Idyl. By Dorothea Gerard. (Methuen & Co.)

IT is to be regretted that the author should enter what she has, in a literary sense, made her kingdom, handicapped by a middle-class family from the suburbs of London. She has the freedom of Poland, in our opinion, without any pretext, and the induction of this family into the country as "gentlemen farmers" is rather irritating. As a family they are neither interesting nor amusing, though the elder daughter gradually does do something to win one from this apathy by her youth, irresponsibility, yet withal grit and good feeling under her self-sought trial. Even when this is conceded we have difficulty in believing that such people could ever have become in any sense acclimatized. In the country and the people belonging to it—gentle and simple, Jew and Christian—we are interested, also in the love affairs of this same elder daughter. The book improves generally as it goes on, and the author's pleasant and luminous style of writing soon begins to find free play in spite of circumstances. In 'The Improbable Idyl' some of her best qualities appear, in the treatment both of landscape and of character.

The Queen's Man. By Eleanor C. Price. (Constable & Co.)

A LOVELY heroine, a gallant hero, a resourceful villain, a besieged castle, an interrupted wedding, the triumph of virtue—all the familiar features of romantic melodrama are to be found in this story of the Wars of the Roses. Lord Marlowe, whose devotion to Margaret of Anjou is responsible for the title, captivates the heart of Sir William Roden's granddaughter when he arrives at her ancestral home to urge his brother's suit. The maiden, as rich as she is fair, has two other suitors, and the plot is mainly concerned with their unscrupulous efforts to win her favour. One, the leader of a gang of freebooters, boldly interrupts Lord Marlowe's courtship by imprisoning him; the other, a handsome young Italian, who is Sir William Roden's secretary, is assisted in his treacherous designs by Lord Marlowe's stepmother, who, though a Lancastrian by repute, is really a Yorkist in disguise, and concludes her bold adventures by stabbing the worthy old man who has confided his grandchild to her care. It is nothing new, of course, for a woman to write a novel resounding with the clash of arms, the thunder of horses' hoofs, and the rough talk of lawless men; but it is seldom that a woman has succeeded in putting into such a story the virility, the briskness, the picturesqueness, that belong to 'The Queen's Man.' The tale is admirably told.

The Fate of Luke Ormerod. By Richard Dowling. (Hurst & Blackett.)

THIS story makes a heavy demand upon the credulity of its readers. A blackmailer is murdered by the son of the eccentric old inventor whom he is persecuting. The affectionate and indignant son, unknown to his father, is concealed in a suit of armour, and contrives to create the impression that the fatal sword-thrust came from a mechanical figure. He disappears from the house, leaving his bewildered father to be suspected of the crime. The arrest of the old man on a charge of murder seems inevitable, when the captain of a ship lying in an adjoining dock, who has witnessed the tragic scene from the mast of his vessel, comes to the rescue. Urged by his love for the inventor's daughter—a girl with a "beautiful, absorbed olive face"—he induces the missing son, who conveniently pays him a midnight visit on his vessel, to write a confession and to give the police the idea that he has committed suicide by leaving his cap and coat on the river bank. This simple ruse thoroughly deceives the police, and the disguised boy sails away to New Zealand on the captain's ship. What ingenuity the plot has is insufficient to make it convincing, and scarcely one of the characters is more lifelike than the automaton that plays a prominent part in the story.

The Snare of Strength. By Randolph Bedford. (Heinemann.)

THIS is an Australian story, and the author shows an intimate acquaintance with Australian miners, politicians, company promoters, and prodigal sons. His story owes its plan to Zola and its inspiration to Walt Whitman. It has the broad canvas which Zola covered with such wealth of detail and fidelity to truth, and its atmosphere is that of certain poetical passages in 'Leaves of Grass.' There is power in the book, and if it is a first book it means that Mr. Bedford has a future before him. He cannot yet handle successfully more than three or four characters, and most of the men to whom he introduces us have not the breath of life in them. At times he is undeniably coarse, but only in a single instance does this coarseness overstep the bounds of decency. In the matter of style he sometimes errs through striving after force of expression, but there are passages in the book that are admirably written. Taken as a whole, 'The Snare of Strength' is a remarkable book, and its ending, though decidedly unconventional, is the ending which a true artist would give to it. It will, perhaps, be noticed by those who are familiar with American slang that it closely resembles the slang spoken by some of Mr. Bedford's Australians.

Sherman Watterson. By William Marabell. (New York, the Author.)

MR. MARABELL has endeavoured to depict the rise of a typical American boy from extreme poverty to assured success. The attempt has been carried out conscientiously, but the story is deficient in interest, and is much too long. The author is entitled to the credit of having earnestly striven to make his book conform to his ideal of a faithful picture of certain phases of American life, and with further experience as a writer he will probably be more successful in combining faithfulness of description with interest of plot and incident.

XUM

LOCAL HISTORY.

Smalley: its History and Legends. By the Rev. Charles Kerry. (Bemrose & Sons.)—It is now very many years since we welcomed an admirable volume by Mr. Kerry on the church and parish of St. Laurence, Reading. Since that date he has done much good archæological work, more particularly in the pages of various volumes of the *Derbyshire Archæological Journal*, of which he was for some years editor. It is a pleasure to meet with another volume from his pen, now that he is advanced in years, and to find that, though he writes from "a sick room," chiefly from notes made years ago, he is fully capable of producing a thoroughly readable and scholarly book.

Smalley is but an offshoot of the parish of Morley, Derbyshire, and of no exceptional interest. The chapelry had, however, baptismal and burial rights at an early date, and Mr. Kerry makes good use of the old registers, which begin in 1623. Towards the end of the eighteenth century, Robert Wilmot, who was rector of Morley with Smalley, entered a variety of curious memoranda in the registers:

"1781, Nov. 14. Simon Wilmot, Esq., buried, aged 30. He was the 4th son of the Rev. Dr. Richard Wilmot, late rector of this parish. In the service of his king and country in America he was wounded, and taken prisoner by the Rebels, and such was their cruelty to him, that they suffered him to languish with his wounds undressed in a common prison for several days. This laid the foundation of the fatal disease: a consumption of the lungs, which brought him to his grave. He possessed a liberal mind, was generous, brave, and merciful.

"R. W. Rector."

The old chapel was rebuilt in 1795, and again at a much later date. When a grave was being dug in 1862, an oblong gritstone with a Maltese cross on one side, and other ornamentation on the reverse, was found. A plate is given of this stone, which is undoubtedly pre-Norman. A very similar stone has lately come to light in the churchyard of Norton, in North-East Derbyshire.

The book contains much pleasant gossip about local celebrities. Part of the account of the condition of the chapel about sixty years ago may be quoted:—

"Across the west end stretched the inevitable gallery, occupied by the boys' Sunday school. The men servants from Stainsby, and the old instrumental choir, with 'all kinds of music,' conducted by Mr. Samuel Ottewell, occupied the front seats. In the centre panel of the gallery front, a contrivance of three wooden rollers with ten facets, each with their numerals, enabled the clerk to ascertain the Tate and Brady psalms determined by the choir. The Rev. Henry Moore (1847) was the first to introduce modern hymns. The gallery stairs were honeycombed on each side by old Jonathan Beniston's spiked crutches, and although Jonathan could not read, he considered himself a valuable addition to the choir, contributing a sort of drone base accompaniment to the melodies, after the style of a bagpipe 'chanter.'"

A series of excellent photographic plates adds much to the value of an otherwise attractive book.

Selborne. By H. W. Tompkins. With Illustrations by Henry J. Howard. (Dent & Co.)—This is a tasteful little book, of "The Temple Topographies" series. Those who desire to have a small memento of a visit to Selborne cannot do better than purchase it. Mr. Tompkins makes no claim to originality, and frankly acknowledges his indebtedness to two recent writers on Hampshire, Mr. Dewar and Dr. Cox. Mr. Howard's illustrations are worthy of the place.

The Story of Edinburgh, by Oliphant Smeaton, illustrated by Herbert Railton and J. Ayton Symington (Dent & Co.), is a welcome addition to the well-known "Mediæval Town Series." Mr. Smeaton claims that the book, though based on a bigger volume published last year, is altogether an independent work, and if this statement is perhaps a little too large, yet the addition of new matter and the rearrangement of the old undoubtedly give the present edition a value of its own. It has at least been successfully adapted to meet the requirements of a somewhat different class of readers, and should prove most useful to any one who desires a guide and instructor in the Scotch capital. The scheme of the volume is sensible. The first portion, dealing with the history of Edinburgh, traces the general fortunes of the city without special regard to topography; it is briskly enough written, and suitably seasoned with classical anecdotes. The second, and in this instance more important, division presents a detailed description of the city itself, and discusses the places and objects of historic interest. The instructions are clear and practical, the comments are generally to the point, and the illustrations decidedly good.

Studham: the Story of a Secluded Parish. By J. E. Brown. (Stock.)—In these sixty pages Mr. Brown, the vicar of this parish on the borders of Bedfordshire and Hertfordshire, gives an account of Studham. It is neither particularly badly nor particularly well done. The little book does not appear to appeal in any special way to the general reader or the general antiquary. The best thing about it consists of the photographic plates of some capitals of thirteenth-century date in the church. Further research would have brought to light much more about the parish. Doubtless the book will possess some attraction for residents.

OUR LIBRARY TABLE.

How to Collect Books. By J. Herbert Slater. (Bell & Sons.) — Much has been written concerning the delights of book-collecting, and, on the other hand, critics have not been slow to denounce the pursuit as a useless and expensive folly. We are glad to see that Mr. Slater, whose experience as a bibliographer entitles him to speak with authority, makes no apology for the collector. Whether he is a book-hunter of the hard old stamp, who, as we know on unimpeachable authority, "had the scent of a slow-hound and the snap of a bull-dog," or whether he belongs to the more modern school, which relies chiefly on auction catalogues and the sympathizing bookseller, the bibliophile renders a service to literature by assisting in the preservation of books which would otherwise be lost and forgotten. We entirely agree with Mr. Slater in the defence he offers for the collection of first editions. As Dr. J. Taylor Brown showed in his admirable essay on 'Bibliomania,' the orthography of such writers as Milton, Sir T. Browne, and their contemporaries, as employed in the original editions of their works, was an essential part of their literary equipment. Subsequent writers, in modernizing the spelling, have sometimes altered the sense, as well as the appearance, of the original passage. It has long been felt that a book compiled somewhat on the same lines as Rouveyre's 'Connaissances nécessaires à un Bibliophile' would be of assistance to the English collector. It is perhaps doubtful if Mr. Slater's book exactly meets this want. It professes to be compiled for the guidance of the "inexperienced collector," but a great deal of the volume, though interesting to the historical student of books, is of very little use to any one who wishes to start a collection. As has been pointed out more than once, there is no real satisfaction in being a book-collector unless one is poor. The feeling that one cannot afford the coveted volume, but that an irresistible force compels one to buy it, is what gives the pursuit its exquisite zest. The largest portion of Mr. Slater's book is taken up with articles on ancient manuscripts, incunabula, celebrated presses, and historical bindings. The class of amateur for whom 'How to Collect Books' is designed has very little concern with illuminated codices, the "Adam" Lactantius or the Jensen Virgilius, or the books that bear the ownership marks of Jean Grolier and Demetrio Canevari. In dealing with these subjects Mr. Slater has merely retrodden ground that has been traversed by such writers as Mr. Andrew Lang in *The Library* and *Books and Bookmen*. What the tyro wants to know is how to collect such books as fall within his modest means.

The first chapter contains several useful hints, and the second, which deals with the sizes of books, the sheet measurements, and the methods of collation, is of considerable value, as the young collector cannot realize too soon that the basis of collation is the number of sheets of which a book is composed. The correct "register" having once been ascertained, any imperfections in the book are immediately discoverable. But the utility of the chapter would have been greatly enhanced if Mr. Slater had given a few specimen collations for the instruction of the inexperienced collector. Amongst older books he might have selected the first editions of 'The Faerie Queen' and 'Paradise Lost,' and amongst those of more modern date, the first issues in parts of 'The Pickwick Papers' and 'Vanity Fair.' Scientific collations of these books, accompanied with explanatory notes, would go a long way towards completing the education of the young amateur.

The chapter on 'Auction Sales' is also interesting, but of little practical use to the collector. The trend of the market is ascertained, not by consulting the records of sales a century ago, but by carefully watching the movements of the present day. In this connexion Mr. Slater might usefully have given references to the special bibliographies of modern writers, Ruskin, Browning, Morris, and others, which have been a feature of the last dozen years, and of which the study is indispensable to the amateur. The book is well printed, and the illustrations testify to the liberality of the publishers. The text is generally accurate, but there is a curious error on p. 103, which should be corrected in a future issue. Among the works illustrated by William Blake, a book called 'Silver Drops, or Serious Things,' is specified, and its date is assigned to "about 1780." The author of 'Silver Drops' was another William Blake, a woollen-draper of London, living at the sign of The Golden Boy, corner of Maiden Lane, at the end of Bedford Street, Covent Garden; and the book, though undated, was published about 1666, more than ninety years before the birth of the poet-artist. Its author was a kind of seventeenth-century Dr. Barnardo, who induced a number of charitable ladies to assist him in establishing a home for waifs and strays of both sexes at Highgate, on or close to the site of the house in which Coleridge lived and died. This "Ladies' School," as it was called, flourished for a few years, but died of inanition before the close of the century.

Essays in Revolt. By Herbert M. Thompson. (Dent & Co.)—The author of the four essays in this book is a bold thinker of no mean powers; but he has a piece of special pleading to do, and he does it not over scrupulously. He is an advocate of non-theological moral instruction and more history, and the curriculum must be cleared accordingly. The classical languages, therefore, are required to remove themselves almost entirely from the boy's round of studies. Mr. Thompson is skilful in handling his argument

after a seemingly logical method, and in dressing it neatly to the purpose in hand. It so happens that the trend of his first essay on moral instruction in schools gives results with which we cordially agree, while that on classical studies is characterized by some blatancy and strong language. On the whole we feel that the author would be likely to do more good by his writing if he were less self-assertive and less confident of his mission to set the poor old world right. His moral instruction he would prefer to substitute for the present religious teaching; or, if this were impossible without too much friction, to have both. Not all the Bible, however, is to be taught, but only what is ethically good for children to learn. Dogmatic and undenominational religious teachers are unsuited for imparting moral instruction, because they have "always failed to adapt themselves to a well-ordered, well-reasoned ethical system." The essay on classical studies starts from the views of a moderate advocate like Prof. Butcher, and arrives at the conclusion stated above. Mr. Thompson, who is not slow to complain of the unreality of the pleas of his opponents, of their palaver and unfair argument, himself argues unfairly (p. 162) when he implies that for the attention and imagination of boys over their Latin and Greek to wander to fields of real interest is a deficiency peculiar to classical studies. He must be well aware that—the cricket match or the volume of Henty being the most likely "fields of real interest"—the attention will wander quite as much in the physical laboratory, at the history lecture, or on the experimental farm.

English Idioms and Colloquialisms, with translations into French and Dutch (Thieme, Zutphen; Herckenrath, Lederberg-Gent), is the work of Prof. Arthur Burvenich. Prof. Logeman contributes an introductory note commending the collection, and we are able to endorse his praise. A short preface by the author provides an analysis of English grammar and usage, and references to the sections of this are made in the main work, which is sensibly arranged in alphabetical order, and runs to 343 pages in all. We are struck with the wealth of material displayed and the high level of accuracy maintained. The obvious difficulty, as Prof. Logeman says, is to limit such a work. It would be best to confine oneself to the living language, or, say, to the language of the last hundred years, or to include only those words which may be classed as literary slang, occurring in Shakspeare and other standard authors. Prof. Burvenich is pretty well up to date, though he includes many historic words, and his manual ought to be of real use to practical people.

There is, however, one method of improving it which he seems to have neglected. He should have shown his proof-sheets to one or two cultivated Englishmen. They would have corrected some obvious errors, and altered other things which, though grammatically correct, are not, we think, English as they stand. Thus "Saul among the apostles" should be "Saul among the prophets"; see 1 Sam. xix. 24 of the English Bible. A "malapropism" is not merely "un terme prétentieux mal employé"; it generally implies actual distortion as well as misuse of words. "Mods" represents "Moderations," not "moderates"; and we do not find "Greats" and the Cambridge "Tripos," which have an equal claim for insertion. We understand what an "endyadis" is, but have never seen the word in such a form before. A "money-man" is not English any more than "a familiar way of *boarding* an embarrassing subject." Some more subtle points of style and taste could be easily indicated. The ordinary Englishman would, we think, be useful, if set to reject phrases and words that may fairly be called obsolete. He would not recognize as familiar "What has that to do with Bacchus?" He might miss a common meaning of "monkey." "Oof," an interesting word for the foreigner, may be justly omitted as obsolete; but for the same reason we should remove the "Healtheries," which we class with mere trade inventions, like "motoralities," as not worthy to figure in a dictionary. Prof. Logeman warns off critics who are ready with addenda; so we keep back many of our notes. And, after all, there is surprisingly little to correct in a mass of well-ordered words and phrases. The equivalents in French and Dutch, so far as we are able to test them, seem excellent. Some interesting matter has been derived from *Notes and Queries*, and from authorities like Prof. Stoffel and Prof. Skeat. The latter has acquired an intrusive "s" on p. 238. If there is a second edition of the book, as we hope, a trained English proof-reader might go over it with advantage before its reissue. It deserves a cloth binding too, for it is already going to pieces as we turn over the leaves.

Punctuation: its Principles and Practice, by T. F. Husband and M. F. A. Husband (Routledge), is a practical little volume, which is also strong on the theoretical side, and may be commended as a guide to a neglected subject. The first part of the volume is historical, beginning with the alphabet and Greek epigraphy. Part II. discusses modern practice. We do not think that even the expert writer is likely to consider sentences so subtly as the authors do, but he is likely on the whole to endorse their conclusions. The chapter concerning the colon does not discuss the arbitrary use of that stop in the Bible and the Prayer Book, a use we saw repeated in a recent translation of the 'Imitatio Christi.' The authors note the growing over-use of short sentences. We recall a fine long one where the author speaks of

> "standing in the eye of a master of grammatical construction, and feeling the weight of at least three sentences on his brain, together with a prospect of judicial interrogation for the discovery of his precise meaning."

It is a simile introducing Dr. Middleton's reply to a query if the wine was good in chap. xxxii. of 'The Egoist.' Beginning with commas, it swells on to semicolons, and a colon and dash at the main point, occupying twenty-two lines before a full stop is reached. The typical modern writer has got over the use of italics to emphasize his statements, but he often strives to make his scene move by an absurd debauch of full stops. We rather relish the leisurely semicolons and sentences of the eighteenth century after being confronted with the "telegraphese" of many a modern stylist.

Messrs. Seeley & Co. send us *The Golden Reciter*, which offers an unusual wealth of passages from authors of to-day, such as Mr. Austin Dobson, Mr. Hardy, Mr. Hewlett, and Mr. Kipling. There are also some scenes from the dramas of Mr. Pinero and other prominent dramatists. Mr. Cairns James, who is a Professor of Elocution, contributes by way of introduction some admirably practical remarks on the reciter's art. The selection of pieces is good and varied, though we are a little surprised to see a number of meditative passages which are pretty enough as prose, but do not read as if they would be effective on the platform. Mr. Kipling's 'Recessional,' with other modern verse, makes a good show. The facilities afforded by holders of copyrights have been well used throughout. We are glad to see some American poems, in particular Lowell's charming 'My Love.' We do not care for the Tennysonian selection, and we may point out (though it is a trifling matter) that the author of 'In Memoriam' should not be called "Lord Tennyson." A living holder of that name, the poet's son, has written at least one piece of verse. Tennyson *tout court* and Charles Kingsley (not the Rev. Charles Kingsley) are surely sufficient designations for authors now classic.

Records and Reminiscences, by Sir Francis C. Burnand (Methuen), appears in a single volume, revised, at a cheaper price. This is the fourth edition, and we congratulate the genial author on the success of his volume, which in this form should be read far and wide. There is a good deal about Eton, and the discipline, or lack of discipline, which prevailed there. We had an interesting correspondence, it may be recalled, as to the question whether Maurice FitzGerald, a nephew of the translator of Omar, stood for the "wise youth" of 'Richard Feverel.' The corrections have improved the volume, though more are still possible; *e.g.*, on p. 284 a classical quotation seems incomplete, and a Dickensian character is misspelt.

Goethe's *Faust*, translated by Anna Swanwick, appears in the "York Library" (Bell), and in this form will, we hope, be widely patronized, for the book has the great advantage of an admirable introduction and bibliography by Dr. Karl Breul. No one speaks with better authority on the subject; and though we prefer some of the other translations to Miss Swanwick's fluent version, which, by the by, includes both parts of 'Faust,' we shall treasure the book for the aids it offers to the understanding of the great play.

Mr. H. A. L. Degener, of Leipsic, is the publisher and compiler of *Wer ist's?* for which Messrs. Williams & Norgate are the English agents. The volume is just an elaborate German 'Who's Who,' and will be an invaluable book of reference. We have not received 'Minerva' for some years, and that is confined to the learned world. We are much struck with the thoroughness of the work before us, both in the preliminary sections and in the biographies. The foreigners who are included seem rather an odd selection. We do not see why, for instance, the head of Girton should be included, while those of various more important Cambridge colleges are omitted. A good deal of interesting and well-arranged information will be found in the sections which come before the main list of biographies, after which an obituary and list of authors with pseudonyms appear.

Mr. C. A. Pearson has reissued Mr. Sladen's successful novel about Nelson, *The Admiral*, at sixpence. On the paper cover is a figure of Nelson, taken from an extremely rare colour-print published by Tegg in 1807, and pronounced by some people to be the work of Rowlandson. There is no copy of it in the South Kensington Museum, and the single copy in the British Museum is only half coloured.

We have on our table *Christian Belief interpreted by Christian Experience*, by C. Cuthbert Hall (Unwin),—*Christian Baptism, its Significance and its Subjects*, by J. E. Roberts (Clarke),—*The Life of St. Patrick*, by the Most Rev. Dr. Healy (Dublin, Gill),—*The Harmony of the Proper Psalms*, by Melville Scott (Bemrose),—*A Seraphic Keepsake: a Talisman against Temptation, written for Brother Leo by Saint Francis of Assisi*, translated by Reginald Balfour (Burns & Oates),—*To Jerusalem through the Lands of Islam*, by Madame Hyacinthe Loyson (Kegan Paul),—*China's Intercourse with Korea from the Fifteenth Century to 1895*, by W. W. Rockhill (Luzac), — *Picturesque Yorkshire: York and the North Riding*, by W. Andrews (Valentine),—*Round the Empire*, by George R.

XUM

Parkin (Cassell),—*The University of Leeds Calendar, 1905-6* (Leeds, Jowett & Sowry),—*College Lectures on the Exodus of the 'Bacchae' of Euripides*, by E. C. Marchant (Oxford, Gadney),—*Introduction to Chemical Analysis*, by H. C. H. Candy (Churchill),—*How to Live the Simple Life*, by Calvin Pater (Laurie),—*Studies in Rhyme and Rhythm*, by Charles F. Grindrod (Elkin Mathews),—*The Immortality of the Soul in the Poems of Tennyson and Browning*, by Henry Jones (Green),—*The 'Prometheus Unbound' of Shelley*, by J. Macmillan Brown (Whitcombe & Tombs),—*The Love Affairs of Great Musicians*, Vols. I. and II., by Rupert Hughes (Nash),—*Pictures without Canvas*, by Clark Stephens (Drane),—*Chandrashekhar*, translated from Bengali by Debendra Chandra Mullick (Calcutta, Thacker & Spink),—*Cyril's Quest*, by Annie Gray (R.T.S.),—*Dorothy Raeburn*, by R. Turner (Greening),—*The Adventures of Val Daintry in the Græco-Turkish War*, by V. L. Going (R.T.S.),—*A Spur to Smite*, by G. B. Lancaster (Melrose),—*Where Angels Fear to Tread*, by E. M. Forster (Blackwood),—and *The Other Woman*, by L. T. Meade (Walter Scott). Among New Editions we have a *New Grammar of French Grammars*, by Dr. V. de Fivas (Crosby Lockwood),—and *Coins d'Égypte Ignorés*, by Albert Gayet (Paris, Plon-Nourrit).

LIST OF NEW BOOKS.

COLONIAL ARCHIVES: CAPE TOWN.

Colonial Office, Cape Town, September 13th, 1905.

In your review of 'The Native Races of South Africa,' by G. W. Stow, edited by G. M. Theal (July 29th), you mention the latter as "custodian of the white men's archives in Cape Colony." Permit me to inform you that this is an error; that I have for a considerable number of years (since January, 1881) held the appointment; that I still hold it alone; and that I have already produced an English précis of very many volumes of the Dutch archives in my custody, which has been heartily welcomed by those in Europe and South Africa, as well as in America, who take an interest in Cape history.

Dr. Theal holds the official title of "Colonial Historiographer," and has no connexion with my department. H. C. V. Leibbrandt,
Keeper of the Colonial Archives.

THE DEATH OF EDWARD THE ELDER.

The College, Llandovery, September 27th, 1905.

The beginning of the annal for 924 in the Abingdon version of the 'Anglo-Saxon Chronicle' runs: "Her Eadweard cing gefor on Myrcum æt Fearndune." This entry has repeatedly been used as the authority for the scene of Edward's death, but it does not seem that any serious attempt has been made to identify "Fearndune," although place-names derivable from this form occur in Cheshire, Northamptonshire, and Nottinghamshire. Our choice in the matter is determined by one of the important passages in William of Malmesbury's 'Gesta Regum,' in which he is following a contemporary metrical life of Athelstan. He says that King Edward "paucis ante obitum diebus, Urbem Legionum, fiducia Britonum rebellantem, a contumacia compescuit: ibique præsidio militum imposito, apud Ferendunam villam, tactus valetudine vitam præsentem exivit." Now if the words "paucis diebus" are to be interpreted with any strictness, the equivalent of "Ferenduna" must be sought within a measurable distance of Chester, and the only place which fulfils all the required conditions is Farndon, in Cheshire, on the Dee, about six miles north-east of Wrexham. This place, therefore, we may reasonably assume to be the "Fearndune" of the Abingdon chronicle: an identification which has a certain interest as proving, if proof were needed, that Mercia at the beginning of the tenth century extended as far as the present boundary between Cheshire and Denbighshire. F. M. Stenton.

THE AUTUMN PUBLISHING SEASON.

MESSRS. LONGMAN

have in hand: In History and Biography: The Political History of England, edited by the Rev. W. Hunt and R. L. Poole: Vol. X. by the Rev. W. Hunt; Vol. II. by Prof. G. B. Adams; Vol. III. by Prof. T. F. Tout; and Vol. I. by Dr. T. Hodgkin,—Stubbs's Lectures on Medieval English History, edited by A. Hassall,—Gregory the Great: his Place in History, by F. H. Dudden, 2 vols.,—Henry VIII., by A. F. Pollard, a new edition,—Pryings among Private Papers, by the author of 'A Life of Sir Kenelm Digby,'—The Life of Granville George Leveson Gower, by Lord E. Fitzmaurice, 2 vols.,—Letters to "Ivy" from the first Earl of Dudley, edited by S. H. Romilly,—Mrs. Fitzherbert and George IV., by W. H. Wilkins, 2 vols.,—and Life of Sir J. T. Gilbert, by Rosa M. Gilbert. In Religion, Theology, &c.: Addresses to Cardinal Newman, with his Replies, edited by the Rev. W. P. Neville,—George Rundle Prynne, by A. C. Kelway,—Aspects of Anglicanism, by Dr. Moyes,—Self-Knowledge and Self-Discipline, by the Rev. B. W. Maturin,—Mariale Novum, a Series of Sonnets,—St. John and the End of the Apostolic Age, by the Abbé Fouard,—The Claims of the Common Life, by Bishop M. Creighton, and Counsel for the Young, from the letters of the same,—Spiritual Difficulties in the

Bible and Prayer-Book, by Dean Luckock,—The Scientific Temper in Religion, and other Addresses, by the Rev. P. N. Waggett,—The Historic Christ, lectures by the Rev. T. A. Lacey,—Old Beliefs and New Knowledge, by the Rev. C. L. Drawbridge,—Our Lord's Resurrection, by the Rev. W. J. Sparrow-Simpson,—Religious Ceremonial, by the Rev. W. H. Frere,—St. Giles's of the Lepers, by E. C. W. Grey,—How the Church Began, by the Rev. R. B. Rackham,—Preparation for Ordination, by Dr. B. W. Randolph,—new editions of Studies on the Character of Christ, and Human Nature a Revelation of the Divine, by the Rev. C. H. Robinson,—The Spiritual Order, with other papers by George Congreve,—Pastoral Work in Country Districts, by V. S. S. Coles,—The Opportunity of the Church of England, by the Bishop of Stepney,—Shinto (the Way of the Gods), by W. G. Aston,—The Sermon on the Mount: an Exposition, by the Rev. E. Lyttelton,—The Tradition of Scripture, by Dr. W. Barry,—The Holy Eucharist, by the Right Rev. J. C. Hedley,—The Catholic Calendar, by the Rev. H. Thurston,—and Our Young People: a Book for Priests and Parents, by Canon Keatinge. In Juvenile Literature: A Book for Children about our Lord Jesus Christ, by the Rev. C. Hart, illustrated by A. A. Hilton,—The Lay of the Wee Brown Wren, by H. W. Shepheard-Walwyn,—The Plain Princess: a Fairy Tale, by I. Maunder, illustrated,—The Golliwogg's Fox Hunt, by F. K. and B. Upton,—The Red Romance Book, edited by A. Lang, illustrated by H. J. Ford,—and A Child's Garden of Verses, illustrated by J. Wilcox Smith. In Natural History, Science, and Travel: The Mammals of Great Britain and Ireland, by J. G. Millais, illustrated, Vol. II.,—a new edition of Gray's Anatomy, edited by T. P. Pick and R. Howden,—Physical Chemistry and its Applications, by A. Findlay, Elementary Electrical Calculations, by W. H. N. James and D. L. Sands,—The Ventilation, Heating, and Lighting of Dwellings, by J. W. Thomas,—a new edition of Crookes's Select Methods in Chemical Analysis,—The Physiology and Therapeutics of the Harrogate Waters, by Dr. W. Bain and Dr. Edgecombe,—Synthetica, by S. S. Laurie, 2 vols.,—Steam Turbines, by W. Gentsch, translated by A. R. Liddell,—A Manual of Diseases of the Nose, by Dr. H. L. Lack,—Elementary Practical Metallurgy: Iron and Steel, by P. Longmuir,—The Food Factor in Disease, by Dr. F. Hare,—The Unit of Strife, by E. Garrod,—The Secret of the Totem, by A. Lang,—The Approach to Philosophy, by R. B. Perry,—Wild-Fowl, by L. H. de V. Shaw, illustrated by A. Thorburn and C. Whymper,—Retrievers and Retrieving, by Major W. G. Eley,—a new edition of The Diseases of Children, by Dr. H. Ashby and G. A. Wright, illustrated,—Everyday Life among the Head-Hunters, by D. Caton,—and A Levantine Log-Book, by J. Hart. In Belles-Lettres, Poetry, and Fiction: The New Rambler, essays and addresses by Sir Lewis Morris,—a new edition of Lucan's Pharsalia, translated by Sir E. Ridley,—Poems of Love and Nature, by L. A. Rickett,—New Collected Rhymes, by A. Lang,—The Three Resurrections and the Triumph of Maeve: Poems, by E. Gore-Booth,—Aurelian: a Drama, by Spencer Moore,—Moscow, a story by F. Whishaw,—Wild Wheat, by M. E. Francis,—and An Appeal to Rome, by Mrs. Wilfrid Ward. Educational and General: a new edition of A Class-Book of English Grammar, by W. E. C. Clarke and A. C. Muller,—A Primer of School Method, by T. F. G. Dexter and A. H. Garlick,—Boys and their Management at School, by H. B. Smith,—Preparatory Cæsar, edited by F. Ritchie,—International Law, by L. Oppenheim: Vol. II. War,—The Model Kitchen, by Lucy H. Yates,—and Catalogue of Fifteenth-Century Books in Trinity College, Dublin, by T. K. Abbott.

MR. FISHER UNWIN

will publish: In Biography: The Memoirs of Dr. Thomas W. Evans: Recollections of the Second French Empire, edited by Dr. E. A. Crane, illustrated,—The Story of a Devonshire House, by Lord Coleridge, K.C., illustrated,—Cobden as a Citizen, by W. E. A. Axon,—A Queen of the Revolution, the life-story of Désirée Bernadotte, by Mrs. Catherine Bearne, illustrated,—and The True Story of George Eliot in relation to Adam Bede, by the Rev. William Mottram, illustrated. In History: A Literary History of the English People: Vol. II. From the Renaissance to the Civil War (Part I.), by J. J. Jusserand, with frontispiece,—The Manors of Suffolk: The Hundreds of Babergh and Blackbourn, by Dr. W. A. Copinger, illustrated,—Julian the Apostate, by Gaetano Negri, translated by the Duchess Litta-Visconti-Arese, illustrated,—Somerset House, Past and Present, by Raymond Needham and Alexander Webster, illustrated,—A History of Co-operation, by G. J. Holyoake, illustrated,—Society in the Country House: Anecdotal Records of Six Centuries, by T. H. S. Escott, with frontispiece,—a cheap edition of Rome and Pompeii, by M. Boissier,—in the "Welsh Library," A Short History of Wales, by Prof. Owen M. Edwards,—and in the "Story of the Nations" Series, The Story of Greece from the Coming of the Hellenes to A.D. 14, by Dr. E. S. Shuckburgh, with maps and illustrations. In Travel and Description: Round about my Peking Garden, by Mrs. Archibald Little, illustrated,—Rambles on the Riviera, by Prof. Strasburger, translated by the Misses O. and B. Comerford-Casey, illustrated,—Sport and Travel in Abyssinia, by Lord Hindlip, with maps and illustrations, and British East Africa, by the same,—The Siege of Port Arthur, by David H. James, illustrated,—and John Chinaman at Home, by the Rev. E. J. Hardy, illustrated. In Science and Natural History: The Nature and Origin of Living Matter, by Prof. H. C. Bastian, illustrated,—Recreations of a Naturalist, by J. E. Harting, illustrated,—Fishes I have Known, by A. H. Beavan, illustrated,—and Our School out of Doors: a Nature Book for Children, by the Hon. M. C. Leigh, illustrated. Codrington, revised,—and new editions of "Illustrated Handbooks of Art History": Architecture, Classic and Early Christian, by Prof. T. R. Smith and J. Slater; Architecture, Gothic and Renaissance, by Prof. T. R. Smith and Sir E. J. Poynter; Sculpture, Egyptian, Assyrian, Greek, and Roman, by G. Redford; Sculpture, Gothic, Renaissance, and Modern, by Leader Scott; Painting, Classic and Italian, by Sir E. J. Poynter and P. R. Head; Painting, Spanish and French, by G. Smith; Painting, German, Flemish, and Dutch, by H. J. W. Buxton and Sir E. J. Poynter; Painting, English and American, by H. J. W. Buxton and S. R. Koehler; and Water-Colour Painting in England, by G. R. Redgrave.

MESSRS. HARRISON & SONS

are preparing: Burke's Landed Gentry of Great Britain, edited by A. P. Burke,—Burke's Peerage and Baronetage, the Privy Council, Knightage, and Companionage, edited by the same,—Our Empire, Past and Present, by the Earl of Meath, M. H. C. Legh, and Edith Jackson, with illustrations and maps: Vol. II., Great Britain in Asia,—Letters of a Genius, a translation of Mérimée's 'Lettres à une Inconnue,'—The Winning Rules; or, Roulette Practically Considered, by Speranza,—and The Story of Ping-Pong, a toy-book, written and illustrated by Mrs. F. E. Drummond Hay.

JOSÉ MARIA DE HEREDIA.

JOSÉ MARIA DE HEREDIA, who died at the Château de Bourdonne (Seine et Oise) on October 3rd, was born in Cuba, November 22nd, 1842. On the father's side he was of Spanish origin; of French on the mother's. He was educated in France, where he finally settled in 1860. When the *Parnasse Contemporain* was founded in 1866 under the editorship of Catulle Mendès, Heredia was one of the contributors; and M. Mendès, writing twenty years later, said, with his pleasant enthusiasm:—

"La fureur rouge des cactus, le resplendissement des incendies nocturnes, l'azur vert du ciel persan et les pourpres et les ors de Paul Veronèse ou Delacroix, n'ont que des teintes pâles, en regard des strophes éclatantes de José Maria de Heredia."

Other sonnets, with a few poems not in sonnet form, were published from time to time, and Heredia was a well-known poet when he brought out his only volume of verse, 'Les Trophées,' in 1893. This, with the exception of two translations from the Spanish, remained his only published volume. It was received with general applause, and Heredia was elected next year to the place in the French Academy left vacant by the death of Leconte de Lisle.

Heredia was the last of the Parnassians. To meet him at Mallarmé's, in the eighties, among the disciples (one of whom, the best, M. Henri de Régnier, was to become his son-in-law) was a kind of anachronism. He seemed too palpable, was like an organ note striking suddenly through the murmurs of a clavichord. The younger men, who respected so few, respected him; but to them he represented, after the death of Leconte de Lisle, whatever was most "splendidly null" in the old technique. That he had poetic substance no one ever denied, and the hard perfection of his form was one of the things which could but be praised and deplored by those who were no longer asking the old question: "Est-elle en marbre ou non, la Vénus de Milo?" His sonnets were like medallions, all surface and relief. They rendered firmly and finely that part of visible things which could be concentrated into their shadowless outlines. In the fragment of a letter which Mr. Gosse quotes in his essay on Heredia in 'Critical Kit-Kats' (an essay which says everything there is to be said in his eulogy), we find him writing:

"Si je m'en suis tenu au sonnet, c'est que je trouve que dans sa forme à la fois mystique et mathématique, c'est le plus beau des poèmes à forme fixe et qu'il exige, par sa brièveté et sa difficulté, une pensée qui ne peuve qu'exciter et pousser à la perfection l'artiste digne de ce beau nom."

In every sonnet he aimed at making a definite thing, a thing to hold in the hand, and turn over, and examine all round. So Gautier, and not with a more masterly skill, made 'Émaux et Camées.' He is the last of the goldsmiths and workers in metals. ARTHUR SYMONS.

Literary Gossip.

WE shall publish next week our annual review of Russian literature.

'ON TWO CONTINENTS: MEMORIES OF HALF A CENTURY,' is the title given by Mrs. Bayard Taylor to a volume of her recollections, which will be published immediately by Messrs. Smith, Elder & Co. Mrs. Bayard Taylor was the daughter of the famous German astronomer Hansen, and wife of the American man of letters who, like many of his compeers, came to represent his country in the diplomatic service. The volume contains several illustrations.

MESSRS. LONGMAN have nearly ready 'New Collected Rhymes,' by Mr. Lang, whose amazing fertility in prose has not, we are glad to find, led to the disuse of his lyrical vein. The volume contains three ballads, of which two at least—'The Young Ruthven' and 'The Queen of Spain'—were written in competition with the street minstrels of the close of the sixteenth century; 'Cricket Rhymes,' 'Jubilee Poems,' 'Loyal Lyrics,' and a number of verses which are described as 'Critical of Life, Art, and Literature.'

THE publication of Mr. Herbert Paul's 'Life of Froude' has been postponed until the end of this month, as the author received at the last moment permission to include a collection of letters which will add considerably to the interest of the work. Mr. Froude's family have given Mr. Paul access to valuable biographical material in their possession, and the life may therefore be considered authoritative. The publishers are Sir Isaac Pitman & Sons.

EARLY next year Mr. John Murray will publish a life of Nelson's intimate friend Sir Thomas Masterman Hardy, captain of the Victory, written by Mr. A. M. Broadley and the Rev. R. Grosvenor Bartelot. It is to be fully illustrated by original portraits, views, &c., in possession of Hardy's descendants, and includes the results of the recent discovery of some hundreds of unknown and unpublished letters of Hardy's.

MR. FILSON YOUNG, whose essays in fiction have up to the present been confined to the short story, has a novel, 'The Sands of Pleasure,' appearing within a few weeks through E. Grant Richards. It includes a preface of some length, addressed "to the conventional reader," in which Mr. Filson Young justifies his disregard of the limitations usually imposed on the English novelist:—

"The collision of the sane mind with what is socially insane produces daily results that are surprising, but always instructive to men and women who are at all capable of finding interest in humane matters at large; and to the making of character go not only the influences of the wise and good in men, but also of the foolish and base."

In scene the story is equally divided between extreme Cornwall and intimate Paris.

MRS. PERCY DEARMER has given the title of 'The Difficult Way' to her new novel, which will be published by Messrs. Smith, Elder & Co. on the 20th. The book deals with the evolution of a human soul through suffering. Nan, an art student, who is frankly pagan, marries John Pilgrim, a zealot of the Church, and their different views end in tragedy.

MR. UNWIN is awarding the prize of 100*l.* in his First Novel Competition to Mrs. F. Baillie-Saunders, who is already known as the author of a work on Dickens. Her novel is entitled 'Saints in Society,' and it touches on social problems in London—a subject in which she takes a practical interest. The working-out of the plot brings the hero (a young printer and Christian Socialist) and his wife from a Walworth back street to wealth, power, and title. The book will be published on the 16th.

The Classical Review for October will contain a paper on the 'Ancient Trireme,' by Mr. A. B. Cook and Mr. Wigham Richardson, the well-known shipbuilder of Newcastle-on-Tyne, with numerous illustrations; also the first instalment of Prof. W. M. Ramsay's account of his recent discoveries in Lycaonia.

MR. SIDNEY LEE has resigned the editorship of Messrs. Methuen's "Standard Library."

The Publishers' Circular and Booksellers' Record, with other properties connected with it—viz., the annual and other volumes of 'The English Catalogue of Books'—will in a week or so be taken over by a limited company, consisting chiefly of publishers and booksellers, including Messrs. Longman and Mr. Murray—Mr. A. H. Hallam Murray and Mr. Hubert Longman being directors with Mr. E. and Mr. R. B. Marston. We are glad to hear that the future of an invaluable source of reference is in such good hands.

MR. F. MADOX HUEFFER writes:—

"Your reviewer of 'A London Girl' seems to hint that I am its author. May I say that I am not—and would you mind stating as much in your columns?"

WE have received two elaborately illustrated catalogues of two collections of prime importance. Mr. J. A. Stargardt, of Berlin, will sell from October 23rd to 28th the first part of the collection of autographs formed by Alexander Meyer Cohn, who died in 1904. Prof. Erich Schmidt is right in placing Cohn among the first collectors in German. The items for sale include among the section of kings such things as autographs by Frederick Barbarossa, Charles V., Maria Theresa, Frederick the Great, Wilhelm I., William the Conqueror (a Latin document signed "apud Lon-

donias"), Edward VI., and Elizabeth. Napoleon is represented by a letter to Josephine which says, "Ne sais-tu que sans toi, sans ton cœur ton amour, il n'est pour ton mary ni repos ni bonheur, ni vie." The sections concerning statesmen, poets, and men of letters are equally interesting. Goethe is particularly well exhibited; and we find Marat, Robespierre, Benjamin Franklin, Gladstone, Wellington, and Nelson all represented. It seems a pity that so fine a collection cannot be purchased *en bloc*.

Equally remarkable is the portion of the Collection Franz Trau to be sold on October 27th and 28th at Vienna by Messrs. Gilhofer & Ranschburg. It consists of many splendid illuminated manuscripts, miniatures, incunabula, and illustrated books of the sixteenth century. The frontispiece exhibits a page of Cicero, 'Officia,' Mainz, Schöffer und Fust, 1465. There are some beautiful Books of Hours; an edition of Æsop's Fables unknown to Hain, probably from the press of Zainer, of Augsburg; 'Biblia Prima Germanica' (Strasburg, Eggesteyn, 1466), and many other rarities. The sale catalogue abounds in illustrations which show the richness of the collection.

Mr. J. M. Ludlow writes:—

"The review of last week headed 'Two Saint Catherines' speaks of the editor of the first book, 'Vida D. Scudder,' as a man. Miss Vida D. Scudder is the author of a work on 'The Life of the Spirit in the Modern English Poets' (1895), and a niece of the late well-known editor of *The Atlantic Monthly* and biographer of President Lincoln, Horace E. Scudder."

The death is announced of Alexander Hay Japp. A sub-editor of *Good Words*, *The Sunday Magazine*, and *The Contemporary Review* he came into close relations with Mr. Alexander Strahan, the publisher, and particularly with Dr. Norman Macleod and Dr. Guthrie, his editors in chief. Some of the early stories and articles which appeared in *Good Words* owed much to his editorship, while he wrote under his own name, that of H. A. Page, and other pseudonyms. His published works include 'Three Great Teachers: Carlyle, Tennyson, and Ruskin' (1865); a 'Memoir of Hawthorne' (1873); De Quincey's 'Life and Writings' (1877); 'Thoreau: his Life and Aims' (1878); some natural history volumes and many compilations of biography under the name of H. A. Page. Dr. Japp had an encyclopædic knowledge of British journalism, and sleepless nights sent him early out of doors to study natural history in the London parks, the public generally getting the benefit of his observations. Stevenson confesses indebtedness to Dr. Japp for the main facts in his essay on Thoreau. The two became by this means acquainted, and Dr. Japp was the intermediary in the disposal of 'Treasure Island.' Dr. Japp, who was born at Dun, Forfarshire, in 1839, was educated at Montrose Academy and Edinburgh University, was twice married, and latterly resided at Purley. Unweariedly industrious, he had published upwards of thirty volumes in 1886, and he wrote to the very last.

Mr. John Oxenham, who spent a long holiday in Sark last year, has completed a novel, the scene of which is mainly laid in that island.

Miss Margaret Westrup writes:—

"In your notice of my book 'The Coming of Billy,' in last week's *Athenæum*, I see that you say: 'The scene is laid in England, we are to suppose, but the colouring, atmosphere, and treatment are American.' May I point out that not only the scene, but the whole book is thoroughly English? I am English myself, and have never been in America in my life."

For the benefit of Irish patriots willing to embarrass the Post Office by addressing their letters in Irish, but ignorant of the language, a dictionary of postal addresses has been issued by the Gaelic League, Dublin. The compilers, while carefully indicating all the ancient divisions of the country, mercifully make use for the present of the Saxon division into counties.

Mr. Elliot Stock has just finished his long and valuable series of the "Gentleman's Magazine Library." It has taken twenty years to complete and publish, and we do not know a more interesting collection of old-time matters. Every library should have it.

Mr. J. J. Hay writes concerning 'A Curious Dance round a Curious Tree':—

"May I add my testimony to the facts already given? Two of the 'bright young ladies who helped to make the Christmas-tree' in December, 1852, are still living. They remember as yesterday every incident of that evening at St. Luke's. They were presented to Charles Dickens by 'that gentle Christian lady, wife of the resident officer,' and conversed with him and Mr. Wills, both of whom were keenly observant of everything."

A correspondent writes:—

"A number of volumes of Gibbon's great history have been issued in the 'World's Classics.' I have seen no announcement as to the completion of the work in this form, but I hope that it will be duly completed by the reconstituted firm of E. Grant Richards."

Messrs. Henry Young & Sons, of Liverpool, are preparing for publication a work written by Mr. John Hughes, of that city, entitled 'Liverpool Banks and Bankers, 1760–1837.' It traces the history of banking in Liverpool from the earliest recorded banker—John Wyke, watchmaker, 1770—to the time when joint-stock banks almost universally supplanted private business. Full particulars are given of many well-known early Liverpool bankers.

The death at Neuilly is announced, at an advanced age, of M. Célestin de Blignières, one of the disciples of Auguste Comte, author of an 'Exposition de la Philosophie et de la Religion Positives,' 1857.—The death is also reported of M. Léonard Danel, who had directed since 1852 the great printing establishment founded by an ancestor in 1698. M. Danel died at Lille, aged eighty-seven.

The death, in his sixty-fifth year, is announced from Meiningen of the poet Rudolf Baumbach. He was most successful as a writer of lyrics, and his poems, distinguished by their brightness and graceful diction, soon became extremely popular in Germany, and were repeatedly set to music. Of his longer poems the best known are 'Zlatorog,' which has passed through over fifty editions, 'Trug-Gold,' and 'Horand und Hilde.'

A "Bureau Bibliographique," which undertakes all kinds of research, has been started at Rome, under the direction of Prof. Henri Celani.

Among recent Parliamentary Papers is a Report by the Historical Manuscripts Commission on the Papers of the Earl of Egmont, Vol. I., Part 1 (1*s.* 8*d.*), which contains a valuable introduction on the Irish Percivalls (the spelling of the name has varied). There is not the usual index to this volume, but it will no doubt come later. We have also the Thirty-Seventh Report of the Deputy Keeper of the Public Records and State Papers in Ireland (3*d.*). From the Board of Education there has come a volume of Reports on Children under Five Years of Age in Public Elementary Schools, by the Women Inspectors of the Board (8½*d.*). The reports of Miss Bathurst contained in this volume are accompanied by notes in which reflections are made by the Board on this lady's facts, which appear, however, rather to concern her opinions. She has not concealed her view of the Board and its policy, and the sympathy of many readers will be with her.

SCIENCE

The Age of the Earth, and other Geological Studies. By W. J. Sollas. (Fisher Unwin.)

This volume is a collection of ten essays and addresses by the Professor of Geology at Oxford. Most of them have already been before the public, but two or three of the articles are new, and some of the others have been revised or expanded. They range over a great variety of subjects, including many which are of sufficiently wide interest to bring the geologist into sympathetic touch with the general reader. What educated man can fail to be interested in such subjects, for instance, as the age of the earth, the building of coral islands, the cause of volcanic action, or the Deluge? On all these matters the Professor discourses pleasantly and well, writing with command of much scientific learning, yet always readably, sometimes with brilliancy of diction, and occasionally with a touch of humour. Even the most abstruse subject fails to make him altogether dull.

The place of honour in the volume is given to a presidential address, delivered to the Geological Section of the British Association at Bradford, on that difficult question—the Age of the Earth. It was Voltaire who said, "The world is an old coquette who conceals her age"; and in spite of all the curious cunning of geologists and physicists, she has managed to keep the secret remarkably well. So far as the stratified rocks are concerned, Prof. Sollas estimates that they form a pile of about fifty miles in thickness, which must have required at least twenty-six millions of years for its accumulation. But this represents a mere fraction of the earth's age, and for the long periods of terrestrial history preceding the formation of sedimentary strata, with which the geologist is unable to deal, the writer necessarily falls back on the estimates of physicists and astronomers like Prof. Darwin, Lord Kelvin, and Prof. Joly. It must be remembered,

XUM

however, that this address was delivered five years ago, and since that time such remarkable discoveries have been made in connexion with radium and other radio-active bodies that any conclusions based on the time required for the earth to cool down from its original heated condition must either be useless or need modification of a very serious character. From the discussion on the age of the earth Prof. Sollas proceeds to deal with its figure. Here he expresses his opinion, following Mr. J. H. Jeans, that the original shape of the earth on consolidation from a molten state was more or less that of a pear, whence he traces, with much ingenuity, the distribution of the great masses of land and water.

Perhaps the article which will be most popular is that recording a visit to Funafuti, one of the coral islands of the Ellice group, in the middle of the Pacific Ocean. As doubt had been cast on Darwin's view that coral islands, or atolls, must have been formed in areas of subsidence, Prof. Sollas made the acute suggestion that, instead of further conjecture, a boring should be made in a coral atoll to see what it was really made of, and, if possible, what was at its base. This suggestion resulted in the formation of a committee of the Royal Society, and the dispatch of an expedition under the Professor to Funafuti. Although unforeseen difficulties arose and prevented the accomplishment of the original undertaking, borings were subsequently made to a great depth by an expert, and the cores were subjected to an exhaustive examination in this country by Prof. Judd, Dr. Hinde, and others. In describing these results, a sequel to his own work, Prof. Sollas points out that, in his opinion, the results triumphantly confirm the views of Darwin.

In a pleasantly written little sketch of a visit to the Lipari Isles, with the Geologists' Association, in 1889, a simple explanation of the cause of volcanic eruptions is suggested. The explanation is ingenious, and may account for small outbursts, but can hardly be regarded as sufficient to explain serious and long-continued eruptions.

On the 'Origin and Formation of Flints'—the title of an article which has not seen the light before, and which is one of the most valuable in the volume—the Professor writes with authority, for this is a subject with which some of his earliest researches were connected. It is interesting to see, as he pointed out some years ago, the little cavities in certain parts of the chalk, representing the spicules of siliceous sponges which have yielded to solution, and surrendered their silica to be used afresh in the making of flint.

In a Friday evening lecture at the Royal Institution entitled 'The Key to Terrestrial History,' which now appears in print for the first time, the reader will find a powerful defence of William Smith's famous principle that strata of corresponding geological age, wherever found, will contain similar sets of fossils. This principle, formulated more than a century ago, is here discussed in the light of our present knowledge of palæontology and stratigraphy. Not less interesting is the discourse on 'The Influence of Oxford on the History of Geology'—a discourse which was delivered by Prof. Sollas on assuming the duties of the Chair of Geology in the University. This deals largely with the nature of fossils, and recites the curious views of many old writers, including the historian of Oxfordshire and Staffordshire, Robert Plot. The work of the famous Dr. Buckland and his successors in the chair, especially John Phillips, is also considered. When 'The Origin of Species' was published, the cautious Phillips—as might have been expected at his time of life—felt unable to accept the new views, and is described as having been "dead against" Darwinism. On the subject of evolution our author has much to say here and there throughout the volume, and a quotation on this subject may be fitly given as a sample of his style:—

"Suppose by some ingenious cinematograph we could recall in a continuous picture the succession of vanished forms of life, and watch the transmutation of animals as they passed from formless protoplasm to man; the spectacle would be interesting, but would the fact it displayed be one whit less a miracle than that we witness every time we plant the seed in the ground and watch the green shoots spring forth, to produce in due time the secret buds which unfold in leaf and flower?"

SOCIETIES.

Society of Engineers.—*Oct.* 2.—Mr. Maurice Wilson, V.P., in the chair.—A paper was read on 'Machine Drills for Hard Rock,' by Mr. A. H. Smith.

MEETINGS NEXT WEEK.

Mon. Royal Academy, 4.—'Tests and Trials of Pigments,' Prof. A. H. Church.
Thurs. Royal Academy, 4.—'Selected and Restricted Palettes,' Prof. A. H. Church.

Science Gossip.

Messrs. Crosby Lockwood & Son announce Motor Vehicles for Business Purposes, a Practical Handbook, by A. J. Wallis-Tayler, illustrated,—Milling Machines: a Practical Treatise on their Design, Construction, and Equipment, illustrated, by Joseph Horner,—Electricity as applied to Mining, by Arnold Lupton, G. D. Aspinall Parr, and Herbert Perkin, a new edition, revised,—The Elementary Principles of Electrical Engineering, a Class-Book, by J. H. Alexander, with many illustrations,—a new edition of The Art of Leather Manufacture, a Practical Handbook, together with a description of the Arts of Glue Boiling, Gut Dressing, &c., by Alexander Watt,—and the Horticultural Note-Book by J. C. Kewsham, illustrated.

The international meeting for co-operation in solar research was brought to a successful termination at Oxford last week. M. Deslandres contributed a valuable paper to a recent number of the *Comptes Rendus* on the desirability of systematic arrangement in this important subject, particularly as regards uniformity in the power of the instruments employed by the astronomers taking part in it. Prof. Hale, Director of the Solar Observatory of the Carnegie Institute, Washington, and medallist of the Royal Astronomical Society last year, who had come to England to attend the meeting, gave a very interesting lecture at the Society's rooms in Burlington House last Wednesday week on the Solar Observatory on Mount Wilson, California, which is to be devoted to this special department of study.

An authorized translation of 'Astronomy in the Old Testament,' by G. Schiaparelli, Director of the Brera Observatory in Milan, will be issued immediately from the Oxford University Press. Many corrections and additions have been made by the author for the English edition. The book was first published in Italian in 1903, and has since been translated into German.

A joint meeting of the Royal Society and the Royal Astronomical Society will be held in the rooms of the former on Thursday, October 19th, to receive preliminary reports on the recent solar eclipse. It is expected that reports will be presented by the Astronomer Royal, Prof. H. L. Callendar, Mr. J. Evershed, Mr. H. F. Newall, Prof. H. H. Turner, and others.

The Institution of Civil Engineers will have an inaugural address by the President, Sir Alexander R. Binnie, presentation of the Council's awards, and a reception in the Library on November 7th.

Mr. W. M. Voynich on his recent visit to Cracow made arrangements on behalf of the American Government for the photographing of the unique globe of the world in the Cracow Museum. As this globe forms part of a magnificent astronomical clock, the photographing of it will be a matter of some difficulty. It is five years older than the Frankfurt-Weimar globe of Schöner, 1515, and the oldest of the known globes which show America as an independent continent. A monograph concerning it appeared (in Polish) in the *Transactions* of the Cracow Academy of Sciences, 1900, by M. Tadeusz Estreicher, sub-librarian of the Jagiello University Library, who endeavoured to prove that it was earlier than the globe which Mr. R. M. Hunt purchased in Paris in 1855, and which is now in the Lenox Library, New York. But many of M. Estreicher's statements serve rather to refute his own theory than to strengthen it, and the facts all point to the conclusion that the Lenox globe is the earlier. The latter is 127 mm. in diameter, and the Cracow example 73½ mm.

Mr. Ribbach, of the Moravian Mission, which has done much good work in Himalayan regions, more especially at Leh, on the extreme frontier of Kashmir, gives an interesting description of the recent earthquake at their station at Kyelang, in Lahoul. Owing to the destruction of the telegraph wires and the mountain paths by landslips, news was very long in reaching Simla from this spot, and much anxiety was felt as to the havoc wrought in the Kulu Valley. At last news came that all the members of the mission were safe. The report stated that

"when perceiving the frightful rocking of the house, which made the plaster fall off the walls, with pictures and all, and seeing the furniture overturned, the missionaries rushed out of their bedrooms, undressed as they were, through a window, on to the slanting, ice-covered slate roof of the verandah, and thence down into the courtyard, where they met the horror-stricken Christians who had been driven from their houses, but none at all hurt, whilst around them, within a few minutes' walking distance, whole villages had been destroyed."

Mr. Ribbach estimates that, out of a population of 250,000 in the whole of the Kangra and Kulu districts, 20,000 perished.

Mr. Denning obtained some interesting observations of the appearances of Jupiter and Saturn in July last with his 10-inch and 12½-inch reflectors. The south equatorial and south temperate belts on Jupiter were very dark and conspicuous, whilst the north equatorial and north temperate belts were very faint. The broad, and apparently multiple, belt on Saturn was, as before, a prominent feature. The equatorial region was less bright than it had been. A very luminous zone outlined the broad belt southwards, separating it from the

dusky polar cap. A few dark and white spots were noticed on the north border of the belt, nearly in the same latitudes as the markings seen in 1903, but much less conspicuous. Observations were obtained of three of these, which were followed by dark markings on the border of the belt. Mr. Denning notes that it is difficult to say whether the above irregularities are the relics of the disturbance which affected the northern hemisphere in 1903, as no satisfactory connecting observations in 1904 are available for comparison.

The fourth edition of Mr. Lynn's 'Astronomy for the Young' has just been issued (Bagster & Sons), and is well up to date, with an additional chapter on eclipses.

FINE ARTS

OUR LIBRARY TABLE.

History of Ancient Pottery, Greek, Etruscan, and Roman. By H. B. Walters. Based on the Work of Samuel Birch. 2 vols. (Murray.)—Though loyalty to a predecessor has induced Mr. Walters to place Dr. Birch's name on his title-page, we have here what is virtually a new work. Each of the two volumes of which it consists is as large as the second edition of Birch's 'Ancient Pottery'; yet even this result has only been attained by the omission of everything included in the earlier work except Greek and Roman pottery, and by the severest compression within this narrower field. A complete account of ancient pottery, including Egyptian, early Oriental, and European, would now be a colossal undertaking, and one for which the necessary basis of detailed study in the various branches is as yet only very partially provided. Even an academy would shrink from such a project in the present state of our knowledge, though the task will have to be tackled, when the time is ripe for it, by the archæology of the future. In the mean time Mr. Walters has provided us with an instalment which is likely for many years to prove a most valuable work of reference for those branches of the subject which he includes in his survey. Almost every page attests the care and thoroughness with which published authorities have been consulted; but the author's familiarity with the vases themselves prevents his work from ever degenerating into a mere compilation. At the same time the necessity for compression and the limitations which the author has imposed upon himself preclude a full discussion of many interesting problems, and result in an almost meagre treatment of some subjects on which one would gladly have heard much more. The portion dealing with the earlier fabrics of the Ægean was probably written in great part before the publication of recent discoveries in Melos and Crete. Though a brief and clear summary of these discoveries is added, it is hardly in proportion to their importance both in quantity and in quality. Perhaps it is even more disappointing to find only about twenty-five pages, out of more than a thousand, given to what is, from the artistic point of view, by far the most interesting study—the signed red-figured vases of the best period. These pages are, of course, supplemented by the chapters upon technique and upon subjects; but even so they do not allow room for any detailed discussion of the attribution of the vases to the various painters, of the style of the masters, the exact import of the signatures, and other such matters. It may be that here, as in the case of the early Cretan vases, Mr. Walters feels that we have to deal with results which "as yet have hardly become ripe for use in a general handbook." But there is a crying need at present for some book that will guide the student in the detailed artistic study of the finest Greek vases; and, since Mr. Walters has not felt that this book offers him a fitting opportunity for meeting this need, it is to be hoped that either he or some equally competent authority will supply it in some other way.

This, however, is not so much a criticism of what the author has done as an expression of regret for what he has refused to attempt. Here the difficulty lay in the superabundance of the material, in other cases it consisted in the absence of such material. A notable example is that of Greek lamps, about which very little is published, though a certain amount is known. They are dismissed very briefly, though a chapter is given to Roman lamps. The chronology in this case leaves much to be done. Rough pottery, without painting or moulded ornament, is left almost entirely out of account; this also is a subject reserved for the archæology of the future, except for the earlier fabrics, which have received some attention. From what has been said, it is clear that it has not been the aim of the author to propound new or brilliant theories, but rather to summarize our knowledge of ancient pottery, according to the opinions accepted by the most competent authorities at the present day. In his criticism of these opinions Mr. Walters shows himself impartial and open-minded, and the sanity and sobriety of his judgment give his work a position from which it will not easily be deposed. If he errs, it is on the side of conservatism, especially in preserving portions of Birch's work which are really superseded by his own fuller treatment; an example is the list of processes in the manufacture of a vase, where we find: "(2) an artist, to trace with a point in outline the subject of the vase; (3) a painter, who executed the whole subject in outline," and so on. This custom of a preliminary sketch with a blunt point has already been very briefly referred to by Mr. Walters in speaking of the technique of black-figured vases; it would have saved confusion if he had dealt with it more fully there, instead of repeating it in an equally summary fashion. In one or two cases statements repeated from Birch are now known to be erroneous; for instance, ἐκ Κεραμέων, in the examples quoted, has nothing to do with a guild of potters, but simply means "of the deme of Ceramicus," as Mr. Walters himself indicates in a foot-note. The illustrations, both black-and-white and half-tone, are good; colours have for the most part been, wisely, avoided; it is very difficult to represent accurately the terra-cotta of an Attic vase; other colours, where attempted, are successful.

A Descriptive Handbook of Architecture. By Martin A. Buckmaster. (Routledge & Sons.)—As a popular elementary text-book on the history of architecture this little book is certainly welcome. It is brightly and clearly written, illustrated by numerous photographs and drawings, and well calculated to arouse the reader's interest and lead him on to larger works where he can find the subject more adequately treated. At the beginning there is a diagram showing the chronological succession of the principal styles, and indicating their derivation from those which most directly influenced them. Next follows a list of those styles treated of by the author, called, somewhat misleadingly, 'A Synopsis of the Styles of Architecture,' and under each heading are supplied the names of several typical buildings, with the dates of their erection. The idea of this is excellent; the beginner gets at once a kind of bird's-eye view of the whole subject, with useful landmarks to guide him when studying the various periods. It would have been better, however, had the synopsis been more complete—at least as complete, for instance, as the diagram which precedes it. After a short description of ancient and classical architecture, the author traces the development of the Western Romanesque and Gothic, from the Early Christian Roman and Byzantine styles—allowing perhaps rather less than its due share to the influence of the latter. The rest of the book (and by far the larger part) is almost entirely devoted to English mediæval work. The chapter on roof (or rather ceiling) vaulting is capitally written. The few pages on French Gothic do little more than describe the principal points of difference between it and English work; while the last chapter is a wholly inadequate description of the Renaissance period, of which England again receives the larger share, the last page or two carrying the description of English work down to the present day. To complete the book there is a short illustrated glossary of architectural terms, and an index. The illustrations are mostly clear and well chosen, though in several cases the buildings shown by photographs are considerably out of focus.

We do not think that in a book professing to outline the various architectural styles it is justifiable to describe at such disproportionate length mediæval work as compared with that of the ancient, classic, and Renaissance periods (the Mohammedan styles being omitted altogether); nor should the space devoted to the work of the Middle Ages be almost wholly occupied by a description of English work. The Romanesque and Gothic styles attained their highest development not in England, but in Normandy and the Ile de France respectively; while their developments in other parts of France, Belgium, Germany, Italy, and Spain were hardly less interesting. Of the great period of the Italian Renaissance not a single illustration is given, nor, in fact, is there an illustration of any important Renaissance building. Apart from this criticism—which, after all, refers perhaps as much to the title as to the book itself—we have very little quarrel with the author. We are not, however, convinced that the date he mentions for the introduction of Gothic vaulting into England is the earliest which can be given. Again, we do not think he was well advised in referring to St. Paul's, Covent Garden, as an example of Inigo Jones's work, for of the church originally built by that master nothing now remains.

The latest of the "colour books" of Messrs. A. & C. Black is *The Garden that I Love*, illustrated by Mr. George S. Elgood. His pictures are very pretty and effective work, and should add to the long-assured success of Mr. Austin's poetical prose. The Laureate contributes a new bantering introduction to this edition, which is sold at a very moderate price in view of its attractions. The binding is not wholly to our taste.

Mr. A. S. Boyd has produced an elaborate illustrated edition of *The Cotter's Saturday Night* (Chatto & Windus). His pictures are spirited, and not devoid of humour, while they are suitably Scottish. He has, in fact, done justice to the spirit as well as the letter of Burns's celebrated piece.

Fine-Art Gossip.

The autumn exhibition of the New English Art Club will be held during this month and November at the Galleries of the Alpine Club, Mill Street, Maddox Street, W. The receiving day for pictures is fixed for Monday.

The season at the Leicester Galleries, Leicester Square, opens to-day with an exhibition of English and foreign landscapes in water colours by Mr. A. W. Weedon, Mr. Alfred Powell, and Mr. Reginald Barratt.

Messrs. Hutchinson will publish immediately a book on the minor arts by Mr. Frank G.

XUM

Sanford, entitled 'The Art Crafts for Beginners.' The volume is intended for those who feel the need of some art expression, but who cannot attend an art school, and for those who wish to follow the art of a craftsman. The subjects dealt with are design, thin woodworking, pyrography, sheet metal work, bookbinding, simple pottery, basket, and bead work. The book will contain over 200 working drawings and photographs.

Mr. George East will bring out the second year's issue of *The Collector's Annual* through Mr. Elliot Stock immediately. It will contain, as did the former volume, a record for the year of the chief sales of china, pictures, engravings, antique furniture, old silver and plate, and other objects of art.

The September number of the *Zeitschrift für bildende Kunst* contains, amongst other interesting features, an article by M. Max Rooses, the well-known and highly esteemed Curator of the Plantin Moretus Museum at Antwerp, on the recently discovered Rubens. This picture, which was noticed at length in our issue of July 29th, is one of the two portraits of Charles the Bold, Duke of Burgundy, which that master is known to have painted, and which are cited in the "catalogue mortuaire" of his effects. No one will dispute M. Rooses's claim to speak with authority on Rubens, and it is interesting to find that he thoroughly endorses the conclusions arrived at by M. W. B. in July. He accepts the theory put forward by Mr. Brockwell that Rubens "copied, or rather derived, his first portrait of Charles the Bold from a painting, or more probably from an engraving," portraying the Reckless Duke. "I should only like to point out," he adds, "that Rubens undoubtedly has imparted to his subject a striking, warlike attitude and defiant expression which are lacking in the primitive picture." M. Rooses further draws attention to the difference in quality between the two portraits of Charles the Bold, the finer work being that in the possession of the Imperial Museum in Vienna. He recognizes, nevertheless, in the newly discovered picture so much of the master's personal touch as to add: "The catalogue testifies that the work is from the hand of Rubens, and to this we can unreservedly subscribe."

The death, on the 27th ult., is announced of M. Alexis Marie Louis Douillard, the artist, who was born at Nantes on June 28th, 1835, and studied under Hippolyte Flandrin and Charles Gleyre. He entered the École des Beaux-Arts in October, 1855, and first exhibited at the Salon in 1861. He painted both portraits and historical subjects, but it was in the latter class that he obtained a medal, the subject being 'La Mort de Saint Louis.' He received a number of important commissions for church decorations, and examples of his work are to be found at St. Julien, Tours, Bayeux, Belfort, Loigny, and at many other places. His large religious compositions formed for many years conspicuous objects at the various Salons, and his versatility was shown by his frequent exhibits of portraits and genre subjects. He was a member of the Société des Artistes Français, and the subject of his picture this year was 'L'Ange Gardien.'

We also learn with regret of the death of two well-known French authors and art critics. M. Charles Ephrussi, proprietor and long chief editor of the *Gazette des Beaux-Arts*, which he took care to keep independent of cliques and coteries, was a most learned amateur. He wrote monographs on Albert Dürer, on Paul Baudry, and on 'Jacopo de Barbarj, dit le Maître au Caducée.' He will be much missed. His open-heartedness and kindness to all with whom he came in contact were notable. As the *Débats* of Tuesday last says of him:—

"Les plus grands artistes comme les débutants pourraient dire les uns et les autres ce qu'étaient la complaisance, la délicatesse et la largeur d'esprit de celui qu'ils virent toujours prêt à leur donner un conseil et un appui."

—M. J. Hédou, who was a lawyer by profession, was a collector by instinct, and a painter of considerable merit. He was at one time President of the Académie des Sciences, Belles-Lettres, et Arts de Rouen, and an active member of various antiquarian and other learned societies of Normandy. He contributed to the *Revue de Normandie*, to *Rouen Pittoresque*, and *La Normandie Littéraire*. He compiled exhaustive monographs on various artists of Rouen—Gustave Morin, his friend and art tutor, and others.

Mr. W. W. R. Spelman, the well-known connoisseur of Norwich, is about to publish an elaborate and exhaustive monograph on Lowestoft china through Messrs. Jarrold. The new book will be liberally illustrated, and will be limited to 500 copies.

We are glad to hear that the Board of Treasury has consented to propose to Parliament a grant of 500*l.* to the British School at Rome, thereby admitting it to parity of treatment with the British School in Athens.

MUSIC

THE WEEK.

SHEFFIELD MUSICAL FESTIVAL.

There was a one-day festival in this city in the nineties, but that which opened last Wednesday counts as the third gathering of the kind. The first was under the direction of Sir August Manns, the second under that of Mr. Henry J. Wood, while the conductor of the one under notice is Herr Felix Weingartner. He appears here not only in that capacity, but also as a composer; of his music, however, more anon. The opening performance was devoted to Handel's 'Messiah.' Other old masters were also represented: Bach by his B minor Mass, Mozart by his Requiem, and Beethoven by his 'Eroica' Symphony; moreover, with the exception of two choruses by Weingatnerr on the last day, the place of honour was assigned to them; the moderns, from Schumann onwards, being in the evening programmes.

Of Handel's oratorio, as a rule, there is nothing fresh to say; records of its performance in and outside London are usually of a perfunctory character. On the present occasion, however, the rendering of the work was instinct with life and nobility. The music naturally bears traces of the period at which it was written, and apart from phraseology there are features connected with form and colouring so different from those prevalent at the present day that it can easily be made to sound old-fashioned. Here at Sheffield every one was in earnest, and none more so than the conductor. The choir has been trained by Dr. Henry Coward, and with the usual splendid results. In "He trusted in God" the jeering words were delivered with realistic power; the "Let us cast their bonds asunder" with vivid impetuosity; but it was perhaps in the 'Hallelujah' that the choir showed its full strength: the rendering was most impressive. We only wish that the full Sheffield choir could come to London and give a performance of the oratorio under the direction of Herr Weingartner. Some folks who think Handel dull and old-fashioned would be surprised to hear how fresh and noble the music sounds. This is due not only to the hearty and intelligent singing of the music by the choir, but also to their clear enunciation and declamatory force.

The edition used was said to be the one published by Messrs. Novello, and prepared by Dr. Ebenezer Prout. It is not now the moment to discuss that score, but this much may be said, that although some of the accompaniments may be open to discussion, Dr. Prout has rectified many mistakes which had crept into various editions; also that he has displayed some of Handel's characteristic colours and contrasts, notably in the choruses "For unto us" and "His yoke is easy," which showed how effectively the composer utilized the material at his disposal. Although the Prout score was said to be followed, we were surprised to find the *da capo* in "He was despised" not observed; while, on the other hand, the usual *da capo* was taken in "Why do the nations?" although not indicated in the autograph score.

The performance of the oratorio was an immense triumph for all concerned. The solo vocalists were Miss Agnes Nicholls, Miss Ada Crossley, and Messrs. William Green and Andrew Black.

The evening concert began with a setting of Milton's verses 'On Time,' by Mr. Nicholas Gatty, born at Bradfield, near Sheffield. He studied at the Royal College of Music, and partly under Sir Charles Stanford. The young composer—for he is only just over thirty years of age—is ambitious, both in the poem which he has selected and in his manner of treating it. Milton's ode deals first with "envious Time," and afterwards with "long Eternity," with everything "sincerely good" and "perfectly divine." Here are two contrasts which appeal to the musician. In the earlier part of his short work Mr. Gatty creates the right kind of atmosphere, although the music is somewhat laboured; in the latter the mood changes, but the music has not sufficient breadth and dignity. There is, however, clever writing in the score, which gives good promise for the future. The rendering was fairly satisfactory, although the lights and shades were not always properly observed. Herr Weingartner conducted as if he felt there was not complete understanding between chorus and orchestra.

Next came the conductor's Second Symphony in E flat, Op. 29, produced at Barmen in 1903. It is an interesting, clever, and effective work. The first movement with its introductory *lento* seems somewhat laboured, and at times very heavily scored. The *Allegro giocoso* is characteristic, and in his endeavour to express rough and also grotesque humour the composer has been most successful. The Adagio, in its principal theme faintly reminiscent of Beethoven, is full of charm and feeling; the loud close, however, seemed inappropriate as regards the movement itself, and spoilt, moreover, a good effect of contrast between the preceding and following movements. The finale is full of humour. The scoring of the whole work, especially of the last two movements, is admirable. The performance

was excellent, and the composer was twice recalled.

The concert ended with a sympathetic rendering of Schumann's 'Paradise and the Peri,' a work in which there is much that is lovely, much that shows the composer's genius at its strongest; but there are dull moments, and the accompaniments to the solos often seem as if they had been composed at the pianoforte. The principal singers were Miss Evangeline Florence, Miss Muriel Foster, and Messrs. Gervase Elwes and F. Austin, all of whom were heard to advantage. The Misses Eva Rich, Clara North, Lillian Hovey, and Amy Sherritt, and Messrs. W. Burrows and J. Lycett, who took small parts, also deserve commendation.

Musical Gossip.

The new piece at the Apollo Theatre, 'The Gay Lord Vergy,' by C. A. de Caillavet and Robert de Flers, with music by Claude Terrasse, exhibits a prince who is persuaded to go crusading, as his wife wishes to occupy herself with a lover. He goes as far as Lyons, and returns with three supposed captives, who make comic play. We noticed some good waltz tunes, but some of the songs did not hit the public taste. Mr. Theo. Wendt has written several bright and tuneful additional numbers, among which is a particularly attractive quintet, "Write to me every day." The first act is too slow. Miss Aurélie Révy is not so good in musical comedy as opera, and lacks lightness. Her voice is excellent, but her English needs more practice to pass muster. Mr. John Le Hay as Le Sire de Vergy worked very hard, and made the most of his part.

The London Choral Society during its forthcoming season will perform Elgar's 'The Apostles,' Brahms's 'Requiem,' and Saint-Saëns's 'Samson and Delilah,' while at the last concert the programme will be selected from César Franck's 'The Beatitudes,' Bossi's 'Paradise Lost,' Cliffe's 'Ode to the North-East Wind,' and Parry's 'The Pied Piper of Hamelin.' The dates of the first three concerts will be October 30th, December 11th, and February 19th; that of the fourth is not yet fixed.

The prospectus has been forwarded of the first half of the "Jubilee" series of the Crystal Palace Saturday Concerts. The dates are as follows: October 14th, 21st, and 28th; November 4th, 18th, and 25th; and December 2nd and 9th. The first two and the fifth will be violin recitals, by Miss Marie Hall, Kubelik, and Mischa Elman respectively, with the assistance of various artists; the third will be a chamber-music recital by the London Trio; while at the fourth, sixth, seventh, and eighth concerts there will be the London Symphony Orchestra, under the direction of Mr. Landon Ronald. The programme of the last will include Dvorák's 'The Spectre's Bride,' with the Crystal Palace Choir.

Miss Katharine Goodson, together with the London Symphony Orchestra, will give the first performance of a pianoforte concerto by Mr. Arthur Hinton at Miss Parlow's concert on November 1st at Queen's Hall. The work will be conducted by the composer.

Messrs. Broadwood & Sons have arranged the fourth series of their Broadwood Concerts, which will take place, as usual, at the Æolian Hall. The dates are as follows: Thursdays, November 2nd, 16th, and 30th; December 14th; January 11th and 25th; February 8th and 22nd; March 1st, 15th, and 29th; and April 5th—all beginning at 8.30 P.M. Among the novelties which will be introduced are a Nonet for strings and wind by Sir Charles Villiers Stanford, a Quartet for strings by Mr. Cyril Scott, and various compositions by Messrs. R. Vaughan Williams, Roger Quilter, Josef Holbrooke, and others.

The dates of the Queen's Hall Orchestra's Symphony Concerts are fixed thus:—November 4th and 18th; December 2nd and 16th; January 20th; February 3rd and 17th; and March 3rd. Dr. Strauss, as announced, conducts his 'Domestic Symphony' at the first; and during the season the following artists will appear: Miss Ada Crossley, Mlle. Camilla Landi, Madame Teresa Carreño, and Messrs. Kreisler, Busoni, and Hugo Becker. The Leeds Choral Union will appear at the final concert, and take part in Strauss's choral ballad 'Taillefer,' Brahms's 'Gesang der Parzen,' and Beethoven's 'Choral' Symphony.

The competitions for the Elkin singing scholarships took place last week at Bechstein Hall. They were awarded by the judges—Mrs. Helen Trust and Messrs. Gregory Hast and Charles Phillips — to Miss Olive Kershaw (London) and Mr. John Harrison (Sheffield).

M. Jules Écorcheville, of Paris, will shortly publish 'Vingt Suites d'Orchestre du XVII. Siècle Français (1640-70).' They have been taken from a manuscript in the Cassel library. There will also be an historical introduction. Interest in old music is greatly on the increase, and M. Écorcheville has devoted much attention to the subject.

The Bayreuth Festival next year will begin on July 22nd and end on August 20th. There will be seven performances of 'Parsifal,' five of 'Tristan,' and two cycles of the 'Ring des Nibelungen.'

PERFORMANCES NEXT WEEK.

Sun.	Orchestral Concert, 3.30, Albert Hall.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
Mon.	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
Tues.	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
Wed.	Promenade Concert, 8, Queen's Hall.
—	Herr Carl Weber's Pianoforte Recital, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
Thurs.	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
Fri.	M. Zacharewitsch's Violin Recital, 3, Bechstein Hall.
—	Promenade Concert, 8, Queen's Hall.
Sat.	Clara Butt-Rumford Concert, 3, Royal Albert Hall.
—	Mr. Wilhelm-Backhaus's Pianoforte Recital, 3, Queen's Hall.
—	Children's Concert (Chaplin Trio), 3, Steinway Hall.
—	Miss Marie Hall's Recital, 3.30, Crystal Palace.
—	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.

DRAMA

THE WEEK.

Comedy.—*On the Quiet: a Farce in Three Acts.* By Augustus Thomas.—*A Man of the World: a Dramatic Sketch.* By the same.

In the American invasion of our stage which, with varying emotions, the playgoer contemplates, the production of Mr. Thomas's new farce constitutes a bold and an aggressive move. Everything about the piece and performance is Transatlantic—characters, dialogue, motive, action, environment, treatment generally. Not a single actor of home growth relieves the monotony of American utterance. If the result is inconclusive, it is because the company is in no full sense representative. Mr. Collier, who plays the central figure and has already created a favourable impression in London, comes over as a "star," and the company he brings has little more to do than to furnish him with a background and support. More than one of them is competent, and genuine talent contrives, in one case at least, to assert itself in spite of adverse surroundings. The general duty is not the less principally that of a chorus, and sometimes that also of a foil.

There are moments when the occupation of a master of the ring in a circus is to answer the impertinent inquiries of the clown in such sense as to enhance the effect of his sallies. This is what we now find. There is no need that the whole should be taken seriously, otherwise we should feel called on to resent the fact that the action has to be arrested while the principal actor propounds conundrums such as have for a century exercised a stimulating influence on youth and a depressing effect upon age. As regards art, accordingly, the novelty is wholly inconsiderable, and its production in no wise enlightens us as to the gain to be hoped from the progressive Americanization of our stage. In one respect at least the novelty is welcome. Though wildly extravagant, and in fact inconceivable, 'On the Quiet' is amusing. Its incidents belong to Palais Royal absurdity, and we should not be greatly surprised were its origin traced to some whimsicality of Halévy or Labiche. We find American husbands or lovers consorting on the most familiar terms with the *demi-monde*.

Nothing "really improper, you know," is, however, permitted, and there are scenes over which gravity itself must snigger. Mr. Collier is indeed a humourist, belonging to the class of Mr. Charles Hawtrey, but with far less refinement and delicacy. That the whole is destined to high popularity is probable. It is exactly the class of performance to appeal to the average occupant of the stalls. Whether this says more for England or for America we leave to others to decide.

'A Man of the World'—as, after a once famous play of Macklin, Mr. Thomas has named the one-act trifle which serves as *lever de rideau*—is a rather lackadaisical piece of sentiment. A neglected wife is listening rather too intently to the pleadings of a youth whom passion has endowed with eloquence. Upon her "*insecure* hour" a former lover of her mother steals, with the result that the tempted wife forgoes, or at least delays, her surrender; that the would-be seducer is banished; and the husband learns that the guardianship of a young wife is a more pressing duty than presence at a masonic lodge. This piece, too, is naught, or very little.

The Smithy: a Drama. By Robert South, LL.B. (Constable & Co.)—The aim of this play is to show the unloveliness of Calvinism as practised in Switzerland during the early part of the seventeenth century. The scene is Neuchâtel, and the action opens upon the public betrothal of Brenda, the daughter of Vautier, a master smith, to Aurèle Felder, a wood carver. Old rites are observed, and there are all sorts of maiden "strewments." Mère Vautier, the grandmother of Brenda, is alone in foretelling unhappiness. Mischief is not long in

coming. Aurèle, the bridegroom elect, has furnished shelter to Tancrède (*sic*) Masson, the son of a militant Anabaptist, to whom Calvinistic bigotry has refused a *gîte* in which to die. Stirred by Pastor Anker, Vautier insists on the young Anabaptist being expelled from his refuge, and encounters a direct refusal. Upon this Aurèle is forbidden the house, and Brenda is ordered to see him no more. Nowise content is the maiden to yield to such an exercise of paternal authority, and Vautier, entering unexpectedly his home, sees Brenda in her lover's arms. When he finds his child obstinate in opposition and determined to share her lover's fortunes, he lavishes on her terms so opprobrious that the lover is driven from protest into violence, and it is due to interference from without that the life of the youth is saved. In a scene of almost intolerable strength the daughter is banished from her father's house, her name is erased from the family Bible, and the father calls down the wrath of the Almighty if ever he sees his child again. In a third act Aurèle, a victim to the savage hatred of his Calvinistic fellow-townsmen, dies virtually of starvation. The helpless condition of the widow, now a mother, moves the pastor to penitence, and a plan is arranged by which Brenda is brought once more into her father's presence. His pity is moved, and his child is pardoned. The penalty he has invoked is, however, exacted, and when, leaning on his arm, she re-enters the house, it is a blind man whom she leads to his customary seat. He holds her hand, but his vow that he will never look upon her again is kept. Very striking and effective are the closing scenes, and the entire play, when a Biblical extract is excised, may well prove impressive on the stage. The characterization is excellent, all the personages participating in the action being flesh and blood, while the treatment is both original and powerful.

Dramatic Gossip.

Nothing very serious or aggressive seems to attend the production at the Coliseum of 'Joseph and his Brethren,' the action of which passes in dumb show, and, in the case of such an innovation, is naturally reverent. All that is significant is that the treatment on the stage of Biblical themes is at length permitted, though not at a theatre. What further steps will follow remains to be seen.

On the transference on Monday to the Shaftesbury of 'The Walls of Jericho,' Miss Mabel Moore was Lady Alethea; Mr. Aubrey Smith, Frobisher; and Mr. Lawrence Grant, Bertram Hannaford. In other characters the original exponents reappeared.

A farewell tour, intended to last until December 18th, when it closes at Brighton, was begun by Sir Henry Irving on Monday at the Lyceum, Sheffield.

The season of German plays will begin on the 28th inst. at the Great Queen Street Theatre, under the management of Herr Andresen, with the production of 'Der Familientag,' a three-act comedy of Herr Gustav Kadelburg, first given at the Lustspiel-Haus, Berlin, in November last. Among artists who will reappear are, in addition to the manager, Fräulein Elsa Gademann, Margaretha Russ, and Dalberg. Herr Andresen has acquired many recent German novelties, and proposes to give at Christmas a pantomime on the subject of Cinderella.

This evening witnesses at Wyndham's the first production of R. C. Carton's farcical comedy 'Public Opinion.'

Mr. Fred Terry has obtained a six months' lease of the New Theatre, dating from January 1st, 1906. He and Miss Julia Neilson will, it is anticipated, reopen in 'The Scarlet Pimpernel,' in which they were first seen a couple of years ago at the Theatre Royal, Nottingham, and will subsequently appear in 'Dorothy o' the Hall,' given in November last at Newcastle.

Mr. Lewis Waller, supported by Miss Evelyn Millard, Miss Henrietta Watson, Miss Edith Olive, Mr. Frank Mills, and Mr. Norman McKinnel, is announced to appear on the 14th inst. at the Imperial in 'The Perfect Lover,' a play by Mr. Alfred Sutro.

In front of 'Clarice,' at the Duke of York's Theatre, is now given a one-act trifle entitled 'The Painful Predicament of Sherlock Holmes,' which serves to reintroduce Miss Irene Vanbrugh. In this the famous detective is brought upon the stage without a single word to say, a novel idea by which the audience was much tickled. 'Clarice' has been shortened by half an hour by the simple process of taking it in quicker time. The entire entertainment may be seen with pleasure, but is, we hear, to be succeeded by a revival of 'Sherlock Holmes' on Monday, the 16th.

On its transference to the Savoy 'What the Butler Saw' is prefaced by a Japanese entertainment called 'Hari-kiri.' Even with the aid of the explanation afforded on the programme the action of the novelty is not too comprehensible, but the acting, music, and dancing are pleasing and acceptable.

Sir Charles Wyndham is now rehearsing at the New Theatre 'Capt. Drew on Leave,' by Mr. Hubert H. Davies, in which, towards the end of the month, he hopes to return to the stage.

One more attempt to reinstate the poetic drama has failed, and 'The Conqueror' is to be withdrawn from the Scala. It will be replaced next Tuesday by 'For the Crown.'

The proposed voyage of Mr. W. L. Courtney to New York to superintend the production of his adaptation of 'Le Dédale' has been abandoned.

The forthcoming sale, at the Anderson Rooms in New York, of the library of the late Mr. Frederick S. Tallmadge will include an unusual collection of Shakspeariana, namely, the series of models known to collectors as "The Clara Fisher Shakspearian Cabinet." These models are eighteen in number, including Shakspeare's birthplace as it was at the time of the Jubilee in 1769, when Garrick was present; the Stratford-on-Avon Grammar School, Anne Hathaway's cottage at Shottery, Daisy Hill farmhouse, the Globe Theatre, London, and various inns which Shakspeare is said to have frequented. This extraordinary collection was formed in England by Clara Fisher (afterwards Clara Fisher Maeder), the actress, and was purchased by William E. Burton, the comedian, about 1840. At Burton's sale in New York in 1860 it was bought by the late Mr. F. S. Tallmadge.

Paulin Louis Boisselot, whose death is announced from Paris, has been before the French and Belgian public for long over half a century. Born in Paris, March 20th, 1829, he made his *début* at the Folies-Dramatiques in 1849. At the Vaudeville, the Gymnase, and elsewhere he was seen in 'Les Vivacités du Capitaine Tric,' 'Nos Intimes,' 'Tête de Linotte,' and innumerable other pieces. An excellent actor, he was engaged to the last at the Renaissance. He was responsible for some dramatic compositions of no great importance.

'The Pride of the Brookes,' a three-act comedy adapted by Mr. Thalberg Corbett from 'Broke of Covenden,' a novel of Mr. J. C. Snaith, has been given at the Theatre Royal, Dublin.

To Correspondents.—A. S. M.—S.—C. A. M. F.—P. H. N.—C. H.—received.

LITERATURE

The Life of Lord Granville. By Lord Edmond Fitzmaurice. 2 vols. (Longmans & Co.)

LORD EDMOND FITZMAURICE'S book is both interesting and important. The most striking letters which it contains are those which explain the relations of Queen Victoria to her Ministers in respect of the conduct of foreign affairs. While the action taken by the Prince Consort and the Queen in 1859 was known, that of Queen Victoria in 1863, after the Prince Consort's death, has not hitherto been the subject of much public comment.

In 1859 Palmerston and John Russell had made common cause against all interference from Osborne with their dispatches. Sidney Herbert, writing to Lord Granville, uses a singularly strong phrase: "The Queen forbade giving any advice or opinion at Paris on the Italian question." He had advised Palmerston not to put the "constitutional" argument to the Queen, inasmuch as it was "a threat and means: 'You must yield or I resign.'" Sidney Herbert thought that Palmerston would "get the worst of it" on account of the state of parties and a good deal of anti-French feeling. But Sidney Herbert was one of the members of the Cabinet who were opposed to the foreign policy of Palmerston and John Russell. After the Prince Consort's death the subject of controversy was intervention on behalf of Denmark. "The younger members of the Cabinet" were against their chiefs and with the Queen, but even Lord Granville, though sharing that opinion, "had to warn the Queen of the necessity of extreme caution." "The Queen is up in her stirrups," he told Lord Clarendon, "very German, and determined if necessary to resist the Prime Minister." "I was obliged to hint that it was a question on which she could not hope to be omnipotent." Queen Victoria felt, indeed, so strongly upon this subject that she wrote several letters to Lord Granville, which are given, but asked him not to name them to his colleagues. On the meeting of Parliament in February, 1864, the Queen objected to the paragraph in the Speech respecting Germany, and got her way, as the Cabinet agreed to excision. Her feeling against Palmerston was very strong, and in one letter she coupled him with the Emperor Nicholas as "the cause of all the present trouble." Queen Victoria's dislike of Palmerston was, of course, avowed, but before the publication of the present volumes the world hardly knew the extent to which she coupled Russell with Palmerston. General Grey, in a letter of May, 1864, alludes to Russell's support of Palmerston, and adds: "All this naturally increases the feeling of distrust with which Lord Russell has contrived to inspire her." On the other hand, the Queen's position was the subject of rumours which led to a speech by Ellenborough which she deeply resented. General Grey stated that she was much hurt that Lord Derby "should not have said a word in condemnation," but added: "The Queen hopes that somehow or other Lord Ellenborough may hear what she thinks of him." In his next letter General Grey complained that Russell had replied "to the Queen's natural and cordial expression of her heartfelt thanks for defending her" by a letter

> "written in his *coldest, hardest* style—in which he assumes.....that the Queen may have used unguarded expressions which ..... may have given occasion to the attacks that are now..... directed against her."

We need not dwell upon the importance of such letters.

The pleasantest portion of the first volume consists of the diary jottings of Lord Granville contained in his letters to the Governor-General of India. Even these, however, have sometimes a disagreeable side. Thus we learn that the reason for the British failure at the Redan was not the difficulty of the task, but the flinching of the men; and, in respect of the nursing, that Miss Nightingale's staff left more to be desired than has been the case in later wars. A curious point is Queen Victoria's unwillingness to break through popular superstitions: "Her Majesty would not sit down, as they were thirteen." There is an application to the present moment and to the recent relations of Lord Curzon and Lord Kitchener in a message to Lord Canning which tells him how it is said that his "Commander-in-Chief meddles with the duties of your Military Secretary, who knows much better than he does about the native army." Lord Canning is reminded "that the Duke of Wellington wrote to (I think) Lord Combermere to say that the Commander-in-Chief was only in Council to support the Governor." A former Viceroy advised that if he did not do so the proper treatment was "to pack him off."

In a similar series of letters by Lord Granville, written from Moscow in 1856 to the then Duke of Devonshire, there are also many points of interest. It was suggested at the time in our official world that Lord Granville's mission had been more successful than seems to have been the fact: "The Emperor did not take much notice of any of us; more of Morny than of me." On the day of the coronation "Morny wept a little," a remark which presents him in a new light. Mr. Murphy, of *The Daily News*, emerged "from behind the altar with the priests. He had been secreted there by them for a consideration." Lord Granville displays much shrewdness in his comments on the Russian Court, and took the measure of that pretentious person the Grand Duchess Helen. This lady complimented Mr. Evelyn Ashley, a member of the mission, on Lord Shaftesbury's philanthropy, and asked him whether he was associated with his father "in his good works. He boldly answered 'Oui,' but when she requested him to specify, he was obliged to succumb." Before the coronation embassy was over Lord Granville had been insulted by the Emperor in much the same fashion in which the British Ambassador was treated by the First Consul at the time of the rupture of the peace of Amiens. Granville kept his temper, complained afterwards through the Foreign Minister, and at last secured a personal apology by Alexander II. Lord Granville draws a character-picture of the Emperor which is excellent, and shows that in 1856 he had appreciated the position and future of Russia with extraordinary accuracy. His conclusion is that, for reasons stated, there is little chance of real improvement in the Russian Government, and that "Russia is not strong for aggression.....It is not necessary to make concessions to her which are in the least degree hurtful to ourselves."

We are apt to think that the relations of Ministers of War with Commanders-in-Chief are specially bad in our own country. It is not disagreeable to learn that the Russian Minister of War was told by the Russian Commander-in-Chief after the Crimean War, when they quarrelled about the powder, "You never invented it—you never smelt it."

The first volume is marked by a good many little hits at men with whom Lord Granville acted. For Lord Shaftesbury he evidently had not the usual respect. It is odd, however, to find Granville in his earlier years making the kind of remarks with regard to Gladstone which were common among the opponents of that Minister. In the second volume the tone towards Gladstone is very different. It is certain that there was in this change no element of calculation, and that the respect with which Granville viewed Gladstone was based upon the profound knowledge of the older statesman which was acquired in the course of long Cabinet service as his subordinate.

The most important matter treated in the second volume is Home Rule, and here again we find new facts which are material. *The Athenæum* has often pointed out, in reviewing books which dealt with the history of "Gladstone's evolution," that the concealment from his colleagues of his Home Rule views, which is generally supposed to have been complete, was not so as regards many of them. Lord Edmond Fitzmaurice gives a letter from Lord Hartington dated August 8th, 1885—many months before the supposed surprise—which records a conversation

between Gladstone and Lord Hartington on the previous day. It is clear that Lord Hartington, and therefore, presumably, his friends, were in full possession of Gladstone's views at that time. Lord Hartington writes: "He seems to consider the Central Board plan the minimum which might have sufficed; but that as that plan appears to have collapsed, a separate Legislature in some form or other will have to be considered."

There are many interesting passages scattered throughout the portions of the book which deal with modern politics. An account of a conversation with the German Ambassador in 1884 shows that Germany asked for Heligoland, and was refused by the Second Gladstone Administration. Lord Granville replied to the observation that the cession "would strengthen the good feeling of Germany towards this country" by saying: "I suppose the cession of Gibraltar would strengthen our good relations with Spain." We are accustomed to hear of Gladstone's admiration for the Italian Government, but it was not shared at all times by his Foreign Secretary, who records that in 1882 they had been "behaving abominably." Some passages which concern Germany have a bearing on the recent Morocco controversy. Our Ambassador at Berlin ascribed to "Bismarck's character" that which is now seen to be an attribute of his successor's: resentment at "even the appearance of 'being passed over.'" He "never forgave those who acted, or even appeared to act, without consulting him." There is hardly so much new matter about the famous Errington "Mission" or "No Mission" as was expected. It is, however, scarcely accurate to say that "Mr. Errington was soon after followed by Lord O'Hagan." It is no doubt the case that Lord O'Hagan did visit Rome after the date named, but O'Hagan had been "the ordinary channel of communication" before the Errington Mission was invented. Lord Granville's wisdom is conspicuously manifested in his memorandum on the foundation of the Congo State. He "was sceptical how long the King would desire to maintain the character of 'the great philanthropic enterprise.'"

We think that Lord Edmond Fitzmaurice fails to meet the case which has been made against Lord Granville in respect of the dispatch of Gordon. The suggestion seems to have come originally from Lord Granville and to have been pressed by him. In 1883 he had written to Gladstone to propose using Gordon, although the letter contains the words, "He has a small bee in his bonnet." The Egyptian Government had already stated that they would not employ Gordon "unless it was demanded of them." In December, 1883, Lord Granville had again asked whether they would employ Gordon, the answer being that they "were still strongly adverse." In January, 1884, Lord Granville again pressed Gordon's name, and was again refused. Later in January the matter was yet again pressed on the Egyptian Government by Lord Granville, with "the same reply." Lord Edmond Fitzmaurice states, indeed, that "General Gordon now returned from Brussels at the request of the Government." But the context suggests the view that it was rather Lord Granville than the Government who had sent the message; and when Gordon started, "at the station Lord Granville took his ticket." It is added that had Lord Kimberley known "he would have shown Gordon to be unfit for the work, 'for he knew him well.'" The allusion is, of course, to the "small bee"; but the bee was familiar to Lord Granville and to his colleagues. It will be remembered that Lord Ripon had appointed Gordon to be his secretary in India, and that the appointment had been cancelled under circumstances publicly related at the time.

Throughout Lord Edmond Fitzmaurice's volumes there are peeps behind the scenes in lesser matters which will be found amusing. Bright charges his colleague Granville with salmon poaching, and perhaps with justice, as the Foreign Secretary admits that both science and art had induced him to change a fly for a boiled prawn. Another letter from Granville to Bright begins: "I am ashamed of my handwriting. It was not 'full of plans,' but 'full of beans,' an 'ossy phrase, ill suited to communications between Cabinet Ministers."

We need hardly say that Lord Edmond Fitzmaurice has done his work with conspicuous ability and care. He is probably not fully responsible for the index, in which there are a few errors (such as "Lady Frances Waldegrave"), of which only one is startling. Princess Alice is twice confused with the Princess Royal, Crown Princess of Germany, afterwards the Empress Frederick. She is indexed only under "Alice," and under "Germany, Crown Princess of, see Alice." Bismarck's famous phrase about "the two Victorias" makes the matter one of historical importance. On the whole, the index is good. Lord Granville usually gives the nicknames rather than the proper appellations of his friends, and we cannot expect to find "Bunny" under "Sturt" or "Alington."

We congratulate the author on the success of his considerable undertaking: it possesses high permanent value.

JUAN DE MARIANA.

Études sur l'Historiographie Espagnole.—Mariana Historien. Par Georges Cirot. (Bordeaux, Feret & Fils.)

However much we may dissent from some of M. Cirot's views, the value of his researches is unquestionable. The life of Mariana, his writings, their sources, and the bibliography of his masterpiece, are now adequately studied for the first time, and in every chapter M. Cirot corrects misunderstandings and errors. To begin with, Mariana's parentage has been made the subject of a mystery which, says Father Garzón, "we should be the last to clear up," and the editors of the "Bibliothèque de la Compagnie de Jésus" are equally reticent. This significant silence only piques the curiosity awakened by a certificate (first printed by Noguera Ramón) according to which Mariana was baptized at Puebla Nueva on April 2nd, 1536. It is not certain, though it is probable, that this certificate refers to the future historian; but, in any case, it cannot be assumed that Mariana was born at Puebla Nueva, for, in four separate passages—twice in verse and twice in prose—he declares that he was a native of Talavera de la Reina, and this statement is repeated by contemporaries or colleagues like Pisa, Rivadeneira, and Schott, who were in a position to know the truth. Their disinclination to go into further particulars was not unnatural. In an unpublished local history by Cosme Gómez de Texada de los Reyes, Mariana is said to be the son of Juan Martinez de Mariana, Dean of the Chapter of Talavera de la Reina, and Bernardina Rodriguez, and the assertion is sufficiently corroborated by a document which M. Cirot has discovered in the British Museum (MS. Egerton, 1875); this is a letter addressed to Mariana from Talavera on December 11th, 1583, and signed "Vtã madre bernaldina Rodriguez." The conclusion is that Mariana was born at Talavera de la Reina about the beginning of 1536, and that, for obvious reasons, he was taken to Puebla Nueva to be baptized. It follows that the story of his French origin, given by Antonio Hurtado de Mendoza and Hernando de Avila, is an invention. So also with respect to Mariana's death, which is usually stated to have occurred in 1623; the true date is February 16th, 1624.

Mariana has been warmly praised for his bold integrity in acquitting Arias Montano of the more serious charges brought against this scholar in connexion with the Antwerp 'Biblia Regia.' Arias Montano himself vaguely insinuated that he was denounced to the Inquisition by the Jesuits, and if this were really so Mariana would deserve all the praise that he has received. But the fact is not proved. On the contrary, the denunciation came in 1576 from León de Castro, the sinister Salamancan professor who had already distinguished himself by informing against Luis de León; and, though M. Cirot does not admit it, Mariana's action leaves a decided impression of timidity and double-dealing. His own turn came in 1609–11, when three of his 'Tractatus VII.' were brought before the Holy Office, apparently by Fernando de Azevedo, afterwards President of the Council of Castile. It has been alleged that Mariana's "treatment on this occasion was undoubtedly the more severe" because the 'Discurso de las enfermedades de la Compañía' was found among his manuscripts. This is not impossible, for the internal evidence of the text shows that the 'Discurso' was written before 1606, and it seems to have been known to some of his colleagues. On the other hand, the 'Discurso' does not exceed the bounds of fair criticism, and it is unlikely that the Jesuits would invoke any external authority against a conspicuous member who, by his conduct in the Vázquez episode of 1588, had proved that all his sympathies were with the conservative wing of the Society.

M. Cirot removes many of the misconceptions rife concerning the 'Historia de rebus Hispaniæ.' Ticknor's assertion that this was the main occupation of the last thirty or forty years of the author's life scarcely conveys the idea that the 'De Rege,' the

'De ponderibus et mensuris,' the edition of Lucas de Tuy, the 'Tractatus VII.,' and the 'Scholia in Vetus et Novum Testamentum,' were all later than the history; that the history was in fact Mariana's first work, that he is probably not responsible for the later editions of it in Spanish, and that the Spanish version was finished at least as early as June, 1593. On all these points M. Cirot's demonstration is excellent. He refutes the current notion that the first twenty books of the 'Historia de rebus Hispaniæ' were issued in 1592, and that the remaining ten appeared in 1609: though most copies of the 1592 edition contain only twenty books, there are some which include twenty-five books, and all thirty were printed at Mayence in 1605. Moreover, as regards the Spanish version, it is only in a special sense that Mariana can be described as his own translator. The testimony of Tamayo de Vargas is as follows:—

"En la traduccion aunque no al letra que no sea del P. Mariana, algunos le desearon aiudar, pero fueles imposible (i a quien no?) alcançar la grandeza del estilo Latino, no solo para igualarle, mas para entenderle; i asi no fue marauilla auer algun descuido que en su censura pudo dexar de aduertir aun su mismo auctor."

This quotation from the 'Raçon de la Historia' is clumsily phrased, but the meaning clearly is that in the Spanish version of 1601 Mariana was aided by collaborators working under his supervision. It is difficult to decide what amount of authority attaches to the reprints of 1608, 1617–16, and 1623, each of which differs from its immediate predecessor in important respects. The 1608 edition contains striking inconsistencies which cannot well be attributed to the author (who was exceptionally careful in correcting), and these oversights may be the fault of his deputy Cristóbal López; the deliberate archaisms, characteristic of Mariana's style, are ruthlessly pruned away in the edition of 1617–16; and the edition of 1623 utilizes the notorious chronicles of the Jesuit Ramón de la Higuera, which, from 1597 to 1616, Mariana had rightly branded as forgeries. Mariana's share in preparing these later editions cannot have been great, and perhaps this is no more than we should expect from his disdain for everything that was not written in Latin.

So far as matters of fact are concerned, M. Cirot's corrections, addenda, and commentaries are invaluable; but he does not carry conviction in his attempt to show that Mariana has been unduly depreciated by the historians of Spanish literature. Even if it be true that Spain has nothing so remarkable of its kind as the 'De Rege' (p. 35), we can no more accept any page in it as "un chef-d'œuvre de grâce, de naturel, et de poésie" (p. 33) than we can believe in its author's "aspirations républicaines et démocratiques" (p. 357), and, at any rate, the 'De Rege' lies outside the province of Spanish literature proper. M. Cirot protests too much. The fact that Mondéjar has dwelt with much severity and some injustice on the errors of the 'Historia' is no reason for going to the opposite extreme and becoming more Marianist than Mariana himself. His own phrase, "plura transcribo quam credo," is an explicit disclaimer of all pretensions to minute accuracy. In point of exactitude he is inferior to Morales, but he has done what Morales could never have accomplished: he has produced "the most remarkable union of picturesque chronicling with sober history that the world has ever seen." This is Ticknor's verdict, and it errs, if at all, on the side of generosity.

A few points may be mentioned for reconsideration. On p. 400 the phrase "para axena [?] impressa" (transcribed from MS. Egerton, 1871) should read *para nueua impressa;* in the description of Tarif (p. 349) as "persona de gran cuenta, dado que le faltaua vn ojo," the expression *dado que* probably stands for *aunque;* the attribution of the 'Republica Literaria' to Saavedra Fajardo (p. 387) is at least doubtful; the comparison between Mariana and Quevedo (p. 377) is misleading, for, as we have already noted, the Spanish version of the 'Historia' was finished in 1593, before preciosity of any kind came into vogue, while the 'Anales de Quince Dias' was written in 1621, when *conceptismo* was rapidly gaining ground. Misprints are few, even in the first appendix, which corrects many bad blunders in Gayangos's 'Catalogue of the Spanish Manuscripts in the British Museum.' It is a little mortifying, by the way, to note that most of the materials for Mariana's biography are in London, and have been neglected by English students. They are admirably used by M. Cirot in a monograph which must henceforth be the chief authority on all matters concerning the greatest historian that Spain has produced.

The Hatzfeldt Letters: Letters of Count Paul Hatzfeldt to his Wife. Written from the Head-quarters of the King of Prussia, 1870–1. Translated from the French by J. L. Bashford. (Murray.)

The Prussian Foreign Office servant who was recently German Ambassador in London had that horror of "indiscretions" which was natural in Bismarck's best man. In his life of Lord Granville, Lord Edmond Fitzmaurice, who frequently names Hatzfeldt, quotes a sentence as to Bismarck's never forgiving "indiscretions," which does not go beyond the truth. The great interest of the book now before us lies, however, in the extraordinarily unexpected nature of its revelations. An English writer bearing a foreign title was described a generation back as having made a bonfire of London society, with his mother on the top. Paul von Hatzfeldt is in the present volume occasionally made to play a somewhat similar part, not so much as regards what is commonly called "scandal" as in respect of Prussian Court and official life and his own family concerns. While, however, a little more care in editing might have avoided some blemishes, we welcome the volume as throwing light on many historical characters and events.

The foot-notes show either a profound knowledge of German society or great care. On the first page we find, however, this statement as to Hatzfeldt's mother, which follows a crude account of her relations with her husband: "She tried to play a part in the social movement with which Lassalle was connected, but failed." It would have been better, if the matter was to be mentioned, to give a fuller statement, by which, we think, more justice would have been done. Disputes between Hatzfeldt and the American family into which he married are related at length in many letters. As the actual first and last words are omitted in all the items of the correspondence, it would have been wise also to leave out frequent references to irritation and "bad temper." No doubt these things played a part in Hatzfeldt's life when he was representing the Prussian Foreign Office at Versailles. He had tried to save the property of his father-in-law outside Paris by stating that he had an interest in it—a step which, however natural, seems to have been resented by the family, who, with the exception of a brother-in-law left to look after Petit Val, without funds, were French in their sympathies and were in Paris during the siege. The youth went out shooting with the German officers in the neighbours' preserves, and Hatzfeldt records his special delight in shooting over a property "where he used not to be invited." He even made presents of the game, and tied on the parcels the labels of the property in question for the purpose of "annoying" the proprietor. Hatzfeldt is also made to tell the world how "he did a good thing for himself yesterday at the outposts: he got 300 francs out of Mr. Ward by a trick." When, however, "Henry" agreed to Petit Val being put into the Hatzfeldt name, so that a claim for damages could be set up, the father-in-law "will probably think that I want to take advantage of the situation in order to enrich myself." Nevertheless it was afterwards proposed that the house in Paris should be handed over, "because you could claim damages as a Prussian subject." The family stock was, however, augmented rather than decreased by the occupation, a growth in the number both of horses and of cows at the country place being duly recorded. On the other side of the account the little jealousies, which had been exaggerated at Berlin, are set forth in Hatzfeldt's replies. He is not made to appear to advantage, to say the least, but thanks God that he is not "as the French" in money matters. With Prussian pride he declares that "therein lies our strength. We are not so corrupt as they are." All the time, however, Hatzfeldt was being worried, and even offered to send in his resignation. In a German book published in the United States, and recently republished with an English translation, credit is claimed, on behalf of a German-American alliance, for the manner in which Washburne, Minister of the United States in Paris during the siege, worked with and for the Germans. The real facts were exactly opposite, and were discussed in *The Athenæum* review. They are here set forth; for example: "Your Minister, Mr. Washburne, is playing a curious part." Hatzfeldt got into serious trouble by reason of his own connexion with Washburne's proceedings, and the Prussian General Staff are shown to have stopped and opened the letters of the chief agents of the Prussian Foreign Office. On the principal occasion Hatzfeldt "scored," however, for he had put in some information settled by Bismarck's office for the very purpose that it should be communicated to the French

Government. We are reminded of Fouché's relations with Bonaparte's private police.

Another source of annoyance to Hatzfeldt lay in the increasing friendliness of his wife's intercourse, when left alone at Berlin, with Queen Augusta. That lady was looked on by his chief as leading "the French party." There are several allusions in Hatzfeldt's letters to his anxieties on this point; for example:—

"What troubles me a bit is, that you read the letter I wrote you from Brussels to the Queen. I don't at all recollect what I wrote; but it is to be hoped that there will be no gossip about it with Bismarck."

The letter referred to, which is dated on the day of the revolution in Paris, only gives an account of the surrender of Louis Napoleon, and can hardly be considered to have been dangerous, or even confidential. It is probably Queen Augusta, about, at that moment, to become German Empress, who is the "great personage" who interfered against the bombardments, first of Strasburg, and then of Paris. The General Staff replied to Hatzfeldt in writing: "In order to please the personage in question, we will give orders that the cannon-balls shall be wrapped in cotton-wool."

It is curious to find that so able a man as Hatzfeldt—differing from Bismarck and from Moltke, who both said that the annexation of Alsace would necessitate great armaments by Germany for half a century—thought that the peace which Prussia was to impose on France would "allow every country to diminish its army and the taxes that result therefrom."

A letter of the September of the siege, when the King of Prussia, Bismarck, and Hatzfeldt were all staying at Alphonse de Rothschild's house, shows what care was taken to avoid any ground for complaint being given to the powerful financial firm. Hatzfeldt says that he is going to make an excursion in search of wine, as the King has not only prohibited requisitions, and stopped shooting, but shown himself so "considerate" that "although there is a cellar chock full before our very eyes, we have nothing to drink." At Christmas Hatzfeldt tells a very different story, this time from Versailles. He explains that

"the courtlings sent wagonloads to their families at Berlin.....As far as the King is concerned the matter is easily explained. He was told that as St. Cloud was the property of the State, everything that it contained belonged to him by right of conquest. As he did not wish to keep the things for himself, he distributed everything amongst the princes and courtlings."

Hatzfeldt had his personal grievance:—

"There isn't a wretched courtling nor a single aide de camp who has not been covered with decorations, although they have done absolutely nothing but eat and drink. At the General Staff and at the War Ministry, even at the Commissariat and at the Post Office, there is not a single official who has not long since received the Iron Cross."

One of the best things in the volume has a literary flavour. It comes from the conversation of M. Thiers: "The result of having M. Hugo as first poet and M. Lebœuf as our War Minister is, that we have the pleasure of lunching with you here"—that is, at Versailles during the occupation.

The index is unfortunately poor, though fairly accurate as far as it goes. There are a few errors in the text, such as the inevitable "Gallifet"; and in one place "Clarmont," spelt otherwise in another passage.

RUSSIAN LITERATURE.

WAR AND POLITICS

It is impossible to say that literary life in Russia has been developed in orthodox fashion during the last twelve months. The attention of all society has been so much occupied by the war with Japan and the revolutionary movement in the country, that readers were not likely to be influenced by purely literary developments. On the other hand, current events have had their influence on literature, if we take that expression in its widest sense. The interest in political questions, which has greatly increased, has produced a series of publications devoted to them. Many books and pamphlets have appeared dealing with the constitutions of Western Europe, and having the object of familiarizing Russian readers with parliamentary usages (*e.g.*, translations of the works of Dicey, Lowell, and Jellinek). At St. Petersburg many new daily newspapers have made their appearance, for the most part Radical in programme (so far as there can be a Radical press when the censorship is in force), such as *The Son of the Country*, *Our Life*, *Our Times*, which at once gained a wide circulation. Yielding to the persevering and unmistakable demands of society, the Government resolved to relax the repressive measures which up to that time had hampered the development of Russian literature. A special commis-

THE PRESS

sion was organized, under the presidency of D. Kobeko, for the investigation of the Russian press laws, with a view to giving the press greater freedom. The labours of the commission have not yet ended. According to report, all the material accumulated on the question will be examined at the first session of the newly formed Imperial Council, which will assemble in January of next year. It is true that the prosecutions of the press by the administration have not ceased; during the last twelve months a whole series of periodical publications have been suspended by order of the Minister of the Interior for some months, and the proprietors have also been punished in other ways—*e.g.*, have been forbidden to sell retail. Some of the provincial newspapers have not been allowed to appear, or have only appeared with gaps in their columns, because certain passages were struck out by the local censor. Still, generally, it is now felt that the rights of the Russian press have been enlarged. The journals and gazettes have acquired the power of judging questions, the right to touch upon which had been before strictly denied. They may now subject to a criticism more or less searching the measures of the Government, which was absolutely impossible a year ago. This is a development which has been sanctioned by no definite legal act, but was founded entirely on the tacit consent of both sides, and in the press has been styled "the Spring."

RELAXATION OF CENSORSHIP

It is owing to this breath of "Spring" that in the book-market have appeared the productions of some prominent Russian authors, which before came into the hands of Russian readers as a kind of contraband, in editions published beyond the frontier. Thus among the first publications were the works of A. Herzen (1812–70), the celebrated exile, who lived many years in England, and edited *The Bell*, which resounded over Russia in the period before the reforms like a *memento mori*. For his fine style, the artistic power of his imagination, and the attractive eloquence of his logic, Herzen may be ranked among classical Russian authors, apart from the historical importance of his literary activity. For a long time the very mention of the name of Herzen was impossible in the Russian press. Unfortunately, even the edition of his writings now permitted is incomplete. There has also appeared a collection of the poems of the friend and co-operator of Herzen, N. Ogariev (1813–1877), whose works, for about fifty years, have been forbidden in Russia. Ogariev deserves to be put in the list of the best Russian poets — in the same rank with Tiutchev, Baratinski, Fet, and Nekrasov. His verses appear careless in form and too simple in their contents; but under the apparent carelessness is an energy of phrase which admits of no modification of words, and under that simplicity the complexity of a soul that has sought and has despaired. No one has expressed better than Ogariev in Russian poetry the aimlessness of hope, and the bewilderment of the paths, from which there seems no exit.

An edition of the works of H. Tchernishevski (1828–83) has also been begun. He was a brilliant critic and passionate publicist, who ruled the minds of Russian youths in the fifties. In 1864 Tchernishevski was sent to Siberia for treason. He returned from exile in 1883, but still vigorous and still capable of continuing his literary work. For a long time his writings were entirely forbidden in Russia, and some of them have only recently made their appearance, but without the name of the author. This year his celebrated novel 'What is to be Done?' has been published with the name of the author prefixed. The novel has no artistic merit, but is important as a sign of the times and a vivid preaching of ideas which in their day agitated the front ranks of Russian society.

Among these "gifts of Spring" we must include the appearance of the 'Memoirs of V. Yakushkin,' one of the *Dekabrists*, which up to this time had been published only in London and Leipsic, and the 'Recollections' of D. Akhsharumov, condemned in 1849 in the political trial of Petrashevski, in which Dostoievski was implicated. Akhsharumov had made for some years great efforts to get the publication of this work permitted.

We must add the translation of the celebrated work of Giles Fletcher, 'On the

Russe Commonwealth,' which appeared in England in 1591. Let us remark that the work of Fletcher was printed in Russian by Prof. Bodianski in 1878 in a special historical magazine; but the number of the magazine was confiscated, and Bodianski sent from Moscow to Kazan.

NOVELS

As regards contemporary literature, we must consider the appearance of the novel of D. Merezhkovski, 'Peter and Alexis,' as the most important event. I have already had the honour in these columns to speak of this production, in my account given last year, when the novel was not yet finished. The last chapters have not changed its general character. In the whole work the author exhibits a vast labour, which shows his great erudition. In his talent he is rather an essayist than a poet. The chapters devoted to the characterization of the great Russian emperor are magnificent—a wonderful, and at the same time portentous, portraiture of the giant Tsar. The remaining chapters furnish living pictures of various sides of Russian life at the beginning of the eighteenth century. The language of the novel is condensed, carefully elaborated, and shows a good style. But Merezhkovski has not produced an artistic whole. He has not brought into complete form the material which he has collected; he has been prevented by his desire to show that Peter destroyed the Russian Church. The novel is not a shapely, well-proportioned statue, conceived by one artistic survey, but a museum of curiosities and mosaics.

The new tales of Andréev have roused great interest, as they always do. Each of them constitutes an event in literature. Undoubtedly 'The Red Laughter' has produced the greatest impression on the critics and the reading public. It deals with the terrors of war and the madness of the masses. It presents harrowing scenes, pictures conveying the impression of delirium, yet so finished that we recognize their realism. But Andréev has not succeeded in producing an epic picture of the war; he is too much of a psychologist for that. Less grandiose in thought, but more complete in execution, is another of his stories, 'The Visions,' where a madhouse is described and the doctor who presides over it; but the reader cannot help thinking that this doctor is a type of the man who is more mad than his patients. Andréev has succeeded in showing in this tale what thin partitions divide the healthy and the diseased mind.

The book of stories by Th. Sologub is very remarkable. They are dainty little parables, recalling the fables of the East or the tales of Andersen, only the methods of the Danish enchanter are enriched and completed with all the discoveries which the masters of the new prose have made. Every scene, independently of its internal allegorical contents, exists in a self-contained artistic life. The language of the tales is astonishingly simple, sober, and to the point. They have also another feature in common with those of Andersen, which is now rarely met with in Russian literature—laughter in all its forms, from bitter sarcasm to the merry roar, from subtle irony to good-natured quips at the perplexity of the reader. This book of tales is beyond dispute the best thing which has up to this time been written by Sologub.

'The Return,' by Andrei Bieli, has been called by its author a symphony. In reality it is something between a poem musically constructed and a novel of large grasp and unconstrained development. It is a peculiarity of Bieli that he understands the relationship between the real and the unreal, that our everyday activity is conditioned by mystic causes. Bieli represents all the transparency, all the transcendental subjectivity (to make use of a term of Kant), of our relation to things. In 'The Return' the strict continuity of our life is mingled with the illogicality of dreams, and is turned into a disconnected and monstrous chaos; the conditions of time and space are, as it were, obliterated, and dizziness seizes the reader, as at the beginning of an earthquake. 'The Return' is the most compact and complete of the three symphonies written by Bieli.

Among other productions appertaining to belles-lettres attention must be called to two collections of stories by the new writers Osip Dimov and M. Artsibashev. Both seem to possess the gifts of a true story-teller; both show original thought and language, and a fine technique in writing. Dimov is interesting in his short sketches, in which much is said allusively and not right out; but greater success has fallen to the lot of Artsibashev, in consequence of the familiar, realistic methods of his creative power, and owing to the fact that he often employs themes of the day. The novel of I. Kuprin has been much talked of—'The Duel,' a tale of military life, representing the emptiness and pettiness of the lives of Russian officers. On the other hand, some small stories of Maxim Gorki, in which the author only repeats himself, have attracted but little notice. To all appearance the influence of Gorki is declining.

The stories of Gorki, as also those of Andréev and the novel of Kuprin, were printed in the *Sborniki* of the publishing firm Knowledge. I may say that in view of the difficulty of obtaining permission to publish a magazine, there has arisen again in Russia during the last few years the old form of periodical "miscellanies" and almanacs, published by a group of authors of the same views. The almanacs issued by Knowledge, which have had a great success, represent a group of realistic writers. The writers forming the circle of "modernists," as they are called, are grouped in two almanacs, published by the firms Scorpion ('Northern Flowers') and the Griffin. The cycle of authors who are beginning their career has entered upon activity in the 'Green Miscellany,' &c. It seems likely that these publications will cease when the difficulties with regard to the establishment of magazines have been overcome.

DRAMA

In the sphere of the drama, among new pieces brought on the stage the 'Lodgers in the Country' of M. Gorki has attracted attention. This play was written under the strong influence of A. Tchekhov, and had no actual success. Among the dramas for private reading we must mention the tragedy of Viacheslav Ivanov, 'Tantalus.' Among the articles included in the journals *The Scales* and *The Questions of Life*, V. Ivanov preaches the renascence of the principles of ancient art, and points out, as the highest objects of poetry, the creation of myths. In his tragedy he attempts to give a version of the myth of Tantalus on a level with the ancient poets. His Tantalus is the type of one who fights with the gods, who opposes the personal "I" to eternal fate. In form the tragedy corresponds very closely to the ancient dramas: the dialogues are written in the iambic metre, the choruses are arranged in strophes. Even in his language, in the syntactical arrangement of his sentences, in his metaphors, Ivanov draws near to the ancient models. If the contemporaries of Æschylus had been able to become acquainted with 'Tantalus,' they would certainly have adjudged a crown to the author. The tragedy is printed in the almanac 'Northern Flowers,' where are two other dramas: 'Three Blossoms,' by K. Balmont, and 'Earth,' scenes from future times, belonging to the pen of him who writes these lines.

VERSE

In the domain of lyrical poetry let me note a new volume of verses by the unwearied K. Balmont, 'The Liturgy of Beauty.' The hymns in honour of the four elements, earth, water, fire, and air, constitute the most important part of the book. These hymns are frequently attractive in their ecstasy, but are sometimes spun out. In general, in this new book K. Balmont seems to feel a weariness in his poetical gifts. He begins to repeat himself, and is more careless about form. His Nietzsche-like invitations to be strong, his exaggerated protestations that he is happy, sound artificial. But for all that there are in the 'Liturgy' pearls of quiet pensive poetry, harmonious songs dealing with nature, things of which Russian poetry will always be proud.

A. Block has shown himself an independent poet in his 'Verses on the Beautiful Lady.' The beautiful lady of the poet is not so much an earthly love as a mystical Madonna, a maiden of rainbow heights according to the terminology of the gnostics. Russian poetry has not known up to this time such penetrating songs to the "Eternal Womanhood." In them still sound the melancholy thought of the child's heart, which beats amid the coarse conditions of contemporary life, and the prayers of the knight errant. Here and there an inexperienced hand can be traced in the verses, but in general the form of the poetry of Block is so original that he ought to be recognized as a master, the creator of his school; and, indeed, he has already had imitators and pupils.

The verses of A. Dobroliubov are entitled 'From the Book of the Invisible.' Ten years ago Dobroliubov made a start with a book of verses of the narrow, decadent type. He then suddenly gave up all intercourse with cultured society, and went among the common people and began to preach in the Russian villages his interpretation of the Gospel. On account of his preaching he was several times prosecuted,

and spent half a year in prison; but he continues his work to this day. His verses are written in the form of the religious hymns which Russian sectaries sing at their prayer-meetings; but under the somewhat coarse exterior it is possible to distinguish a master of the language, who has not forgotten the lessons of his "great teachers," to whom he dedicated his first book, and among whom was D. G. Rossetti.

Among other collections of poems, I find worthy of mention the volumes of M. Semenov and S. Makovski, the book of 'Introductions,' by V. Hofman, and 'Hoar-Frost,' by Madame P. Solovieva. The appearance of the new edition of the poetical works of Count Golenistchev-Kutuzov was a remarkable event. He is a poet whom critics justly value.

TRANSLATIONS

In the sphere of translations we must give the first place to the beautiful edition of the works of Byron which has appeared, under the editorship of S. Vengerov, from the firm of Brockhaus & Ephron. As yet one volume has been published. Most of the translations are new; but, from the abundance of illustrations, this edition ought to have an honourable place, even among English editions. G. Chulkov has published his translation of 'Douze Chansons,' by Maeterlinck, with illustrations by Ch. Dudlé, who has designed an illustrated cover for the Russian edition. The productions of St. Pszibyszewski had great success among Russian readers. They appeared simultaneously from several publishers. The same may be said of the books of Oscar Wilde, especially his posthumous confession, 'De Profundis.' There was a great increase in translated literature on political questions.

HISTORY

No great development has been noticed in historical literature. Among original works may be mentioned 'Lectures on the History of Greece,' by R. Vipper, founded on independent study of primary sources. The history of the most ancient, the Homeric Greece, is minutely elaborated in them. N. Rozhkov has published 'Survey of Russian History from the Sociological Point of View.' The author has been considerably injured by the identification of his views with those of Karl Marx and his efforts to trace every process in history to economic causes; but his book contains many valuable remarks and interesting statements. D. Ilovaiski has issued a new volume of his 'History of Russia,' devoted to the reign of Alexis Mikhailovich and his nearest successors. From all points of view this is a conscientious piece of work; but the author holds a somewhat archaic view of the function of an historian. M. Grushevski, professor at the University of Lemberg, has issued a 'Sketch of the History of the People of the Ukraine,' which is an adaptation of his lectures given in the Russian School in Paris. The author insists upon the independence of the people of the Ukraine, who form a separate branch of the Slavonic family, in the same rank as the Great Russians and the Poles. Unfortunately, Grushevski does not show a complete mastery of the Russian language.

Among the editions of historical materials I must notice 'Collection of Treaties and Conventions between Russia and France, from 1807 to 1820,' a very remarkable and useful work, carried out under the editorship of F. Martens. The new (nineteenth) volume of the huge biography of M. Pogodin, published by N. Barsukov, is devoted to the year 1862, and contains much interesting matter—letters published for the first time, &c. It is a pity that the author, who is prejudiced, explains the material which he has collected in a spirit hostile to the reforms of Alexander II. As in the special historical magazines, so also in separate editions, a great deal of material has appeared dealing with the affair of the *Dekabrists*, the insurgents of the year 1825. Let us also here add the memoirs of Akhsharumov and Yakushkin previously mentioned, and the work of Giles Fletcher.

There has also been published the first volume of a valuable work of M. Pirozhkov, 'Social Movements in Russia in the Nineteenth Century,' in which have been incorporated the labours of V. Semevski, V. Bogucharski, and P. Stchegolev about the *Dekabrists*—also concerning M. von Wizin, Prince Obolenski, Baron Steingel, and various materials to illustrate their characters. In military history the second volume has appeared of the history of the Russo-Swedish war in the year 1808–9, by P. von Gerich.

HISTORY OF LITERATURE.

The following are conspicuous works on the history of literature: 1. The work of the Academician A. Veselovski on V. Zhukovski, 'The Poetry of Feeling and the Imagination of the Heart,' the first investigation of the poetry of one of the greatest of Russian poets, since whose death more than fifty years have elapsed. This inquiry disposes of the legend that Zhukovski was a romantic poet. 2. The book of V. Stchegolev, 'A. Griboyédov and the Dekabrists.' This contains a facsimile of the original work of Griboyédov, which is preserved in the archives, and by searching criticism shows that Griboyédov was much more mixed up with the *Dekabrists* than is generally supposed. 3. 'Sketches of the History of Literature and Education,' by N. Bulich, devoted to the characterization of Russian literature before the appearance of Pushkin. 4. The posthumous work of the Academician Pypin on Nekrasov, founded on unpublished materials, and issued by the Academy of Sciences. 5. The works of the late N. Zhdanov, especially dealing with old Russian literature. 6. N. Ovsianiko-Kulikovski, a pupil of the celebrated Potebnya, has published a very valuable 'Syntax of the Russian Language,' in which he tries in a lucid manner to set forth the observations of his teacher on the psychology of syntax.

PHILOSOPHY

In the department of philosophy I must mention the book of N. Minski, 'The Religion of the Future,' in which the author tries to establish a system of religious beliefs on a strictly rationalistic foundation. The book contains many profound and truly original thoughts. It is written in an attractive way, in the form of a dialogue. A. Shestov, in 'The Apotheosis of Doubt,' further irritates, in a series of bold and unpardonable aphorisms, the most grievous wounds of contemporary conviction. Prof. Th. Zielinski, in his book 'From the Life of Ideas,' has shown himself a convinced and clever defender of classicism as the necessary foundation of education and just views of life. The posthumous collections of essays by N. Mikhailovski, 'Echoes' and 'Last Works,' are far from reaching the power and warmth of his early productions. Of the vast literature called forth by the Russo-Japanese war I will notice only the book of Prof. P. Migulin, 'War and our Finances,' full of assertions which may be disputed, but original and stimulating thought.

DEATHS

In the period under review Russian literature has lost one of its most remarkable poets, K. K. Sluchevski. He was a poet-philosopher, who strove in his productions to render the most torturing contradictions of the human soul. Least of all was he an artist. He wrote his verses like a child—in scrawls, not a handwriting. In poetry he was a stutterer, but it was only like Moses. All came from him as if without any system, sometimes almost ridiculously, but at the same time prophetical, bold, fiery, and clear. In his poetry there is want of form, but nothing mean; it is original in the best sense of the word. The son of Sluchevski, also a poet, a naval lieutenant, perished at the battle of Tshushima soon after the death of his father. Besides Sluchevski have died A. N. Pypin, a prominent historian of literature; D. Aberkiev, a dramatist and theorist on art; D. Mikhailovski, a poet; D. Mordovtzev, a popular novelist; and Madame Lokhvitskaya.

Valerii Briusov.

Interludes in Verse and Prose. By Sir G. O. Trevelyan. (Bell & Sons.)

We are glad to see a reprint of what are now classic pieces of Cambridge wit. 'Horace at Athens,' 'The Cambridge Dionysia,' and 'Ladies in Parliament' (here entitled 'The Modern Ecclesiazusæ') have long enjoyed a considerable sale in cheap form. The two latter rank, with Dean Mansel's 'Phrontisterion,' among the best imitations of Aristophanes known to us. They contain, as do his plays, a certain amount of esoteric allusion which requires a commentator, but in form, matter, and freedom of movement they are worthy of their exemplar. A few notes at the bottom of the page explain local or political allusions which might otherwise be lost on the present generation. The author was Second Classic in 1861, but missed his Fellowship at Trinity, though men lower on the classical list secured that distinction. He points out in a note to 'Horace at Athens' the curious fate of the passage which refers to this mishap:—

"In the first edition the above four lines, the dearest the writer ever penned, were suppressed at the last moment, and fresh matter substituted. But a thrifty bookbinder used the rejected pages to strengthen the covers of a certain number of copies, so that the purchaser could gratify his

curiosity by the simple process of holding up the binding to the light. Few,—and, least of all, the then Master of Trinity,—could be induced to believe that the author was not a party to this suicidal policy."

Whewell, Master at that time, was not to be trifled with any more than his successor Thompson, who refused a Fellowship to the writer of a most brilliant dissertation, because it ended with a piece of slang.

Since then Trinity has offered amends by making Sir George an Honorary Fellow; and his son, another George Trevelyan, has been a Fellow of the College, though he has preferred the severer muse of history to the Thalia of comic verse.

Light as these pieces are, they have also attained to the dignity of history, and contain much that is curious to those who remember old days, or study modern ones in the light of the old. Sir George has made a few omissions of personal allusions. Since his volume ranks as a sort of Freshman's Bible, we may regret one of these, which forms the only literary reference we know to a universal pronunciation. In 'Horace at Athens' we no longer find the lines:—

Balbus. Caius, my worthy comrade—
Caius. If you please,
I very much prefer to be called Keys.

An instance of tenacity is afforded by the Master elected through his own vote, who yet holds the place he secured in the sixties. Quintus Russellus Maximus, the war correspondent, is also still with us, a remarkable veteran. The whole piece contains much classical lore in solution; *e.g.*, we find Sappho's famous love ode translated, and much of Horace. Sir George has slipped, however, in speaking of the gigantic Aristophanic word as

beginning galeo—
Lepado—temacho—and the Lord knows what.

It runs "Lepado-temacho-selacho-galeo," &c., in the 'Ecclesiazusæ,' 1169. We can hardly justify the alteration as *metri gratia* in the hands of so ingenious a finder of rhymes.

'The Cambridge Dionysia' begins with a reference to "Shillibere," *i.e.*, Shilleto, the great scholar, of whom personal memories are now few, though his repute is undimmed, and his classical "copies" are still the exemplars of the undergraduate. Shilleto's beer-drinking powers are commemorated in the volume. A Cabinet colleague of Sir George Trevelyan, who was a lance-corporal on duty in the guard of honour in the tent on King's Lawn at the lunch to the present King and Queen in 1863, has been known to quote an indignant refusal of champagne and to mimic the well-known shout, "Is there no beer?" Another anecdote of Shilleto refers to his saying: "They call me a Jacobite because I wear a sprig on Royal Oak Day."

In the book before us there is much which time has made notable. It appears in the sixties to have been an illicit, but distinct pleasure to read Alexander Smith, whose works are now quite dead. The poem ends with an injunction, if Policeman K interferes, to

Break his head, and shave his whiskers, and suspend him to the lamp,

as to which we may note that "rows" are now by no means so common at Cambridge as in the old days. It takes a special occasion, such as the advent of a Kitchener or the introduction of women's degrees, to raise a tumult. Ordinary town and gown rows, which have a respectable pedigree, going back at least to Henry VII., if not earlier, are virtually extinct. The 5th of November has been for ten years or so but mildly provocative of the delights of battle.

'The Anglo-Indian Lyrics' speak of Clive, Hastings, and Impey as having their fame kept alive in schoolboy mouths by

Just two articles in that Review
Where gaudy yellow strives with dingy blue.

Now, the *Edinburgh* can hardly make or mar a reputation for the reviewer or the reviewed. *En revanche* we have in abundance series of heroes of the nations and periods of literature to instruct the young. But surely no schoolboy other than Macaulay's "infant phenomenon" (who may, after all, have been his nephew) ever read the quarterlies, even in the virtuous sixties.

The paraphrases of Horace here and elsewhere have both grace and ease; they are not the worse for being less thickly starred with cleverness than Mr. Seaman's and Mr. Godley's similar odes. All five burlesques are charming, both from their native wit and their equipment of Horatian allusion in Anglo-Indian or in Cambridge garb. The day may come, but has not come yet, when the brothers Ross, and Brett, R.A., and Sir Ranald Martin, and Sir Charles and Lady Mary Wood in the 'Donarem Pateras' will demand a scholiast. Perhaps Miss Asterie White's lovesick rival hardly reconciles us to Mrs. Bardell and Mr. Pickwick as equivalent with Hippolyte and Peleus; Opuntian Megilla's brother, on the other hand, is delightfully transformed into a Junior Soph, whose hopes are more severely dashed by his charmer's engagement to a college tutor than by Horace's rude aspersions on the young lady as a Charybdis and a Megæra. The touch of fatalistic sadness in the original ode to Leuconoe is a little jarred upon by the mockery of Dr. Cumming and his fated year; and the splendid Horace and Lydia dialogue, which Scaliger declared that he would rather have written than be king of Spain and the Indies, as it has evaded the arts of the translator, so seems to defy the parodist. Yet we well remember, when these *jeux d'esprit* saw the light in 1863, feeling that we had in their author Sir T. Browne's "undiscovered Englisher of Horace."

The extracts from 'Letters of a Competition Wallah' have still the sparkle which delighted us on their first appearance. They paint a celibate Paradise, into which Eve's intrusion, not through the poor thing's fault, brings serious penalties and drawbacks. It is still the best description of Anglo-India, except that given in 'The Chronicles of Dustypore.' 'An Ancient Greek War' was called 'A Holiday among some Old Friends' in the cheap reprint of 1888; it is a good example of classics for the million—curiously eloquent, admirably selective in its translations from Aristophanes, Thucydides, Plato, with not a few perhaps unconscious reflections (as in 'The Siege of Arrah' there is a direct imitation) of Macaulay.

The foot-notes help the reader, as has been said, to many an obsolete allusion; on one or two the oracles are dumb. We should like to know who wrote the 'Sirens' (p. 54), who was the convivial "Phinn" deserving to rank with Harcourt and Brookfield, who the "Arthur struggling with his team of roans" (76, 78). "Beales" (86) was, of course, the hero of the Hyde Park railings and of Mr. Secretary Walpole's tears; but few will know his name to-day. "Pucka" is very properly explained, but was current in Oxford slang twenty years ago. The comma at "pulled" on p. 13 is superfluous; pulled-and-grilled (*poulet grillé*) is one dish. Did not Mr. Bouncer offer it to tempt Verdant Green out of his bed? There would be no harm now, since he has long been dead, in affixing a name to the "old Master of Arts" on p. 74. It was Prof. Westwood, famous naturalist and most genial man, but never known to pronounce the letter immortalized by Miss Catherine Fanshawe. The story was rather differently told at the time, and is perhaps too old now to reprint.

We lay down these clever revivals of long ago with a sense of degeneracy in to-day. It is the proverbial lament of seniors, but all recent reminiscences support belief that university life was fuller, its frolic more intellectual, talk more brilliant, productiveness more inspired, half a century ago than is now the case. There may be amongst the ingenuous youth of later ages hearts pregnant with at least terrestrial fire; there may be Oxford Bachelors who could write a 'Uniomachia,' Cambridge undergraduates who could travesty the 'Ecclesiazusæ'; but in spite of Mr. Godley at Oxford, and Mr. Seaman, whose Cambridge days gave us the admirable parody of 'Œdipus the Wreck,' Sir George Trevelyan's 'Interludes' still hold the field.

NEW NOVELS.

A Waif's Progress. By Rhoda Broughton. (Macmillan & Co.)

The habit of comparing authors with other authors (or with themselves at various epochs of their development) is not one to be encouraged. We always feel this temptation with regard to Miss Broughton's late and early methods. Her new novel shows the old daring and spirit in the dialogue, though not quite the old raciness and spontaneity that kept everything and everybody alive. Such touches when they appear are enjoyable. It may be only the silhouette of a dog, the dress or gestures of a man or a woman, yet they are marked by vivacity, observation, or drollery. This said, one confesses to not liking greatly the human nature and situations of the story. In fact, parts of it are unpleasant—if not in detail, in suggestion. The girl-heroine—an orphan of seventeen already "up" in the ways of the wicked world, and saddled with a "past," her mother's—is a sorry little object. She is not, it is hinted, without experiences of her own which have made her wary. Her sang-froid and aplomb in the business of life—marriage—are, in spite of a pretty manner and a surface good-nature, disagreeable in the extreme. She has all the physical per-

XUM

fection of an exquisite flower; a moral outlook that leaves almost everything to be desired; and a dreadful wisdom that has safeguarded her technical innocence. The reader's acquaintance with her begins when she becomes the guest of a husband and wife. In receiving her the wife, who is given to good deeds of a rather fussy kind, adds another to her programme; but her husband's way of looking on the stranger does not accord with her scheme of things. The girl is soon handed on to a married brother. Fresh difficulties arise. In her new host and hostess there are, however, unexpectedly likable characteristics. One is gentle and loyal, the other upright and generous. The little schemer is, it must be allowed, not altogether proof against these qualities. We wonder why the wife is so coarse in speech, and delicate in feeling and action. Intrigues set in. Fresh people, some cleverly drawn, are introduced. The young schemer returns to her former entertainers, and in the end marries an elderly wooer, the widowed husband of the first hostess. And so ends the waif's career.

The Reckoning. By Robert W. Chambers. (Constable & Co.)

Mr. Chambers is an author who may be relied upon with confidence. That he is not devoid of whimsicality, as his last book proved, is nothing to his detriment. The reader may rely upon him for good, sound craftsmanship, for a genuine sense of romance, and for the gift of narrative. Nothing slovenly stands to his discredit; he upholds a worthy tradition. It would seem that his intention is, and has been, to treat in a series of romances that part of the American War of Independence which particularly affected the great landed families of Northern New York State: the Johnsons, the Butlers, the Schuylers, and others. The first of these romances was that fine tale 'Cardigan'; the second, 'The Maid at Arms.' The third we understand is not yet completed, but the fourth we are given in this present volume, 'The Reckoning,' which takes up the tale from the time of the first serious blow delivered at the Long House. The author's gift for narrative is notable, and his regard for historical accuracy, whilst not slavish, is honourable and consistent. The result in this case is a stirring romance, full of action and of the savour of the period and scenes described. A strong yet delicate love interest runs through the tale, the conclusion of which, in the chapter called 'Butler's Ford,' strikes an admirably fitting note of triumph. The story may be cordially recommended.

The Freemasons. By L. S. Gibson. (Chatto & Windus.)

This novel is described on its outer cover as "a daringly original study of a new situation in fiction." It is not that; a "new situation in fiction" is not so easy of attainment in these days; but it is a good modern story of married folks' love affairs and of middle-class society at Notting Hill and at Ealing. So far as the present reviewer is aware, this is Mr. Gibson's first book, and if that be so he is to be congratulated upon the soundness of his workmanship. His story is likely to win interest and favour in the circulating libraries, and it shows an easy fluency of expression which suggests the pen of a prolific story-teller. A clever and rather unscrupulous young doctor, handsome and popular, has married, chiefly from worldly reasons, a beautiful woman who is socially his superior, but physically unresponsive to the appeal in him which has rendered his affairs with other women both numerous and, from the gallant's standpoint, successful. An underbred City man has married a young, delicate, and rather *spirituelle* woman, largely for the reason that he thought she would give tone to his establishment. He never learns to understand his sensitive wife, and grows presently to neglect her in a rather brutal way. The handsome doctor comes to know the neglected wife, and the obvious result happens when he seeks to console her. The thing goes far, and catastrophe is threatening. Then, not trusting his own strength of will in the matter, the doctor saves the situation by making a Freemason of the City man, who joins the lodge of which his wife's lover is master, the suggestion being that his masonic vows enable the doctor to play the man and bring to an end his dishonourable entanglement. The characterization is creditable, and the story has sustained interest.

The Last Chance. By Rolf Boldrewood. (Macmillan & Co.)

The author of 'Robbery under Arms' may be relied upon to attain in every book he produces precisely the standard to which his readers are accustomed. That standard is not high from the literary point of view; it is too uniformly lacking in originality and distinction; but none the less it is a respectable level of sound and wholesome fiction. Rolf Boldrewood has the gift of narrative, the necessary basis of all good story-telling. Other matters—the refinements and subtleties which make the difference between good, interesting yarns and works of art in fiction—there are in plenty; but they are not of the absolute essence of story, and they are not present in such a tale as 'The Last Chance.'

Captain Maroon. By Robert Stuart. (Eveleigh Nash.)

There are many evidences of care and sincerity in the writing of this adventurous story, but its author has yet much to learn regarding the right construction of a tale. The story, as its title suggests, is of piracy and crime on the high seas, presumably in the seventeenth or eighteenth century. It is told in the first person by one of its principal characters; and herein lies one of its author's blunders, for he has chosen to tell the whole tale in what he conceives to have been the language of the period dealt with, the result being a style of diction by no means consistent except in its one quality of wearisomeness. Further, the device by which our sympathy is solicited on behalf of the narrator and his father, in their adventures as pirates, is unconvincing. The mechanism of the story is faulty; it is built heavily and with care, yet upon a rotten foundation. But, having said so much, we are glad to add that the book has many good points, some of which suggest that, once his amateurishness is overcome by practice, Mr. Stuart may produce good sound fiction that should appeal to young folk. He has considerable feeling for romance in incident and background, and can visualize rude action creditably. Compression, care, and, above all, a more easy style of diction should go to make a later effort from the same pen acceptable.

Mr. Muldoon. By Michael O'Donovan. (Greening.)

Mr. Muldoon was an Irishman of lowly origin, who began his adventures in the world as an indoor servant. The story follows his career closely, and belongs to a class that had its vogue some time ago. The thing is broad Irish farce from beginning to end, and here and there has the flavour of a knockabout harlequinade. There are glints of humour of a quaint sort in parts of the book, but no wit. Upon the whole it is not good enough. The author doubtless has in mind the career of "Mr. Dooley," but real wit and humour are required to make such matters as this at all palatable in volume form, and these saving qualities do not distinguish 'Mr. Muldoon.'

OUR LIBRARY TABLE.

The Rev. C. Gordon Wright is the most recent addition to the ever-growing list of Dante translators. His version of the *Purgatory* (Methuen) is constructed on a somewhat novel, though not wholly commendable, principle. Printed as prose, it consists throughout of ordinary blank-verse lines, interspersed with a certain proportion of a shorter length, six or eight syllables. The rhythm is instantly obvious, even apart from the inversions which it occasionally demands, or the clipped forms like "albe," "gin," and "twards," which Mr. Wright deems give his English a Spenserian flavour. (Would not Spenser's syncopation rather have been "tow'rds"?) A short extract will show the style of thing. We abandon the useless disguise of continuous printing:—

> While thus I musing gazed thereon,
> sleep fell on me, such sleep as ofttimes knows
> the tidings ere the act.
> It was the hour, methinks, Cythera's queen,
> who ever seemeth hot with fire of love,
> first beamèd from the east upon the mount,
> that in a dream I saw a Lady young
> and fair, who gathered flowers along a plain
> and singing said: "Know, whoso ask'st [*sic*] my name,
> I Leah am, who ever ply my hands
> to make me wreaths.

It would surely have been as easy for Mr. Wright, having got so far, to give us a genuine verse translation. He has not a bad vocabulary, if he will forget Spenser, as, to do him justice, he generally does. He often achieves a terse and happy rendering. "Feeling my legs cry truce" (xvii. 73, 4) is neat for verse, though, perhaps, hardly close enough for prose. There are few actual mistakes, and of these some are doubtless mere slips. Thus, in xii. 61, "It showed" should be "I saw." In

the rendering of "Cesare, per soggiogare Ilerda, Punse Massilia e poi corse in Ispagna," the order of the sentences has been changed, to the detriment of the sense. "Mutai vita," in xxx. 125, does not mean "changed life for death," but "changed one life for another." On the whole, however, the translation is sound; but it might have been cast in a less fanciful form.

Mr. Theodore Cook, who has written well on 'Old Touraine,' now gives us in two volumes *Old Provence* (Rivingtons). We heartily congratulate him on the interest of his book, but are not satisfied with it, for we feel certain that he can and will do better. The drawback to the book is partly due to its excellence. Mr. Cook has steeped himself in his subject—has read widely and travelled hard; there is little that relates to Provence which he has not considered. But the book seems to us wanting in plan, and from absence of design to be somewhat confused for the general reader. If the index were better this would matter less; but the index is somewhat poor. When a writer is full of his subject, to which he has indeed been led by special admiration, he will naturally exaggerate. It is hardly possible for us to go with Mr. Theodore Cook so far as to agree that the Greeks (as well as the Romans) "have here left traces upon the soil of France that are as remarkable as any to be found in Italy." If "in Italy," why not in Greece itself? There are, perhaps, no Greek remains in Greece so perfect as, or more beautiful than, the temples at Pæstum and at Segesta, or more interesting than the forts at Syracuse. Provence is so strong in Roman antiquities and arts that her friends may moderate her claim to possess also the best things of Greece.

We admire the work that Mr. Cook has done on Provence, without perhaps sharing his special views either of Provençal literary or of Provençal architectural history. He has formed clear and definite opinions, and defends them with great power. To our mind the distinction between the Provençal poets and the old French poets even of Northern France is less sharp than it appears to him. That marvellous power of concentration to which he alludes is to be found in the Northern French poets of the Middle Ages as well as in the Provençal poets of to-day. So, too, of Mr. Theodore Cook's views upon Provençal architecture. He has, we admit, the highest authorities upon his side, and can quote against us, for example, the great name of Springer, to which we think he does not, as he might, appeal. We are, however, inclined to hold that much which to Mr. Cook appears to be specially Provençal, and due to the continuance in Provence of the local modification of the Roman architecture, is as nearly world-wide as was the early Christian Church. To us it seems possible to trace from Byzantium to Ravenna, to Milan, to Sicily, to Auvergne, much which to Mr. Theodore Cook seems specially of Provençal invention. But we do not press our view. It is sufficient for us that he defends his own with ability, with skill, with learning. One quarrel, indeed, we have with Mr. Cook. He describes with ecstasy buildings in Provence which have been the subject of the most horrible "restoration." To us they have lost all interest. When a reverent spectator has suffered the horror of seeing the walls of Avignon levelled to the ground in order that they might be rebuilt in an "improved" condition, it is hardly possible for him to grow enthusiastic over Carcassonne. We should have preferred the ruin of the past to the smooth perfection of the present. Trets must be well known to Mr. Cook, and is, indeed, named by him. It is not a "monument historique." It is possible that its walls, not long since perfect, have been destroyed since the last visit of the writer of this article. But if the walls, in part at least, still stand, as they stood not long ago, there is reason to prefer the less important Trets to the more important Carcassonne. If men in these days desire to see a great walled city, it is to Agra, even more than to Constantinople or to Rome, that they should go. Mr. Cook describes the damage done to the Castle of Avignon by the troops which inhabited it. At Agra we have also to regret that the ravages of War Offices have exceeded the damage of a siege. This, however, is in the Palace, and the walls of Agra have not been spoilt.

We have already called the index feeble, but do not complain of it for inaccuracy. Even the mention of a Turenne, who is not *the* Turenne, as merely "Turenne" is not inaccurate.

We hope the present volumes may be followed by similar undertakings on the author's part.

In *Betting and Gambling*, edited by B. S. Rowntree (Macmillan), various writers "speak like a book," but all, or nearly all, that is said in their papers, true and excellent as it is in the main, has been said before by eloquent and authoritative preachers and philosophers, though with little effect. Here, at any rate, we find papers by Mr. John A. Hobson, on 'The Ethics of Gambling'; by Mr. A. J. Wilson, on 'Stock Exchange Gambling' (which is so intricately associated with legitimate business that only the conscience of the individual can solve the difficulty); by Mr. J. M. Hodge, on 'Gambling among Women'; by Canon Horsley, on 'Crime and Gambling' (on which subject we have the testimony, in the daily papers, of the Chief Commissioner of Police and of police magistrates, who do not hesitate to place betting and drink almost on a level as begetters of criminals); by Mr. J. R. MacDonald, on 'Gambling and Citizenship'; and by Mr. Rowntree himself, on 'Repression of Gambling.' Mr. Rowntree certainly has some novelties to recommend, and on one point (which, however, is not novel by any means) the majority of educated people are likely to agree with him, viz., "that the solution of the gambling evil, as of many other social evils, will never be permanently effected without a great deepening of the moral and spiritual life of the nation," or, to put the idea into less "preachy" language, without a more general exercise of self-control and common sense among all classes.

The most useful of the collected papers are the two contributed by Mr. John Hawke, the indefatigable and intrepid honorary secretary of the National Anti-Gambling League, who in the course of his campaign—by no means yet finished—against the "professional" betting of the avowed bookmaker has often run personal risks. The two papers referred to, headed 'The Extent of Gambling' and 'Existing Legislation,' present within the compass of comparatively few pages a full, true, and sufficiently particular account of the professional bookmaker's rise and progress, and of the legislative efforts made (hitherto in vain) to suppress him. Mr. Hawke, no doubt, is responsible also for the greater number of the eight appendixes, which contain copies of public documents and extracts bearing on his subject. It is curious and significant that 'Lord Davey's Street Betting Bill, 1903,' is antiquated already, so slippery a gentleman is the bookmaker, whether of the street or of the "enclosure."

The most interesting and amusing paper is that contributed professedly by "A Bookmaker," whose reason for not making known his identity—if, indeed, he be not fictitious altogether—it is easy to understand. He would, we imagine, get a warm reception, should his "pals" learn what he has written about them. The "Bookmaker" reveals himself as a befouler of his own nest. He knows that, in the main, his "clients" have not a ghost of a chance against him and his fellows. Yet he has the impudence to claim that he should be "licensed." That, of course, would make money due for bets recoverable by law. It does not seem to be generally known that there was a time when this was so, and when no less a personage than the famous Lord Mansfield had to decide such questions as are now submitted to editors of journals devoted to sport, when too paltry for the various "committees." And what was the result? That the judges protested against the waste of public time on such disputes. There is another point which is not insisted upon sufficiently, namely, the farce of talking about the transactions between "backers" and "layers of odds" as if the former ever won the latter's money. Whether backers win or lose, it is obvious that they pay both the winnings and the losings, though, no doubt, it is not the same set of backers that pays both; but the money paid comes in every case out of the pockets of backers. When bookmakers pay, they only refund, in paying Paul, a portion of what was Peter's. The bookmakers' own part of the "pool" is so small as to be negligible.

Messrs. Methuen send us *Derbyshire*, by the Rev. Dr. Cox, a handy little guide to that county, or perhaps one should rather say a gazetteer. The bulk of it consists of an alphabetical list of places, with descriptions. This is prefaced by the usual information, statistical, physical-geographical, natural-historical. A section on 'Derbyshire Worthies,' also in alphabetical order, is perhaps a more original feature. Is it still true that Robert Curzon (cardinal in 1211) is "the most celebrated of the ancient family of Curzon of Kedleston"? We are rather surprised to read that there are not a few to whom Hobbes's philosophical writings are a sealed book, but who well know his 'De Mirabilibus Pecci.' Perhaps, however, this refers to Derbyshire only. Generally, we should have thought that for one person who had ever heard of the 'De Mirabilibus' by either its Latin or its English title (which Dr. Cox does not give) a hundred knew the 'Leviathan,' at least by name. For the general accuracy of the information Dr. Cox's name will be a sufficient guarantee. There is a copious index, and a map on the scale of one mile to the inch; also a railway map as "end-paper" and an appendix on rock-climbing. Mr. J. C. Wall's quasi-woodcut illustrations are pretty. Let it be noted for the next edition that the painter's name was Mantegna—not, as it appears both in text and index, Montegna.

The figures of British trade have unfortunately become of late the weapons of political controversy. As a natural consequence, the use of trade figures has ceased, on both sides, to be fair. The beautifully "got-up" and carefully edited volume, *The British Trade Year-Book, 1905, covering Twenty-Five Years, 1880-1904* (Murray), is evidently intended by the author, Mr. John Holt Schooling, to support Mr. Chamberlain's scheme.

While we cannot unreservedly commend the text of *Java*, by Augusta de Wit (Chapman & Hall), we are able to praise the numerous illustrations, which bring the peoples and the arts of Java before the reader exactly as they are. The letterpress improves as we go on, and the account of the native drama is the best with which we are acquainted. There is also an excellent description of the botanical garden of Buitenzorg.

XUM

The third volume of *The Hibbert Journal*, now complete, is evidence of a great success. It proves the interest of all sorts of educated men and women in the fundamental problems of religion and philosophy. It is not purely technical, but appeals to the general public, in so far as it cares for serious topics. We hope that in future the doors of discussion may be, if possible, thrown wider open, and that representatives of even the crudest Evangelicalism will be found airing their views in company with many who will be anathema to them. Nothing so much helps towards folk understanding one another as realizing the grounds of their differences.

Mr. A. F. Pollard's *Henry VIII.*, published in magnificent style by Messrs. Goupil in 1902, has now been reissued by Messrs. Longman in two neat volumes. Mr. Pollard has shown exemplary industry in adding references to the original sources; his work will be read with interest, but not, possibly, without dissent, the reasons for which we stated in reviewing the original issue.

Messrs. Tuck send us a large box of Cards, Calendars, and Pictorial Postcards suitable for the Christmas season. It is an exceptionally early incursion, but we can commend the varied wares offered as bright and pretty. "Table cricket" is a new feature; Dickens and Tennyson Calendars are old-established favourites by now; and the pictures which show the dates all the year round are better than usual. The postcards in colour are most varied.

Dickens's Christmas Stories have, we believe, an immense sale at the appropriate season every year. Messrs. Dent are bound to secure a host of buyers with their new editions of *A Christmas Carol*, *The Cricket on the Hearth*, and *The Chimes*, illustrated by Mr. C. E. Brock, whose work is both dainty and researchful. The books are well produced, as might be expected, and desirable except for the colour of the binding, which pleases us no more than it did in Messrs. Dent's Brontë books.

We can only call attention briefly to some important reissues, such as Mr. Shuckburgh's able book on *Augustus* (Fisher Unwin); Prof. Agar Beet's *The Last Things* (Hodder & Stoughton), a book that showed both his wide learning and his resolute and entirely reasonable stand for independence of thought; and Mr. Howard Collins's practical *Author and Printer* (Frowde).

We have on our table *The Church and the Schools*, by the Rev. W. H. Carnegie (Wells Gardner),—*The Bible and Christian Life*, by Walter Lock, D.D. (Methuen),—*Religion and Politics*, by A. S. Crapsey (New York, Whittaker),—*Stories from the Life of Christ*, by Janet H. Kelman (Jack),—*On Life's Threshold*, by C. Wagner (Pitman),—*The Bondage of God*, by Emily P. Finnemore (Digby & Long),—*The Kentuckians*, by J. Fox, Jun. (Constable),—*The Parson's Wood*, by Violet A. Simpson (Nash),—*The Fatal Ring*, by D. Donovan (Hurst & Blackett),—*Ben Pipe's Sowing*, by Emily P. Finnemore (S.P.C.K.),—*The Letter Killeth*, by A. C. Inchbold (Partridge),—*The Haunted Mill on Birley River*, by Edith E. Cowper (S.P.C.K.),—*The Impostor*, by H. Bindloss (White),—*The Czar's Spy*, by W. Le Queux (Hodder & Stoughton),—*The Love Child*, by T. B. Clegg (Lane),—*For Love of Her*, by G. Boothby (Ward & Lock),—*The Mistress of the Robes*, by S. H. Burchell (Hurst & Blackett),—*A Pillar of Dust*, by Frances Campbell (Bristol, Arrowsmith),—*Facing the World*, by Jean A. Owen (Religious Tract Society),—*Blake Family Records, 1600 to 1700*, by M. J. Blake (Stock),—*Abberley Manor*, by the Rev. J. L. Moilliet (Stock),—*The Genealogist*, Vol. XXI., edited by H. W. F. Harwood (Bell),—*The Jewish Year-Book*, edited by the Rev. I. Harris (Greenberg),—*Combined German Reader, Writer, and Grammar*, by H. G. Spearing (Oxford, Clarendon Press),—*Les Chouans*, by Honoré de Balzac (Oxford, Clarendon Press),—*The United States*, by W. E. Chancellor and F. W. Hewes (New York, Putnam),—*A Yankee in Pigmy Land*, by W. E. Geil (Hodder & Stoughton),—*Short Lives of Great Men*, by W. F. Burnside and A. S. Owen (Arnold),—*The Prose Works of Jonathan Swift*, edited by Temple Scott (Bell),—*A Specimen Spinster*, by Kate W. Yeigh (Fisher Unwin),—*The Journeys of Antonia*, by C. Dundas (Fisher Unwin),—*The Mysterious City*, by Bessie Marchant (S.P.C.K.),—*Sporting Sketches*, by E. Sandys (Macmillan),—*Peace, and other Poems*, by F. Baines (Kegan Paul),—*Perdita, and other Poems*, by C. J. Bayne (Georgia, Cole Book Company),—*International Civil and Commercial Law*, by F. Meili, translated by A. K. Kuhn (Macmillan),—*Rates and Taxes as affecting Agriculture*, by J. S. Nicholson (Sonnenschein),—and *First French Grammar*, by J. Coquelin (Walter Scott).

'QUEEN MAB' AND 'THE DÆMON OF THE WORLD.'

WITHIN the last few weeks the chances of the auction-room have brought to light a priceless relic of the transformation of certain parts of 'Queen Mab' into 'The Dæmon of the World.' This is a copy of Shelley's privately printed issue of 'Queen Mab' (1813), wherein the poet has transcribed amid the amended text of Cantos I. and II. of the original poem the interpolations, &c., required to make up Part I. of 'The Dæmon of the World' as issued with 'Alastor' in 1816, with one sole exception, of which more anon. This recovered treasure has passed into the already rich Shelley collection of Mr. Thomas J. Wise, who has placed it in my hands for collation with the well-known copy of 'Queen Mab' in my own library, containing the rough revisions of Cantos I. and II. for Part I. of 'The Dæmon,' and the completed and carefully arranged revisions of Cantos VIII. and IX. for Part II., with other MS. changes unconnected with 'The Dæmon,' fully described in my Library Edition of Shelley and the book called 'The Shelley Library.'

When I was fortunate enough to unearth that copy of 'Queen Mab,' which for the purposes of this paper we will call Q.M. 1, there was no reason for suspecting the existence of Mr. Wise's copy, hereinafter called Q.M. 2: I had already published Vol. I. of the Library Edition (1876), and had, of course, reprinted Part I. of 'The Dæmon' from Shelley's published text of 1816 and with his title 'The Dæmon of the World: a Fragment.' Deciphering the second part of the poem, not without much labour, I had the whole work, no longer a fragment, printed in a small volume for private circulation —Shelley's 1816 text of Part I. and the Q.M. 1 text of Part II.; and I suppose bibliographers would call that little volume the *editio princeps* of 'The Dæmon of the World': indeed I know of no other separate edition of it; and more than a half of the poem was from the virgin MS. In 1877, when the third volume of the Library Edition came out, Part II. of 'The Dæmon' was given to the public for the first time, among the posthumous poems of 1814-16; and when the fourth volume followed, MS. readings, &c., from Q.M. 1 were given in the foot-notes to 'Queen Mab.' Some of them would, of course, have been more appropriately placed in Vol. I., if only Q.M. 1 had been unearthed in time. Now that Q.M. 2 has also come to light, we have what is practically manuscript authority for the whole of the poem, save 34 lines, to be appealed to at need.

Q.M. 2, like Q.M. 1, is an entirely untrimmed copy in buff boards with the remains of a back-strip of dingy purple, both having the same sort of inferior and rather small end-papers, and that part of the sign-manual of Shelley which consisted in the mutilation of the last leaf by removal of the imprint; but whereas Q.M. 1 lacks also the title-page and dedication to Harriet, always, like the imprint, wanting from copies given away by Shelley (as this was), Q.M. 2 includes the title and dedication; also, on the recto cover Shelley's gadding pen has left a little bit of scribbled foliage, just as on the verso cover of Q.M. 1 a more various and extensive piece of idle sketching has been left.

On collating Q.M. 2 with the 'Dæmon' fragment in the 'Alastor' volume, I find no reason whatever to doubt that here we have the "copy" from which Mr. S. Hamilton of Weybridge or his folk set up the last twenty-one pages of the now rare little volume in which Shelley made his first appearance in the rôle of an unquestionable and authentic poet, as distinct from that of a rhetorician in verse and a disputant in prose which he had filled in 'Queen Mab': the "copy" for those 21 pages less 34 lines, I should say; for the lines from

> Awhile the Spirit paused in ecstasy—

to

> Serene and inaccessibly secure,

which were an afterthought, are not here. Being 34 continuous lines in iambic metre of five feet, they would have been far more difficult to squeeze into the printed book Q.M. 2 than any of the other interpolations; and it is likely that they were first written on a large sheet of paper and pinned into Q.M. 1, and afterwards detached from Q.M. 1 and pinned into Q.M. 2, from which they would readily disappear when the work of composition was given out at Hamilton's. Both books alike have in this very place identically the same evidence of the use of the pin. In both alike, the last line before the 34 new ones is an untouched line of print ("Pursued its wondrous way.") standing with two others at the top of page 21, of which page all the rest was crossed through by Shelley without anything being substituted in the margin. In both alike, page 29 begins with seven lines of print crossed through by Shelley in ink and goes on with the 'Queen Mab' passage

> High on an isolated pinnacle;
> The flood of ages combating below,
> The depth of the unbounded universe
> Above, and all around
> Nature's unchanging harmony.

In both alike "High" and "Nature's" are struck out and "Stood" and "Necessity's" substituted. In both alike the whole printed page 28 is struck out with cross lines, and the four leaves bearing pages 21 to 28 have been pinned together to show that the intervening matter is not to be set up. And in both alike the pin was driven in from page 28, not from page 21, and may perfectly well have gone through another leaf or leaves bearing the interpolated 34 lines. But whereas, in the lower half of page 29 in Q.M. 1, Shelley's hand had supplied eight lines of MS. verse (and some queer faces) and had afterwards crossed through the lines of verse, the lower half of that page in Q.M. 2 is blank. The eight cancelled lines of MS. in Q.M. 1 complete the structure of the first part of 'The Dæmon,' making the close read thus:

> Above, below, around
> The circling systems formed
> A wilderness of harmony;
> Each with undeviating aim,
> In eloquent silence, through the depths of space
> Pursued its wondrous way.
> None dare relate what fearful mysteries
> The Spirit saw, nor the portentous groan
> Which when the flood was still, the living world
> Sent in complaint to that divinest fane.
> While from the deep a multitudinous throng
> Of motley shapes, the envious Present leads
> Who raging horribly their armed hands
> Hurl high, where inaccessibly serene
> Stood on an isolated pinnacle;
> The flood of ages combating below,
> The depth of the unbounded universe
> Above, and all around
> Necessity's unchanging harmony.

Shelley cancelled this close because he made up his mind at last that he, at all events, would "dare relate" those "fearful mysteries"; and in working up the "multitudinous throng" and the "motley shapes," the "horrible raging," the "isolated pinnacle," &c., into their final form he found out that, in the shorter conclusion, he had cut out "the Spirit" from 'Queen Mab' and forgotten to reinsert it in 'The Dæmon of the World'—which of course he proceeded to do, thus:—

> they did rage horribly,
> Breathing in self contempt fierce blasphemies
> Against the Dæmon of the World, and high
> Hurling their armed hands where the pure Spirit,
> Serene and inaccessibly secure
> Stood on an isolated pinnacle, &c.

The first part of 'The Dæmon of the World' as printed with 'Alastor' consists of 291 lines; Cantos I. and II. of 'Queen Mab' contain 534: in preparing pages 1 to 29 for Mr. Hamilton's use Shelley sometimes altered the printed lines in ink, sometimes struck them through and wrote fresh ones between them, and sometimes wrote continuously in the margins. Of the 291 lines in the new version 90 are from printed lines standing unaltered in Q.M. 2, 61 are from printed lines altered in manuscript, and 106 are newly written lines, while 34 are, as already stated, not forthcoming. Carefully as the work was done, the "copy" is marked by Shelley's usual peculiarities of spelling and misspelling, capitalling, and punctuation — which last is often negative, especially when a point is wanted at the end of a line where there is not much room, or even when there is ample room. Of characteristic misspellings, where Shelley unquestionably knew better, suffice it to set down here "thier" for "their" (l. 24), and "viel" for "veil" (l. 99). Once, too (l. 114), he wrote "Demon Shape" where the 'Alastor' text has "Dæmon shape"; but as a rule Q.M. 2 has the usual œ employed by Shelley as the written equivalent for the printed æ. The inference is that the proofs were carefully revised; for a good deal of proper and necessary punctuation is supplied by the 'Alastor' volume, while many of Shelley's capitals have disappeared. Verbally, Q.M. 2 sustains the printed text of 1816 throughout except where Shelley had forgotten to strike out a word of print when substituting something else, or made some obvious slip of that kind. To this generalization there is one doubtful exception, and that occurs on the first page of the revision.

It will be remembered that the second paragraph in the opening of 'Queen Mab' begins thus:—

> Hath then the gloomy Power
> Whose reign is in the tainted sepulchres
> Seized on her sinless soul?—

Whereas the corresponding passage in 'The Dæmon' ('Alastor,' &c., 1816) is:—

> Hath then the iron-sceptred Skeleton,
> Whose reign is in the tainted sepulchres,
> To the hell dogs that couch beneath his throne
> Cast that fair prey?

In Q.M. 2 the remodelled lines stand without commas after "Skeleton" and "sepulchres," "helldogs" is written as one word, and the word "crouch" is very clearly written—not "couch" as in the 1816 text. Q.M. 1 yields no evidence on the subject of this word; for its reading of the passage is an intermediate one:

> Hath then the gloomy Shadow
> Whose reign is in the tainted sepulchres
> Seized on her sinless soul?

Probably we shall never know whether Shelley meant "crouch," as written, or "couch," as printed. Great pains were certainly taken over the details of the 1816 printed volume,

which, of course, other things equal, has the preponderant voice as to text. My own view is that in this instance other things are not equal, but even more favourable to the printed text than if they were equal; for, though "crouch" yields the more active figure of hell-dogs in act to spring, "couch" yields the more dignified figure of hell-dogs passively awaiting the call of their master—Death.

From what has been said above it will be evident that Q.M. 2 is something far more precious than a mere transcription by Shelley of his rough attempts in Q.M. 1 to transform Cantos I. and II. of 'Queen Mab' into the first part of 'The Dæmon of the World.' Those who are familiar with the printed texts of the two works and what has been written about their sources will remember that Q.M. 1 does not contain the five rhymed stanzas forming the Dæmon's invocation to Ianthe: Q.M. 2 of course does; they are written in the margins of pages 5 and 7, every line of print on pages 5, 6, and 7 being cancelled with cross lines after Shelley's usual fashion.

It is to be hoped that the MS. of the 34 lines may yet come to light, though there is but one point of textual importance involved in it as far as I know, and even that it would most probably not settle. The point is the division, or grouping of the many curious things said about those "motley shapes" described as kneeling around the "throned king," whose "likeness" came by in one of the vast spheres which Ianthe was privileged to see in procession, as she looked over the battlements of the temple of the Dæmon of the World:—

> and motley shapes,
> A multitudinous throng, around him knelt,
> With bosoms bare, and bowed heads, and false looks
> Of true submission, as the sphere rolled by,
> Brooking no eye to witness their foul shame,
> Which human hearts must feel, while human tongues
> Tremble to speak, they did rage horribly,
> Breathing in self contempt fierce blasphemies
> Against the Dæmon of the World, and high
> Hurling their armed hands where the pure Spirit,
> Serene and inaccessibly secure,
> Stood, &c.

The comma after "rolled by" is in the 'Alastor' text, as is the comma after "Tremble to speak." I believe the new sense begins at "Brooking no eye," and that Shelley would have put a period at "by" if he had noticed the tail of the comma: though he might have preferred to put a semicolon at "speak." Most likely, if the MS. were discovered, we should find in each place either a comma or no stop at all; but that would not go for much, as in writing Shelley often began a new sense after a comma. But the question is not really in dispute. In my Aldine Edition (1892) I placed the period at "rolled by," without even recording the change, which seems to have been too obvious to be challenged, and which I am quite sure Mr. Hutchinson would not have adopted in his recent edition, with emphasis, as a new reading of his own, if he had chanced to notice that the change had already been made.

H. Buxton Forman.

THE AUTUMN PUBLISHING SEASON.

MR. JOHN LANE

is bringing out:—In History and Biography: The Life of Peter Ilich Tchaikovsky, by his brother, translated by Mrs. Newmarch,—The Duke of Reichstadt (Napoleon II.), by Edward de Wertheimer,—History of the Northern Interior of British Columbia, by the Rev. A. G. Morice, O.M.I.,—Jane Austen's Sailor Brothers, by J. H. and E. C. Hubback,—and in "Living Masters of Music," Richard Strauss, by A. Kalisch; Ignaz Paderewski, by E. A. Baughan; Alfred Bruneau, by A. Hervey; Edward Grieg, by H. T. Finck; Theodore Leschetizky, by Annette Hullah; and Edward A. Macdowell, by L. Gilman. In Fiction: Lilliput Revels, by W. B. Rands, illustrated by Gwelda Wedderburn,—The Ford, by A. E. J. Legge,—The Champagne Standard, by Mrs. John Lane,—The Love Child, by T. H. Clegg,—The Cleansing of the "Lords," by Harold Wintle,—Display, by R. E. S. Spender,—and several additions to "The New Pocket Library." In Fine Art: Moorish Remains in Spain, by A. F. Calvert, illustrated with many coloured plates, black-and-white illustrations, and diagrams,—and Our Neighbours, by C. D. Gibson. His other productions include The Singing of the Future, by D. Ffrangcon-Davies,—The Collected Poems of Ernest Dowson, with a memoir by Arthur Symons,—A Year of Songs: for a Baby in a Garden, by W. G. Robertson,—Underneath the Bough: a Posie of Other Men's Thoughts, selected by Theodora Thompson,—The Cloud Kingdom: a Book of Bird Song, by J. H. Wallis,—The Spirit of Rome, by Vernon Lee,—Peterkins: the Story of a Dog, translated from Ossip Schubin by Mrs. Lane,—in "The Crown Library," Story of the Princess des Ursins in Spain, by Constance Hill; and S. R. Maitland's Reformation in England,—My Garden in the City of Gardens, by E. H. Cuthell,—in "The Country Handbooks," The Stable Handbook, by T. F. Dale,—in "The Practitioner's Handbooks," The Post-mortem Handbook, by R. S. Trevor; Forms of Paralysis, by J. S. Collier; and X Rays in General Practice, by Capt. A. E. Walter,—in "Handbooks of Practical Gardening," The Book of Rarer Vegetables, by G. Wythes and H. Roberts; and The Book of the Winter Garden, by D. S. Fish,—in "The Sacred Treasury," The Poems of J. H. Newman; Valdesso's Divine Considerations; The Hundred Best Poems of John and Charles Wesley; and Law's Spirit of Love,—and additions to "Flowers of Parnassus" and "The Lover's Library."

MESSRS. T. C. & E. C. JACK'S

historical and biographical works include a new series, "The Makers of Canada," edited by D. Campbell Scott and Dr. P. Edgar, the first three volumes being Sir Frederick Haldimand, by Jean McIlwraith; Samuel de Champlain, by N. E. Dionne; and Lord Elgin, by the late Sir J. G. Bourinot,—Camden's Queen Elizabeth, with an introduction by Mr. Henry Newbolt, in "The Lives of the Kings,"—and The Anne of Exeter Volume, in the Marquis of Ruvigny's series "The Blood Royal of Britain." The firm will also issue the fifth edition of Armorial Families, by A. C. Fox-Davies,—a volume on the Minor Prophets, by Canon Driver,—and a number of additions to the "Told to the Children" series, edited by Louey Chisholm.

Literary Gossip.

Messrs. Longman announce the early publication of a new book by President Roosevelt. It will be entitled 'Outdoor Pastimes of an American Hunter,' and will be illustrated by a photogravure portrait of the author and forty-eight illustrations from photographs.

A book of considerable interest to Dickens collectors has just been discovered by Mr. W. T. Spencer, of New Oxford Street. This book, which is not recorded in any Dickens bibliography, is a quarto published under the title "The Josephine Gallery. Edited by Alice and Phœbe Cary," New York, 1861, and is probably an echo of the novelist's visit to the States nearly twenty years before. Pp. 89–107 are occupied by "Suburban Romance. By Charles Dickens," a pretty little story of a young Englishman's love for a French girl named Nanette, who, being afflicted with a disfiguring tumour on the face, hides herself in a London hospital. The book contains several other contributions by well-known writers, among them Nathaniel Hawthorne and Mr. T. B. Aldrich.

We understand that the authorities of the British Museum are contemplating the preparation of a temporary Naval Exhibition, which will include printed books, manuscripts, prints, coins, seals, and other objects in the custody of the Trustees. The Museum possesses some national relics of the highest interest which fall under this category.

Mr. and Mrs. Egerton Castle's novel 'French Nan' will be published by Messrs. Smith & Elder on the 26th of this month. It is an eighteenth-century tale, telling of the conflict of hearts and wits between a spoilt young beauty, bred amid the artificialities of the French Court, and her English husband, a country-loving squire.

In a book about to be published by Messrs. Longman, and called 'The Secret of the Totem,' Mr. Andrew Lang developes and expands the theory put forward in 'Social Origins' that totemism arose from the efforts of various clans or groups to differentiate one clan from another by means of group-names. He seeks to show that, the origin of such names being forgotten, a mystic relation between the name-giving object and the group was imagined, and that this brought about, first myths, and then the different tabus which forbid the union of couples of the same group. He has been allowed in writing his book to make use of the unpublished work of Mrs. Langloh Parker upon the Euahlayi tribe of New South Wales, and he also acknowledges his obligations to the criticisms of Mr. N. W. Thomas. Mr. Hill-Tout's theories, on the other hand, still find in him a sturdy opponent.

The many students from all parts of the world who have had occasion to use the Manuscript Room at the British Museum during the last twenty years will have learnt with regret of the premature retirement, through serious ill-health, of Mr. F. B. Bickley, who presided in that department with unvarying courtesy and with consummate knowledge of the archives, which he was ever ready to impart. They will be glad to hear, therefore, that a strongly supported movement has been started amongst the past and present students of the Manuscript Room to present Mr. Bickley with a substantial token of their esteem and gratitude. Any communications on this subject will be acknowledged by Miss E. M. Walford, 45, Bernard Street, W.C.

Mr. Henry Frowde, as publisher to the British Academy, is about to issue the first volume of the *Proceedings* of the Academy, with introductory matter and obituary notices. The various papers will also be procurable separately. Several of the papers which will be contained in the publication have been pretty fully reported in *The Athenæum*. The obituaries are those of Henry Sidgwick, Lord Acton, Prof. Davidson, S. R. Gardiner, E. B. Cowell, W. E. H. Lecky, G. Salmon, Leslie Stephen, and A. S. Murray.

Dr. W. de Gray Birch has just completed the catalogue of Margam and Penrice manuscripts belonging to Miss Talbot, of Margam, a work on which he has been engaged for several years. Miss Talbot possesses upwards of ten thousand charters and other documents, dating from the twelfth century to the nineteenth, and descriptions of all prior to 1750 are given in Dr. Birch's six volumes. The deeds are invaluable for the history of Glamorgan and the principal old families of the county, and the work contains much information not accessible elsewhere.

The Cambridge University Press will shortly issue a volume of essays by Dr. A. W. Verrall, entitled 'Four Plays of Euripides.' The plays are the 'Andromache,' 'Helen,' 'Heracles,' and 'Orestes,' each of which is discussed in a separate essay. In principle and purpose the book follows the same line as the author's previous volume, 'Euripides the Rationalist.'

E. Grant Richards has in preparation a new series entitled "The Chapbooks." The first volume, to be published immediately, is an anthology, 'Lyrists of the Restoration,' including work from Sir Edward Sherburne to William Congreve, which Mr. John Masefield has compiled. The same editor will be responsible for the second volume, 'Essays Moral and Polite,' a collection of essays from the writers of the time of James II. and Queen Anne.

In *The Scottish Historical Review* for October Prof. Firth edits a Bodleian ballad on the duel in which the Earl of Southesk killed the Master of Gray in 1660, and Sir Herbert Maxwell begins a translation of the 'Scalacronica' from 1274. There are also papers on the raising of the first Highland regiment in 1689, on the artistic tastes and relationships of Charles II., on the Scots students at Padua, and on certain old Gaelic ballads of Killiecrankie. Mr. Maitland Thomson writes on the Ruthven Peerage, and Bishop Dowden estimates Prof. Bury's 'St. Patrick.'

A collection of the letters of the late Lafcadio Hearn has been undertaken by Messrs. Houghton, Mifflin & Co. It will be edited with a biographical outline by Mr. Ferris Greenslet, of *The Atlantic Monthly*, with the collaboration of Mrs. Hearn and of Mr. Basil Hall Chamberlain, the literary executor. It is requested that persons having letters of Hearn's will kindly communicate with the editor at 4, Park Street, Boston, U.S.A.

A new Nottinghamshire work is about to be issued from the pen of Mr. Potter Briscoe, entitled 'Bypaths of Nottinghamshire History.'

Mr. A. W. Sijthoff, of Leyden, is about to issue the tenth volume of his important series "Codices Græci et Latini." This comprises a photographic reproduction of the richly illustrated Dioscurides Codex of the Imperial Vienna Library, painted and written in Byzantium about the year 512 for the Imperial Princess Anicia Juliana. Dr. v. Premerstein will treat of the history and exterior form of the MS. and of its copies; Prof. K. Wessely of the palæography; Dr. J. Mantuani of the questions relating to the history of art; and Hofrat v. Karabacek of the Oriental plant-nomenclature.

Archbishop Healy, of Tuam, is bringing out immediately 'The Life and Writings of St. Patrick,' through Messrs. Gill & Son, of Dublin.

Mrs. M. S. Rawson's novel 'The Labourer's Comedy,' to be published by Messrs. Constable on Tuesday next, is a story of modern life in London, and depicts, through the experiences of a woman journalist on the staff of a group of fashion papers, the inner workings of ladies' journalism.

The valuable Burmese library of the ex-Kinwun Mingyi of Mandalay has been purchased by the Government of Burma, and deposited in the Bernard Free Library at Rangoon.

In *Chambers's Journal* for November there will appear a paper on Mr. Andrew Lang's 'Adventures among Books,' with the latest data as to his literary industry from Mr. C. M. Falconer, of Dundee. Mr. Robert McClure describes a literary symposium under the title of 'With Coleridge at Samuel Rogers's,' at which Macaulay, Theodore Hook, Harrison Ainsworth, and George Cruikshank put in an appearance.

Mr. A. C. Benson has contributed a sketch of William Cory to the third edition of 'Ionica' which Mr. George Allen is bringing out.

A story of modern Oxford by Mr. James Baker, dealing with undergraduate life, will be published in a few days by Messrs. Chapman & Hall. The title is 'The Inseparables.'

Mr. Unwin will publish in November a new novel by Mr. H. de Vere Stacpoole. The book, which is entitled 'Fanny Lambert,' relies for its effect not on plot, but on delineation of humorous and unconventional characters.

M. Eugène Fallex, "proviseur honoraire" at the Lycée Charlemagne, who died a few days ago in Paris at the age of eighty-one, was a professor of literature successively at Montpellier, Tours, and Paris. He published translations from Aristophanes and Terence. He had a profound knowledge of the French literature of the eighteenth century, and annotated selections from Voltaire, Rousseau, Diderot, and others.

The only Parliamentary Paper likely to be of general interest to our readers this week is an Appendix to the Seventy-First Report of the Commissioners of National Education in Ireland, for 1904, Section I., General Reports of Inspectors and others (8*d.*).

SCIENCE

OUR LIBRARY TABLE.

Magnetism and Electricity for Students. By H. E. Hadley. (Macmillan.)—"The scope of this volume is roughly that required by pass candidates for the B.Sc. examination of the University of London....." What a bitter satire on our educational system! Physics divided into sections convenient for the examiner's syllabus! But so long as the majority of students regard the passing of examinations as the end and object of all knowledge, we suppose it is right that suitable books should be written to aid them in attaining that goal. Mr. Hadley's book is not an unfavourable specimen of the class. It is accurate and rigidly concise; every chapter ends with a summary and list of questions to aid in "cramming"; all "interesting" developments or glimpses into possibilities of future research are carefully excluded, and the student's attention will not be diverted thereby from subjects more productive of "marks."

There is nothing particularly novel in the treatment, though we are glad to see that the passage of electricity through gases is considered to have attained sufficient importance to have a special chapter. The sequence is rather remarkable, and it is difficult to see on what principle it is based. Magnetism comes first, followed by electrostatics and currents, and a jumble of magnetic induction, alternating currents, electrolysis, and electricity in gases; units and the electromagnetic field bring up the rear. The division adopted is only rough, and there are several apparently irrelevant intercalations, such as the chapter on force, energy, and potential, which a student might be expected to have studied in connexion with dynamics before he reached this stage. We are unable to discover why most writers of text-books refuse to recognize the obvious analogy between magnetism and electrostatics, magnetic induction and electric displacement. Logically each of these pairs should be treated on parallel lines in a single chapter, in which the theorems more particularly applicable to magnetism or electricity should be pointed out. Indeed, it would be better to take the latter pair first, for the former consists of applications of the general theory for the special case when $\mu=1$ and $K=1$. In the author's arrangement it is not clear that most of the theorems on magnetism are applicable to electricity and *vice versa*; the introduction of the term "induction" in the statement of Gauss's theorem must seem to the student a needless complication. If, from the beginning, the fundamental law of magnetism were stated as $F = \frac{mm^1}{Kr^2}$, the necessity for a distinction between force and induction would be at once apparent.

We have noted a few errors. The ionic charge is given as 6.5×10^{-10} on p. 121, and as 3.4×10^{-10} on p. 503; the latter is right. Fig. 351 is misleading; in a given field the Beta rays are more deflected than the Alpha rays. On p. 516 it is said that the British units are the foot, the second, and the grain; but the pound is the usual unit of mass.

There is every reason to expect that Mr. Hadley's book will have a wide circulation among the class of students for whom it is intended.

The World of To-day. By A. R. Hope Moncrieff. Vol. II. (Gresham Publishing Company.)—The second volume of this series fully justifies the praise bestowed upon the first. A large amount of information is put into a small compass; but the writer is nevertheless able to make his narrative extremely interesting. The illustrations are numerous and excellent. The present volume describes Burma and Indo-China, and the islands of the Malay Archipelago, and then turns east to the lands of that great semi-desert belt which stretches from the shores of the Mediterranean to the frontiers of India, and includes Afghanistan, Beluchistan, Persia, the Russian and Turkish provinces of Western Asia, and Arabia. All of these are accurately and graphically described, and after a careful perusal we have detected no errors worthy of notice. There is no indication that the writer knows the localities at first hand, but it is everywhere evident that he is thoroughly familiar with the immense mass of literature relating to them. Many extracts are given in the texts and footnotes, and these, with few exceptions, are from authoritative writers, though we think that the inclusion of a quotation from Mark Twain was a mistake. The necessary commercial and statistical information is added in an appendix. The great difficulty in a book of this kind is that of reference, and we make Mr. Moncrieff a present of the suggestion that if his last volume can be made to include an analytical table of contents, giving the "heads" under which subjects have been treated in his various sections, it will add considerably to the value of his book.

Messrs. Hutchinson ought to reap an abundant harvest from their enterprise in reissuing *The Living Races of Mankind* in twenty-four

fortnightly parts at a trifling price. Part I. is before us, and well exhibits the wealth of illustration and information in this remarkable record of mankind at large. The present section has many interesting Samoan details.

ANTHROPOLOGICAL NOTES.

The Congrès International d'Expansion Économique Mondiale lately opened at Mons by King Leopold was attended by a large number of people. There were few English visitors. The discussions of most interest to anthropologists were those which took place in Section V., dealing with 'Expansion Civilisatrice vers les Pays Neufs.' Here a proposal for international Arctic and Antarctic exploration was brought forward, on which Mr. Bruce and Mr. Shackleton spoke in English, and they were appointed the English members of a committee to formulate a scheme. On the question, What are, in new countries, the best means of making ethnographic and sociological observations with the view of arriving at a scientific knowledge of the social conditions, manners and customs of the inhabitants, and raising them to a higher civilization?—a great number of papers were contributed, giving details of the methods and forms of instruction for explorers adopted in various countries, and a committee was appointed, on the proposition of Dr. Heger, of Vienna, to consider the practicability of harmonizing all these methods into an international code. Dr. Haddon and Mr. Keane were nominated the English members of that committee. A short note contributed by Mr. Keane gave some practical hints on this matter. To the section of 'Enseignement' Mr. James Baker communicated a paper in English on 'Technical and Commercial Education as a Means of Economic Expansion.' Altogether nearly three hundred papers were laid before the Congress and printed for circulation among its members.

Messrs. Kerry, of Sydney, New South Wales, have circulated among archæological societies a list, with reduced facsimiles, of a selection of 150 typical photographs published by them of aborigines of New South Wales and Queensland, including some representing tribes that are now extinct, and a series of photographs of the Bora ceremonies. The same firm offer for sale photographs of natives of Samoa and Tonga.

To *Man* for September Mr. H. Ling Roth communicates an interesting account of the stock-in-trade of a native professional tattooer of Tunis, which Mr. Roth purchased a few years ago, with twenty specimens of the designs from the tattooer's book. The needles used were European, fitted into watchmaker's tool-holders, and some of the designs are copies from devices on European goods. Prof. Bertram C. A. Windle contributes an account of the excavation superintended by him on behalf of Mr. R. Biddulph Martin, M.P., in Kemerton Camp, Bredon Hill, Gloucestershire, which yielded many fragments of rough, hand-made pottery. Mr. E. Torday, a local correspondent of the Anthropological Institute for the Congo Free State, gives notes on the natives of the Kwilu, accompanied by a vocabulary, and diagrams showing the different manners of filing the teeth adopted by the several tribes. An obituary and portrait of Prof. Adolf Bastian, of Berlin, are contributed by Prof. E. B. Tylor.

Science Gossip.

Messrs. Constable & Co. are to publish the series of "National Engineering and Trade Lectures" which are intended to stimulate British trade in colonial and foreign markets by means of illustrated lectures. The subjects dealt with are scientific, and much space is given to the utilization of electric discovery.

In the September number of the *Astrophysical Journal* Mr. C. Lane Poor, of the Columbia University Observatory, New York, after discussing the results of a large number of photographic and heliometric observations of the sun, has come to the conclusion that a periodical small variation in its shape takes place, the length of which is the same as that of the solar-spot period. The first indication of this was arrived at by measuring a number of photographs taken by Rutherfurd at New York between 1860 and 1874. Mr. Lane Poor has compared the results with those obtained from a number of observations of the sun's diameter made to determine the constants of the heliometers used by the German observers of the transits of Venus in 1874 and 1882. Similar effects are noticed, which, though small, are mutually confirmatory, whilst like indications are shown on a few photographic plates taken at Northfield, Minnesota, in 1893 and 1894. Although great caution is necessary in coming to a conclusion in a matter of this kind, and other possible action may have to be taken into account, Mr. Lane Poor's investigation is undoubtedly one of great interest, the indication being that, while the sun's equatorial diameter is usually slightly larger than the polar, this is most marked at a maximum of solar spots, and afterwards diminishes in such a way that at a minimum of spots the polar diameter exceeds the equatorial.

We regret to announce the death of the Rev. S. J. Johnson, which took place on Monday last, the 9th inst., in the sixty-first year of his age. Born at Atherton, near Manchester, in 1845, he took his B.A. degree at Oxford in 1867, and proceeded M.A. in 1871. He became rector of Upton Hellons, Devonshire, in 1870, and vicar of Melplash, Dorsetshire, in 1881. Elected a Fellow of the Royal Astronomical Society in 1872, he published a useful little book under the title 'Eclipses Past and Future, with General Hints for observing the Heavens,' in 1874. The second edition appeared in 1896, under the changed title 'Historical and Future Eclipses, with Notes on Planets,' previous to which he had issued a portion with additions as 'Eclipses and Transits in Future Years.' He made a considerable number of contributions to the *Monthly Notices* of the Royal Astronomical Society and to *The Observatory*, and was a diligent observer of astronomical phenomena, taking part in the observation of the transit of Venus in 1882, and in an expedition to observe the total eclipse of May 28th, 1900, in Spain.

Six new small planets are announced as having been photographically discovered at the Königstuhl Observatory, Heidelberg: three by Dr. Götz, on the 18th, 19th, and 22nd ult. respectively; and three by Prof. Max Wolf on the 19th. Visual observations of several of the later discoveries (the last of these was the one found on the 4th ult., and mentioned in our 'Science Gossip' on the 16th) have been obtained by Dr. J. Palisa at Vienna, and are published in No. 4049 of the *Astronomische Nachrichten*.

MEETINGS NEXT WEEK.

Mon. Royal Academy, 4.—'Vehicles and Varnishes,' Prof. A. H. Church.
Wed. Entomological, 8.
— Microscopical, 8.—'Notes on Aragolite, a Rare Californian Mineral,' Prof. H. G. Hanks.
Thurs. Royal Academy, 4.—'Methods of Painting,' Prof. A. H. Church.
Fri. Institution of Mechanical Engineers, 8.—'The Manufacture of Cartridge-Cases for Quick-Firing Guns,' Col. Leandro Cubillo and Mr. A. P. Head.

FINE ARTS

THE VON PANNWITZ COLLECTION AT MUNICH.

A remarkable collection of works of art, the property of Dr. von Pannwitz, is to be dispersed on October 24th and 25th in the sale-rooms of Herr Hugo Helbing at Munich, and will be on view till October 23rd. The Pannwitz Collection has the merit of containing for the most part only works of the finest quality, and, though they are few in number (the total amounts to little over five hundred lots), the items appeal to connoisseurs, and in a special degree to collectors of plate and porcelain. The owner adhered from the outset to one principle—that of acquiring works of real merit. He aimed at making his collection one of permanent beauty, irrespective of any passing fashion, and as a result only specimens of undoubted authenticity found their way into his possession.

The collection contains no Italian pictures, and indeed no paintings of any importance. On the other hand, the Italian sixteenth-century bronzes, though few in number, are of fine quality, and are on a par with some of the best specimens in the National Museum at Florence, while in maiolica there are ten excellent examples of Faenza, Urbino, Deruta, Cafaggiolo, Gubbio, and Castel Durante at the moment of their highest development.

Further we find carvings, enamels, embroideries, furniture, and a miscellaneous collection of works of considerable merit. But the strong points of the collection are the china and the plate. The former includes Dresden of the best period, and among the 186 examples are many celebrated masterpieces, known to collectors through reproductions in standard works and from having been often exhibited. Specimens of the earliest and finest works of the Meissen factory have been unobtainable during the past ten years. Herr von Pannwitz, however, did not confine himself to Meissen. Frankenthal, Nymphenburg, and other factories are represented by some fine pieces, and Sèvres by five examples, among them two Rose Dubarry plates of 1775. There are also a few specimens of Chelsea and Capo di Monte, and six pieces of Oriental porcelain. The plate includes examples of the Augsburg and Nuremberg work of the sixteenth and early seventeenth centuries, and, in this respect, as Dr. Bassermann-Jordan observes in his introduction to the illustrated catalogue, it supplements the collection in the Bavarian National Museum. For further information readers must go to the catalogues which have appeared in three editions.*

And first as to the china. The most brilliant pieces in the collection belong to the classic era of Meissen, that is to say, to the period between 1725 and 1750, when Herold had overcome all the technical difficulties of colouring, and Kändler was at the zenith of his fame.

The immediate influence of Herold is seen in a clock, marked with the crossed swords, of remarkable beauty of form and design, flanked by figures surmounted by a *putto* holding a globe and resting upon sphinxes; it is decorated with paintings, in the Chinese style, of the utmost refinement and delicacy, and is a work well known to connoisseurs, having been exhibited at Berlin in 1904, and reproduced in Berling's 'History of Meissen China' and in the *Formenschatz* by Dr. Hirth. The two cocks (Nos. 316, 317, pl. 58), drawn with great spirit and striking realism, also reveal

* "Die Sammlung von Pannwitz, mit 104 Lichtdrucktafeln u. 63 Textabbildungen, Vorwort von Dr. E. Bassermann-Jordan"; "Katalog in Luxusausgabe, 47 Tafeln in Autotypie u. Lichtdruck u. 64 Textabbildungen"; and "Katalog in einfacherer Ausgabe, mit 12 Autotypietafeln u. 64 Textabbildungen," published by Hugo Helbing at the prices respectively of 50, 15, and 3 marks.

the taste and feeling of Herold in their close connexion with Oriental models and in the enamel colours of the plumage. These rare models, with the caduceus mark* belonging to the earliest period of Meissen, were originally in the possession of Prince Rospigliosi, and latterly in the Bardini Collection. Another rare example of the Herold period is the harlequin group (No. 448, pl. 102) of four figures, a piece greatly prized from the fact that the Pierrot in the background is usually absent in the few known replicas of this group.

Among the earliest examples without any mark must be mentioned a harlequin group of two figures (No. 311, pl. 57), splendid in modelling, spirited in conception, and brilliant in colour. In an article on 'Court Jesters and Dwarfs in Art'† Dr. Bode refers to this group, and also to the figure of Johann Fröhlich, the Court Fool (Pannwitz Coll. No. 314), a piece dated 1737, though the shade of brown in the colouring and the use of oxidized silver recall the methods of the earliest period of Meissen. Other examples of this model are known, dated respectively 1738 and 1752. Early, too, is the historical group of Augustus the Strong and Countess Orselska, the former being a good portrait, and, according to Dr. F. Rosenbaum, the only authentic likeness extant of the king in porcelain—a piece dating from about 1730–33.

Over twenty unmarked pieces of this early period are owned by Herr von Pannwitz, among them some groups of brilliant colour, such as Nos. 347, 348 (pl. 91 and 69), the former being one of the choicest groups in the collection, and both having been exhibited and described by Berling; we find also some single figures of much charm.

There are over thirty models by Kändler in the collection, produced either by himself or under his immediate direction, including some specimens of importance. In the first place we have the clock (No. 313, pl. 57, 62, and 100), formerly in the collection of Prince Gustav of Coburg, with porcelain figures, mounted in ormolu. It is marked with the crossed swords, which will be found at the back of the single figure on the left near the base§—a figure admirable in pose and design, which appears to be unique. A second clock by Kändler is further remarkable on account of the quality and workmanship of the bronze, the base being the best specimen of French work of the seventeenth century in the whole collection, though the ormolu mount of the groups known as The Horse Tamers (Nos. 335, 336, pl. 64, 65) appears to be almost on a level with it in execution.

Of superb quality are the pair of life-sized guinea fowl (Nos. 401, 402, pl. 79) belonging to the series ordered by Augustus the Strong to decorate the interior of the so-called Japanese Palace in Dresden. The work was executed by Kändler, but the king's scheme was never carried out, and most of the birds made for the purpose are now in the *Johanneum* at Dresden. Among them is a guinea fowl similar in quality to the pair in the Pannwitz Collection, and a fourth is in the Palace at Dresden, but no other repetitions are known. These birds are extolled as masterpieces of their kind by Sponsel, Berling, Brüning, and all standard writers on porcelain. Scarcely inferior to the guinea fowl in brilliancy of colouring and life-like modelling are the jays belonging to the same series (Nos. 354, 355, pl. 72), formerly in the collection of the Marquesa d'Edla at Lisbon. Of great refinement in modelling and beauty of colour is the group of two Freemasons, a seated and a standing figure, the latter said to represent Augustus III. This group is referred to in terms of admiration by writers on porcelain. Brüning praises the breadth of the composition, and Herr von Berneck instances this piece as a striking example of Kändler's characteristic manner of modelling. A replica is at Ansbach. A rare specimen is the portrait of the same monarch on horseback with his Moorish servant (No. 375, pl. 86). Brüning gives a coloured illustration of this little masterpiece, which was seen at the Berlin Exhibition of last year.

Among the so-called "Crinoline groups" by Kändler there are so many lovely pieces that it is difficult to particularize. Perhaps the most historically interesting is that of Augustus III. with a lady, possibly Countess Brühl. She wears an immense hooped petticoat of a beautiful shade of yellow, with bouquets of flowers in oxidized silver; the constant use of silver (which, as already noted, is never employed in the later years of the Meissen manufactory) stamps this group as a product of the earliest period. Another admirable model of this class by Kändler is the figure of a lady, her hooped petticoat covered with bunches of flowers and caught up at the side to show the underskirt, which is ornamented with a dainty design on a blue ground. The expression of the face is full of charm, the modelling throughout admirable, and the execution of a high degree of finish; the same may be said of No. 305 (pl. 54), a young man and a girl in an elaborate costume and wearing a large hat tied under her chin. Very attractive in composition and glowing in colour are the following groups, all belonging to Kändler's early time and without any mark: No. 436, Italian comedians, an extremely rare model (pl. 100, 101); No. 438, a lady with a child upon her knee and a youth playing the flute (pl. 102); and No. 437, a lady seated under a tree with a parrot, a harlequin beside her (pl. 103), all of which were exhibited at Berlin in 1904.

Among the harlequin groups, Nos. 373 and 374 (pl. 85) are remarkable; in the records of the Meissen manufactory Kändler describes the last-named group, and speaks of it as modelled entirely by himself in 1741. The two allegorical figures, Nos. 381, 382 (illustrated in the text, p. 61), show a developed feeling for line and great beauty of form; they belong to a series of the five senses, and are mentioned by Sponsel and Brüning. Both pieces bear the mark of the crossed swords.

Among the most superb works ever produced at Meissen are the four gourd-shaped, long-necked vases (pl. 89 and 90). In form and scheme of decoration they are founded upon Oriental models, and are unique of their kind, having no counterpart even in the *Johanneum*. Both pairs bear the mark A.R. (Augustus Rex), and must have been produced about 1730. In Nos. 388, 389, the ground is of a yellow tone; in Nos. 390, 391, of a delicate blue; but in all other particulars the scheme of decoration is identical. They came from the collection of Herr Guttmann at Berlin, and were exhibited at Dresden in 1900, and at Berlin in 1904.

Finally, among the miscellaneous pieces mention must be made of a casket (No. 324, pl. 60); the painting on the inside of the lid marks perhaps the highest level reached in this branch of art, both from the artistic and technical point of view.

Nymphenburg, as already noted, is well represented by a few choice pieces, such as the group No. 455 (pl. 93), probably the most perfect example ever produced in this manufactory, mentioned by Swarzensky* and Rosenbaum,† and exhibited at Berlin; the graceful female figure holding a fiaschetto (No. 460, pl. 54); and the dancing harlequin (No. 452, pl. 69), a little figure of marvellous vitality. All three bear the shield of Bavaria, the Nymphenburg mark.

Of Höchst china there are two examples, both by the master-hand of J. P. Melchior, the group No. 487 (pl. 50) being considered by Dr. Rosenbaum* to surpass the harlequin groups of even the best Meissen period. Among Frankenthal pieces, one of the most remarkable is the lifelike figure of a woman dancing, which has now been identified as the portrait of La Camargo. The figure was found to agree in every particular with Lancret's portrait of the celebrated dancer in the Wallace Collection. Much interest was aroused by this discovery, and the literature dealing with the subject is now considerable.†

Among the forty-six specimens of plate, one of the most beautiful is an Italian bowl of mazer fashion (No. 24, pl. 7), silver parcel gilt, of great simplicity of workmanship and purity of form: a fifteenth-century work, bearing the maker's mark. A standing cup, with cover (No. 25, pl. 9), has the mark of Heinrich Straub, of Nuremberg, and dates from about 1600.

A very fine goblet (No. 27), silver parcel gilt, of the second half of the sixteenth century, bears the mark of Erhart Scherl, whose mark is on another piece of 1556 in the collection (No. 40, pl. 14). Other well-known makers who are represented are: Martin Rehlein, Sebald Buhel, Hans Bertolt, Franz Vischer, and Cristof Ritterlein, all makers of Nuremberg of the sixteenth century; and there are many examples by South German masters—notably one signed "G. W.," and dated 1535—and by makers of Ulm, Augsburg, and Brunswick, most of which have been exhibited and described.

A remarkable drinking vessel of Italian or Spanish origin (No. 35, pl. 15) is a fifteenth-century work of great beauty; and a South German drinking vessel of the same period should not be overlooked (No 72, pl. 15), a wooden cup, with cover in copper gilt mount and enamelled in part. The form is one of considerable rarity, and only a few examples of the kind are known in English collections.‡

The chief example of ecclesiastical art in the Pannwitz Collection is the large processional cross with fourteen plaques of translucent enamel, a specimen of fifteenth-century work, probably Florentine. A Limoges enamel plaque of the Crucifixion with numerous figures is in the characteristic manner of Leonard Limousin, whose initials it bears.

Among the German wood carvings should be noted a delightful figure of St. George (No. 109, pl. 31), a Swabian work of the fifteenth century now restored to its original condition, the paint with which it had been barbarously daubed on leaving its former home in the Kuppelmayr Collection having been removed; and the charming relief with the legend of St. Eligius, a work admirable in modelling and characterization. This, too, is of Swabian origin, and dates from about 1500 (No. 106, pl. 32). Among the Italian boxwood carvings we meet with a graceful figure of Spring (No. 124), and two representations of Hercules, with Antæus, and with the Nemean lion (Nos. 125, 126, pl. 33).

Lastly, among examples of maiolica, two small jugs must be mentioned: No. 260 (pl. 28), Gubbio ware of the fifteenth century, recalls in form and decoration, as Herr von Seydlitz has pointed out, the vases often met with in pictures of the Annunciation of this date; the other, a specimen of Cafaggiolo, is decorated with a coat of arms upon a ground of *bianco sopra bianco*—that is to say, with palmette ornaments of opaque white enamel upon a milky-white ground. A dish with the

* More properly the wand of Æsculapius, in allusion to the original profession of Böttcher, to whom is attributed the second invention of hard paste. In 1710 he was appointed first director of the manufactory established at Meissen by Augustus II.

same coat of arms, probably the stand belonging to this jug, is in the Wallace Collection.

F.

Fine-Art Gossip.

Mrs. Russell Barrington is preparing the authorized 'Life of Lord Leighton.' Mrs. Matthews, Lord Leighton's sister and sole executrix, has supplied Mrs. Barrington with diaries and letters; but the biographer desires to include other letters and documents of public interest which elucidate the character and life of Lord Leighton, especially those which have reference to his artistic career, and will be glad if possessors of such papers will forward them to her at Ruskin House, 156, Charing Cross Road. Every possible care will be taken of them, and they will be promptly returned to the owners.

In connexion with the appointment of M. Bonnat to the École des Beaux-Arts and the purchase by the French Government of that château of Azay-le-Rideau which, though seated on the water, inspired Baron Ferdinand de Rothschild in the creation of Waddesdon Manor on a bare Buckinghamshire hill, the Ministry of the Fine-Arts has decided to make many changes. The whole of the art teaching and of the museums of France are to be dealt with and improved. As regards Azay, the "mellowed beauty" of which Mr. Theodore Cook writes in his 'Old Touraine' will, we fear, suffer from the threatened "restoration."

A new monument to the Blind King of Bohemia and those who died with him for France, fighting against the English, has just been inaugurated at Crécy, in place of the old cross, which had all but disappeared. The German Emperor is directly descended from this John of Luxemburg, King of Bohemia.

An exhibition of Etruria (Josiah Wedgwood) ware, designed and decorated by Mr. Alfred H. Powell, will be on view at Mr. W. B. Paterson's Gallery, Old Bond Street, from Monday next.

The first volume of 'French Art from Watteau to Prud'hon,' edited by Mr. J. J. Foster, forming the fifth annual volume of the "Dickinson Art Library," will be ready shortly. It will contain essays by Mr. Frederick Wedmore, MM. Henri Frantz, Rémy Salvator, and Eugène Langevin, Mr. Oliver Madox Hueffer, and the editor. A general introduction has been written by M. Robert de la Sizeranne, whose brilliant work on 'English Contemporary Art' and on 'Ruskin' will be well known to many of our readers. The illustrations are fine photogravures and facsimiles of drawings by Largillière, Watteau, Nattier, Lancret, and other artists who flourished in the closing years of Louis XIV. and during the Regency. They have been taken direct from originals in celebrated private and public collections at home and abroad, and comprise many subjects never before reproduced.

Señor Enrique Salas, of Archena in Murcia, has recently made some remarkable discoveries during excavations which he has conducted in that district. Numerous objects, principally jugs and vessels of the Celtiberian era, in red and black clay, have been found, one of which—apparently a cinerary urn—bears a representation of three warriors, of whom one, a footman, carries a shield and spear; a second, a horseman, bears a dart; and the third is lying on the ground, wounded by a spear. This scene, both in drawing and technique, recalls the archaic styles of the Cypriote and other ancient Greek ceramics; and the general characteristics of the newly found *fictilia* establish their close connexion with similar relics found much further to the East.

Mr. H. Forbes-Witherby has written a work entitled 'The Story of the Chair of S. Peter in the Basilica of S. Peter at Rome.' It traces the record of the chair from the earliest times, and gives much interesting information concerning its history, comparing it with other ancient surviving seats in Rome and elsewhere. Mr. Elliot Stock is the publisher.

Messrs. Newnes are about to bring out a new monthly, *The Magazine of Fine Arts*, which will be devoted exclusively to the fine and decorative arts of past times.

The death, in his ninety-fourth year, is announced from Arnsberg, in Westphalia, of the historical and portrait painter Seibertz, well known for his excellent illustrations to 'Faust.'

MUSIC

THE WEEK.

SHEFFIELD AND BRISTOL FESTIVALS.

The singing of the Sheffield choir in Bach's Mass in B minor on Thursday of last week was magnificent. The "Gloria," "Cum Sancto Spiritu," and "Et resurrexit" were rendered with massive power and irresistible *élan*. But there was one section, the "Sanctus," which lost in impressiveness by the rate at which it was taken. Herr Weingartner seems determined that old music shall not be performed in a cold, formal manner. The rapid *tempi* at which the above-named movements were taken, though perhaps open to question, were not hurtful to the spirit of the words and music; the "Sanctus," however, imperatively demanded a broader, more dignified reading.

In the evening the programme included the second festival novelty, Mr. Frederic Cliffe's 'Ode to the North-East Wind.' In 1889 the composer's first symphony and first work, produced at the Crystal Palace, aroused great expectations, which have never been properly fulfilled, although several of his later compositions possess much merit. The setting of Kingsley's poem shows good workmanship, yet throughout one could not but feel that Mr. Cliffe was thinking more of the public than of his art. There is a certain fresh, open-air atmosphere in the music quite in keeping with the racy poem, but no special individuality. The work will appeal to ordinary choral societies, for it is well written for the voices, and only of moderate difficulty; for a festival novelty it was not of sufficient importance. Max Bruch's 'Scenes from the Frithjof Saga' proved interesting. A great portion of the work bears traces of the period at which it was written—*i.e.*, more than forty years ago, and therefore, as regards the form and character of the music, sounded somewhat old. But the writing is clever, and in its way very effective, more especially in the last three scenes. The soloists were Mrs. Henry J. Wood and Mr. Frederic Austin, and both sang artistically. Brahms's 'Nänie' was a welcome feature in the programme: it is seldom performed, and yet the music is beautiful. The closing scene was given from Tschaïkowsky's 'Eugen Onegin,' and the two vocalists just named sang with marked skill and dramatic power. This excerpt from the opera may serve as a reminder to operatic managers that, well known as are the instrumental compositions of Tschaïkowsky, his operas—with the exception of this very 'Eugen Onegin,' which was given in London for a few nights under Mr. Henry J. Wood in 1892, and, we believe, one performance of 'Mazeppa' at Manchester by a Russian company—are unknown in England. Herr Kreisler's masterful rendering of Brahms's Violin Concerto was highly appreciated.

On Friday morning Herr Weingartner's two eight-part choruses, dedicated to Dr. Henry Coward and the members of the Sheffield Musical Union, were produced for the first time in England. The first, 'The House of Dreams,' well reflects in tone the mystic character of the poem by Franz Langheinrich, and the effect of the music is heightened by clever scoring. The second, 'Song of the Storm,' poem by Helene von Engelhardt, is a bold piece of writing. But in both choruses the impression created is the result of manner rather than matter, while in the closing section of the second the attempt to depict the scene of the Last Judgment is sensational, but not solemn: it inspires no feeling of reverent awe. The complex choral music was superbly sung. The able English version of the poems is by Mr. William Wallace. The programme included Mozart's 'Requiem' and the 'Eroica' Symphony.

The festival concluded in the evening with an admirable rendering of Berlioz's 'Faust.' Herr Weingartner's admiration of the French master's music is well known, and he conducted the work with all tact and sympathy. The rendering of the 'Hungarian March' was most vivid; and it caused an excitement which, from the description left by Berlioz, must have been somewhat similar to that produced when the March was played at Pesth.

The Sheffield Festival of 1905 has not produced any novelties which will be handed down to posterity, but it has again shown the supremacy of the choir: the choral singing at Sheffield is one of the wonders of the musical world.

Wednesday was the opening day of the tenth Bristol Musical Festival. The morning was devoted to 'Elijah,' of which an excellent all-round performance was given. The choir, from four to five hundred in number, sang extremely well; the voices were of pleasing quality and thoroughly well balanced. The soloists were Madame Albani and Miss Muriel Foster, and Messrs. Lloyd Chandos and Andrew Black, the former gentleman taking the place of Mr. William Green, who was indisposed. In the evening the programme included Berlioz's 'Symphonie Fantastique,' and the sequel 'Lelio,' which has not been heard in London since 1881, when it was given under Sir August Manns. This sequel is somewhat of a jumble, but the last and most important number is the Fantasia on Shakspeare's 'Tempest'; the music in it may not represent Berlioz at his best, nevertheless it is characteristic and interesting. The melodramatic monologues between the musical numbers were admirably declaimed by Mr. Laurence Irving, and the tenor solos well sung by Messrs. Vivien Bennett and Charles Knowles. The melodrama was given according to Berlioz's intention, with a drawn curtain separating the reciter from the choir and orchestra until

the 'Fantasia.' It was an interesting experiment, and Mr. George Riseley, the able festival conductor, may be congratulated on the success of the performance. In Mendelssohn's fine 'Œdipus at Colonos' music the male choruses were sung with dramatic power.

COVENT GARDEN.—*La Bohème. Un Ballo in Maschera. La Tosca.*

THE autumn season of Italian opera was inaugurated on Thursday in last week with a performance of Puccini's 'La Bohème.' In the rôle of Mimi, Madame Melba once more asserted her supremacy as a singer. Signor de Marchi, who had already won favour at Covent Garden, gave an artistic rendering of Rodolfo's music, and sang with no little fervour. Signor Sammarco was an able representative of Marcello; and Signor Didur, a new-comer, who took the part of Colline, displayed a rich and sympathetic voice. The part of Musetta was brightly enacted by Signora Trentini. As conductor, Signor Mugnone showed firm control over his forces, and both band and chorus were efficient, if not brilliant.

On the second night Verdi's 'Un Ballo in Maschera' was given. Of this work the performance was spirited. In the rôle of Riccardo there appeared Signor Zenatello, a new tenor, who has made a name for himself in Italy and South America. His voice is rich and powerful, and his singing is laudably free from exaggeration. Signora Buoninsegna made her reappearance as the heroine, and sang in very effective style; while the Page's phrases were brightly rendered by Signora Trentini. With Ulrica's music Signora de Cisneros was quite at her ease.

Last Wednesday evening an admirable rendering of Puccini's 'La Tosca' was accomplished. In the arduous part of the heroine Madame Giachetti again greatly distinguished herself both as singer and actress. Signor de Marchi, who was the original exponent of Cavaradossi at Covent Garden, resumed a part in which he shows to much advantage. He sang the music fervently and with sincerity, yet without a trace of exaggeration. Of Scarpia, Signor Sammarco made a sufficiently sinister figure, and his delivery of the telling phrases that belong to the character was full of significance. The composer was called forward after the second act, and again at the close of his picturesque work.

Musical Gossip.

'BARBAROSSA,' a symphonic poem by Siegmund von Hausegger, was the novelty at the Promenade Concert on Tuesday evening. Like the 'Eroica' Symphony, it lasts fifty minutes, but there all resemblance ends. In the one noble subject-matter is nobly treated; in the other the themes are plain and the workmanship patchy. In depicting storm and strife realism runs rampant. The scoring is for the most part terribly noisy, and it seemed at times as if some of the performers had gone wrong, or were playing their parts upside down. All—conductor and band—must have had a hard time of it at rehearsal.

HERR KREISLER and Herr Kubelik have each given a recital at Queen's Hall, the one a fortnight, the other a week ago, and both were in splendid form. They are artists of very high rank, yet Kreisler, regarded from the artistic standpoint, is the more serious. Kubelik has wonderful technique; but though the paths of virtuosity lead to fortune, they are dangerous in that the interpreter is apt first to consider the material rather than the spiritual side of the works of the great composers.

NELSON Centennial Celebrations will be held in the afternoon and evening at the Albert Hall next Saturday. Mr. Ben Davies will sing 'The Death of Nelson' at the afternoon function; while for the evening concert the services of Madame Suzanne Adams, Madame Alice Esty, Miss Evangeline Florence, Miss Margaret Ashton, Mr. John Coates, and Mr. Ffrangcon-Davies have been retained. All the artists have declined to accept any remuneration.

THE Mozart Society's first concert this season will take place next Saturday at the Portman Rooms, when Mr. J. H. Bonawitz, the founder of the Society, will give an interesting Historical Pianoforte Recital. The concert on December 16th, in commemoration of Beethoven's birthday, will be devoted to that master's music; and in like manner the concert of January 20th will be devoted to Mozart, who was born January 21st, 1756.

MISS SYLVIA BLACKSTON, M. Victor Maurel's first English pupil, will make her appearance in London at the Bechstein Hall on October 31st.

THE Bechstein Hall Ballad Concerts are to be resumed on the 25th inst. All seats will be reserved, and the charges will be very moderate.

MR. LIONEL TERTIS, the viola player in the Kruse Quartet, and Mr. York Bowen, will give a recital at the Bechstein Hall on the 30th inst., when the programme will be devoted to works originally written for viola and pianoforte.

THE Gresham College Lectures will be delivered by Sir Frederick Bridge on October 17th, 18th, 19th, and 20th. The subjects are Matthew Locke, Bach's 'St. Luke Passion,' J. B. Lully, and British Naval Songs. The first lecture will be given at the College, the other three in the Great Hall of the City of London School.

MR. WALTER HEDGCOCK, the musical director at the Crystal Palace, will conduct the Saturday afternoon concert on December 9th, in which the London Symphony Orchestra and the Crystal Palace Choir will take part.

CARL GOLDMARK is at work on a new opera. The libretto, by A. M. Willner, is based on Shakspeare's 'The Winter's Tale.'

A HITHERTO unknown sonata by Handel is said to have been discovered in the Royal Library, Copenhagen, among some musical MSS. received from the Royal Court Archives some time ago.

THE death is announced, at the age of eighty-six, of Ferdinand Schubert, Professor of Drawing for many years at Wiener-Neustadt. He was the son of Ferdinand Schubert, brother of Franz Schubert.

HERR SIEGFRIED WAGNER'S opera 'Bruder Lustig' was announced for production at Hamburg yesterday evening. The chief parts were to be taken by Frau Katherina Fleischer-Edel and Herr Alois Pennarini.

THE first biography of Liszt in French, written by M. Calvocoressi, will shortly be published.

A HISTORY of the San Carlo theatre, Naples, from 1737, the date of its foundation, down to the present day, is to be written by Signor Salvatore di Giacomo. Among the composers whose works were produced at this theatre were A. Scarlatti, Piccinni, Cimarosa, Rossini, Donizetti, and Verdi.

THE twenty-fifth season of the Lamoureux Concerts at the Nouveau Théâtre, Paris, will begin to-morrow.

PERFORMANCES NEXT WEEK.

SUN.	Orchestral Concert, 3.30, Albert Hall.
—	Sunday Concert Society, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
MON.	Miss Nora Thomson's Violin Recital, 3, Bechstein Hall.
—	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
TUES.	Mischa Elman's Violin Recital, 3, Queen's Hall.
—	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
WED.	Miss Edith A'Vard's Violin Recital, 3, Æolian Hall.
—	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
THURS.	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
FRI.	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
SAT.	Orchestral Concert, 3, Queen's Hall.
—	M. Lamond's Pianoforte Recital, 3, Bechstein Hall.
—	Mozart Society Concert, 3, Portman Rooms.
—	Herr Kubelik's Violin Recital, 3.30, Crystal Palace.
—	Nelson Centennial Celebrations, 2.30 and 8, Albert Hall.
—	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.

DRAMA

THE WEEK.

WYNDHAM'S.—*Public Opinion: an Original Farce in Three Acts.* By R. C. Carton.

NOT until Tuesday did the new piece by R. C. Carton, originally announced for Saturday last, see the light at Wyndham's Theatre. The claim to originality put forth in the programme is not likely to be seriously disputed. No indebtedness to any British source is to be imputed; and though in the leading idea some resemblance may be traced to the 'Pattes de Mouche' of M. Sardou, this is most probably as fortuitous as it is slight. In the French piece, as in the two well-known English comedies that were based on it in the early sixties, the misadventures of a solitary letter are responsible for the excitement and amusement of the spectators. In 'Public Opinion' it is an entire correspondence between an attractive, astute, and designing *diva* of the music-halls and her admirers that has gone astray, and has to be sought for in a chamber-hunt such as M. Sardou devised. From the mere fact that the resemblance which we allege can present itself, it is obvious that the novelty belongs to an eminently artificial class. It is, however, ingenious as well as comic; has a more sympathetic interest than ordinarily attends pieces of its kind; and displays, in addition to the neat dialogue we are accustomed to expect from the author, a certain power of characterization. 'Public Opinion' belongs to the class of rough-and-tumble farce, and is indeed, so far as we recall, the only piece of the author to be put in that category. Though the play is genuinely amusing, the task of extracting from it the whole of the mirthfulness with which it is charged demands constant exertion on the part of the audience; and though there is no point at which positive dullness is reached, there is more than one at which it is felt to be hovering in the air. The story deals with the wholesale fascination exercised over masculine humanity by a pretty, vivacious, and dangerous minx, who seems to have carried captive to her rouge-brush and her powder-puff every man who has once come within her reach. Under

various names, but by the exercise of the same allurements, she has extracted amorous protestations of the most compromising description from all with whom she has been thrown into contact. When—somewhat gratuitously, since her victim asks nothing better than to marry her—she brings an action for breach of promise against the most foolish and impecunious of young noblemen, everybody concerned with the case (even to the judge before whom it is tried) is in her power. Such action as there is springs from the efforts of the various personages to recover possession of the letters containing their protestations in prose or verse. Not a very high order of production, it is seen, is this, and it might easily fail to hit public taste. A singularly competent cast has, however, been obtained, and performances by Mr. Henry Kemble, Mr. Charles Allan, Mr. Fred Kerr, Mr. George Giddens, Miss Annie Hughes, and other actors commend the whole warmly to the public. Trivial enough is the piece, but it pleases in spite of, if not by reason of, its triviality.

Dramatic Gossip.

'Pour la Couronne,' by M. François Coppée, given at the Odéon on January 15th, 1895, and presented in an English adaptation by Mr. John Davidson at the Lyceum on February 27th, 1896, is one of the noblest dramas of modern days. It has another claim—that in the part of Constantine Brancomir it supplies Mr. Forbes Robertson with the only original part quite worthy of his talents in which that admirable actor has been seen. Tuesday night's revival at the Scala was accordingly in all respects judicious. Mr. Forbes Robertson reappeared in the fine character of the patriot; Miss Gertrude Elliott succeeded Mrs. Patrick Campbell as the slave Militza; and Miss Suzanne Sheldon, Miss Winifred Emery as Bazilide. Mr. Ian Robertson reappeared as the Priest-King Stephen; Mr. Courtenay Thorpe replaced Mr. Mackintosh as the spy Ibrahim; and Miss Aimée de Burgh, Miss Sarah Brooke as Anna. 'Carrots,' with Mr. Forbes Robertson and Miss Gertrude Elliott in their former characters, was also given.

With the removal of the Strand Theatre, the site of which is now required for a railway station, the most easterly of the Strand theatres, and one of the earliest houses to struggle against the monopoly exercised by the patent houses, will disappear. The entertaining history of its shifts and struggles has been often told.

After a run all but unprecedentedly short, 'Clarice' is this evening withdrawn from the Duke of York's Theatre, and will be replaced on Tuesday by 'Sherlock Holmes,' in which Mr. Gillette will shortly, it is said, play the hero for the nine-hundredth time. A strange but potent tyranny is not seldom exercised by a success, and Mr. Gillette is reaping an experience of popular demand such as attended Jefferson in Rip Van Winkle, and Sothern in Lord Dundreary.

The assumption by Mr. James Welch of the reins of management at Terry's will not take place until 1906. The tenure of the new manager is for three years.

Mr. Tree's return to His Majesty's on Thursday was marked by the presentation to the audience of a "souvenir," special features in which were the reproduction from the National Portrait Gallery of Maclise's well-known portrait of Charles Dickens, and that from the Forster Collection in the South Kensington Museum of a page of the original MS. of 'Oliver Twist.'

In taking possession of the New Theatre Mr. Fred Terry will bring with him, to succeed 'Dorothy Vernon,' 'The Rapparee Trooper,' a "Royalist and Roundhead romance" by the two ladies who, under the pseudonym of John Rutherford, are responsible for 'The Breed of the Treshams.'

The French Repertory Theatre in London, under the management of Madame Réjane, of which much has been heard, is not to be opened until the Royalty has undergone reconstruction, which includes considerable enlargement.

A copyright performance of 'A Four-leaf Clover,' by Mrs. Martha Morton, has been given at the Savoy Theatre.

'Klein Dorrit,' an adaptation from Dickens, has been given at the Imperial Hofburg Theatre, Vienna.

The Théâtre de l'Œuvre, still under M. Lugné-Poé, promises 'Dans les bas Fonds,' a rendering from Maxime Gorki by M. Halpérine Kaminsky.

"Hope springs eternal in the human breast," and in spite of the fact, but too abundantly established, that two-thirds of recent theatrical ventures are pronounced failures, novelties and revivals tumble over one another in unprecedented fashion.

Seventy years to a month after the first production, the Comédie Française has revived 'Don Juan d'Autriche,' by Casimir Delavigne, a work which in its day was regarded as a masterpiece of the romantic school, and freely compared with Shakspeare, but which now inspires little interest. Doña Florinde, played originally by Madame Volnys, and in 1847 by Judith, is now assumed by Mlle. Gladys Maxance, whose reputation has yet to reach this country. The general interpretation was scarcely worthy of the Théâtre Français.

In 'L'Audition,' a one-act piece of Madame Marie Laparcerie, produced at the Théâtre Molière, a young and pretty actress accepts an engagement on the terms that she shall show herself amiable to her manager and receive no salary. Whether this is realistic as well as crude who shall say?

The scene of 'Der Schwur der Treue,' a three-act comedy in verse of Herr Oscar Blumenthal, produced at the Schauspielhaus, Berlin, is laid in Antwerp, and has an artistic background, some of its characters being pupils of Rembrandt. It is like enough to find its way to the Great Queen Street Theatre.

We are glad to hear that the *sociétaires* and *pensionnaires* of the Comédie Française are pleasantly occupied in signing a letter of congratulation to M. Jules Claretie on the completion of his twentieth year as "administrateur général." The presentation of this letter will be made "solennellement" during the next few days. There is reason to believe that with the "letter" will be a tangible gift in the shape of an art object.

'Francs-Maçons,' a vaudeville produced at the Cluny by MM. Claude Rolland and Leprince, proves to be, says *The Era*, a rendering of a German piece called 'Logenbruder.'

LITERATURE

Fighting Instructions, 1530–1816. Edited, with Elucidations from Contemporary Authorities, by Julian S. Corbett. (Navy Records Society.)

The Year of Trafalgar. By Henry Newbolt. (John Murray.)

IT is not, we understand, by pure coincidence that a notable edition of the 'Fighting Instructions' of the Navy has been issued by the Navy Records Society in this, the centenary of Trafalgar. It is rather that the Society has wished to mark Trafalgar as the high-water mark of naval tactics, and to show that it was not a mere spasmodic effort of genius, but the growth of a century and a half of effort and striving after knowledge. Mr. Corbett, in tracing the history of fighting formations, has pricked many bubbles, has upset many favourite dogmas; and by showing how continuous and persistent was the development of the tactical system has dealt a cruel —we wish we could say a deadly—blow against those who have argued that, with the modern applications of steam, electricity, guns of precision, and rapid fire, all is dark, and that the tactics of the future must spring, fully armed, from the head of some mighty warrior yet to be born. This, at any rate, does not seem to have been the conception of the admiral of Japan, who—though not an Englishman—has had the opportunity of celebrating the centenary of Trafalgar by a victory which, in its complete and decisive nature, as well as in its broad principles, though not in its details, closely resembles the crowning work of Nelson's glorious life.

From the reign of Henry VII., when the invention of ports enabled ships of war to carry guns on their broadsides, the effort to devise some means of developing their collective fire was continuous; the necessity was so urgent and the problem admitted of such a simple solution that it cannot but seem remarkable that a hundred and fifty years should pass away before the "line of battle" was definitely suggested; for we cannot quite bring ourselves to accept Mr. Corbett's argument that Baskerville formed his fleet in embryonic "lines of battle" when he met the Spaniards off the Isla de Pinos. One point, however, on which the evidence he produces seems incontrovertible, is that the line was first ordered by the English Generals at Sea on March 29th, 1653. It is true that Article 2 of the Instructions then drawn up prescribes line abreast as the preparatory order:—

"At sight of the said fleet the vice-admiral and the rear-admiral are to make what sail they can to come up with the admiral on each wing, the vice-admiral on the right wing, and the rear-admiral on the left wing."

And Article 3, in continuance, implies that the line abreast so formed is the fighting order:—

"As soon as they shall see the general engage, or make a signal by shooting off two guns and putting a red flag over the fore topmast-head, that then each squadron shall take the best advantage they can to engage with the enemy next unto them; and in order thereunto all the ships of every squadron shall endeavour to keep in a line with the chief."

It may seem doubtful—it certainly is not clear—whether line abreast or line ahead is here meant; and though there is no doubt that Article 7 orders line ahead—

"In case the admiral should have the wind of the enemy, and that other ships of the fleet are to windward of the admiral, then upon hoisting up a blue flag at the mizen yard, or the mizen topmast, every such ship then is to bear up into his wake and grain,"

—it is not quite clear that this is intended as an order of battle. There cannot, however, be much doubt that it is; it is as clear as most—or all—of the instructions for the next two hundred years. For in fact it may be urged with some plausibility, if not certainty, that one principal cause of the numerous miscarriages during the eighteenth century was the inability of the commanders-in-chief or the framers of the signal book to write intelligible English. Beatson over and over again expresses a strong opinion that the cause was the defective system of signalling; but the principal defect was not that the signal was not clearly made out, but that the official interpretation of it could not be understood. One instance will probably be sufficient. On October 1st, 1748, Sir Charles Knowles met a Spanish squadron off Havana, brought the English squadron in line of battle, nearly abreast of the Spanish, and to windward of it, and made the signal for the leading ship to bear down on the enemy and engage. But the wording of the signal was "the ship that leads on the port tack to bear down and engage," and it happened that though the squadron was on the port tack, it was in inverted order, and the Tilbury, the ship actually leading, was, by the order of battle, as given out, the ship that led on the starboard tack. The captain of the Tilbury therefore ignored the signal, and refused to bear down until a special order was sent to him to do so—by which time it was too late. He was tried by court martial and shelved; he was spoken of as "shy." But the man was not a coward: simply a man who could not understand the contradictory language, and was determined not to give Knowles—a cantankerous sort of man—an opportunity to reflect disadvantageously on his conduct.

The order of March 29th, 1653, is signed by Blake, Deane, and Monck, but as Blake was then sick—having been severely wounded in the Portland fight—the credit of the order lies between Deane and Monck. Mr. Corbett considers it certain that Penn was called into council by these two, and that the order was the outcome of the military experience of the two generals, combined with the naval experience of Penn. He doubts if the mere naval mind, which during one hundred years had not evolved the "line," could have done so then; and feels confident that the military mind unaided could not. But Deane was by no means the mere soldier. Even as a young man he had served in the navy, and since his experience on land as an artillery officer had had high command at sea. It is, however, impossible to apportion the separate share of these three; it is enough to say that in these instructions we have the first prescription of the line as a fighting formation.

There is another article in them which might very well have remained to all time, though the desire of prize money caused it to be cancelled:—

"If in time of fight God shall deliver any of the enemy's ships into our hands, special care is to be taken to save their men as the present state of our condition will permit in such a case; but that the ships be immediately destroyed, by sinking or burning the same, so that our own ships be not disabled or any work interrupted by the departing of men or boats from the ships."

Students of naval history will have no difficulty in calling to mind instances where it was said that the commander-in-chief's anxiety to secure the prizes prevented him from pushing on to render his victory complete.

What Mr. Corbett brings out clearly is that the line as a fighting formation was not—as has been generally supposed—an invention of the Dutch, and, more distinctly, of Martin Tromp. The date of its birth is also a very satisfactory proof that the Duke of York had nothing to do with it, though in his orders of April, 1665, he adopted most of the Commonwealth instructions, expanding or modifying some of them. As he very certainly had then no naval knowledge or experience, it may fairly be assumed that the improver was Penn; and Mr. Corbett quotes the admiring testimony of a French critic—the Comte de Guiche—as to the excellent way in which the English carried out the instructions:—

"A la vérité l'ordre admirable de leur armée doit toujours être imité, et pour moi je sais bien que si j'étais dans le service de mer, et que je commandasse des vaisseaux du Roi, je songerais à battre les Anglais par leur propre manière et non par celle des Hollandais, et de nous autres, qui est de vouloir aborder."

It was not till the third Dutch war that the idea of the line was so far accepted as to lead to a separation of the smaller vessels from the large or "capital" ships, which a few years later were distinguished as ships "fit to lie in a line," and then "ships of

the line of battle," a name that first appears in 1691. It was in this year that Russell's Instructions were drawn up — instructions of paramount importance in the history of naval tactics, as they virtually continued in force, under Admiralty sanction, for close on a hundred years. But this was forgotten till the fortuitous discovery, by the late Sir William Clowes, of the only known copy, in a shop in Holland. It is now in the library of the United Service Institution. Interesting as it would be to know who drew up these instructions, it is now impossible to find out. It could not be Russell unaided, for he was neither a man of genius nor experience. Mitchell, "the chief of the staff," and Benbow, the master of the flagship, were equally without experience, and we incline to the opinion that the author of the draft was Herbert, the disgraced Earl of Torrington; though, of course, Russell and his staff may have modified or "edited" it.

The Instructions issued by Rooke in 1704 were nearly the same, and with very few modifications they continued in force till Rodney broke them down in 1782. All this, and the baleful effect arising from the rigid interpretation of them rather than from the original intention, is fully discussed by Mr. Corbett in a manner that will come to many of his readers with the force of novelty, as will the distinction which he draws between the breaking of the enemy's line effected by Rodney on April 12th and that attempted by Howe on June 1st, which latter he considers the more scientific. To us the actual difference seems to be that Rodney's method, though perhaps adopted by accident, succeeded; Howe's, though deliberately ordered, failed, but very probably because he was unable to make himself understood, and the captains of his fleet had not learnt that their not understanding was no excuse for inaction. Nothing, perhaps, in the change brought about by the spirit of Nelson is more striking than this; for before Nelson's time the accepted rule was for a captain who did not understand what the admiral meant to do nothing, to be tried by court martial, and broke. Without any court martial Nelson convinced those who served with him that in such a case they ought to do something—if only to clap their ship alongside one of the enemy.

We have left ourselves but little space to speak of Mr. Newbolt's 'Year of Trafalgar,' which for its clear account of the conditions of the campaign and lucid description of the battle might well be spoken of at length, were it not that it would be exceedingly difficult to condense either the author's narrative or his argument. Readers of *The Times* know that during the last few months—since the delivery of Sir Cyprian Bridge's address to the Navy Records Society and the publication of Mr. Newbolt's book—a warm controversy has been carried on as to the exact manner in which the English fleet approached the enemy's. Much, if not all, of the difficulty is in the interpretation of the signal; Sir Cyprian Bridge—following in this the teaching of the late Admiral Colomb—holding that the advance was made on a broad front, whilst Mr. Corbett, by his understanding of the signal, and Mr. Newbolt, from the historical evidence, are of opinion that it was made on a narrow front—in line ahead, roughly speaking. We conceive that the historical evidence is far too strong to be upset by a question as to the meaning of the signal; but in any case the point is only one of scholastic interest, for it does not appear from the contention of either party that it had the slightest effect on the conduct of the battle; and, in fact, the attack as drawn by Sir Cyprian Bridge agrees almost exactly with that drawn by Mr. Newbolt. We cannot, however, conclude without expressing a regret that Mr. Newbolt has chosen to celebrate the centenary in historic prose, rather than in soul-warming verse. The poet who sang how "Hawke came swooping from the west" might—had he but thought fit—have written on Trafalgar as he had already done on Quiberon Bay, or as one of his precursors did on Copenhagen.

The Poems of John Keats. Edited, with an Introduction and Notes, by E. de Sélincourt. With a Frontispiece in Photogravure. (Methuen & Co.)

The essence of good editorship, at all events on the textual side, is fidelity to one's author. How that quality can be best applied depends largely upon the author's personality and circumstances. Fidelity to a printed text published by the author is not necessarily fidelity to the author, and may even be the opposite; the same is true of fidelity to his holograph manuscript; and the editor whose piety induces him to reprint the author's edition with exactitude, save for obvious errors of the press, may possibly find that he has pinned his faith to several varieties of publishers' advisers, each with individual views as to the right of interference; to half a dozen sets of house-rules, characteristic of as many printing establishments; and a score of printers' readers, each with his own theory as to the manner in which a rough proof should be compared with the author's copy, and what should be done when he finds them at variance. Probably no poet of a high order ever succeeded in getting his work issued from the press in the first instance exactly as he meant it to be printed in all particulars. Few manuscripts impulsively deemed by poets to represent their final conception do in fact represent it. It follows, indeed, from what we know of the poetic temperament that, unless a poet has the luck to live long enough to cool down from the creative state, he does not employ his unaided intellect on educing from the written or printed words what it really was that he wished to set down in the hard black and white of typography. Even when he has done so, he has not always the technical experience which teaches a man what signs or symbols he should set upon the written or printed page to secure that a future print shall, with precision and in the minutest details, display to the instructed mind of the world, in black lines, curves, dots, and so on, upon a white ground, his thoughts and emotions as embodied in words. Hence it is that, in the case of modern poets who have died young, an editor may be confronted with a plethora of material, complicating enormously the task of settling the text and recording its basis and the grounds of its variation from previous texts.

Broadly, it may be said that, when a poet has had the opportunity of seeing his work through the press and has not denounced the resultant book, that book is the most reasonable body on which to frame the text of a new impression; but it does not by any means follow that it should be anything more than a basis upon which to build from other legitimate sources, such as the author's various manuscripts, if such exist, transcripts made from lost manuscripts, proofs corrected or uncorrected, amended copies of the printed book, letters and other records indicating error or desire to alter, and so forth. It is not often that the mere amendment of obvious errors suffices for the needs of piety to the author: there are innumerable cases where something seems to be amiss, but the means of ascertaining what is wrong lie outside the book, even if they have not perished. Piety to the author may demand the rectification of the text in such cases if the material is forthcoming, though the error be not obvious, but only demonstrable from extraneous material.

For the treatment of the text of Keats two methods may be regarded as the opposite extremes of honest editorship. One is to frame the best authentic text that the editor can compound from all the sources open to him, leaving the words which Keats finally left, whether in print or in manuscript, save for the adoption of authentic revisions or the amendment of faults resulting from evident mischance, and then to recast the spelling, punctuation, capitalling, and so on, in such a way as to accord with contemporary usage and make the sense leap to the eyes of the general reader. The other is to reprint Keats's own three volumes *verbatim et literatim* and give his *posthuma* literally in accordance with the manuscripts whenever possible. On the whole, the former method is more pious towards Keats than the latter, and, if the question be merely of a text, also the more effectual, provided always that the editor be duly qualified. But if there is to be an *apparatus criticus* for the reader's assistance, then any degree of variation between the methods of half a dozen editors is comparatively unimportant from the point of view of piety, if only the sources of the text are faithfully recorded, and provided all divergences of the editor from what claims to be the author's text, printed or written as the case may be, are avowed. Hence we are not disposed to quarrel with Mr. de Sélincourt for electing to reprint Keats's three volumes of 1817, 1818, and 1820 just as he found them, except for the amendment of obvious errors, and avoiding the thorny task of reducing to some sort of uniformity Keats's spelling and punctuation as represented in those volumes, while recording the changes of detail whereby such harmonizing might have been attained or attempted. For all general needs his notes upon the text are ample, though professedly not exhaustive. As to the representative character of the varying orthography and punctuation displayed by the three volumes themselves and adopted here, suffice it to say that it is more

than questionable whether in a vast number of cases the inconsistency is not between Keats and some one else rather than between the inconstant poet and himself.

There are, of course, cases in which to go on reprinting Keats's text as issued to the world in his lifetime is wrong, even though he may not himself have observed the errors. Take, for instance, the quatrains 'To some Ladies.' Mr. de Sélincourt reprints the second quatrain thus :—

> Yet over the steep, whence the mountain stream rushes,
> With you, kindest friends, in idea I rove ;
> Mark the clear tumbling crystal, its passionate gushes,
> Its spray that the wild flower kindly bedews.

Here something is clearly wrong, because, as Keats had set himself the task of ingeniously devising quatrains (seven in number) in which the dissyllabic terminal of line 1 has a perfect rhyme in line 3, and the monosyllabic terminal of line 2 a rhyme in line 4, it is inconceivable that anything but mischance could have been accountable for the lack of a rhyme to *rove*. There was no flare of creation to interfere with the mechanical task—nothing to do but express a mediocre sense reasonably in the metre chosen. In the carefully written holograph which Mr. Buxton Forman described in our pages (April 16th, 1904) *muse* is substituted for *rove;* and the fourth line begins with *In*, not *Its*. Mr. de Sélincourt adheres to the 1817 text, but that he knows the true reading his note on the line (p. 392) shows. That is an instance where a vague "something wrong" is shown by the poet's manuscript to be an obvious error, and piety to the author imperatively dictates its amendment. It is possible, as the edition was delayed after being partially printed (see P.S. to Preface), that Mr. de Sélincourt would have amended the text in the first instance had he had the opportunity; but he does not show any leaning that way; and in any case there are such trifling conveniences as cancel-leaves, or, if economy so direct, lists of errata.

We notice that in the passage in 'Endymion' (ii. 882) where Keats uses, probably by accident, the strange verb to "arbour" in describing a lurking-place of whales, the word is adopted without comment, though in other editions of authority the much more probable and defensible reading "harbour" is generally accepted.

The following is "the exact text published in the poet's lifetime" of a passage in the third book of 'Endymion,' from the curious speech of Venus to the hero of the romance :—

> Pr'ythee soon,
> Even in the passing of thine honey-moon,
> Visit my Cytherea : thou wilt find
> Cupid well-natured, my Adonis kind ;

but Mr. de Sélincourt does not reprint "Visit my Cytherea," although it is supported by Keats's fair copy for the press, and cannot be classed among "obvious errors," since it was, for Keats, not startling to forget or ignore the distinction between Cythera and Cytherea, and Cythera here would not scan. Quite properly, Mr. de Sélincourt (p. 118) has recourse to Mr. Buxton Forman's edition for the reading of the earlier copy known as "the draft," which Keats has not here followed in transcribing for the press; and thus we get the correct, but by no means obvious reading, "Visit thou my Cythera." Having the first edition and the new edition open at this passage, we glance upwards and downwards, and are not greatly reassured as to the minute accuracy of this text in regard to Keats as represented in his own publications; for in line 913 we find a colon substituted for a semicolon, and in line 922 a capital *W* for *while* (after a colon) substituted for Keats's small *w*, without any fathomable motive for either change. Again, in the notes we have observed some very unchancy things, as, for example,

> Clasp with thy parting soul the pendulous earth

(p. 408), in which, if Shelley had been buried, the substitution of "parting" for "panting" would assuredly have made him turn over in his grave; "Merton and Viviane" (p. 468) for "Merlin and Viviane"; and *Vasi ds Candelabri* for *Vasi e Candelabri* (p. 476). We notice a most curious oversight or lapse of memory—it must be one or the other—at p. 562. The poem "Fill for me a brimming bowl" (p. 383) and the sonnet 'On Peace' (p. 384) are respectively described in the notes as "never before published" and "now first published." As a matter of fact both were published in the pages of our esteemed contemporary *Notes and Queries* for February 4th, 1905, in a paper by Mr. de Sélincourt which was noticed in the columns of *The Athenæum* on March 11th.

We are not disposed to submit either the text or the notes to a rigorous examination of this kind of detail; for it is not from the point of view of textual minutiæ and so on that we chiefly look upon Mr. de Sélincourt as a public benefactor. It is as a textual critic in the broadest sense and as a skilful and sympathetic commentator that he shines; and particularly in tracing the sources of Keats's style and diction as far as they are derivative, he has pushed inquiry further than his predecessors. Hence his introduction and notes are full of interest for all who have at heart the telling of the truth about Keats's works. Over and over again in the perusal of these the receptive student will come upon admirably luminous expositions of things seen with quite unusual insight. He follows up and expounds the relationship of Keats to his contemporaries and to literary predecessors at large, both with the "scent," so to speak, of an expert, and with the unflinching impartiality of a judge, and never hesitates—however ardent and loyal his admiration of Keats—to use the true word in characterizing his shortcomings. To illustrate what we mean we turn to one passage, by no means one of the most notable, in his introduction. It was easy enough for a much less well-equipped critic than Mr. de Sélincourt to detect and display the influence of Dryden on Keats's style and versification as shown in 'Lamia'; but it is in such paragraphs as this that the higher qualities of the critic are shown :—

> "But his close study of Dryden was perhaps responsible for the recurrence of certain faults which mar the effect of an otherwise perfect work of art. His desire to attain to the masterly ease and fluency of Dryden's manner led him into frequent false rhymes and to some return of the unhappy characteristics of his early vocabulary. And the careless levity expected of a Restoration poet in his treatment of love, and rarely present in Dryden without the compensating charm of urbanity and airy grace, appears in Keats in the form of that vulgarity which he seemed elsewhere to have out-grown. The execrable taste of the description of a woman's charms (i. 329-39) and the feeble cynicism of the opening to the second book, both, in all probability, traceable to this cause, are alien to the whole spirit in which 'Lamia' was conceived."

The word "execrable" is perhaps a little excessive; but the passage cited is a distinct blot on Keats's work.

In our notice of Mr. de Sélincourt's facsimile of the manuscript of 'Hyperion' (*Athenæum*, March 11th, 1905) we indicated that in our opinion there were direct Virgilian influences at work in the production of Keats's poetry—a luminous Virgilian atmosphere at times, not got through any refracting medium; and we are not sure that Mr. de Sélincourt has fully appreciated the permanence of the impressions produced on Keats's young mind when he translated a considerable mass of Virgil's poetry at school. Mr. de Sélincourt remarks upon the juvenile allusion to Dido in the 'Imitation of Spenser' as "one of the very few cases in which Keats drew upon Vergil" (p. 393), and (p. 436) upon the casual reference to Alecto in 'Endymion' (ii. 875) as a possible reminiscence of the Æneid (vii. 324); and he goes so far as to think that Keats, when writing about the giant that "writhes about the roots of Sicily," may have remembered translating the passage about Enceladus (Æneid, iii. 577–82); but he questions the late Mr. W. T. Arnold's view that the phrase "prophesyings of the midnight lamp" ('Hyperion,' i. 174) is a reminiscence of the passage about the omen of the sputtering oil in the first Georgic (390-2). The ground of dispute is that Keats was "not scholar enough to appreciate the language," and that he, who "looked upon fine phrases like a lover," did not attempt "to reproduce this greatest phrase-maker of literature." But this is an illustration that Keats has taken—not a phrase; and we can see no ground to assume the existence of a "Vergilian echo to be found in some scholarly Elizabethan." Keats was scholar enough to get out the plain English of what he was reading in Latin, however far the graces of Virgil's style and versification may have been a closed book to him. Such intuition as his would have made the Virgilian atmosphere a vital thing to him, probably much more vital in dealing with the Latin than, say, in reading Dryden's version, which, with all its force and picturesqueness, is constantly offensive to the very spirit of Virgil, and would have spoilt the Georgics for Keats. Twice, at least, in turning the pages of the fourth book of 'Endymion,' have we come casually face to face with Virgil in what seems like a transfusion of living blood—once in the beautiful passage about the Bacchic revellers, where

> the rills
> Into the wide stream came of purple hue—

a touch irresistibly recalling Jupiter's general suppression of streams running wine (Georgics, i. 132),

Et passim rivis currentia vina repressit;

and again where Mercury strikes the earth with his caduceus and

The teeming earth a sudden witness bore
Of his swift magic,

for

from the turf outsprang two steeds jet-black,

where it is difficult to avoid the conclusion that the incident is straight from the opening of the first Georgic, in which Neptune is invoked thus:—

Tuque o, cui prima frementem
Fudit equum magno tellus percussa tridenti.

Perhaps more notable still is the passage in the third book of 'Endymion' describing the symmetrical arrangement of the dead lovers:—

Turn to some level plain where haughty Mars
Has legion'd all his battle; and behold
How every soldier, with firm foot, doth hold
His even breast: see, many steeled squares,
And rigid ranks of iron—whence who dares
One step? Imagine further, line by line,
These warrior thousands on the field supine:—
So in that crystal place, in silent rows,
Poor lovers lay at rest from joys and woes.—
The stranger from the mountains, breathless, trac'd
Such thousands of shut eyes in order plac'd;
Such ranges of white feet, and patient lips
All ruddy,—for here death no blossom nips.
He mark'd their brows and foreheads; saw their hair
Put sleekly on one side with nicest care;
And each one's gentle wrists, with reverence,
Put crosswise to its heart.

Surely we have here nothing less than an open and intentional act of homage to Virgil. Even if Keats had been capable of a furtive appropriation, it would have been so hopeless to expect to escape detection in such a flagrant theft as that of the renowned one simile in the second Georgic ("Ut sæpe ingenti bello," 279 *et seq.*), that he would never have attempted it; and accident is here out of the question. The plain, the legions, Mars, the squares, the expectancy, the prevailing notion of perfect symmetry in arrangement, and the spiritual note of the simile—viz., the comparison of a huge living engine of war to a most unwarlike situation—all are reproduced, though, it must be admitted, in a context which might well have made the *Quarterly* reviewer of 1818 smile at the futile tidiness of the dead lovers. We commend earnestly to Mr. de Sélincourt the pursuit of Virgilian currents in Keats as a topic for further fruitful study; and in the mean time we commend most heartily to the public his introduction and notes to this edition.

The Duke of Reichstadt (*Napoleon II.*). By Edward de Wertheimer. (John Lane.)

The publication of an English edition of Dr. Wertheimer's monograph on the Duke of Reichstadt is to be welcomed, for that work exhibits throughout careful and scholarly research into a subject which had not before been treated upon adequate documentary evidence. In saying this we do not depreciate the worth of M. Welschinger's book 'Le Roi de Rome' (1897), which broke new ground in some directions. Dr. Wertheimer, however, has had more ample opportunities. The State Archives at Vienna and Berlin have yielded up to him secrets of no small importance. He also searched those of Parma, but, strange to say, found little of interest there. Further, he availed himself of the opportunity of consulting the private papers of Count Dietrichstein, governor to the young prince.

But this is not all. Dr. Wertheimer approached the subject with the determination to elucidate every incident, and to follow up every clue, connected with it. The result is almost portentous in extent, and bewildering in complexity. Few biographers can hope to have so free a hand. Perhaps it is undesirable that they should. Dr. Wertheimer considered that his duties enjoined on him at the outset—first, a consideration of the motives which impelled Napoleon I. to divorce Josephine; secondly, a recapitulation of the reasons which prompted Metternich, Talleyrand, and eventually the French Emperor himself, to favour a marriage alliance with Austria rather than with Russia; thirdly, a brief notice of the marriage negotiations that went on between Paris and Vienna; and finally, an account of the marriage ceremony, or ceremonies, with a side glance at the "brutal" incident at Compiègne. The exordium is certainly complete; but we are inclined at times here, as elsewhere in the work, to ask whether it is concerned with the record of a life or with the diplomatic history of a period. With respect to certain men, no doubt, these two methods of presentment are closely parallel, if not identical; but this is not the case with one who was so completely at the mercy of events as was the Duke of Reichstadt.

In these preliminary inquiries the author found no decisive evidence as to who first suggested the idea of the Austrian marriage; but facts seem to favour the assumption that it was Metternich. That he afterwards denied this in his 'Memoirs' counts for little. As a piece of clever but unscrupulous statecraft, the incident is hardly surpassed, even in that age. It is natural, perhaps, that Dr. Wertheimer should be sparing of censure on Hapsburg policy in the whole of this matter, but surely he somewhat exaggerates when, referring to the incident at Compiègne, he says: "But what did one more brutality matter to Napoleon, who had behaved brutally throughout the entire marriage negotiation?" To us, on the contrary, his conduct appears to be in the main straightforward and manly, when compared with that of the Court and Chancery of Vienna. There is no doubt that he thenceforth idolized Marie Louise, and was a most affectionate father.

Instead of reviewing in detail the childhood and upbringing of their son, Dr. Wertheimer presents us with an interesting account of the influence which the Austrian marriage exerted upon the policy of Napoleon and of his opponents. Sometimes, perhaps, he overrates that influence. It is very questionable whether the Austrian marriage contributed in any appreciable degree to the breach between Napoleon and Alexander I. in 1811–12. In his remarks on this subject Dr. Wertheimer rightly assigns importance to the Tsar's fears that Poland might be reconstituted as a barrier against Russia; but it is strange that he omits all reference to the fiscal and commercial policy to which Napoleon sought to hold his ally. When reviewing the highly important incidents that occurred during the armistice of the year 1813, the author shows how embarrassing were the relations of father-in-law and son-in-law, and how genuine was the desire of the Emperor Francis for peace. He further suggests, though perhaps not with sufficient emphasis, how misleading was Napoleon's impression, to which he obstinately clung, that the Hapsburgs could not make war on him. Would not Napoleon have shown more consideration for that empire had he not counted too much on the paternal feelings of his father-in-law? The strength of these feelings is apparent in the letter which Francis wrote to Marie Louise during the night when Austria declared war (August 10th-11th, 1813):—

"Keep calm: the war we wage is purely political: I am not, and never shall be, your husband's foe—nor he mine—so much I can vouch for."

Napoleon knew as much; and probably it was this, among other things, which led him to the dangerous shifts of 1814, which cost him his crown. In this indirect sense, then, Marie Louise and her babe warped the diplomatic issues which might otherwise have been comparatively straightforward.

In contrast with the fullness of detail on diplomatic affairs in 1813-14 is Dr. Wertheimer's brief and reserved treatment of the conduct of Marie Louise at and after Napoleon's first abdication. The subject, of course, is a very delicate one. She was placed in an impossible position. Joseph and Jerome Bonaparte endeavoured (so our author thinks) to abduct her from Blois in the early days of April, 1814; but we should like to see evidence on this subject less biassed than that of her major-domo Bausset. If the attempt was really made, it justified her eagerness to leave Napoleon's family, at least for a time, and to join her father. Perhaps it is best to leave these complex and shabby transactions in their original obscurity. It is certain that she did not choose to follow Napoleon's fortunes at Elba, and that, as Dr. Wertheimer expresses it,

"the right way to succeed in subduing the wife was by appealing to the mother. Her nature was too limited to fill both parts at one and the same moment."

She, who had said in 1811 that Napoleon was more afraid of her than she of him, now confessed that she feared him greatly. So at least Neipperg reported to the Emperor Francis at the end of August, 1814; and in this connexion it should be remembered that Napoleon had foolishly threatened to have her carried off to Elba in case she did not come of her own will. That threat and the sinister influence of Neipperg served to extinguish the affection which she at one time felt for her husband.

Efforts were also made to carry off the young Duke of Reichstadt from Schönbrunn. The author examines these reports, and pronounces some of them to be groundless; but the affair in which Comte Anatole Montesquiou was implicated in March, 1815, was probably a serious attempt. In any case, it led to the dismissal of the Comtesse de Montesquiou, the governess of the little prince; and thenceforth his attendants were mainly Germans. Thus,

while the question of his possible succession to the throne of Napoleon I. was being discussed in the Senate at Paris after Waterloo, the Hapsburgs were taking all possible means to secure his education as an archduke. It is not pleasing to remember that Marie Louise publicly, or at least officially, expressed her wish for the success of the Allies against her husband in the campaign of 1815. Had she played a more spirited part and made a bold bid for power for her son in France, there are good grounds for thinking that he would have been welcomed by the majority of Frenchmen. Gentz went so far as to assert that "France would have received him without a dissentient voice," which we may interpret to mean that the Bonaparte dynasty (without Napoleon I.) was far more popular than the Bourbons. But Marie Louise, either from weakness or infatuation—she was already in Neipperg's toils—allowed her son to remain at Vienna, while she made good her claims to Parma.

In some respects her action is more defensible than appears on the surface. After her experiences of the French in 1814–15 she had almost a loathing of that "unrighteous, shameless, godless" nation, and desired for her son nothing more than a peaceful succession to the Duchy of Parma. This she believed to be assured to him by the treaty of May 31st, 1815, between Russia, Austria, and Prussia; but she soon discovered that intrigues were on foot at the Bourbon Courts to assign that duchy eventually to the ex-Queen of Etruria, a Spanish princess who had married the then Duke of Parma. Strange to say, Metternich favoured these intrigues; and, despite the prayers of Marie Louise to her father to ensure the succession of her son, she underwent the humiliation of seeing his rights set aside. A year later he received the title of Duke of Reichstadt. An abler and more determined woman than Marie Louise would perhaps have set at naught the efforts of the Bourbon Powers; but she was unequal to the task. The conduct of her father towards her comes out here in an unpleasing light.

Dr. Wertheimer brings forward several facts which prove that the chances of the Duke of Reichstadt succeeding to the throne of France were by no means ended by the death of his father in 1821. In and after 1822 there were movements in France on behalf of "Napoleon II."; but owing to the dictates of Hapsburg policy, the Duke was thereafter subjected to a closer watch in Austria. Death ended the contrarieties of his life on June 22nd, 1832, on the fourteenth anniversary of his reception of the title "Duke of Reichstadt." As to his character diverse estimates have been formed. Dr. Wertheimer sets forth reasons for believing that he was richly endowed with gifts that promised success in war and administration, had he but had the chance. All who knew him, from Dietrichstein to Marmont, testify to the eager tension of his mind and nerves and the restlessness of his ambition. These characteristics throw light on what is otherwise obscure. As he was the son of strong and healthy parents, the story of the steady decline of his health is hardly intelligible unless we remember that he was a "caged eaglet."

We must add that the English edition, like its German predecessor, is enriched by copious quotations from original authorities in the foot-notes, a fact which greatly enhances its value for students of the period. There is an adequate index; and the present edition gains artistically by the inclusion of reproductions of works of art. That of the young Duke, after Lawrence, on p. 206, is especially charming. Exception might here and there be taken to the English version. As a rule, however, the narrative runs easily—perhaps more so than is the case with most translations. The book is certain to find favour with all who take an interest in the fortunes of Marie Louise and of the youth who entered upon life as "King of Rome" and ended it as "Duke of Reichstadt."

EARLY SCOTTISH CHARTERS.

Early Scottish Charters prior to A.D. *1153.* Collected, with Notes and an Index, by Sir Archibald C. Laurie. (Glasgow, MacLehose & Sons.)

In his 'Early Scottish Charters' Sir Archibald Laurie has collected all documents of Scottish origin or destination, whereof the originals or authentic transcripts remain, prior to the death of David I. in 1153, and has added valuable notes, filling more than half the volume. There are but 271 of these documents in all, several of which refer exclusively to the English estates of David I. as Earl of Huntingdon, and are only Scottish in the sense that they were executed in Scotland by a Scotsman. Undoubtedly Scotland lagged far behind England and Ireland in letters, and, if grants and transfers of Scottish land were committed to writing before the end of the eleventh century, the parchments have perished or been used up by bookbinders. It implies no reflection upon the honour of King Edward I. to recall the hazards to which the national muniments and public records were exposed while lying for more than a year—1291–2—in the custody of English officials in Roxburgh Castle; nor was their integrity better assured after they were handed back to the puppet king John Baliol, and the Great Seal of Scotland had been broken into four pieces, and deposited in the English Treasury in token of Edward's suzerainty. Then followed the vicissitudes of the war of independence, the raids and invasions of the fifteenth and sixteenth centuries, the diligence enjoined by the General Assembly in the destruction of all books and documents savouring of Papistry, and finally—perhaps most harmful of all—the deportation to London of the Scottish records by command of Cromwell, and their utter loss when they were being brought back to Edinburgh—whether jettisoned from the frigate Eagle or sunk in the Elizabeth off Burntisland. All things considered, then, the wonder is not that Sir Archibald Laurie's collection is so meagre, but that his diligence has effected so much. Although nearly all these documents have been printed elsewhere, it will be found of inestimable convenience to have them for reference between a single pair of boards.

Sir Archibald's judicial experience has rendered him a severe, if not a merciless, censor of the authenticity of certain documents hitherto accepted as genuine. Not only has he excluded the 'Assise David' and the 'Leges Quatuor Burgorum,' holding them to be compilations later than the twelfth century, but he has also thrown grave doubts upon the character of other documents which he has admitted to his book. No. 1 in the collection is a translation of the Gaelic *notitiæ* in the famous 'Book of Deer'; it will come as a shock to many good antiquaries to read Sir Archibald Laurie's conclusion about them. Discovered by Henry Bradshaw in the Cambridge Public Library in 1860, this MS. was pronounced by Dr. Reeves to be "the oldest book of Scotland, as well as the sole relique of its early literature." Cosmo Innes, Skene, Robertson, and Whitley Stokes have accepted the Gaelic marginalia as virtually contemporary with the illuminated text of the Gospels forming the body of the little volume, and have hailed them as the only surviving written example of the Gaelic of Alban. "I venture," writes Sir Archibald Laurie,

"to say that the value of these *notitiæ* has been exaggerated. The account of the foundation of Aberdour and Deer is a picturesque tradition written nearly 600 years later than the time of St. Columba.....It has been assumed that this copy of the Gospels belonged to a Columban house at Deer. I doubt if there was a monastery at Deer prior to 1213. Nothing had been heard of it before the MS. was discovered, and no local tradition of it at Deer itself. The only notice in the MS. which connects these donations with Deer is a fragment of a charter in Latin, of a late date, which is perhaps spurious. .....These *notitiæ* may have been written by an Irishman, one of the secular clergy serving at Aberdour or Deer, in the twelfth century, who may have collected the traditions of grants of lands to Drostan's churches, writing in Irish, and using titles—*mormaer* and *toisech*—used in Ireland."

The last word probably remains to be spoken upon this enigma; meanwhile we shall observe that the Gaelic of Erin and Alban differed only as dialects of a common language; that it is not likely that all the Scottish clergy previous to the eleventh century were illiterate; and lastly, that mere "traditions of grants" would not have preserved the names of three witnesses to one of them.

Another important document, accepted as genuine by most writers, but considered spurious by Sir Archibald, is the well-known charter granted by Alexander I. to Scone Priory, *circa* 1120. There exist two registers of Scone, one compiled about 1320, the other about 1450–60. The charter appears only in the later compilation, and is framed in the manner of Saxon charters, which is not known elsewhere in deeds of the twelfth century. "It looks," says Sir Archibald, "like the work of a scribe who had before him a copy of a charter belonging to the earlier Saxon period"; but this would not account for the discrepancy involved in the statement that the king had obtained canons from Adelwald, Prior of St. Oswald's, who only became prior in 1128, four years after Alexander's death.

XUM

Et passim rivis currentia vina repressit;

and again where Mercury strikes the earth with his caduceus and

The teeming earth a sudden witness bore
Of his swift magic,

for

from the turf outsprang two steeds jet-black,

where it is difficult to avoid the conclusion that the incident is straight from the opening of the first Georgic, in which Neptune is invoked thus:—

Tuque o, cui prima frementem
Fudit equum magno tellus percussa tridenti.

Perhaps more notable still is the passage in the third book of 'Endymion' describing the symmetrical arrangement of the dead lovers:—

Turn to some level plain where haughty Mars
Has legion'd all his battle; and behold
How every soldier, with firm foot, doth hold
His even breast: see, many steeled squares,
And rigid ranks of iron—whence who dares
One step? Imagine further, line by line,
These warrior thousands on the field supine:—
So in that crystal place, in silent rows,
Poor lovers lay at rest from joys and woes.—
The stranger from the mountains, breathless, trac'd
Such thousands of shut eyes in order plac'd;
Such ranges of white feet, and patient lips
All ruddy,—for here death no blossom nips.
He mark'd their brows and foreheads; saw their hair
Put sleekly on one side with nicest care;
And each one's gentle wrists, with reverence,
Put crosswise to its heart.

Surely we have here nothing less than an open and intentional act of homage to Virgil. Even if Keats had been capable of a furtive appropriation, it would have been so hopeless to expect to escape detection in such a flagrant theft as that of the renowned one simile in the second Georgic ("Ut sæpe ingenti bello," 279 *et seq.*), that he would never have attempted it; and accident is here out of the question. The plain, the legions, Mars, the squares, the expectancy, the prevailing notion of perfect symmetry in arrangement, and the spiritual note of the simile—viz., the comparison of a huge living engine of war to a most unwarlike situation—all are reproduced, though, it must be admitted, in a context which might well have made the *Quarterly* reviewer of 1818 smile at the futile tidiness of the dead lovers. We commend earnestly to Mr. de Sélincourt the pursuit of Virgilian currents in Keats as a topic for further fruitful study; and in the mean time we commend most heartily to the public his introduction and notes to this edition.

The Duke of Reichstadt (*Napoleon II.*). By Edward de Wertheimer. (John Lane.)

The publication of an English edition of Dr. Wertheimer's monograph on the Duke of Reichstadt is to be welcomed, for that work exhibits throughout careful and scholarly research into a subject which had not before been treated upon adequate documentary evidence. In saying this we do not depreciate the worth of M. Welschinger's book 'Le Roi de Rome' (1897), which broke new ground in some directions. Dr. Wertheimer, however, has had more ample opportunities. The State Archives at Vienna and Berlin have yielded up to him secrets of no small importance. He also searched those of Parma, but, strange to say, found little of interest there. Further, he availed himself of the opportunity of consulting the private papers of Count Dietrichstein, governor to the young prince.

But this is not all. Dr. Wertheimer approached the subject with the determination to elucidate every incident, and to follow up every clue, connected with it. The result is almost portentous in extent, and bewildering in complexity. Few biographers can hope to have so free a hand. Perhaps it is undesirable that they should. Dr. Wertheimer considered that his duties enjoined on him at the outset—first, a consideration of the motives which impelled Napoleon I. to divorce Josephine; secondly, a recapitulation of the reasons which prompted Metternich, Talleyrand, and eventually the French Emperor himself, to favour a marriage alliance with Austria rather than with Russia; thirdly, a brief notice of the marriage negotiations that went on between Paris and Vienna; and finally, an account of the marriage ceremony, or ceremonies, with a side glance at the "brutal" incident at Compiègne. The exordium is certainly complete; but we are inclined at times here, as elsewhere in the work, to ask whether it is concerned with the record of a life or with the diplomatic history of a period. With respect to certain men, no doubt, these two methods of presentment are closely parallel, if not identical; but this is not the case with one who was so completely at the mercy of events as was the Duke of Reichstadt.

In these preliminary inquiries the author found no decisive evidence as to who first suggested the idea of the Austrian marriage; but facts seem to favour the assumption that it was Metternich. That he afterwards denied this in his 'Memoirs' counts for little. As a piece of clever but unscrupulous statecraft, the incident is hardly surpassed, even in that age. It is natural, perhaps, that Dr. Wertheimer should be sparing of censure on Hapsburg policy in the whole of this matter, but surely he somewhat exaggerates when, referring to the incident at Compiègne, he says: "But what did one more brutality matter to Napoleon, who had behaved brutally throughout the entire marriage negotiation?" To us, on the contrary, his conduct appears to be in the main straightforward and manly, when compared with that of the Court and Chancery of Vienna. There is no doubt that he thenceforth idolized Marie Louise, and was a most affectionate father.

Instead of reviewing in detail the childhood and upbringing of their son, Dr. Wertheimer presents us with an interesting account of the influence which the Austrian marriage exerted upon the policy of Napoleon and of his opponents. Sometimes, perhaps, he overrates that influence. It is very questionable whether the Austrian marriage contributed in any appreciable degree to the breach between Napoleon and Alexander I. in 1811–12. In his remarks on this subject Dr. Wertheimer rightly assigns importance to the Tsar's fears that Poland might be reconstituted as a barrier against Russia; but it is strange that he omits all reference to the fiscal and commercial policy to which Napoleon sought to hold his ally. When reviewing the highly important incidents that occurred during the armistice of the year 1813, the author shows how embarrassing were the relations of father-in-law and son-in-law, and how genuine was the desire of the Emperor Francis for peace. He further suggests, though perhaps not with sufficient emphasis, how misleading was Napoleon's impression, to which he obstinately clung, that the Hapsburgs could not make war on him. Would not Napoleon have shown more consideration for that empire had he not counted too much on the paternal feelings of his father-in-law? The strength of these feelings is apparent in the letter which Francis wrote to Marie Louise during the night when Austria declared war (August 10th-11th, 1813):—

"Keep calm: the war we wage is purely political; I am not, and never shall be, your husband's foe—nor he mine—so much I can vouch for."

Napoleon knew as much; and probably it was this, among other things, which led him to the dangerous shifts of 1814, which cost him his crown. In this indirect sense, then, Marie Louise and her babe warped the diplomatic issues which might otherwise have been comparatively straightforward.

In contrast with the fullness of detail on diplomatic affairs in 1813-14 is Dr. Wertheimer's brief and reserved treatment of the conduct of Marie Louise at and after Napoleon's first abdication. The subject, of course, is a very delicate one. She was placed in an impossible position. Joseph and Jerome Bonaparte endeavoured (so our author thinks) to abduct her from Blois in the early days of April, 1814; but we should like to see evidence on this subject less biassed than that of her major-domo Bausset. If the attempt was really made, it justified her eagerness to leave Napoleon's family, at least for a time, and to join her father. Perhaps it is best to leave these complex and shabby transactions in their original obscurity. It is certain that she did not choose to follow Napoleon's fortunes at Elba, and that, as Dr. Wertheimer expresses it,

"the right way to succeed in subduing the wife was by appealing to the mother. Her nature was too limited to fill both parts at one and the same moment."

She, who had said in 1811 that Napoleon was more afraid of her than she of him, now confessed that she feared him greatly. So at least Neipperg reported to the Emperor Francis at the end of August, 1814; and in this connexion it should be remembered that Napoleon had foolishly threatened to have her carried off to Elba in case she did not come of her own will. That threat and the sinister influence of Neipperg served to extinguish the affection which she at one time felt for her husband.

Efforts were also made to carry off the young Duke of Reichstadt from Schönbrunn. The author examines these reports, and pronounces some of them to be groundless; but the affair in which Comte Anatole Montesquiou was implicated in March, 1815, was probably a serious attempt. In any case, it led to the dismissal of the Comtesse de Montesquiou, the governess of the little prince; and thenceforth his attendants were mainly Germans. Thus,

while the question of his possible succession to the throne of Napoleon I. was being discussed in the Senate at Paris after Waterloo, the Hapsburgs were taking all possible means to secure his education as an archduke. It is not pleasing to remember that Marie Louise publicly, or at least officially, expressed her wish for the success of the Allies against her husband in the campaign of 1815. Had she played a more spirited part and made a bold bid for power for her son in France, there are good grounds for thinking that he would have been welcomed by the majority of Frenchmen. Gentz went so far as to assert that "France would have received him without a dissentient voice," which we may interpret to mean that the Bonaparte dynasty (without Napoleon I.) was far more popular than the Bourbons. But Marie Louise, either from weakness or infatuation—she was already in Neipperg's toils—allowed her son to remain at Vienna, while she made good her claims to Parma.

In some respects her action is more defensible than appears on the surface. After her experiences of the French in 1814–15 she had almost a loathing of that "unrighteous, shameless, godless" nation, and desired for her son nothing more than a peaceful succession to the Duchy of Parma. This she believed to be assured to him by the treaty of May 31st, 1815, between Russia, Austria, and Prussia; but she soon discovered that intrigues were on foot at the Bourbon Courts to assign that duchy eventually to the ex-Queen of Etruria, a Spanish princess who had married the then Duke of Parma. Strange to say, Metternich favoured these intrigues; and, despite the prayers of Marie Louise to her father to ensure the succession of her son, she underwent the humiliation of seeing his rights set aside. A year later he received the title of Duke of Reichstadt. An abler and more determined woman than Marie Louise would perhaps have set at naught the efforts of the Bourbon Powers; but she was unequal to the task. The conduct of her father towards her comes out here in an unpleasing light.

Dr. Wertheimer brings forward several facts which prove that the chances of the Duke of Reichstadt succeeding to the throne of France were by no means ended by the death of his father in 1821. In and after 1822 there were movements in France on behalf of "Napoleon II."; but owing to the dictates of Hapsburg policy, the Duke was thereafter subjected to a closer watch in Austria. Death ended the contrarieties of his life on June 22nd, 1832, on the fourteenth anniversary of his reception of the title "Duke of Reichstadt." As to his character diverse estimates have been formed. Dr. Wertheimer sets forth reasons for believing that he was richly endowed with gifts that promised success in war and administration, had he but had the chance. All who knew him, from Dietrichstein to Marmont, testify to the eager tension of his mind and nerves and the restlessness of his ambition. These characteristics throw light on what is otherwise obscure. As he was the son of strong and healthy parents, the story of the steady decline of his health is hardly intelligible unless we remember that he was a "caged eaglet."

We must add that the English edition, like its German predecessor, is enriched by copious quotations from original authorities in the foot-notes, a fact which greatly enhances its value for students of the period. There is an adequate index; and the present edition gains artistically by the inclusion of reproductions of works of art. That of the young Duke, after Lawrence, on p. 206, is especially charming. Exception might here and there be taken to the English version. As a rule, however, the narrative runs easily—perhaps more so than is the case with most translations. The book is certain to find favour with all who take an interest in the fortunes of Marie Louise and of the youth who entered upon life as "King of Rome" and ended it as "Duke of Reichstadt."

EARLY SCOTTISH CHARTERS.

Early Scottish Charters prior to A.D. *1153.* Collected, with Notes and an Index, by Sir Archibald C. Laurie. (Glasgow, MacLehose & Sons.)

In his 'Early Scottish Charters' Sir Archibald Laurie has collected all documents of Scottish origin or destination, whereof the originals or authentic transcripts remain, prior to the death of David I. in 1153, and has added valuable notes, filling more than half the volume. There are but 271 of these documents in all, several of which refer exclusively to the English estates of David I. as Earl of Huntingdon, and are only Scottish in the sense that they were executed in Scotland by a Scotsman. Undoubtedly Scotland lagged far behind England and Ireland in letters, and, if grants and transfers of Scottish land were committed to writing before the end of the eleventh century, the parchments have perished or been used up by bookbinders. It implies no reflection upon the honour of King Edward I. to recall the hazards to which the national muniments and public records were exposed while lying for more than a year—1291–2—in the custody of English officials in Roxburgh Castle; nor was their integrity better assured after they were handed back to the puppet king John Baliol, and the Great Seal of Scotland had been broken into four pieces, and deposited in the English Treasury in token of Edward's suzerainty. Then followed the vicissitudes of the war of independence, the raids and invasions of the fifteenth and sixteenth centuries, the diligence enjoined by the General Assembly in the destruction of all books and documents savouring of Papistry, and finally—perhaps most harmful of all—the deportation to London of the Scottish records by command of Cromwell, and their utter loss when they were being brought back to Edinburgh—whether jettisoned from the frigate Eagle or sunk in the Elizabeth off Burntisland. All things considered, then, the wonder is not that Sir Archibald Laurie's collection is so meagre, but that his diligence has effected so much. Although nearly all these documents have been printed elsewhere, it will be found of inestimable convenience to have them for reference between a single pair of boards.

Sir Archibald's judicial experience has rendered him a severe, if not a merciless, censor of the authenticity of certain documents hitherto accepted as genuine. Not only has he excluded the 'Assise David' and the 'Leges Quatuor Burgorum,' holding them to be compilations later than the twelfth century, but he has also thrown grave doubts upon the character of other documents which he has admitted to his book. No. 1 in the collection is a translation of the Gaelic *notitiæ* in the famous 'Book of Deer'; it will come as a shock to many good antiquaries to read Sir Archibald Laurie's conclusion about them. Discovered by Henry Bradshaw in the Cambridge Public Library in 1860, this MS. was pronounced by Dr. Reeves to be "the oldest book of Scotland, as well as the sole relique of its early literature." Cosmo Innes, Skene, Robertson, and Whitley Stokes have accepted the Gaelic marginalia as virtually contemporary with the illuminated text of the Gospels forming the body of the little volume, and have hailed them as the only surviving written example of the Gaelic of Alban. "I venture," writes Sir Archibald Laurie,

"to say that the value of these *notitiæ* has been exaggerated. The account of the foundation of Aberdour and Deer is a picturesque tradition written nearly 600 years later than the time of St. Columba.....It has been assumed that this copy of the Gospels belonged to a Columban house at Deer. I doubt if there was a monastery at Deer prior to 1213. Nothing had been heard of it before the MS. was discovered, and no local tradition of it at Deer itself. The only notice in the MS. which connects these donations with Deer is a fragment of a charter in Latin, of a late date, which is perhaps spurious. .....These *notitiæ* may have been written by an Irishman, one of the secular clergy serving at Aberdour or Deer, in the twelfth century, who may have collected the traditions of grants of lands to Drostan's churches, writing in Irish, and using titles—*mormaer* and *toisech*—used in Ireland."

The last word probably remains to be spoken upon this enigma; meanwhile we shall observe that the Gaelic of Erin and Alban differed only as dialects of a common language; that it is not likely that all the Scottish clergy previous to the eleventh century were illiterate; and lastly, that mere "traditions of grants" would not have preserved the names of three witnesses to one of them.

Another important document, accepted as genuine by most writers, but considered spurious by Sir Archibald, is the well-known charter granted by Alexander I. to Scone Priory, *circa* 1120. There exist two registers of Scone, one compiled about 1320, the other about 1450–60. The charter appears only in the later compilation, and is framed in the manner of Saxon charters, which is not known elsewhere in deeds of the twelfth century. "It looks," says Sir Archibald, "like the work of a scribe who had before him a copy of a charter belonging to the earlier Saxon period"; but this would not account for the discrepancy involved in the statement that the king had obtained canons from Adelwald, Prior of St. Oswald's, who only became prior in 1128, four years after Alexander's death.

We can only note the suspicion with which this cautious editor regards the pair of charters (Nos. 100 and 101) whereby David I. granted Swinton to Arnulf or Hernulf. These charters are in the treasury of Durham Cathedral, and, in passing, let us say, Blessed be Durham! which, despite its perilous proximity to the Border, has been a faithful custodian of so many of the writings in this collection. Now the present family of Swinton of that ilk claim descent from this Arnulf, with unbroken possession of the lands. Sir Archibald is dissatisfied with the evidence on this point; moreover he thinks that the phrases "huic meo militi Hernulfo" and "Arnulfo isti meo militi" are too contemptuous to have been applied to a knight, and that *miles* means here merely a soldier, "one of the King's Drengs." A still more serious point, he hesitates to admit the charters themselves as genuine:—

"I suspect that they were forged by the monks to support the claims of the Church on the land of Swinton. Swinton was granted to Durham by King Edgar by charter (No. 20) in terms which imply that the monks were not merely to be the overlords.....but it is plain that in the reign of Alexander I. the right of the monks was disputed (Nos. 26, 27, 29 and 30)."

Scepticism is salutary in measure, but in some matters we incline to think Sir Archibald Laurie pushes it too far. For instance, the statement that "the date when St. Ninian lived has not been fixed with certainty" throws the early ecclesiastical history of Scotland into unnecessary flux. Ailred's testimony, says he, is "historically worthless" because he wrote six hundred years after the death of Ninian's patron, St. Martin of Tours. But Ailred tells us in his prologue that his narrative was a translation of an older one in "a barbarous language," and that his task was "to rescue from a rustic style as from darkness the life of this most renowned man, which had been told by those who came before me." Ailred's chronology, moreover, tallies with that of Bede, who wrote at a period two hundred years nearer that of Ninian. The history of primitive Scotland must remain a blank sheet if nothing is to be written until every link in the chain has withstood such tests as are proper in criminal trials.

At a time when penmanship was all but a monopoly of ecclesiastics, it is natural that manuscripts should refer far more to the relations of kings and nobles with the Church than to their relations with their people. Such mention as does occur of the peasantry is not of an alluring kind. No. 68 in the series records a transaction of a class which endured until the close of the thirteenth century—the sale or gift of serfs. In this deed the saintly David gives to the church of Dunfermline three serfs, "Ragewin et Gillepatric et Ulchil, sicuti homines meos proprios."

Sir Archibald Laurie's notes are excellent. He has been at pains to identify as many of the various witnesses as possible, giving brief biographical information about them, and reconciling place-names with modern topography. Much light upon etymology may be gathered from such early spellings as Gierva for Yarrow, Bothenden for Bowden, Galche for Gala, &c. We may suggest Kelloe, in Berwickshire, as the locality of the "nemus quod est in Calang'," whence King David ordered Edward the monk of Coldingham to supply his stack of firewood at Berwick. The legend about the foundation of Holyrood is not quite correctly given. The stag which attacked King David under Arthur's Seat did not bear "between his antlers a holy cross." The stag was either the devil himself or a powerful emissary of the evil one. When the king threw up his hands to seize the beast's antlers a "haly Croce slade incontinent in his hands," and the beast fled.

In producing this valuable work Sir Archibald Laurie has been fortunate in his publishers. An excellent index has been supplied, and we have noted only one printer's error—"substititus" for *substitutus* (p. 291).

The Church of our Fathers. By Daniel Rock, D.D. Edited by G. W. Hart and W. H. Frere. (John Murray.)

It happened once to the writer of these lines to be a guest at Mr. Pusey's house in Berkshire when Dr. Pusey was spending the Long Vacation with his brother's family. Refusing ordinarily external society, Pusey was persuaded by his old friend and neighbour Sir Robert Throckmorton to meet at dinner the famous Dr. Rock, who had just brought out his monumental history of ecclesiastical belief and ritual in England from earliest to later times. He returned wearied and indignant. Dr. Rock had started controversy as they sat down to dinner, kept it up unbrokenly through the evening, walked back with his antagonist to Mr. Pusey's lodge, and fired after him a parting volley of argument as he left him at the gate. Were this book as purely controversial as its author showed himself on that occasion, it would not appeal to a wide English public now, nor perhaps have found a publisher in Albemarle Street. Its interest lies in historical research, elaborate references to and excerpts from valuable authorities, and numerous fine illustrations. It had readers from the first amongst the liturgical students of the English Church, who, beginning with Henry Bradshaw, Bishop Christopher Wordsworth, and E. W. Benson, have largely increased in later years; and it is apparently reprinted now for their behoof. It will be read by most people with intermissions. The elaborate studies of costume, for instance, come home only to the specialist: distinctions between cowl and coif, alb and amice, dalmatic and tunicle, morse and pectoral, we pass over as uninteresting varieties of what Dean Stanley irreverently called "clergymen's clothes"; but this is not the case with every one. Men travelling with Liddon on the Continent used to say that when he remained in a church for more than half an hour, while they waited outside, they knew that he had got among the vestments, and must be dug out like a ferret, if any more touring were to be done that day. But there remains much which we can all enjoy. The beautiful pastoral staves and crosiers, the Evangelaria or Gospel-cases, the reliquaries and candlesticks here delineated, have other than ecclesiastical value, as illustrating the progress of metallurgical ornament and jewel-work. The many "Lives" profusely quoted open pleasant pastures to those versed in hagiography. Godric's hymn and the 'Geste of Kyng Horn' recall the infancy of our mother tongue, Chaucer and 'Piers Ploughman' the formation of our national literature. In the Mystery Plays of Coventry, York, and Chester we trace the beginnings of our English drama; while books like the 'Doctrynal of Dethe' or 'Dives and Pauper' catch the eye and kindle the enthusiasm of the bibliographer. So, again, the quaint custom of the *Eulogia*, or "Holy Loaf," is still maintained in Brittany, as formerly in the west of England; the rood beam or loft with approaching staircase lingers in some English churches; while the "Gang-days" of Rogation-tide survive in our beating the parochial boundaries on Holy Thursday.

It is curious to note, as do the editors, that for the fruit of his researches—for revival of cope and chasuble and mitre, of the once famous sacred embroidery by English sisterhoods, of the Lenten veil and the liturgical colours—Dr. Rock would have to go to the Anglican, not the Roman, Church in England. Would he be glad or sorry—glad that his old opponents have advanced along his lines—grieved, as Newman was grieved, that "those of the Household of Faith," to whom he dedicated his labours, have stood still? We have greatly enjoyed the book: not having met Rock at dinner, or flinched under his *malleus hæreticorum*, we bear away from it an affectionate memory of its author, with a respect for, if not a leaning towards, those ancient ways which he with pious zeal commemorates.

NEW NOVELS.

Ayesha. By H. Rider Haggard. (Ward, Lock & Co.)

Twenty years have gone since the appearance of 'She,' which crowned Mr. Haggard's reputation as a writer of romance, and now he gives us what he expressly desires to be considered not a "sequel," but the "conclusion of an imaginative tragedy." There is little enough in the distinction, and 'Ayesha' is to all intents and purposes a sequel. We cannot say, however, that the sequel shows any falling off in the properties which went to the production of the first romance. Mr. Haggard left himself in that a "jumping-off" place for his conclusion, and he has fitted in the new story very skilfully with the old. It is not essential that the reader of the later should also have read the earlier tale, but it would be advantageous for him to have done so. The scheme is deftly reproduced in 'Ayesha'—She herself, the reincarnations of Amenartas and Kallikrates, and the warring jealousies of the women. Indeed, we now find our old friend Holly is a reincarnation of one Noot, companion to the Ayesha of Egyptian days. But it would seem as if the author had somewhat shifted his ground, for whereas Ayesha was aforetime but a plain reincarnation, in the new tale she becomes something more. Even Holly does not understand her, and asks if she is

"an incarnate essence, a materialized spirit of Nature, the unforeseeing, the lovely, the cruel, and the immortal: ensouled alone, redeemable only by Humanity and its piteous sacrifice."

Here, of course, is a mere piling-up of words, but it has its romantic effect. Mr. Haggard's sense of adventure is alive throughout, as it was in 'She.' Once more we are introduced to catastrophic convulsions of Nature, to Titanic phenomena; once more primitive passions ride through his pages; and once more mysterious and remote cities are discovered to us. In fine, he uses his old imagination in just the old way. Honestly, his invention is as large and ingenious as before; and honestly his writing is more discreet and quite as picturesque. Yet 'Ayesha' fails to exercise the fascination of 'She'; and the reason must, perhaps, be sought, not in Mr. Haggard, but in ourselves. 'Ayesha' deserves indeed a vogue only second to that of her previous incarnation.

The Irrational Knot. By Bernard Shaw. (Constable & Co.)

Mr. Bernard Shaw has allowed the republication of one of three early novels which have long been familiar to his greatest admirers, though there has been some difficulty in procuring them.

The man who stands highest among living speakers of our tongue for the combination of distinction and fastidious taste could pick no hole in 'Man and Superman,' except that "Hell is too long." To such a one much of the dialogue in the book before us must seem unreadable vulgarity, and some critics might be inclined to admit that the publishers who, according to the author, refused it with unanimity, may have been right. On the other hand, if the adherence of the youthful writer to what he thought the conventional form of conversation required in a novel is set aside by the reader, the book is as good as anything that Mr. Bernard Shaw has done. The author in his own preface has indeed heaped on the volume all blame possible. He has explained and criticized himself with the same power that he displayed in his 'Quintessence of Ibsenism,' and with greater freedom. He has not the same unbroken respect for himself that he has for Ibsen. While "G. B. S." is commonly, and in many cases with justice, charged with paradox or exaggeration, in this particular instance it is certain that the novel is in fact exactly what he says it is, so well has he weighed its merits and defects.

Mr. Bernard Shaw gives in 'The Irrational Knot' a specimen of the criticism of *The Athenæum* on a new novel; but on this occasion he has saved all trouble to the critic, for his own preface appears to us to be a perfect piece of criticism.

The novel before us sparkles less with epigram than is the case with the later writings of the author. There are very few passages which will be got by heart, and these may suffer from our remembering them from previous reading many years ago, and thinking, perhaps unjustly, that they are not wholly new. It is a pleasant index to a woman's character to hear from one who knows her: "Some of her ideas will serve her very well when she goes to heaven; but they will get her into scrapes in this wicked world."

The Household of Peter. By Rosa Nouchette Carey. (Macmillan & Co.)

Like Miss Carey's other novels, this is an essentially feminine book, and, like them, it is not lacking in charm for the sex to which it especially appeals. Woman's joy in afternoon tea with hot sweet cakes and cream, and woman's anxiety over the waning freshness of a blouse, are herein developed with the author's accustomed sympathetic insight. One or two of the characters, indeed, seem to us above her usual level, notably the carpenter's daughter who comes unexpectedly into a fortune, and is at a loss how to get through the day without her wonted domestic labours. The hero, too, bears—at least superficially—a stronger resemblance to the human boy of actual life than is generally the case with Miss Carey's specimens of youthful masculinity. Altogether this is a soothing and cheerful story.

By the Gods Beloved. By Baroness Orczy. (Greening & Co.)

In the year in which Mr. Rider Haggard has resumed the story of his famous Egyptian princess Ayesha, Baroness Orczy attempts what is in effect a new 'She.' It is true that there are considerable differences between the two stories, but the general framework is identical. In 'She,' Leo Vincey and his friend Holly were lured by an Egyptian manuscript into an expedition in search of an unknown civilization in Africa. In this romance there are also two adventurers, one of whom, the secondary person, is the narrator; and an Egyptian papyrus reveals to them the existence of the ancient people of a certain dynasty beyond the Libyan desert. The goal sought by Mr. Haggard's heroes is Kor, a city among rocks and hills; that of the Baroness Orczy's is Kamt, also situated in inaccessible mountains. There is a lovely young woman in both books, but in the one under consideration she is styled Neit-Akrit. This sort of story is usually accompanied by a welter of the picturesque, and the author is successful in the richness of her effects. Mr. Haggard piled Ossa on Pelion, and his successor follows his example. The result is a certain sensual pleasure in the gorgeousness of the *mise en scène*. If to that is added, as here, a vigorous plot, the romance will pass muster in our age. Neit-Akrit is a charming princess, and Maat-kha is phrenetically barbarian. As in Mr. Haggard's tale, there is an odd incongruity between the slangy conversations of the two modern Englishmen and their melodramatic environment. But why should the hero be cruelly nicknamed "Girlie"? How is it possible for him to achieve the heroic under such a handicap?

Dilys. By F. E. Penny. (Chatto & Windus.)

The search for a missing heiress, her dual personality, and the mystery which successfully shrouds her movements are cleverly handled, but Mrs. Penny is more to be congratulated upon the incidents which go to the making of her latest Indian story than upon the story itself. The scene is laid mainly in and about an old disused fort in Southern India, the haunt of the gipsies who have reared Dilys; and the English girl remains faithful to the people of her adoption even after she has fallen in love with Rex Carwardine, the police officer. The author shows a remarkable insight into native character, and the influences—so incomprehensible from the European standpoint—by which it is largely controlled. The Lumbadies are a picturesque and interesting tribe, who successfully baffle all Carwardine's efforts to discover the secret of the French brandy which is smuggled into camp. Two old English pensioners are not a little concerned in the matter, and the superior attitude of the native wife of one of them towards her sister who has married a man of her own race illustrates in a humorous fashion the difference in social grade conferred by the absence of colour. The story is full of interest of a varied kind. Dilys herself is too wilful to be attractive to anybody but the police officer, and the barrister who goes out to look for her and finds Marion Hensley certainly has the best of the bargain.

The Passport. By Richard Bagot. (Methuen & Co.)

It is seldom that novels treating of modern Italian life, always excepting those written with a purpose, are otherwise than pleasant, and in 'The Passport' the pitfall of overearnestness is carefully avoided. The author touches social and political problems with a light hand; and even his anti-clerical bias is only to be traced in the contrasted portraits of two priests: one worldly, cunning, and unscrupulous; the other a model of every virtue, but none the less regarded with disfavour at the Vatican, owing to the broadness of his opinions. The result is an entirely pleasant story of true love under difficulties of the kind with which Mr. Marion Crawford has made us familiar. The son of a Radical professor and the heiress of a princely house lose their hearts to one another at first sight in the traditional Southern fashion, and have, of course, to encounter a desperate opposition from the lady's family, with the good and bad priests taking sides respectively for and against the young people; but in the end everything comes right, and virtue triumphs all along the line.

Sacred and Profane Love. By Arnold Bennett. (Chatto & Windus.)

There is not very much sacred love in Mr. Bennett's novel, which is obviously inspired by a study of modern French fiction. The story is told in the first person by Miss Carlotta Peel, whose career is, one must hope, unusual. In the first chapters we find her a victim to the celebrated pianist Diaz, on the first occasion of their meeting; later she becomes the mistress of a publisher who issues her books, for she is a popular writer—indeed, we gather, a famous writer, since when she again encounters Diaz

he knows of her repute. The publisher, on hearing that his wife has committed suicide, blows out his brains. But Carlotta, undismayed, continues her career of sacred or profane love — whichever Mr. Bennett calls it. Diaz has unhappily become a dipsomaniac, but she heroically redeems him from his degrading vice, and writes the libretto of an opera which startles Paris. And then she dies. What Mr. Bennett means, if he means anything, it is hard to discover. His tale reads like a parody of a French novel, and at times is positively grotesque. Certainly, if it has been his object to depict the amours of an ill-regulated woman, he has failed to realize her for us. Carlotta is only such a woman as seen from the outside by Mr. Bennett, and as composed by him from imagination. She never convinces us, and though the ways of women are well known to be inscrutable, they are not so unnecessarily wanton as hers. This is how she explains herself to the publisher, but it does not seem to advance us much:—

"For me there are two beings—myself and the observer of myself. It is the novelist's disease, this duplication of personality. When I said illusion, I meant the supreme illusion of love. Is it not an illusion?.....Will it last? Who knows?"

By that time Carlotta ought to have had a shrewd suspicion it would not.

OUR LIBRARY TABLE.

In writing *Emma, Lady Hamilton* (Constable), Mr. Walter Sichel has taken much pains and displayed much zeal, but zeal perhaps not based on sufficient knowledge. That the career of Lady Hamilton is a fascinating subject the numerous memoirs of her are sufficient proof, but when one has studied the works of Cordy Jeaffreson, Mrs. Gamlin, and their critics, one may reasonably beg to be excused beginning it all over again—the birth in 1765; the seduction by Capt. Payne, who was not a captain and was not in London; and all the rest of it. And after all, what does it matter? The salient facts of her early life can neither be denied nor explained away, and are of no interest in themselves. It is only in connexion with the history of Naples and the life of Nelson that she becomes a public character; and before Mr. Sichel can pronounce on these he must study the history of the period a good deal more than he seems to have done. No one who had any familiarity with our naval history could talk of a 64-gun ship as a 64-gunner; and no one who had read the life of the first Earl of Minto with any care could say that "the Elliots were praising and applauding Emma to the skies," when, in fact, Elliot wrote that "Lady Hamilton's person is nothing short of monstrous for its enormity," her manners have the "ease of a barmaid," and "with men her language and conversation are exaggerations of anything I ever heard." The "get-up" of the book is excellent, and many of the illustrations are charming; but if the portrait at p. 341 is rightly labelled "Lord Nelson, from an original sketch by G. Romney, 1800," it is a strong corroboration of the statement in the 'Dictionary of National Biography' that in 1798 Romney suffered from failing sight, dizziness, and a numbness in his hands which made him unable to guide his brush. It seems, in fact, very doubtful whether Romney ever saw Lord Nelson; and the portrait—if Romney's—is probably of an earlier date and of some different person.

Mr. Arnold White and Mr. Hallam Moorhouse are responsible for *Nelson and the Twentieth Century*, which was published last week by Messrs. Cassell & Co. in preparation for the centenary.

In what is called a "Foreword" Mr. Arnold White displays his usual vigour of style. He writes in the first person, and tells us that in his task he has been helped by naval officers, including four admirals on the active list—as to two of whom we are able to make a guess. The title is explained to mean the application of Nelson's principles to the conditions of naval service at the present time, and the object of the volume is evidently meritorious. The chapter on the memory of Nelson has special application to the moment. We are told, with truth, that if the battle of Trafalgar had been won by France, each of the Admiral's captains would have had a street dedicated to his memory. With us, however, Nelson alone is placed in Trafalgar Square, and other pedestals are occupied by "three major-generals and the First Gentleman in Europe." A good deal of the volume is, though interesting, somewhat wide of the title. In a chapter on the gunnery of our day, and also in a chapter on discipline, we find practical remarks which point to a certain clinging to old practices on the part of our navy, where the Germans and the Japanese, starting afresh, stand in a better position. Ours is an old-fashioned navy—the most old-fashioned of all navies except the French. The fact that our navy and the French are both good navies ought not to blind us to such considerations as are here put forward with much power. The pith of the matter lies in the partial sacrifice of real training to mere smartness and superficial cleaning. While the volume before us has many merits, it is possible to find in it defects. We do not think it true, as asserted in one passage, that the navy of the United States still drains the British navy of seamen. It is commonly believed that this is so; but careful examination of the lists of seamen serving on American men-of-war generally shows that there are no British. The men are nearly all native-born Americans, and the few exceptions are naturalized Swedes, Norwegians, and Germans. Another point on which we differ from one of the writers in the volume concerns the extent to which naval principles had been forgotten before the appearance of the first book of Capt. Mahan. It is, however, true that the sound doctrine which has always been preached by British writers of authority has been popularized by Mahan's style. From a naval point of view we are inclined to think that there is perhaps more exaggeration in the praise given to Queen Elizabeth, in the chapter on dockyards, than in any which has been allotted to the American literary admiral. While we are told that Elizabeth was by natural disposition inclined to take the course which she did in adding to the strength of the navy, and while it is asserted that "she filled her arsenals with naval stores," we, on the contrary, think that the records show that undue attention was given by the queen to land preparations, and that the fleet which fought the Armada had been neglected by the Court.

As it is understood that the feelings of France are to be considered in the commemoration of Nelson, which this book is intended to support, it is perhaps worth noting that in the preface there appears to be a little mistake in the second of two quotations in the French tongue.

Mr. John Masefield's *Sea Life in Nelson's Time* (Methuen) is one of a class of books which the present season has produced. They are not interesting to grown men; and by means of a number of half-truths they give a false impression. We gather that Mr. Masefield has no personal knowledge of the navy—not even so much as to give his proper rank to the officer to whom he dedicates his work; and to that fact we may perhaps attribute his ready acceptance of obsolete yarns. By way of describing sea life in Nelson's time, he quotes from a book published in the time of Queen Anne; 'Roderick Random,' too, is called on to do duty; and when he does get to contemporaries, his most trusted authorities seem to be Mitford—a wretched creature—and a book "by a sailor, politely called by the officers of the navy Jack Nasty-Face," from which he quotes freely, but perhaps at second hand.

Another volume of which the title at least is intended for the centenary is *The Nelson Navy Book*, by Mr. Cuthbert Hadden (Blackie & Son). This illustrated book is merely "popular," and is probably intended chiefly for boy readers. It does not deal fully with Nelson, to whom only a small portion of the story is devoted, but, beginning with the Danes and Alfred and the Cinque Ports, it comes to Sir Francis Drake and the Armada, and Blake and the later battles; while after Trafalgar it is briefly continued until we reach the navy of the present day, and hints "How to join it," which again suggest the young, or possibly their parents.

With the limitation which we have noticed the book may be commended, but it does not contain much of value to the instructed public.

Under the title *Final Recollections of a Diplomatist*, Sir Horace Rumbold publishes, through Mr. Edward Arnold, a fourth volume of his entertaining reminiscences. The most interesting fact set forth in its pages is the statement that the veteran diplomatist Count Nigra has written memoirs, which, as Sir Horace Rumbold says, "will surely be a contribution of surpassing interest to the history of the last century." There may be slips between the Nigra cup and the lip of the public. If Italy were Germany, Nigra's papers would be seized and suppressed at his death, unless he had taken the precaution, now common among statesmen, of lodging copies in this country. If Count Nigra is as prudent as was Talleyrand, his papers will not be published until every one now living is dead, and, when published, may be found by our descendants to omit everything that is of moment. If Count Nigra's papers should be published, fully, and within a century of his birth, they will, we venture to prophesy, astound the world. Since the death of Bismarck, Count Nigra has probably been the one man who could, if he chose, reveal the secret of the origin in 1868 of the Hohenzollern candidature of 1869 and 1870. He was, too, in an extraordinary degree, the friend of both sides.

The subject upon which Sir Horace Rumbold enlightens us in his present volume has somewhat lost its interest, but, for reasons which we will give, ought not to have done so. It was, when he was British Minister at Athens, his duty to explain to the Prime Minister of Greece the intention of the Powers to force the hands of the Greeks by what is known to the writers of text-books as a "pacific blockade." The steps which had been decided upon by the Salisbury Administration were taken by Lord Rosebery, to whom Gladstone "left a free hand." The Cabinet at Athens was told that it

"must not indulge any expectation that the attitude of the Liberal Cabinet would differ from that of their predecessors, and that it might indeed prove even more decided."

The Duke of Edinburgh was placed in command of the international fleet and the world informed that "the east coast of Greece would be blockaded against all Greek shipping." It may be remembered that this precedent was named in the case of Venezuela, but not exactly followed. Mr. Balfour was

advised by his law officers that those were right who had objected to "pacific blockade," and that the blockade proposed in the Venezuela case implied a state of hostilities. Sir Horace Rumbold explains the reasons why "France did not join in the final pressure exercised, and furnished no contingent to the international squadron." France drew back in much the same fashion as we did in Mexico. Sir Horace Rumbold ends his account of the proceedings by saying that his lifelong relations with King George made "it hard that to me should have fallen the distasteful lot of carrying out a policy of coercion towards his Government and people." The importance of this piece of history, apart from its bearing on international law, is that the present state of things in Crete makes it probable that a Liberal Government in 1906 may be face to face with much the same complication as had to be faced by Gladstone and Lord Rosebery in 1886. British troops are engaged, along with Russians and Italians, in fighting against the Greek majority in Crete who desire union with the kingdom of Greece. The Germans have kept out of the matter, and the French are keeping out of it in practice. International complications are almost certain to be the result.

There is a slip in the suggestion that Mr. George Wyndham has been Secretary of State for War. At the moment of the Windsor visit mentioned he was probably the representative of Lord Lansdowne in the House of Commons.

Messrs. Archibald Constable & Co. publish the second volume of the translation of *Contemporary France*, by M. Hanotaux. The admirable portrait of Gambetta prefixed, which represents him, however, as he was before the war, leads the reader to expect that prominence of his figure in the volume which we anticipated in our notice of the earlier portion of this history. It is always interesting to read one Foreign Minister of France upon another, but M. Hanotaux displays in the case of Gambetta a perfect freedom from the prejudice which has sometimes been detected in his writings about others. The pages which deal with the character and career of the great orator are superb; and the translation before us is sufficiently good to convey their spirit. The rest of the volume does not greatly please us, but it is most difficult to make history of the life of the French Republic in our own time. The writer of this notice was present on the occasion when were uttered the words of Bazaine, and the reply of the Duc d'Aumale, as President of the Court Martial, which are quoted here. They were better than appears from the report, which omits the last words of Bazaine's answer, "There was nothing left," and gives the retort as: "*The President.*—'France still existed.'" The Duc d'Aumale's actual reply was: "There was France."

The part of the volume which deals with art and letters strikes us as poor. To come to detail, even admirers of the inspiration of Puvis de Chavannes will detect exaggeration in the words "the sublime master."

We have received from Messrs. Chatto & Windus two volumes of Mr. Justin McCarthy's *History of Our Own Times*, which takes us from the second Jubilee in 1897 to the accession of King Edward. The opinion of all historians that it is not possible to write history of times so recent has often been endorsed by *The Athenæum*. Mr. Justin McCarthy does the best that is possible in the difficult circumstances of the case. He is, of course, compelled to write in the tone of beneficent Whiggism which is alone appropriate to such an endeavour, but which, in his case, is not strained, representing as it does the natural inclination of a benevolent open mind.

The Macmillan Company publish *Restrictive Railway Legislation*, by Mr. Henry S. Haines, who writes from an impartial point of view on railway finance, on freights and rates, and on legislative matters which mainly concern the United States, and, although interesting to all railway managers, do not for the most part directly affect our own British railway problems.

We have on our table *The Golden Reciter*, with an Introduction by Cairns James (Seeley),—*The Story of a Nose*, by Zoë McCausland (Drane),—*The Drums of Fate*, by R. Halifax (Drane),—*The Mysterious "Mr. Punch,"* by G. E. Farrow (S.P.C.K.),—*The Amethyst Box, and other Stories*, by Anna K. Green (Chatto & Windus),—*The Fatal Song*, by Fergus Hume (F. V. White),—*Meg the Lady*, by T. Gallon (Hutchinson),—*Oxendale*, by Ella MacMahon (Chapman & Hall),—*The Vampire Nemesis, and other Weird Stories of the China Coast*, by Dolly (Bristol, Arrowsmith),—*Joy: the Happiest Child in England*, by F. C. Beames (S.P.C.K.),—*Terraweena*, by R. Allanson (Wells Gardner),—*Rupert Dudleigh*, by F. Harrison (S.P.C.K.),—*The Novels of Laurence Sterne* (Newnes),—*The General's Choice*, by A. W. Fox (S.P.C.K.),—*Entrées Made Easy*, by Mrs. C. S. Peel (Constable),—*Puddings and Sweets* (same author and publishers),—*Mohammed Aben Alamar; or, the Invention of the Moorish Arch*, by S. Syeds (Leadenhall Press),—*Patriotism*, by H. Egerton (Allen),—*Beautiful Bulbous Plants*, by J. Weathers (Simpkin & Marshall),—*In the Royal Irish Constabulary*, by G. G. Green (Blackwood),—*Life of Helen Macmillan Brown*, by Edith S. Grossmann (Whitcombe & Tombs),—*Bath as a Health Resort*, by L. H. Wilson (Corporation of Bath),—*Outlines for my Class*, by W. H. Groser (S.S.U.),—*Physical Education of the Young*, by S. Smiles, edited, with additions, by Sir H. Beevor (Walter Scott),—*Southwark, the Cathedral and See*, by G. Worley (Bell),—*English Church History, 1509-1575*, by the Rev. A. Plummer (Edinburgh, Clark),—*Bread and Salt from the Word of God*, by T. Zahn (Edinburgh, Clark),—*Catch Questions in Infantry Training* (Gale & Polden),—*City of Westminster, Report of the Public Libraries Committee for the Year 1904-1905* (Wightman),—*A Healthy Home and How to Keep It*, Parts I. and II., by Florence Stacpoole (Wells Gardner),—*Amor Amoris* (Truslove & Hanson),—*Miscellaneous Works of Oliver Goldsmith* (Newnes),—*Quaint Sayings from the Works of Sir Thomas Browne*, by Mrs. M. H. Wilkin (Elliot Stock),—*The Parish Church Anthem Book*, by the Rev. C. G. Nash (Novello),—*The Evolution of Religion*, by L. R. Farnell (Williams & Norgate),—*Do You Believe? or, Aids to Faith*, by the Rev. R. C. Burr (Thynne),—*The Book of Job*, by the Rev. J. Aitken (Edinburgh, Clark),—*The Muslim Controversy*, by the Rev. E. M. Wherry (Christian Literature Society),—*Guide to Military History for Military Examinations*, by Capt. G. P. A. Phillips (Gale & Polden),—*The Extinction of the Ancient Hierarchy*, by the Rev. G. E. Phillips (Sands),—*Cicero, Pro Lege Manilia*, by A. W. Young and A. F. Watt (Clive),—and *List of Inscriptions on Tombs or Monuments in Madras*, by J. J. Cotton (Madras, Government Press).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Book of Psalms, with Introduction and Notes by W. F. Cobb, 8vo, 10/6 net.
Bowne (B. P.), The Immanence of God, cr. 8vo, 3/6 net.
Darlow (T. H.), The Upward Calling, extra cr. 8vo, 6/
Horne (C. S.), Nonconformity in the Nineteenth Century, 12mo, 1/6
Meyer (F. B.), The Soul's Wrestle with Doubt, 12mo, 1/6
Pearson (A.), The Claims of the Faith on the Practice of To-day, cr. 8vo, 3/6 net.
Waggett (P. N.), The Scientific Temper in Religion, and other Addresses, cr. 8vo, 4/6 net.
Watson (D.), Perfect Manhood, cr. 8vo, 3/6

Law.

Buchan (J.), The Law relating to the Taxation of Foreign Income, cr. 8vo, 10/6
Carr (C. T.), The General Principles of the Law of Corporations, 8vo, 7/6
Smith (A. D.), Trial of Madeleine Smith, 8vo, 5/ net.

Fine Art and Archæology.

Bough (Sam), R.S.A., by Sidney Gilpin, 8vo, 7/6 net.
Catalogue of Pictures forming the Collection of Lord and Lady Wantage, folio, 105/ net.
Fletcher (W. Y.), Bookbinding in France, sewed, 2/6 net.
Gibson Calendar, 1906, 10/6 net.
Hamerton (P. G.), The Etchings of Rembrandt, 2/6 net.
Harwood (H.), Notable Pictures in Florence, cr. 8vo, 4/6 net.
Raphael, by Julia Cartwright, 12mo, 2/ net.
Reynolds (Sir Joshua), P.R.A., by Sir W. Armstrong, 8vo, 15/ net.
Southwark Cathedral, by G. Worley, cr. 8vo, 1/6 net.
Van Dyck (A.), by L. Cust, folio, 42/ net.

Poetry and the Drama.

Cook (W. A.), Plays and Poems, cr. 8vo, 3/6 net.
Dante Calendar, 1906, 4to, 2/6 net.
Heine (H.), Romancero, Book 3, Last Poems, translated by M. Armour, cr. 8vo, 5/
Molière (The Life of), by H. M. Trollope, 8vo, 16/ net.
Moore (Spencer), Aurelian, cr. 8vo, 4/6 net.
Odes from the Divan of Hafiz, freely rendered by R. Le Gallienne, 4to, 7/6 net.
Tennyson (Alfred, Lord), Poems, illustrated by E. F. Brickdale, 8vo, 7/6

Bibliography.

Abbott (T. K.), Catalogue of Fifteenth-Century Books in the Library of Trinity College, Dublin, 8vo, 10/6 net.

History and Biography.

Anderson (J. M.), Matriculation Roll of the University of St. Andrews, 1747-1897, 8vo, 21/
Austen (Jane) and her Times, by G. E. Mitton, 8vo, 10/6 net.
Browne (Sir Thomas), by Edmund Gosse, cr. 8vo, 2/ net.
Clarke (Lieut.-General Hon. Sir Andrew), Life of, by R. H. Vetch, 8vo, 15/ net.
Cox (J. C.), The Royal Forests of England, 8vo, 7/6 net.
Curtis (W. E.), Modern India, 8vo, 7/6 net.
Gregory the Great, by F. Homes Dudden, 2 vols. 8vo, 30/ net.
Hadden (J. Cuthbert), The Nelson Navy Book, cr. 8vo, 6/
Hanotaux (G.), Contemporary France: Vol. 2, 1873-5, 15/ net.
Hatzfeldt Letters (The), translated by J. L. Bashford, 15/ net.
Hertz (G. B.), The Old Colonial System, 8vo, 7/6 net.
Kelly (W. H.), The Battle of Wavre and Grouchy's Retreat, 8vo, 8/ net.
Leno (Dan), by J. Hickory Wood, cr. 8vo, 6/
Mallet (Sir Louis), by Bernard Mallet, 8vo, 7/6
Mohammed and the Rise of Islam, by D. S. Margoliouth, 5/
Molloy (F.), The Russian Court in the Eighteenth Century, 2 vols. 8vo, 24/ net.
Newbury, in the County of Berks (A Popular History of), by Walter Money, 8vo, 6/ net.
Rumbold (Sir H.), Final Recollections of a Diplomatist, 8vo, 15/ net.
Standing (P. C.), Memorials of Old Hertfordshire, 15/ net.
Wallace (A. R.), My Life, 2 vols. 8vo, 25/ net.

Geography and Travel.

Newcombe (A. C.), Village, Town, and Jungle Life in India, 8vo, 12/6 net.
Phillipps (L. M.), In the Desert, 8vo, 12/6 net.
Scott (R. F.), The Voyage of the Discovery, 2 vols. 42/ net.
Shoesmith (F. H.), Object Lessons in Geography for Juniors, 8vo, 2/6
Watson (G.), The Voice of the South, 8vo, 10/6 net.

Philology.

Coquelin (J.), First French Course, cr. 8vo, 2/6 net.
Urdu Reader for Beginners, by F. R. H. Chapman, 7/6 net.

Science.

Alison (John) and Clark (John B.), Arithmetic for Schools and Colleges, cr. 8vo, 4/
Ballantyne (J. W.), Essentials of Gynecology, 8vo, 5/ net.
Belcher (J. H.), Practical Electricity, cr. 8vo, 1/6
Bichel (C. B.), New Methods of testing Explosives, translated by A. Larsen, 8vo, 6/ net.
Flint (A.), Handbook of Physiology, 8vo, 21/ net.
Grinling (C. H.), The Ways of our Railways, 8vo, 10/6 net.
Hasluck (P. N.), Practical Handrailing and Practical Pattern Making, cr. 8vo, 2/ each.
Houston (E. J.), Electricity in Everyday Life, 3 vols. 8vo, 21/ net.
Marr (J. E.), An Introduction to Geology, cr. 8vo, 3/ net.
Paton (D. N.), Essentials of Physiology for Veterinary Students, 8vo, 12/ net.
Poultry Farming, by Home Counties, cr. 8vo, 5/ net.

Juvenile Books.

Aitchison (J.), The Children's Own, cr. 8vo, 3/6
All the Best Nursery Stories and Rhymes, illustrated by J. Hassall, 4to, boards, 3/6
Baldwin (M.), Girls of St. Gabriel's, cr. 8vo, 3/6; That Little Limb, cr. 8vo, 2/
Black Cat Book, Rhymes by W. Copeland, Cats by C. Robinson, roy. 8vo, boards, 1/6
Blackie's Children's Annual, 4to, boards, 3/6
Brereton (F. S.), A Knight of St. John, cr. 8vo, 6/
Defoe (D.), Robinson Crusoe, Illustrations by J. A. Symington, cr. 8vo, 5/ net.
Earle (M.), Molly and her Brothers, cr. 8vo, 2/6
Fenn (G. M.), Nephew Jack, his Cruise for his Uncle's Craze, extra cr. 8vo, 5/
Harrison (F.), Rhymes and Reasons, 4to, sewed,
Hart (C.), A Book for Children about our Lord Jesus Christ, Coloured Plates by A. A. Hilton, imp. 16mo, 3/6 net.
Haskell (Mrs. L.), The Little Ones' Book of Bible Stories, royal 8vo, boards, 3/6
Haverfield (E. L.), The Ghost of Bxlea Priory, cr. 8vo, 5/
Henty (G. A.), A Soldier's Daughter, and other Stories, 2/
Herford's (Oliver) Animal Book, 4to, 3/6 net.

NELSON'S TACTICAL STUDIES.

In the most interesting and suggestive address which Sir Cyprian Bridge gave to the Navy Records Society at its annual meeting he called attention to the mistaken belief, long entertained even in the navy, that Nelson's one idea, when in presence of the enemy, was "Go at 'em." It was so described by Lord Dundonald; and what Dundonald thought was the creed of thousands. Mr. Corbett in his excellent volume of the 'Fighting Instructions' has made the same point; the belief had got into the navy, and was widespread among naval officers, that the essence of Nelson's tactics—the Nelson "touch," in fact—was, in the words attributed to a hard-headed old Scot, name unknown, "Dom the signals; up wi' the hellum and gang in among 'em." That such a belief has done immeasurable harm to the study of tactics as a branch of naval science seems to be certain, and I think that no better tribute can this day be paid to the memory of Nelson than once again to bring into prominence the fact that though Nelson's achievements were the outcome of rare genius, that genius was nurtured and developed by long and careful study. Mr. Spenser Wilkinson has shown how Bonaparte prepared for his Italian campaign by continued study of what Maillebois had done fifty years earlier, and how throughout his life he was an assiduous student of military history. He was an embodiment of the familiar proverb, "Experience teaches even fools: the wise man learns from the experience of others"; and in this, as in many other points, Nelson's genius was the counterpart of that of Bonaparte. But to the ill-informed it will ever seem that what a man does with apparent ease, he does either because it is really easy, or because fortune has specially favoured him. It is difficult to persuade them that Nelson's victories were the result of patient and painstaking study, that there was nothing impromptu or "extrumpery" about his methods, and that he was ever most careful to explain to his subordinates what they had to do, and what, under changing conditions, they might be called on to do, so that there might be no mistake. This very perfection of care has led some into error. In his last memorandum, issued a few days before Trafalgar, there is a phrase which, misquoted and robbed of its context, has certainly been the parent of much tactical heresy. We are all familiar with the misquotation as the summary of all Nelson's teaching—"No captain will do wrong if he places his ship alongside one of the enemy." What Nelson wrote was: "In case signals can neither be seen or perfectly understood, no captain can do very wrong if he places his ship alongside that of an enemy," a vastly different thing to any one who will take the trouble to think about it. For, in fact, it was Nelson's life-study to learn the best position in which to place his ships, and to formulate plans for doing so—not only before Trafalgar, but in the West Indies, off Toulon, at Copenhagen, or in the chase which came to an end in Aboukir Bay. For this last, in particular, every conceivable position had been so thoroughly worked out and explained to the several captains who had to carry out the scheme, that when the enemy was discovered, nothing remained except to put the scheme in execution; and it was done in such an off-hand way, that there have been many who have supposed that Nelson's share in the battle was simply an order, "Go at 'em," and that others—the captains, acting on the pre-arranged plan—were, in fact, the spirit of the whole.

But the question naturally arises whether in forming his plans Nelson had any assistance; and if he had, what and whence. Sir Cyprian Bridge has reminded us that when still a very young man Nelson was introduced by Lord Hood to Prince William (afterwards William IV.) as an officer to be consulted on "questions relative to naval tactics." Hood was not a man to lavish praise or commendation where it was not due, and we may certainly take his introduction as a certificate of competency. How, then, had Nelson so qualified himself, and at that early age? It has been assumed that Nelson did not read. I am convinced, on the contrary, that he read much—not indeed of general literature, for the sake of reading, but as study. Naturally, as midshipman in a small frigate like the Seahorse, his opportunities were limited, and as a lieutenant in the Lowestoft they were little better, though in her he had the advantage of the conversation of Locker, who had impregnated him with a knowledge of Hawke and Hawke's methods. But after he came home from Nicaragua, when he had formed a lifelong friendship with Cornwallis—whom he always recognized as his tutor—he must have read. His health was feeble; he was neither sportsman nor athlete; he was not much of a society man; he was not a hard drinker; I cannot believe that he was a mere loafer. I have no doubt that he read a good deal, though perhaps in a desultory kind of way. So also in the Albemarle, and afterwards in the Boreas; and during the five years of half-pay, the greater part of which he passed at Burnham Thorpe, he is said to have spent much of the time in reading, writing, and drawing. We are so accustomed to think of him as a one-eyed, one-armed man, that we forget that he had the normal use of two eyes till he was thirty-six, and of two arms till he was thirty-nine. As in later life, and with only a left hand, he wrote voluminously, there is no difficulty in believing that he wrote much during these five years. But what? Not letters: there are very few of this date. Very possibly a commonplace book, which may yet be unearthed. And what did he read? Naval history, I am sure. Campbell, certainly; and though Campbell's history is shaky according to our modern standard, he is as sound as Capt. Mahan himself on the influence of sea-power. The story of the Seven Years' War he knew from Locker—the War of American Independence from Hood, Cornwallis, and almost every man of his acquaintance. The campaign in the East Indies must have attracted him, for he had served on the station, and Hughes had been kind to him. Troubridge, his messmate in the Seahorse, had been in several of the battles with Suffren, and during part of the years mentioned was also in England, on half-pay, and no doubt there were others. But there were no books in English treating directly of tactics, which brings up the question, Could Nelson read French? It has been generally assumed that he could not. He could not speak it; but that is not to say that he could not read it; and it is possible that a phrase he was fond of using in his letters may be evidence that he could. Over and over again in his letters we find such an expression as "I hope to be presented to her crowned with laurel or cypress." It seems to me to be taken from Basnage, who tells how Opdam, on the eve of his fatal battle off Lowestoft, said, "Messieurs.....je serai demain couronné de lauriers ou de cyprès; mort ou vainqueur." If it is a mere coincidence, it is a curious one, and perhaps Nelson may have met with Opdam's speech elsewhere; but he seems to me to have been acquainted with the work of

Hoste and others of the French tacticians. It is an interesting question, but one which I fear cannot now be solved: Could Nelson read French? If he could and did, he did it to good purpose, and we may conceive the French, in the agony of defeat, anticipating the poet, and murmuring:—

> Keen was the pang, but keener far to feel
> *They* nursed the pinion that impelled the steel.

J. K. Laughton.

NELSON'S OFFICIAL MANUSCRIPTS.

Much has been said of late in the public press with regard to the duty of the nation, or rather the duty which the Government owes to the nation, in the matter of the acquisition and official preservation of certain documents connected with the career of our great naval hero.

The documents in question, it is alleged, should never have left official custody, and the fact of their having presumably been removed thence has been regarded as a public scandal. This allegation, which there has been no attempt to disprove, is disquieting. Moreover it opens a vista of official negligence in more than one direction. It will have been noticed, however, that the reports in question omit to designate these "official" documents by their official titles, or to specify the class of official archives to which they properly belong. The same omission, indeed, has been noticed in other cases; and it may therefore be of interest to historical students, as well as to owners or collectors of MSS., to consider the general aspect of the subject more carefully.

In the first place, it may be admitted that it is scarcely probable that a complete series of the official documents connected with every stage or incident in the career of Nelson exists in the Admiralty archives. In this as in other cases it is perfectly possible that losses may have occurred from natural causes. Again, it has been the practice of this, as of every other department, to make periodical clearances of documents apparently devoid of historical or departmental value. It is, however, improbable that in the present instance our memorials of Nelson have suffered from either of these causes of possible loss. A third cause, which has operated in other cases, may be found in the earlier official practice of depositing documents of undoubted interest in public museums, which are not what the French term "archives." Apart from the rarity of these transactions, it cannot be considered that the nation has suffered any loss by such arrangements, which may, however, be a source of confusion to historical students. Finally, we have the most fertile cause of national loss in connexion with the reprehensible practice of a still earlier official age, whereby official documents were removed wholesale by Ministers of the Crown, presumably for convenience of reference, and were never replaced. But not even this extensive leakage, which has notoriously depleted our national archives to a lamentable extent, nor the more sordid malpractices of minor officials, who at one time abstracted or mutilated State documents for their private profit or interest, have perceptibly injured the purely official series of Nelson memorials.

From what quarter, then, it may be asked, have the alleged losses been inflicted? The answer to this question is twofold. In the first place the survival and custody of historical documents are really matters of only relative importance. It is somewhat unreasonable to complain of losses without attempting to estimate the proportion which they bear to the fortunate survival of the great bulk of documents which constitute a particular source of information. In the present case a practically unbroken and almost incredibly extensive series of official documents has been continuously preserved in official custody, to the honour of all parties concerned. Here we find Nelson's dispatches as admiral, and his official reports as captain, as far as they came to hand, together with copies of the official letters and instructions addressed to him; his ships' journals as admiral and captain; the logs, muster-rolls, pay lists, and structural records of the ships which he commanded or in which he served; even the medical officer's journal of the ships on which he received his wounds; the ledger books recording the payment of his sea-pay, half-pay, and pension; the records of proceedings in prize causes in which he had a personal concern; the certificates of his first commission and subsequent appointments; Orders in Council affecting his interests; strategical documents, with many others of minor importance.

In the second place it must be clearly shown that so-called "official" documents in private hands are really entitled to that description. For example, duplicates discarded by the official archivists, or originals that were never intended for official preservation, have clearly no place in an official collection. To find a place for such waifs and strays amongst the formal archives, as a mere matter of sentiment, would be contrary to public policy. Even in the case of the few documents which might fill actual gaps in the existing official series, it has yet to be shown that their present position is either insecure or inaccessible, and the precedent created by any steps for their recovery would be a dangerous one. But, in fact, the most casual examination of the largest and best collection of Nelson MSS. of a semi-official nature—that preserved in the British Museum—will show that, as we should expect, the "official" documents preserved in the families of the admiral or of his friends consist for the most part of original letters received by Nelson, and therefore clearly at his own disposal, together with copies of letters written by him of which the originals alone, and of those a comparatively small proportion, would be regarded as "official." In addition to the above we notice the titles of ships' logbooks, which are probably in all cases duplicates; admirals' and captains' journals, which were never rigorously exacted for official preservation; order and signal books and registers of commissions, which were not official records; and a few more, the position of which is doubtful. Now when we consider the evident care bestowed upon the preparation of these semi-official records, as well as the opportunities offered to naval commanders like Nelson and St. Vincent for retaining purely official records in their own custody, together with the obviously lax supervision of the Admiralty archives in those days, it is a matter for congratulation that the legitimate division of proprietary interests has been so scrupulously observed.

Literary Gossip.

Mr. Murray is about to issue an account of the three Dorset captains at Trafalgar—Hardy, of the Victory; Henry Digby, of the Apice; and Charles Bullen, of the Britannia. It has been supposed that Hardy destroyed his correspondence, but some hundreds of his letters have been discovered, and form the foundation of the biography written by Mr. A. M. Broadley and Mr. R. G. Bartelot.

'The Triumphs of Petrarch' is another important work promised by Mr. Murray. It will appeal specially to collectors. The type has been designed after MSS. of the fifteenth century; the paper is made from an old Italian formula; and the English edition will be limited to 110 copies. The book will have initials executed by Attilio Formilli, of Florence, and be furnished with an introduction by Signor Guido Biagi.

Mr. Murray's other announcements include 'The Life and Letters of Sidney Herbert,' by Lord Stanmore; 'The Life of Isabella Bird (Mrs. Bishop),' by Miss A. M. Stoddart; 'Peasant Life in the Holy Land,' by the Rev. C. T. Wilson; 'Researches in Sinai,' by Prof. Flinders Petrie; 'Things Indian,' by Mr. W. Crooke; 'Our Culture Bearers in Central Asia,' by Prof. Vambéry; the continuation of Mr. Mackail's translation of the Odyssey; a translation of Nielsen's 'History of the Papacy in the Nineteenth Century'; 'Our Waterways,' by Mr. U. A. Forbes and Mr. W. H. R. Ashford; 'Reason in Architecture,' by Mr. T. G. Jackson; and 'The Chemistry of Proteids,' by Dr. Schryver.

With the January number *The Dublin Review* will pass into the editorial hands of Mr. Wilfrid Ward. Founded nearly three-quarters of a century ago, this periodical has been the leading exponent of intellectual Roman Catholicism in the English-speaking world. Under Cardinal Wiseman it was read by the leaders of the Oxford Movement, and played its part in the secession of Newman. When Dr. W. G. Ward became its editor it had the respectful ear of John Stuart Mill; and in the hands of Dr. Ward's son it is likely enough to enlarge its influence on readers both within and without the Roman communion.

A new novel by Mrs. Israel Zangwill, entitled 'The First Mrs. Mollivar,' will be published by Messrs. Smith & Elder on the 26th inst. The lady who gives the title to the book and dominates it from an early chapter up to the very last line is no longer living. And yet it is not easy to say whether the story is supernatural or not. In this doubt lies the artistic interest of the book.

Lady Currie, formerly Mrs. Singleton, and known in the world of letters as "Violet Fane," whose death is recorded, is shown by her 'Denzil Place' to have had a greater power of telling a tale in verse than has been generally admitted by critics.

Mrs. Humphry Ward's new novel, 'Fenwick's Career,' will run serially through *The Century Magazine*, the first chapters appearing in the November number.

A strong October number of *The Edinburgh Review* contains two articles which amplify arguments lately used in *The Athenæum*. A learned essay on 'Early Christian and Byzantine Art' enforces the view to which in a recent notice of 'Old Provence' we gave our adhesion, namely, that the Gaul of the Franks took its Christian architecture from the Eastern Mediterranean. A review of Lord Edmond Fitzmaurice's life of Lord Granville attaches supreme constitutional importance to the letters of Queen Victoria in 1863 and 1864, to which we called attention on their publication.

The November *Blackwood*, under the title 'A Great Viceroyalty,' summarizes the work done for India by Lord Curzon during his Governor-Generalship. Another article describes 'The Streets of London,' and is by Sir Henry Smith, ex-Commissioner of the City of London Police. Sir Herbert Maxwell writes on 'British Woodlands as They Are, and as They Ought to Be'; and there is an account of the relief of the legations at Pekin by the allied forces, from the pen of Col. Scott Moncrieff, who was in command of the Royal Engineers. Among the other contents of the number is an article on 'William Pitt, the Younger,' by Mr. C. Whibley.

To the November number of *The Independent Review* Dr. J. Holland Rose will contribute a paper on 'The True Significance of Trafalgar.' It propounds an entirely new view of the consequences of the battle. Among the other articles will be 'Hungary and Austria,' by Dr. Josef Redlich; 'Charles Lamb,' by Mr. Herbert Paul; 'The Gaelic League,' by the Rev. J. O. Hannay; and 'At the Sign of the Lion,' by Mr. Hilaire Belloc.

The first number of the new series of *Macmillan's Magazine*, now reduced to sixpence, contains the opening chapters of a serial story entitled 'The Enemy's Camp.' Mr. David Hannay writes on 'Nelson the Civiliser,' with special reference to the influence he exercised in the removal of brutality from the navy. 'As Others See It,' by Miss Edith Durham, is a sketch of Old Servia. Mr. H. H. Dodwell has a paper on 'Matthew Arnold as a Social Reformer.' Lieut.-Col. A. W. A. Pollock supplies an answer to the question 'Has the British Soldier Deteriorated?' and Sir Charles Bruce discusses the relation between 'Our Public Schools and the Empire,' incidentally stating that Harrow sent four hundred old boys to service in the Boer War.

The Cornhill Magazine for November opens with a poem in hexameters, entitled 'On the Oxford Circuit,' over the well-known legal initials C. J. D., on the dramatic death of Sir Thomas Noon Talfourd, the author of 'Ion,' while delivering his charge to the grand jury at Stafford. Sir E. Maunde Thompson writes on 'The Creation of the British Museum.'

In his new book 'Modern Germany: her Political and Economic Problems, her Policy, her Ambitions, and the Causes of her Success,' which Messrs. Smith & Elder will issue on the 26th inst., Mr. O. Eltzbacher not only depicts the evolution of Germany as she is, but also points out the contrast with our haphazard English methods. The volume will be published in the United States by Messrs. E. P. Dutton & Co., of New York.

Next week Messrs. Chapman & Hall will publish 'The Boz Birthday Book,' compiled by J. W. T. Ley. Mr. Ley's aim has been to include only quotations from the works of Dickens which have point, and express sentiments on some phase of life. All the quotations have the source from which they are taken, and when spoken by a character the name is given. The volume will have a comprehensive index, making it a useful book of reference.

Mrs. Henry de la Pasture's new novel, which will be published by Messrs. Smith & Elder on the 30th of this month, is entitled 'The Man from America: a Sentimental Comedy.' The story should appeal especially to lovers of children and young people. The scenes are laid in the West Country and in London; the love interest concerns itself exclusively with the courtships of youths and maidens, and the theme is the descent of an adventurous American upon a primitive cottage home in Devon.

A correspondent writes from the University of Rennes:—

"President Roosevelt is Irish on his mother's side, and, as such, is engaged on a 'study' of the Cuhullin legend."

A life of the Rev. T. E. Bridgett, the biographer of More and of Fisher, has been written by his brother Redemptorist, the Rev. Cyril Ryder. It will have an introduction from the pen of Abbot Gasquet, long his fellow-labourer in the Reading-Room of the British Museum, and will be published by Messrs. Burns & Oates.

Temple Bar for November will contain 'A Tour in Sweden Ninety Years Ago,' taken from the letters and diaries (hitherto unpublished) of Lady Sarah Lyttelton, who gives glimpses of the Court and family of Bernadotte. In 'Some Recent Tragedy' Mr. M. A. Balliol discusses the works of Mr. Stephen Phillips. In 'Mauvaises Herbes de l'Ame' Mr. Marmaduke Pickthall describes some of the superstitions of French peasants. Mrs. Leigh Hunt Thornton (great-granddaughter of the poet) relates the difficulties that attend being 'The Eldest' of a large family.

An essay on 'English Women Humourists,' written by Mrs. Meynell, will appear in a proximate number of *The North American Review*.

Messrs. Longman's edition of Mr. Pollard's 'Henry VIII.,' to which we referred last week, is in one volume, not two, as stated.

Mr. James Huneker, author of 'Iconoclasts,' has nearly ready a volume of stories, entitled 'Visionaries,' which Mr. Werner Laurie will issue shortly.

The Standard for last Wednesday contained a Shakspearean communication from Mr. Charles William Wallace, of the University of Nebraska, with regard to a Bill and Answer in Chancery proceedings of April 26th, 1615, which mentioned the names of Willyam Shakespere, Gent., and Richard Bacon, in connexion with the Blackfriars property.

In our next issue we hope to deal largely with gift-books for children.

Dr. Ellicott, whose death took place last Sunday, besides being Hulsean Lecturer in 1859, and first Hulsean Professor of Divinity, was chairman of the Company of Revisers of the New Testament from 1870 to 1881. He was the author of many important works on theology and Biblical criticism.

At the annual festival of the Newsvendors' Institution, at which Sir Horace Marshall is to preside, on the 31st inst., the Lord Mayor and the Lady Mayoress, the Sheriffs, the Chinese Minister, Lord Burnham, the Hon. H. L. W. Lawson, Sir Joseph Lawrence, and Mr. Cecil Harmsworth will be present.

We mentioned last week the proposed Nelson Exhibition at the British Museum. The catalogue (price sixpence) contains long quotations from contemporary narratives of all the great sea-fights from the Armada to Trafalgar, and is illustrated by two facsimiles of manuscripts (including Nelson's last letter), five portraits of admirals (Howard, Blake, Hawke, Rodney, and Nelson), and one plate of fifteen medals.

We deeply regret to announce the death at Paris, on the 5th inst., of Mlle. Germaine Marie Merlette, the biographer of Elizabeth Barrett Browning. Mlle. Merlette's enthusiasm for her subject took her to England and Italy in search of material, and, with assistance from Mrs. Browning's son and surviving friends, enabled her to produce what will long continue to be by far the fullest and most adequate biography. This gained for the author the high distinction of the Doctorate of the University of Paris, to which it was presented as a thesis. Much more might have been expected from the industry and talent so painfully eclipsed by a sudden death.

The Parliamentary Papers of most interest to our readers this week are the Report of the President of Queen's College, Belfast, for 1904–5 (4½*d.*); and Intermediate Education, Ireland, Rules and Programme of Examinations for 1906 (3*d.*). The Index to the Debates for the session of 1905 has also appeared (15*s.* 3*d.*). It is fuller and better than it has been in the last few years.

SCIENCE

BOOKS ON FORESTRY.

Future Forest Trees. By A. Harold Unwin. (Fisher Unwin.)—The sub-title of this book runs as follows: "The Importance of the German Experiments in the Introduction of North American Trees." Since the failure, in many places, of the larch, attention has naturally been called to the numerous conifers which may, it is presumed, be employed as substitutes for it. Of these the Douglas fir takes first rank. The author of the present volume gives a sketch of what has been done in Germany, but has somewhat ignored what has been done in this country, although before the Germans began to think of these matters the Lebanon cedar had been introduced here, and Bishop Compton had enriched the gardens at Fulham Palace with numerous trees, mostly from the Eastern United States. The researches of Menzies, Douglas, and others made manifest the extraordinary richness in tree vegetation of the Rocky Mountains and the Pacific Coast. The Horticultural Society did excellent service in introducing, making known, and distributing seeds and plants of these valuable trees. Only cursory mention is made by our author of the Douglas fir, which has given excellent results in Scotland, and has been reported on favourably by so excellent an authority as Dr. Schlich. The first part of the present volume is occupied with tabular matter in which the amounts of timber imported from America into Hamburg and other German ports are cited. Cedar (*Juniperus virginiana*) and walnut (*Juglans nigra*) are the most largely imported timbers. In the second part the produce of individual trees is noted, and, among others, mention is made of *Pinus banksiana*, a species

which is highly recommended for the afforestation of waste lands, in damp, swampy places as well as in arid, poor, sandy, and gravelly soil. We suppose this tree is recommended for binding loose soil, as a nurse plant and as yielding a crop preparatory to the growth of other more profitable timber. We have no knowledge of the tree in this country out of gardens, but the details here given should certainly be considered by planters. So much attention is now (and very properly) being given to all matters concerning forestry that this little book may be confidently recommended as supplying details of German practice not easily to be procured elsewhere.

Messrs. William Blackwood & Sons publish in two volumes *The Forester: a Practical Treatise in British Forestry and Arboriculture, for Landowners, Land Agents, &c.* This continues the work under the same title by Dr. Brown, of which the sixth and last edition was edited, on its appearance more than ten years ago, by Mr. John Nisbet, the author of the present book. The importance of the Douglas fir, referred to in the preceding notice, is fully recognized by Mr. Nisbet. Those who have grown the Colorado, or slow-growing variety, in this country will hardly agree in the German view, quoted by Mr. Nisbet, that it is "only a little quicker-growing than spruce." In some parts of the United Kingdom spruce is worth growing, but we do not think that the same can be said anywhere in this country concerning the Colorado Douglas.

Mr. Nisbet explains in his preface that in the present new work is incorporated the essence of all his other books on forestry. He adverts to the incorrectness of the conclusions of the Departmental Committee on Forestry, based, as he thinks, on "evidence that was incomplete and, therefore, misleading." The present volumes are dedicated to the Scottish Arboricultural Society, a body which is supposed to have had a good deal to do with the appointment of the Committee in question. Mr. Nisbet's criticism is, therefore, the more weighty. It is impossible to conceal the fact that in Great Britain forestry has been sacrificed, as are military manœuvres, to the preservation of game, an influence equally adverse in both cases.

Were we to make criticisms of detail upon the useful volumes before us, we might question the maximum diameter or circumference given to the British willows, basing our comment on instances to be found within the county of Middlesex; and we might also express a doubt as to the accuracy of the statements made in both volumes as to the non-responsibility of Railway Companies for damage by sparks. In the latter instance, however, we admit that Mr. Nisbet's words represent the general view—upon which, indeed, the legislation of the present year was based. He names in a foot-note in the second volume the introduction of the Bill; but it was, as a fact, carried in an amended form, and is now an Act.

RESEARCH NOTES.

The most important event to be here chronicled is the appearance *in extenso* of M. Langevin's theory of magnetism, foreshadowed rather than summarized by him at St. Louis last year (see *The Athenæum*, No. 4041). The complication of the problem is apparent when we reflect that there are three states of magnetism: to wit, ferromagnetism, or the condition of natural magnets; paramagnetism, or the tendency of substances like soft iron to arrange themselves north and south in the presence of a ferromagnetic body; and the less familiar diamagnetism, or the tendency of substances like bismuth to set themselves at right angles to the position they would take up if paramagnetic. Further complications, too, have been introduced by the discovery of Zeeman that the action of an intense magnetic field causes the spectrum of any gas, as it were, to break up; and by that of M. Curie that, while the paramagnetism of a body varies in inverse ratio to the absolute temperature, diamagnetism seems to be independent of all changes of heat or cold. M. Langevin has now succeeded in showing that these phenomena can be accounted for by pure mathematical reasoning, if we are willing to grant the postulate that all matter is made up, in the last resort, of electrons, and that the inertia of a molecule of matter is but the sum of the electromagnetic inertias of the electrons that compose it. The equations that he gives stand for criticism, but if they prove well founded, it would seem that M. Langevin may have done for magnetism what Clerk Maxwell did for the electromagnetic theory of light. Even then, however, his conclusions will have to be experimentally demonstrated. The unwisdom of trusting in such matters to mathematical theory alone has been more than once mentioned in these Notes, and it is doubtful whether Clerk Maxwell's masterly reasoning would in itself have been accepted without the crucial experiment of Hertz.

On the ever-present question of the structure of the atom there should be noticed the excellent and clear study lately put forth by M. C. E. Guye, Professor of Physics at Geneva University. After giving in sufficient detail all the experimental evidence on the subject since the cardinal discovery of the cathode rays by Sir William Crookes, M. Guye cautions us against being too hastily led away by theories of interatomic action, of which till now we know next to nothing. While mentioning with great respect the theory of Prof. J. J. Thomson as to the revolution of the negative electrons round a positive core, he points out that the positive and not the negative electrons may turn out to be the principal seat of the inertia of matter, and that the charge of the positive electron would on that hypothesis be spread over a much smaller sphere than that imagined for its negative brother. Arguing from this, he calculates that all the conditions of the problem would be fulfilled if we consider the atom of hydrogen to be made up of two electrons only, the negative having a radius of 10^{-13} centimetres and the positive one of $\frac{10-16}{2}$. But he is most earnest in warning us that the electromagnetic theory of physics, which has been coming into fashion ever since the reasoning of Faraday and Clerk Maxwell enabled it to supplant the mechanical one formerly in vogue, is so very seducing in appearance that its development ought on that account to be most critically watched.

Miss J. M. W. Slater, the holder of the Bathurst Scholarship, describes in this month's *Philosophical Magazine* some experiments by which she claims to have ascertained that the emanation of thorium as well as that of radium gives off slow-moving negative electrons or Delta rays capable of discharging an electroscope, and that it is probable that the quantity of negative electricity emitted by these emanations is considerably greater than the positive. This conclusion, which appears in some sort to support M. Guye's suggestion mentioned above, seems to require control, which should not be difficult. Spectrum analysis ought, as M. Guye himself suggests, to be a help.

In the same magazine Lord Blythswood and Mr. H. S. Allen have a very practical paper dealing with the production of an almost perfect vacuum in glass tubes by means of cocoanut charcoal cooled in liquid air. The calculations, which are of course founded on Sir James Dewar's discovery of the practicability of the process, are very extended, and should make it possible for the experimenter who has attained even a small skill in glass-blowing to exhaust a tube to any possible vacuum he pleases without the use of a pump. The quantity of liquid air required is not excessive, and one of the advantages of the process is that it gets rid of the suspicion of mercury vapour generally noted in tubes exhausted by the vacuum pump.

The Proceedings of the Association Française pour l'Avancement des Sciences at the session held last year at Grenoble are now out, and contain some noteworthy papers. There may be especially noticed some photographs by M. Stéphane Leduc of the electric spark, showing some curious differences between those emitted by the positive and negative poles respectively. The star-like lines of the positive seem to be at once smaller and more intense than those formed by the negative discharge, a phenomenon that may be accounted for by the supposition that the first named takes place at a higher potential than the second. He seems, however, to have placed in every case a strip of copper beneath the sensitized plate, and the effect may therefore be due to some difference of absorption. M. Leduc's papers on cytogenesis in the Biological Section have been mentioned too recently here to require recapitulation, but the photographs by which they are accompanied deserve study.

With regard to Mr. Butler Burke's alleged discovery in this connexion, the following remarks of M. Raphaël Dubois are worth giving verbatim:—

"Je déposai un jour un petit cristal de chlorure de baryum et de radium, avec les précautions voulues, sur un bouillon de culture gélatineux pour microbe lumineux.....je ne tardai pas à voir apparaître une quantité considérable de petits corpuscles qui s'enfoncèrent rapidement dans la profondeur en même temps qu'ils augmentaient de volume.....Hâtons-nous d'ajouter que la radioactivité ne semble pas jouer un rôle nécessaire dans ces formations, tout au plus pourrait-elle en achever la production. En effet, je les ai obtenues avec du chlorure de baryum ordinaire."

They are taken from an article by M. Dubois in the *Revue des Idées* for March 15th last, and an editorial note informs us that this article is a summary of the *discours d'ouverture* delivered by M. Dubois on November 4th, 1904. Mr. Burke's first public announcement of his so-called discovery was given in a letter to *Nature* dated May 10th, 1905, and the dates are worth noting.

F. L.

Science Gossip.

M. Victor Loret has written a preface for MM. Lortet and Gaillard's magnificent book on the mummified fauna of ancient Egypt, in which he draws attention to the fact that the sacred animal of Anubis is now shown to be neither a jackal nor a fox, but simply a dog; that that of Amon is not the African, but the Asiatic sheep; and that many of the mummified animals were embalmed, not from motives of adoration, but in order to provide the dead with food or sport in the next world. In addition, he returns to the question of the clans or tribes into which the prehistoric Egyptians are supposed to have been divided, and gives several new reasons for concluding that these tribes were each distinguished by the name of some animal. Altogether, the preface is not less interesting than the book.

The session of the Sociological Society will begin at the School of Economics, Clare Market, next Tuesday, when Dr. G. Archdall Reid will read a paper on 'The Biological Foundations of Sociology.' The Society, in addition to the ordinary monthly meetings, has arranged for a series of Research Meetings. At the first of these, on November 23rd, Dr. J. L. Tayler will read a paper on 'The Study of the Individual,' and at the second, on December 19th, M. Waxweiler, Director of the Institut de Sociologie, University of Brussels, will treat of 'Biological Methods in application to Social Problems.' On the previous evening M. Wax-

weller will describe the equipment and work of the Institut de Sociologie.

Ferdinand von Richthofen, whose death in his seventy-second year is announced from Berlin, ranked high among geographers. He studied first at Breslau, and afterwards at Berlin. He joined Count Eulenburg's Prussian expedition to East Asia, and visited the Philippines, Celebes, and Java; but, instead of returning with the expedition, continued his travels, frequently by unexplored routes, through Burma. He next went to California, and thence back to China, where he remained for four years. At the end of twelve years he returned home to write his travels. The University of Bonn, after electing him to the Chair of Geography in 1875, allowed him to complete the first part of his great work on China before he took up his post in 1879. He went from Bonn to Leipsic, and in 1886 to Berlin. He was the chief promoter of the Institute for Deep-Sea Exploration, and founded the museum connected with it.

Sir J. Halliday Croom was on Monday appointed Professor of Midwifery in Edinburgh University, as successor to Prof. A. R. Simpson, who has recently retired.

Major Lachlan Forbes, D.S.O., has been appointed secretary of the Royal Scottish Geographical Society in succession to Major Lindsay Forbes.

The death, in his eighty-first year, is announced from Alsfeld, in Oberhessen, of Karl Müller, whose works on natural history, written conjointly with his brother, were at one time popular.

The observations hitherto obtained of the small planet Eros, which has made itself more useful than the rest by its comparatively near approaches to the earth, appear to indicate that the sun's parallax is somewhat smaller than the value 8″·80, which has been generally accepted in recent years. Mr. Hinks, of the Cambridge Observatory, considers that the true value is probably about 8″·76. Meantime Prof. Küstner, Director of the Bonn Observatory, has been making an elaborate attempt to determine this important element by a new method. The measurement of the motion of stars in the line of sight (approaching to or receding from the earth) by spectroscopical observation of the fixed lines in their spectra, according to what is called the Doppler principle, has been applied with success to a considerable number of stars. Now it is obvious that the actual values of these must differ when the earth is in the part of its orbit moving towards or moving away from the star; and if the mean value be known with some accuracy, it may be possible to eliminate this portion, and so obtain a measure of the earth's distance from the sun. Prof. Küstner has applied this method to the observations of Arcturus, and obtained a value of the solar parallax which amounts to 8″·84, or somewhat less if a doubtful observation be rejected. It would seem, then, that there is a prospect, by applying this to other stars also, of obtaining accurate results by this new method.

Prof. Bauschinger, Director of the astronomical Recheninstitut at Berlin, after an elaborate discussion of the observations of new planets discovered since the beginning of this year, finds (*Ast. Nach.*, No. 4050) that several are rediscoveries of planets previously known, and some others are too insufficiently observed for determination of their orbits. Definitive numbers are, however, assigned to sixteen, the last of which, No. 569, was discovered by Dr. J. Palisa at Vienna on July 27th, and has been named by him Misa.

We have received the third appendix to vol. iv. of the second series of the *Publications* of the United States Naval Observatory. It contains a series of tables of differential refraction for micrometer observations made with an equatorial. They are applied to three cases: (1) when observations are made by directly measuring both differences in right ascension and differences in declination with a micrometer; (2) when differences in right ascension are determined by transits; (3) when observations are made by measuring position-angles and distances, and are adapted to the latitude of Washington, *i.e.*, 38° 55′ 14″ north.

MEETINGS NEXT WEEK.

Mon. Royal Academy, 4.—'The Essential and Distinctive Characters of the Human Skeleton,' Prof. A. Thomson.
Tues. Sociological, 8—'The Biological Foundations of Sociology,' Dr. G. Archdall Reid.
Wed. British Numismatic, 8—'Portraiture of the Stuarts on the Royalist Badges,' Miss Helen Farquhar.
Thurs. Royal Academy, 4.—'The Bones and Muscles of the Trunk and their Relation to the Surface Forms,' Prof. A. Thomson.

FINE ARTS

Rubens. By Max Rooses. Translated by Harold Child. 2 vols. (Duckworth & Co.)

An English edition of Dr. Max Rooses's 'Rubens' is to be welcomed. Dr. Rooses has for so long taken an unquestioned position as the supreme authority on the subject of Rubens, and this work embodies so admirably the study and research of a lifetime, that if anything in the history of art may lay claim to the titles definitive and final, surely the present volumes may. No one, we venture to think, will set to work again to write *the* life of Rubens, or to compile another catalogue of his works to replace Dr. Rooses's 'Œuvre de Rubens.' Here and there discussion about particular pictures may proceed, now and again lost pictures may come to light; but in the main we have all that we ever shall know (and indeed, for once, almost all that we need to know) about a great artist. For Rubens stands historically in as clear a light as that which illuminates his most brilliant portraits. His life in almost every way is exceptional among those of great artists. He seems to have had all the advantages and none of the drawbacks of genius. All those internal conflicts which seem inseparable from the act of creation—that difficulty of accommodating the ideal to the actual which has made the lives of great creators unhappy even in the most fortunate circumstances—never occurred to this the most felicitous of artists. Always successful, always respected, a brilliant courtier, a sufficient scholar, a successful diplomatist; made rich, almost without effort, by the practice of his art; happy in love, and, nevertheless, free from affectation and foolish pride, always genial and always considerate, Rubens seems too happy for an artist, and his life resembles rather that of a successful man of affairs or a great and exceptionally fortunate statesman. And like such a one he is an historical figure. In that Europe of the early seventeenth century where the great causes of political and religious liberty were pawns in the game of a few disillusioned and brilliant personalities, Rubens was destined to an almost central position. As diplomat and painter he became acquainted with most of the leading men of his day. Albert and Isabella of Brabant he knew intimately; Buckingham, Charles I., Philip IV. of Spain, Velasquez, Marie de' Medici, and Richelieu are among those with whom he came into contact; while with scholars and humanists, such as Lipsius, Gevartius, and Peiresc, he was on terms of intimacy. Little can have happened in Europe in the first forty years of the century, either in politics or in letters and science, of which Rubens did not receive the earliest and fullest information. As a collector and student of classical antiquity he took the same supreme position in his day as he acquired by his art. All these aspects of his life—the kindly intercourse with humanists, the subtle and dangerous intrigues into which he plunged for the sake of his country, and from devotion to the cause of peace, and through which he came with spotless honour, and on the whole with conspicuous success—all this highly coloured and varied existence is brought out admirably by Dr. Rooses, who has followed every bypath of contemporary history, every detail of biography and genealogy connected with his subject, with scrupulous care. Nothing but a lifelong devotion to the history of his hero could have given him the intimate familiarity which his book displays.

That amid all this public activity (enough by itself, one would suppose, to fill an ordinary life) Rubens should have had time and energy to produce a greater mass of painting, covering a wider range of subjects, than any other master, would hardly be credited if it could be denied. For sheer overflowing vitality, for exuberance of invention and efficiency of execution, Rubens has never been approached among painters, or probably among creators of other kinds. He was essentially a man of action, and this and his unparalleled facility were at once the causes of his greatness and the reason why, great as he is, one cannot quite place him among the very greatest. He was too happy in everything he touched, too fortunate alike in gifts and circumstances, ever to penetrate deeply into the mysteries of life. The surface he saw as no one else ever has seen it—transfigured by his own exuberant vitality, but with the simplicity and sanity of a great man of the world. He accepted the material facts of life without hesitation; they had, indeed, always turned out precisely to his liking. He was the happiest of pagans, because his paganism was based on a faith which absolved him of care, and left him entirely free for enjoyment. "It is permitted us," he says, as his reason for marrying at the age of fifty-three an entrancingly beautiful girl of sixteen, "to give our senses legitimate satisfaction, thanking God for the pleasure He grants us." Rubens never forgot the thanks, and in consequence he never missed the pleasure. It is singular—perhaps pleasantly ironical—that the great surviving effect to-day of the Catholic reaction is this expression in paint of the most light-hearted and voluptuous paganism that our art has known. Rubens is what the world has reaped from that movement—a permanent source of exhilaration and simple delight in the world and the flesh, happily screened by a triumphant Church from all fear or thought of the devil.

If one considers his work from a more technical point of view, the same incredible good fortune seems to accompany him.

For power of representation no one has come near him. He found a shorthand which described everything, a line that fitted all possible forms and gave life to all. Or rather he did not find them: they seem to have been given to him by a fairy godmother, so immediately, so spontaneously, do they flow from his hand. In one of his landscapes is a flock of sheep running away; every animal is scampering with all its might, and yet there is nothing there, no careful study of the form, no elaborate drawing, nothing but a few blots of colour put on with the peculiar life-giving twist of which his hand had the secret; it must have moved too rapidly for his brain to do more than follow. It seems to have cost him nothing whatever to realize forms. It was as easy to him to make a dog or a man as to put a flat smudge of paint on his canvas. He was never a prosaic or literal realist; his most real landscapes have a glamour of romance, and yet nothing could happen that was inconsistent with his scheme. Once he was painting a landscape with eleven large cows in the foreground. One of them for a few seconds took a pose that is at once ridiculous and unpleasant—well enough, one might say, for a piece of grossly humorous realism, but for poetical landscape inconceivable. But there is the cow, and no one would dare to wish it away.

So it is with his more ambitious flights. He makes us accept everything: Venus is just born from the sea, and in perfect simplicity her first care is to wring the salt water from her locks, and yet it is Venus, and no mere woman coming in from a bathe. The pageant of life unrolled before him always with the same glittering exterior. In his invention he has the charm of a child; in his observation and his psychology the shrewdness of a man of the world; and fortunately, perhaps, he was never tempted to go deeper. He never seems to have asked an unanswerable question, or wanted to get behind the matter of fact.

We have given by preference some of the impressions left on us by the perusal of Dr. Rooses's book rather than any detailed criticism of its contents. Dr. Rooses is, indeed, so incomparably the best authority on his subject, and his book so universally recognized, that for once the critic may be allowed simply to enjoy. Here and there other opinions may be maintained as to attributions. We should, for instance, be inclined to include two or three pictures in Sir Frederick Cook's collection which do not figure here; and, judging from the reproduction, one might doubt whether the 'Susannah' of p. 620 is really at all equal to the version at Munich, or whether the 'Herod's Feast' on p. 612 is more than a "pièce d'atelier." But there is only a small margin left for discussion. Dr. Rooses has cleared the ground completely, and left room only for that final appreciation of Rubens which will require a writer of almost as varied talents as the artist himself.

The English translation is eminently readable; the illustrations are many, and the larger plates good, while the indexes make it invaluable as a book of reference.

Gardening enthusiasm runs in these days even to fanaticism, and the art may in time come to die of ridicule, or at least of reaction. When that time comes the real garden lovers will come to their own quietly, and the crowd of books which fashion has turned out during two decades will perish or fall into oblivion. There is no aspect of gardening which nowadays is not treated in print. Mrs. Haig Thomas, for example, has chosen to write of *Stone Gardens* (Simpkin & Marshall), and writes of these with evident sincerity and affection:—

"A flat stone garden costs not a little trouble and, if far from stone quarries, not a little money to make. But the reward is great, for it is a means of growing many tiny plants that would be hidden in the herbaceous border, and lost in a rock-garden."

If you do want a stone garden you could probably do no better than consult Mrs. Haig Thomas's book, which, besides information, contains original designs. But the question arises, Why want a stone garden? Having got your design, you hire a man to lay the stones in sand; then you follow behind him, putting into the cracks chips dropped by him. In these cracks you plant your flowers, which should be as dwarf as possible. Sedum, saxifrages, lychnis, myosotis, and the like are recommended for this purpose; but lilies, delphinium, and the tall border plants are condemned as unsuitable. "Keep your borders flat and your plants low." If you decide in favour of a stone garden, in which you can grow such plants as find room in a crack, you can choose from these designs your pattern. You may select the lyre design, which includes lawn, borders, water, and stone; or the sun design, with an appropriate sundial, or the trifolium design, or the snowflake, or the vestal virgin's atrium from Rome, or a bewildering and terrifying "three snakes design." But on the other hand you may think it not worth while to go on, and so will resist the author's pleading—"Now begin to make your stone garden to-morrow."

THE NEW ENGLISH ART CLUB.

The New English Art Club is again "showing" in London, but in new quarters—the gallery of the Alpine Club. The light here is very variable, and on two visits the pictures appeared under totally different aspects, a fact which makes any judgment of the show as a whole somewhat precarious; but our general impression is that it is rather a good average than a striking exhibition.

Mr. Steer has for so long been the mainstay of the Club that one naturally turns to him first, and on this occasion he sends two water-colours, both of Chepstow Castle, which are really splendid. One, a twilight effect in a harmony of dull purplish greys and deep blue-greens, has the dignity and solemnity of tone of a Girtin; the other, a scheme of gold and blue, is brilliant in effect, though this is obtained by the just apposition of quite sober tints. Both display the utmost economy of means, and the surest instinct for the right note in colour as well as tone. It is surprising what solidity and relief are given by these apparently casual blots of colour; indeed, no other drawing here, though there are many good ones, holds at a distance as these do.

Of Mr. Steer's large oil painting of Chepstow Castle it is difficult to say anything fresh. It is a repetition of past triumphs in the same line, and is built upon the colour scheme of pearly greys and blonde yellows that is his particular discovery. The figure study *Morning* (No. 86) carries this feeling for opalescent greys still further. One sees that the idea was suggested by an effect of sunlight shining into a room; but the artist, having got from this the hint for his colour scheme, has not cared to follow it out naturalistically. In reality, one fancies, the sunlight would have made a more definite *tache;* but to have rendered it literally would have broken the unity of the scheme. The action of the figure is admirable, and the design of the drapery, falling in large triangular masses, gives it a certain statuesque simplicity and repose. Only an artist of great sensibility would have found anything to interest him in so unemphatic, so easy an arrangement.—Mr. Orpen, for instance, whose brilliant talents we have always recognized, forms a great contrast; he is determined to interest us, and he is by no means content to allow the mere beauty of things to make its gentle appeal. He is essentially anecdotic; his pictures may or may not have a story attached to them, but they always have the air of illustrations. His flower girl (74), which contains some extraordinarily forcible passages, belongs clearly to a short story for one of the newer monthlies. His *Waiting their Cue* (97) and *Spanish Woman* (26) should illustrate a long and preferably tedious realistic novel. The latter is extraordinarily effective; there are few living artists who could give a more precise and vigorous rendering of the facts; but in this as well as the others the emphasis appears to us in the wrong place—either on the mere dead, explanatory fact, or on some interest which belongs too much to the preoccupations of ordinary life. It is never translated into the language of beauty.

Mr. John, on the other hand, has this curious, inexplicable interest in beauty. This is perfectly consistent with the fact that many find his pictures revoltingly ugly. Most really fresh visions of life do produce this effect in their first impact, especially if they are concerned with expressive and dramatic rather than with formal beauty. People dislike them because of their insistence. Mere affectation and mannerism, airs put on to attract attention, produce a kind of pleasure because they do not impose themselves seriously; but pictures like Mr. John's have the insistence of living things—they will not allow you to pass them by with a smile of amusement at the performer's contortions. For Mr. John is not affected; he may be perverse—at times he certainly is; but what he feels and sees, he feels quite seriously and records with absolute simplicity. Before such a picture as his *Mother and Child* (3) one understands the favourite words of praise for certain great masters of the past—that their works were not art, they were nature herself. In spite of its apparent absurdity, there is a truth in this; no mere record, however exact and however brilliant, could produce this effect on the spectator. To get this feeling of nature the artist must inform his work with the same spirit of life; it must be a real creation, not an imitation. And to this picture it is impossible to deny a vehement, full-blooded, overflowing vitality. It really kills the other pictures by making us realize that they lack this rarest of qualities, this inner life. By what subtle harmonizations of tone, by what energy of rhythm in the touch, this quality of life arises it is almost impossible to discover by analysis, as, indeed, it probably eludes the artist's own consciousness. The great thing is to recognize and welcome it. That the picture has none of the more ordinary charms, that it is rough and crude in quality, that it has no very decided decorative design, that in colour it verges on crudity, may be admitted; but where so much is accomplished much may also be forgiven. That Mr. John himself is conscious of his defects is clear from the successful effort he makes in the small *Cupid and Nymphs* (96). Here—where he is not wrestling immediately with the problem of giving a living soul to his creations, where he can go more leisurely and more at ease—he has succeeded in getting, first of all real beauty of design, and secondly something of the shapely and distinguished handling of the older masters. The picture is, for us, somewhat spoilt by the cupid, whose head is

too large and formless, but the treatment of the figures shows an ease and certainty of touch which are almost unknown in modern work.

Mr. Rothenstein's work grows slowly but steadily in interest; and though the signs of labour and effort are still apparent in his large picture of Rabbis expounding the law, it is clear that he has at last found himself, and has only now to amplify and perfect his expression. Already he has learnt how to give dramatic intention to his work: he has passed from the merely curious or ingenious realism of the older generation to that infinitely more difficult realism which describes not merely objects and people, but also what they signify to the imagination. The difference may be seen at once by comparing his picture with Signor Mancini's extremely able, but comparatively meaningless picture of an old man.

Another painter whose work always possesses interest, even beyond what its actual accomplishment arouses, is Mr. McEvoy. His work has the impress of a strong personal feeling, a quiet, contemplative, and elegiac sentiment—so shy and retiring, indeed, that it almost escapes notice in the bustle of an exhibition. His *Rickyard* (87) is really poetical, and the mood is given with the simplest means, without any of the rhetorical aids which might have made the mere statement more effective at a first glance, but would inevitably have detracted from it in the end. His *Seasons* (9) is a more ambitious attempt. The figure of Spring is a delightful and naïve invention, but there is not quite sufficient richness of pattern to carry out the idea.

Among the landscapes there are a great many which, without being very striking, show a sincere and delicate feeling. Mr. Bernhard Sickert's *Grey Effect on the Rhine* (1) is one of the most harmonious and intentional landscapes he has exhibited of late.—Prof. Holmes sends two sombre and imposing landscapes of bare rock and desert sand dunes. In both there is evidence of much concentration and deliberate purpose in the design.—Mr. H. S. Teed sends a very delicate and intimate study of *Sinah's Warren, Hayling Island* (48); and Mr. Tonks's *Chalk Cliff* (75) has some delightful passages of colour.

Among the drawings we have already mentioned Mr. Steer's; next to them in their power to arrest and hold the attention come Mr. Muirhead Bone's drawings of the housebreaker at work. No one who has passed along Regent Street of late can have failed to be struck by the ruins of St. James's Hall. This monument of ugliness suddenly took on a new grandeur, and certainly nothing became it in life like its death, but perhaps few realized that it had in it the possibility of such an imposing design as Mr. Bone has discovered in his study for a print (117). Still finer, we think, because of a greater breadth of treatment, is his drawing of the interior of the same building (113), where the preposterous architectural forms become the excuse for a suggestion of Oriental splendour and secular decay.

Mr. MacColl sends some very brilliant architectural drawings and a very subtle rendering of the Thames from Richmond Hill. The suggestion of the inky greys and greens of a dull summer evening is given with wonderful certainty and skill.—Mr. Rich's *Sussex Harbour* (110), which is hung rather painfully low, gives an excellent suggestion of colour by the use of almost monochromatic tints. It is agreeably harmonious and reserved.—Mr. Dodd's *East Acton* is also luminous and rich, and surely and simply handled. We ought, by the by, to have mentioned his portrait (70) as the most sensitive and accomplished that he has yet contributed.—A drawing by a new contributor to the Club, Mr. Neville Lytton, has singular distinction and refinement. Indeed, as usual, one has to admit that the drawings show a higher level of achievement than the oil paintings.

THE SOCIETY OF TWENTY-FIVE.

After the Twelve comes the Twenty-Five: the titles are really significant in their absence of meaning. The artist of to-day has no propaganda; no revolutionary or reactionary maxims are inscribed on his banner; and the schools which he forms are like schools of porpoises—mere aggregations for convenience and necessity. The Twelve had to some extent the common aim of serious draughtsmanship; the Twenty-Five are linked only by the common quality of the size of their pictures. They paint cabinet pictures. This, it is true, might have an æsthetic intention. It might mean that they cultivated together those subtler qualities of technique, those finer shades of expression, which the connoisseur tastes slowly and at his leisure in quiet seclusion, and which pass unnoticed in the noisy glare of our big exhibitions—the qualities, in short, of Dutch painting. But in reality the Twenty-Five have no such connecting link between their units. Many of the pictures here are painted in exactly the same manner as the life-size portraits of the Academy; some have an elaborate concoction of solid crumbled impasto, such as the desire to get solidity and atmosphere on a large scale—something, in fact, of the quality of fresco—has forced upon artists. Only one artist here, Mr. Oliver Hall, has really investigated the subtleties of expression possible in oil paint, such as the painter of cabinet pictures should endeavour to acquire. A work like his *Grey Day, Haslar Creek* (No. 6), is really delightful, and yields the more pleasure the more one dwells on its details, the longer one allows oneself to enter into its mood and become sensible to the delicate suggestions and hints of colour which lie half concealed beneath the sober general tone of the painting. Such work as this is neither very ambitious nor very great, but it requires real sensibility and a scientific knowledge of the painter's craft; and in these days of big exhibitions such qualities are heavily handicapped, and deserve all the encouragement which societies like the Twenty-Five can give. *Autumn Colour* (13) is another tender and retiring harmony which shows great delicacy of feeling.

The rest of the artists exhibiting here are all more in the ordinary current of modern painting. Mr. Hornel, it is true, has a manner entirely his own, and his remarkable skill is seen to better advantage on the small scale of his pictures here than in his larger arrangements. His productions are, of course, intensely mannered; but mannerisms, and even affectations, if they have something witty, are not always objectionable in slight and unpretentious works. Mr. Hornel is entirely wilful and capricious in everything but his faces, which stand out from the rest by their almost laboured realism. His *See-saw* (30) is, however, well composed, and if only he would make his children as fantastic as their setting, so that they became a part of the mysterious glitter of blossom and foliage, or seemed to grow out of it as Monticelli's faces grow out of the golden gloom of his background, his work would gain immensely in its effect.

Mr. D. Y. Cameron sends a very able picture of *Old Brussels* (63), which struck us, however, as on too large a scale for the design, and somewhat empty in consequence.—Mr. Alfred Withers shows several works, which have a rather obvious and effective picturesqueness. His *Mill of Muids* (11) struck us as the best, though the effects are forced, and the handling scarcely refined.—Mrs. Isobelle Dods-Withers has a genuine poetical sentiment, and her twilight effects are well composed, the silhouettes being really studied. Her feeling for the general masses of tone is also sure, but the quality of the paint is hardly agreeable. It is no doubt forced upon her by the endeavour to get away from the unpleasant positiveness of simple oil pigment—a positiveness which is fortunately lacking in water-colour mediums, and above all in fresco, the ideal medium for the effects she chooses. M. Baudouin has shown how perfectly such effects can be rendered with the simplest and most direct handling in fresco, whereas Mrs. Dods-Withers has evidently to work over her canvas many times in order to get the requisite brokenness of surface, and the final effect is thereby rendered dull and opaque. Indeed, almost all of these artists seem to be making desperate efforts to get away from the deadly paintiness of paint—to break up the surface, to make it elusive and atmospheric. The attempt is worthy, but, with the exception of Mr. Oliver Hall's, the methods chosen seem to us of doubtful efficacy. On the whole, one may congratulate the Society on showing a good deal of talent—though none of it of striking originality or power—and a good deal of feeling for the poetical aspects of landscape.

WEDGWOOD POTTERY AT MR. PATERSON'S GALLERY.

There is a singular appropriateness in the fact that once again, after an interval of more than a century, the name of Wedgwood should be connected with an attempt to give artistic value to the necessary craft of the potter. It was high time that an attempt should be made to bring back sound principles of design to a craft which admits of almost unlimited possibilities of beauty. The firm of Wedgwood deserve high commendation for the bold experiment they have made in giving Mr. Alfred Powell carte blanche, and putting the technical skill and experience of their workmen at his disposal. The small collection now on view at Mr. Paterson's gallery shows at once how wise they have been, and what excellent use Mr. Powell has made of his opportunity.

Naturally such a first attempt is in many ways experimental. Mr. Powell has tried many styles and worked in many materials; he has allowed himself to be influenced now by Hispano-Mauresque ware, now by Italian majolica; sometimes he has taken a hint even from Chinese bronzes, and at others he has endeavoured to rival the simplicity of peasant productions. One cannot think all these equally successful, but one must admire the versatility and fertility of resource which the artist has displayed. He was, moreover, quite right to try many possibilities in order to find out those most perfectly adapted to the conditions of the craft and the trade. We confess to thinking that he has succeeded best in proportion to the restriction of his colour schemes and the boldness and simplicity of his ornament. Two bowls based on Hispano-Mauresque ideas of design, carried out in alternate bands of blue and brown ornament, seem to us real masterpieces, fit to be put beside pieces that now find their place in museums, or fetch fabulous sums at auction. Entirely successful, too, is the large crested bowl in blue and purple lustre. Another excellent and original piece is the large bowl with a pyramidal cover, entirely in cream-coloured ware, with incised pattern. One of the most admirable features of nearly all the work here is the way in which the pot is left as it comes from the wheel, with just the slight markings of the surface that result from the handling of the clay. In most modern earthenware these are subsequently removed by turning on a lathe, producing as a result a mechanical deadness of surface which is recognized in the trade as finish. The happiest variations, both of surface and colour, result from leaving out this final process of destroying the vitality of the caster's work.

In the more elaborate colour schemes, and especially in the printing on china, Mr. Powell seems to us less entirely happy, though there is

delightful and delicate fancy in his fine earthenware tea service, with a border of field flowers reduced to their simplest terms, but without any deliberate conventionalizing. Altogether, the exhibition is one of the most hopeful for the future of the minor arts in England that we have seen for a long time. If only the commercial difficulties which seem always to beset the attempt to make really good pottery can be overcome, the Wedgwood experiment should have great consequences.

Fine-Art Gossip.

THE private view takes place to-day of two exhibitions at the Fine-Art Society's Rooms—'Here and There,' water-colours by Mr. William Foster, and Signor Alberto Pisa's water-colours of Rome and Umbria.

MESSRS. CARFAX have on view from to-day paintings by deceased masters.

A COLLECTION of works by Alphonse Legros and Dorothea Landau is being shown at the Dutch Gallery, 39, Old Bond Street.

THE first annual exhibition of the Essex Arts Club will remain open at the Passmore Edwards Museum, Stratford, until November 4th (Wednesdays excepted).

THE private view of Mr. Cecil Aldin's pictures 'A Gay Dog-Show' took place yesterday at the Doré Gallery.

AN exhibition of pictures by G. F. Watts was opened at the Royal Scottish Academy buildings, Edinburgh, last Saturday. There are 144 works, of which 121 belong to the executors and 23 to private owners. One of these pictures, 'Mischief,' has been given by Watts's executors to the Scottish National Gallery.

THE Royal Academy Schools are to receive at once a number of the studies and drawings fo Watts.

THE Fine-Art Society will publish shortly a book containing reproductions of a number of the well-known etchings of Axel Herman Haig. With these will be included reproductions of drawings in pencil and of water-colours, and the whole will be accompanied by a *catalogue raisonné* of his etchings. A biographical note will be contributed by Mr. E. A. Armstrong.

A NUMBER of facsimile reproductions of water-colour drawings by Burne-Jones will be issued before long by the Fine-Art Society. The originals of these, which have not hitherto been seen by the public, are the property of Lady Burne-Jones, and their subjects were suggested by the old-fashioned English names of flowers, chiefly wild flowers. A short prefatory note is contributed by Lady Burne-Jones. Only 300 copies of the book will be issued.

THE subject of Mr. D. S. MacColl's lectures at University College for the present session is 'Sculpture, Mediæval, Renaissance, and Modern.' Eight weekly lectures will be given before Christmas, on Fridays at 4.30 P.M., beginning next week. These will deal with the sculpture of the thirteenth and fourteenth centuries in France, England, and Italy, and Italian sculpture of the fifteenth century. The lectures will be illustrated by slides. Mr. Arthur Gardner, the joint author with Mr. Prior of a forthcoming history of English mediæval sculpture, has allowed his unique collection illustrating the mediæval period to be freely drawn upon. Tickets for the course may be obtained from the Secretary of the College.

THE following gentlemen have been elected Members of the Royal Society of British Artists: Messrs. Stephen Reid, W. H. Milnes, A. H. Elphinstone, A. Brougier, D. Fox-Pitt, R. Wheelwright, H. Drew, and J. N. Holroyd.

AMONG the acquisitions of the Lucknow Museum during 1904-5 was an iron tripod of Buddhist times, discovered at a depth of 70 ft. during the excavations for the piers of the new bridge at Allahabad. The Curator calls attention to the close resemblance between this and the tripod described as a curiosity by Herodotus among the treasures of Crœsus the Lydian. The numismatic section has been increased by 660 new coins, chiefly Græco-Bactrian specimens.

MUSIC

THE WEEK.

BRISTOL MUSICAL FESTIVAL.

A NEW work by Dr. Richard Strauss was the principal feature of the morning programme last Thursday week, viz., the choral ballad 'Taillefer,' performed for the first time in England. It was written in 1902, coming between 'Ein Heldenleben' and the 'Symphonia Domestica,' *i.e.*, between two works in which the composer seems to us to be following paths leading to programme music of an erratic and often ugly character. Strauss in his *Lieder* has shown that he can write music clear in form, and not only free from extravagance, but also full of charm; so different, indeed, from that of the symphonic poems and from that of the latest symphony that it is hard to believe that the same man wrote both. Now, fortunately, a great part of the 'Taillefer' music is akin to that of the songs; it is clear, fresh, and direct in its appeal, both in the short solos and in the choral portions. The composer, when illustrating, by means of the orchestra, the battle between the Normans and the English, indulges in storm and stress after the manner of the middle section of the 'Heldenleben,' but that is natural enough; moreover, it sets off to advantage the beginning and end of the short work. We confess that when Strauss is at his simplest, he is more or less conventional; anyhow it is better than individuality which reveals itself in harsh discords and violent, unnatural changes of mood. The programme included Sir Edward Elgar's 'Dream of Gerontius,' concerning which it need only be said that—with the exception of the instrumental introduction, which was taken at a rate which robbed the music of its solemnity, and the "Kyrie eleison," which lacked fervour — the rendering of the work was very fine. The soloists were Messrs. John Coates and Andrew Black and Miss Muriel Foster, all of whom evidently felt the dramatic power and mystic influence of the music. Herr Kreisler's rendering of the Beethoven Violin Concerto was superb: on him has fallen the mantle of Dr. Joachim, who no longer plays that work, at any rate in public.

There was a grand concert in the evening. Madame Melba sang various songs with all success, and Miss Adela Verne gave a brilliant rendering of Liszt's E flat Pianoforte Concerto. But there was a novelty, a Dramatic Scena for baritone and orchestra, by Mr. Joseph Holbrooke, written especially for the occasion. The composer is rather fond of tragic subjects, and in a recent work of his he missed his aim by exaggeration. In the present scena, a setting of Marino Faliero's speech in the fifth act of Lord Byron's tragedy of that name, before he is led to execution, Mr. Holbrooke has shown real restraint. He has caught the right mood, and selected the appropriately dark colouring for the orchestral accompaniment. The scena, admirably sung by Mr. Andrew Black, will no doubt be heard in London.

Friday morning was devoted to sacred works by Mozart and Beethoven. The former was represented by a Mass in C minor, for the whole of which Mozart was not responsible. He promised his father in 1782 that he would compose a Mass to be performed at Salzburg when he brought Constance Weber as his wife to that city. But he finished only four movements—the Kyrie, Gloria, Sanctus, and Benedictus. There is some noble writing in them, although there are conventional phrases and florid passages in the solo parts, which tell, the one of writing against time, the other of concessions to public taste. The "Qui tollis" is a wonderful combination of grandeur and pathos. It was evidently written in a moment of high inspiration. Mozart left some sketches, and from them Dr. Alois Schmitt, conductor of the Mozart Society at Dresden, completed some movements, while for others he selected music from earlier works of the composer, and thus it was performed under his direction at Dresden in 1901. He has carried out his self-appointed task with skill and discretion; but, of course, the result is a mixture of styles. It was, however, extremely interesting to hear the work.

Beethoven was represented by his 'Christ on the Mount of Olives.' This oratorio is seldom given. It was announced as 'Engedi; or, David in the Wilderness,' for in the days of the Sacred Harmonic Society there was a very natural objection to the original text, in which a part was assigned to Jesus; hence a new one was prepared. But now that César Franck's 'Beatitudes' and Sir Edward Elgar's 'The Apostles' are performed, that objection is no longer valid. As, however, the light character of most of the music in Beethoven's oratorio is at variance with the solemn subject, the 'Engedi' text, after all, seems the more suitable.

Friday evening was devoted to a performance of 'Lohengrin,' without "cuts"; but if ever cuts were to be desired it would be in a concert performance of the opera. It may have interested some of the audience to listen to the music, which was well sung and well played; from an artistic point of view, however, it must be condemned.

On Saturday the festival ended with 'The Messiah.' Throughout the week Mr. George Riseley displayed great ability as conductor. The chorus distinguished itself, and there was a very fine orchestra, with Mr. Arthur W. Payne as leader.

Musical Gossip.

AN Irish Symphony in D minor, by Mr. Hamilton Harty, the well-known pianist and accompanist, was produced last Saturday at the Promenade Concerts under the direction of Mr. Henry J. Wood. The music is thoroughly Irish, each section of the work being based on well-known Irish melodies, clever and genial. In all the movements, however, except the

Scherzo, the composer indulges in length not justified by the style of treatment of the thematic material. The symphony was well received.

Mischa Elman gave the first public performance of a new Violin Concerto by the Russian composer A. C. Glazounoff at his orchestral concert at Queen's Hall on Tuesday afternoon. The work is divided into four sections, but there is no actual break between them. The music throughout is clever and clear in form. The opening section sounds somewhat conventional. The Andante, however, is expressive and daintily scored, while the final Allegro is bright and legitimately effective. Elman played the solo part remarkably well, and afterwards in the Beethoven Concerto he displayed all the qualities which have won for the youth such great, yet such well-deserved success.

Herr Wilhelm Backhaus, the winner of the Rubinstein prize, gave a recital at Queen's Hall last Saturday afternoon. Of his wonderful technical powers there is nothing new to say. But his reading of Beethoven's long and difficult Sonata in B flat, Op. 106, though clever and intelligent, was scarcely convincing; the opening movement lacked nobility, and the Adagio deep feeling. The Scherzo was admirably rendered; the long fugue, however well played, cannot be made attractive. Herr Backhaus may one day understand how to interpret Chopin; as yet he is too young.

A word may be said about the music written for the production of some of the plays at the Lyceum under the management of the late Sir Henry Irving. He knew, or rather felt, the importance of the art of tones in connexion with the drama. And it should be noted that he commissioned British composers to provide incidental music: Sir Arthur Sullivan for 'Macbeth' in 1888, and 'King Arthur' in 1895; Mr. Edward German for 'Henry VIII.' in 1892; Prof. Stanford for 'Queen Mary' in 1876, and 'Becket' in 1893; and Sir Alexander Mackenzie for 'Ravenswood' in 1890, and 'Coriolanus' in 1901.

PERFORMANCES NEXT WEEK.

Sun.	Sunday Concert Society, 3.30, Queen's Hall.
—	National Sunday League Concert, 7, Queen's Hall.
Mon.	Mr. Goldsborough's Violin Recital, 3, Bechstein Hall.
—	Promenade Concert, 8, Queen's Hall.
—	Mr. Felix Swinstead's Pianoforte Recital, 8.30, Bechstein Hall.
—	Royal Italian Opera, Covent Garden.
Tues.	Mr. Frederick Ellis's Pianoforte Recital, 3, Salle Erard.
—	Promenade Concert, 8, Queen's Hall.
—	Sunderland and Thistleton Concert, 8.30, Broadwood's.
—	Royal Italian Opera, Covent Garden.
Wed.	Bechstein Ballad Concert, 3, Bechstein Hall.
—	Promenade Concert, 8, Queen's Hall.
—	Royal Italian Opera, Covent Garden.
Thurs.	Promenade Concert, 8, Queen's Hall.
—	Miss Evangeline Anthony's Violin Recital, 8.15, Æolian Hall.
—	Royal Italian Opera, Covent Garden.
Fri.	Promenade Concert, 8, Queen's Hall.
Sat.	Chappell Ballad Concert, 3, Queen's Hall.
—	Miss Irene Penso's Violin Recital, 3, Bechstein Hall.
—	Concert, The London Trio, 3.30, Crystal Palace.
—	Royal Italian Opera, Covent Garden.

DRAMA

THE WEEK.

Garrick.—*The Merchant of Venice.*

In making as Shylock his first serious Shakspearean venture in London, Mr. Arthur Bourchier, after the fashion of actor-managers from the days of Betterton downwards, has elected to do so in a rendering prepared by or for himself. Against this course, as now carried out, nothing more is to be urged than that the performance—which is embraced in six acts and fourteen scenes—is too long, a drawback which may disappear when the whole is taken at a quicker rate, and less time is wasted on rhetorical or spectacular pauses. When, presumably in his own person, Shakspeare in the Prologue to 'Romeo and Juliet' spoke of "the two hours' traffic of our stage" he knew what he was talking about. The phrase inculcates a "counsel of perfection," since no reasonable processes of elision and compression could bring 'Hamlet' within such limits. Two hours is, however, to be aimed at, and three hours, except in 'Hamlet,' involves a confession of incapacity. For the rest, Mr. Bourchier's version is reverent and good. It omits few scenes of drama or passages of poetry, allows no Augustin Daly-like concessions to prudery, furnishes a clear and intelligible sequence of action, and is, so far as text is concerned, free from almost every species of heresy. Good and helpful scenery is supplied, and the spectator with a moderate amount of intelligence or imagination may concern himself in the scenes and among the characters depicted. Mr. Bourchier's conception of Shylock is free from that worst of modern heresies, the idea that the Jew is in any full sense a tragic character or an object of sympathy. That his griefs should stir us, and that we should feel for him the same kind of sorrow that we have for the wounded beast which, after a vain struggle against irresistible weapons, retires into a thicket to die, is of course intended by Shakspeare. This amount of sympathy and no more Mr. Bourchier claims and obtains. Miss Violet Vanbrugh enhances the value of the presentation by assigning Portia passion as well as charm, and by insisting on the carrying out of those precise instructions in the text generally neglected in modern performances, but imperative. An attempt to infuse into the characters generally some warmth is encountered by that spirit on the part of English actors which will judge yesterday by the standard of to-day, and reduce Tudor love-making to the proprieties of a cockney festival. In no Shakspearean comedy is the language of the amorist more divinely poetical and impassioned than in this, and one might hope that the need to utter a line such as

A day in April never came so sweet,

to say nothing of nobler utterances informed by the very spirit of passion, would stir animation in a block.

Mr. Norman Forbes has risen to be the very best of Launcelot Gobbos. Many of the characters are well played; and the whole, though deficient in some respects in poetry, has abundance of brightness and bustle.

St. James's.—*The Housekeeper: a Farce in Three Acts.* By Metcalfe Wood and Beatrice Heron Maxwell.

The farce which the Kendals have brought from the country and presented at the St. James's is a rather curious hodge-podge with small claim to originality. Starting with an idea anticipated by Goldsmith in 'The Good-Natured Man,' that of a travelling hero mistaking for a domestic the lady of the house in which he is a visitor, it recalls in its progress various familiar plays, French and English, and bears a title appropriated by Douglas Jerrold a couple of generations ago. It displays some ingenuity, but is too thin for its length, or, it would perhaps be more just to say, too long for its tenuity. One claim on attention it has in showing that the Kendals, who are the chief interpreters, are as excellent artists in farce as in comedy. The whole was received with gratification, but is scarcely strong enough to fulfil all the obligations thrust upon it.

Imperial.—*The Perfect Lover: a Play in Four Acts.* By Alfred Sutro.

Short as is the period during which he has been before the public as a dramatist, Mr. Sutro has to be reckoned with. He is one of the assets of our stage. Varying degrees of success have attended the two or three pieces he has contributed to it, but all are considerable, and two rank as accomplishment. 'The Perfect Lover,' as the latest is prettily, but not quite appropriately called, is a successful and an eminently interesting play. Worthy as it is when thus considered, it is, however, not quite convincing, and it inspires the conviction that it would be immeasurably greater as a novel. Its defects are such precisely as could be well supplied by the elaborate exposition for which the novel offers scope. In itself the story has a suggestion of Zola, perhaps even of Balzac. The idea of a man resolute in the pursuit and worship of money, amorous and jealous of a wife whom he has bought, but cannot hold or even possess, sending her to call upon another whom she loves and by whom she is beloved, because thus only can he bring off a nefarious transaction of which the lover in question is to be the victim, is bold, dramatic, and original. That he should lose his wife in so doing satisfies at least the demands of poetic justice, and is brought about in a fresh and stimulating, if rather theatrical as apart from dramatic, fashion. This portion is telling throughout, and the only thing to be urged against it is that so soon as it is carried out the "perfect lovers," in whom interest centres, disappear, and the play has to get on as it can without them.

This unexpected elopement is not the strongest nor even the central feature of the play. That on which Mr. Sutro seems chiefly to rely is the pressure put upon Joe Tremblett, a worthy, but obscure and underpaid journalist. He, it appears, is the only person who can bring about the required state of affairs. Without him, in the words of the child's story, "Fire will not burn stick; stick will not beat dog," and so on through the concatenation. Joe interferes accordingly, and in response to a bribe of a large sum, which his wife compels him to accept, exercises his marvellous and magical power; brings about the iniquitous transaction, in the profits of which he is to participate; and in so doing facilitates, and in the end approves, the elopement of his brother's wife with the young nobleman whose plunder has been accomplished. Eventually an opportunity for Joe's rehabilitation is afforded. He repudiates the dishonouring contract he has made, burns the bond his disloyalty has secured, defeats his brother's fraudulent purpose, disappoints his mercenary wife, and returns to his pristine poverty.

This brings us to the second point. The

methods of fiction, diametrically opposed to those of drama, would allow of, and indeed exact, an explanation how an obscure man, of no recognizable intellectual force and of no social status, obtains so unprecedentedly commanding a position that a wife whom conjugal responsibilities fail to restrain from elopement cannot go without his approval and benediction, and that her impatient lover, finding his heart's desire at last within his reach, is almost inclined to commend her scruples. Fiction might also explain how the general state of affairs was brought about—why an English earl has to sink his title and emigrate to Canada, why of two brothers one is a hero and the other a villain, and so forth. We accept these conditions, but should do so the more readily if we knew why such things be.

A competent interpretation is afforded, Mr. Lewis Waller as Joe, Mr. Norman McKinnel as his dishonest brother, Miss Evelyn Millard as the heroine, and Miss Henrietta Watson as an aristocratic and slightly acid old maid, chiefly distinguishing themselves. Strengthening of the cast in some of the subordinate characters seems expedient. The play is admirably written. We shall have failed in our design if we allow the impression to get abroad that, notwithstanding its inequalities, 'The Perfect Lover' is not a thing to be seen and enjoyed.

Duke of York's.—*Revival of 'Sherlock Holmes.'*

Mr. Gillette is reaping an experience not unknown among those who obtain a sudden hold on public favour. Having reached as Sherlock Holmes the pinnacle of popularity, he finds his most enthusiastic admirers reluctant to accept him in any other character. This is regrettable for others than the actor. It is, however, but natural. Though nowise better than various parts in which Mr. Gillette has been seen, Sherlock Holmes is admirably suited to impress public imagination. Its reception on Tuesday was overwhelmingly favourable, and its revival seems likely to be no less fortunate than was its first production. As Alice Faulkner, the heroine, Miss Marie Doro was once more seen to high advantage.

Court.—Morning Performance: *Revival of 'The Wild Duck.'* By Henrik Ibsen.

Eleven years have elapsed since 'The Wild Duck' was first produced at the Royalty by the self-styled Independent Theatre. Its appearance fluttered the dove-cotes, or the owl-roosts, of dramatic criticism, and even caused open dissensions among writers on the stage. Since then we have learnt or forgotten much, and what was once considered as innovation and hardihood is now looked on as weariness and banality. Willingness to accept Ibsen is regarded as a proof of belonging to the esoteric. We now so far pass the ordeal as to accept it without protest, but not without a yawn.

The symbolism of 'The Wild Duck,' even with the light Ibsen casts upon it, appears neither clear nor significant. The acting is not specially affecting, and of the "Vedrenne-Barker Matinées" we hold this of least account.

HENRY IRVING, 1838–1905.

So many biographies of Sir Henry Irving, and such full records of his life work, are in existence that there is no temptation to expatiate on the details of a career with which almost every cultivated Englishman is familiar. If only for purposes of standing reference, however, a summary of the principal events in his artistic career, together with some attempts at an estimate, must be supplied.

Of Irving it may be said—as it can be said of no other man of the day, whatever his country or position—that he stood absolutely foremost in his line, and that his place is conceded among the immortals. His method was faulty, and often ineffective; his elocution was at all times indifferent, and in some cases unpleasant. When he played Lear, one of the best actors of the day—his own special friend, and in no sense a rival—said it was like listening to the nocturnal noises in the "Zoo." His movements were at times ungainly, and he never acquired the crowning merit of repose. Conscious, it may be supposed, of the deficiencies and inadequacies of those by whom he was surrounded, he seemed to think that unless he himself strutted or fretted the entertainment would fail. No electric shock such as we read of in Edmund Kean was administered by him; and in one of his favourite characters—Louis XI.—he was inferior to Charles Kean. Yet, with all these shortcomings and defects, he was a greater actor than the latter, and perhaps than the former also. The palm of supremacy in English acting has to be assigned him or Garrick, and the space between the two men is so wide, and the disparity of conditions is so marked, that the task of judging is difficult. As regards individuality Irving is easily foremost. No one that ever came under the spell of his manner sought to resist it. He was not specially brilliant in conversation, and when he did speak, which was not very often, was more of a narrator than a discourser. He never bid for conversation, though all were glad to hear him and loved to listen, and to some extent to learn. There was nothing that was acid, if a great deal that was Machiavellian and perhaps a little blandly mischievous, in his nature. Want of consideration, and aggression—to which he was sometimes, though rarely, subjected—never disturbed his philosophic serenity, but were accepted with a species of dry and almost acquiescent comment which was wholly his own. Leaning back in his chair, he would listen with enjoyment to an animated discussion; and if a point of warmth was reached, he would do little to allay it—perhaps, on the contrary, would cleverly "embroil the fray." In every company his individuality seemed the most incontestable. His most remarkable gifts in his art were the greatest. He had imagination and romance. Not always sure in his perceptions, he made, though rarely, mistakes not easily comprehensible in a man of genius. His defence of his alteration in 'Macbeth,' "She would have died hereafter" for "She should have died hereafter," is simply inconceivable. One of his most popular characters—his Shylock—is from the Shakspearean point of view indefensible. Fault has been found with his Hamlet, yet there is no other to oppose to it, and from Fechter (whose picturesque, sentimental, and romantic performance is sometimes mentioned in opposition) to the latest development of eccentricity, the Hamlet of Madame Bernhardt, there is nothing over which it did not triumph. Richard III.—a part in which the sardonic traits in his character asserted themselves—was a great presentation. Becket had singular beauty and dignity. Scarcely paternal seemed the tenderness of his Dr. Primrose, of which he was not the first exponent; but it was very moving. His Charles I. was responsible for a renascence of Stuart worship; and his Corporal Gregory Brewster, before it became a trifle exaggerated, ranked in its line beside the Noël of Regnier ('La Joie fait Peur'), the Rip van Winkle of "Joe" Jefferson, the Daddy Hardacre of Robson, and other unforgettable parts of actors of the past generation.

Early performances at the Princess's and the St. James's are still recalled; and Irving's presentation at the Vaudeville of Digby Grant in 'The Two Roses' was a superb effort. When repeated at the Lyceum it was quite another thing. Not until his connexion with the Lyceum—at which house he made, under "Col." Bateman on September 11th, 1871, a not very successful appearance in 'Fanchette,' an adaptation by Mrs. Bateman of 'La Petite Fadette' of George Sand—did his artistic career begin. Jingle, in Albery's 'Pickwick,' followed, and was itself succeeded by Mathias in 'The Bells,' which on November 25th of the same year elevated him to a position he did not subsequently forfeit. 'Raising the Wind,' 'Charles I.,' 'Eugene Aram,' 'Richelieu,' and 'Philip' preceded 'Hamlet,' which, first seen on October 31st, 1874, marked his highest accomplishment, and ran for 200 nights. Before Irving associated himself with Miss Ellen Terry he had been seen in 'Eugene Aram,' 'Richelieu,' 'Philip,' 'Macbeth,' 'Othello,' Tennyson's 'Queen Mary,' 'The Belle's Stratagem,' 'Richard III.,' 'The Lyons Mail,' 'Louis XI.,' and 'Vanderdecken.'

Miss Terry joined him so soon as the Bateman influence was over, and Irving had himself assumed the reins of management. She was Pauline to his Claude Melnotte on April 17th, 1879, having previously (December 30th, 1878) appeared as Ophelia in a revival of 'Hamlet.' In most of his great subsequent productions she took part, her boldest experiment being Lady Macbeth. Memorable plays in which both artists were seen at the Lyceum were 'The Lady of Lyons,' 'The Merchant of Venice,' 'Iolanthe,' 'The Cup,' 'Othello,' scenes from 'The Hunchback,' 'Romeo and Juliet,' 'Much Ado about Nothing,' 'Robert Macaire,' 'Twelfth Night,' 'Olivia,' 'Faust,' 'Werner' (jointly for one night only), 'The Dead Heart,' 'Ravenswood,' 'Henry VIII.,' 'King Lear,' 'Becket,' and 'King Arthur.' Other plays in which Irving was seen without her aid were 'The Iron Chest,' 'The Corsican Brothers,' 'Two Roses,' 'A Story of Waterloo,' and 'Dante.' In more recent days the two artists were associated in 'Cymbeline,' 'Madame Sans-Gêne,' 'Peter the Great,' 'Coriolanus,' and 'Robespierre.'

His influence upon the stage has been enormous. He was the first actor to be knighted as such, and to him it is mainly due that the stage holds a position such as in no previous epoch and in no other country it has known. In America he will be no less missed than in England. It may be said that his loss is irreparable, insomuch as no successor can step into his shoes, and in no other country is so potent and interesting an individuality at the service of the stage.

Joseph Knight.

SOME MARLOWE RIDDLES.

ALTHOUGH Mr. Slater repeats several of the "Marlowe Riddles" which have puzzled the bibliographers of the last three centuries, he does not furnish, or even suggest, solutions for any of them. Some of his queries are no "Riddles," and all those of any importance have been fully dealt with in my recent work on 'Marlowe and his Associates.' Many of Mr. Slater's statements are made upon the supposed assertions of "some authorities" who are unnamed. It would be a waste of time to deal with ascriptions of unknown persons in unnamed works, nor need the various well-known facts repeated in Mr. Slater's letter be reverted to. His "Riddles" may be dealt with *seriatim*.

A translation of 'Helenæ Raptus,' from the Greek of Coluthus, was originally attributed to Marlowe in the Coxeter MSS., and the attribution was repeated by Warton and others. There is no corroborative evidence of such a translation having been printed, even if made.

'The Atheist's Tragedy' belongs to the Collier forgeries, so that no contemporary publication of it was possible. That Marlowe had projected—even if he had not completed—a work on the history of Scanderberg seems probable, since Gabriel Harvey directly refers to it in connexion with the author of 'Tamburlaine.' There is no evidence of 'The Passionate Shepherd' having been printed previous to its publication in 'The Passionate Pilgrim,' in 1599, although, as shown in my Marlowe work, manuscript copies of the poem, *with variations*, were in circulation previous to that date.

It is too late nowadays to question the authorship of 'Tamburlaine.' No competent person can doubt its being Marlowe's. I am not one of those who have, Mr. Slater says, "invariably stated" the Roxburghe copy of the 1590 edition belonged to Kemble. The copy of the 1611 edition of 'Dr. Faustus' was sold at Heber's sale. My bibliography of 'The Rich Jew of Malta' shows, in addition to the edition of 1633, several editions of the drama, including that of 1780. There is nothing wonderful in the work not having been published until so many years after it had been licensed. It is a well-known fact that not only were many works of the Shakspearean epoch, for obvious reasons, licensed several years before they were published, but that some, apparently, were never published at all.

No one conversant with the historical facts need discredit Marlowe with the paternity of 'Lust's Dominion.' Marlowe is not supposed to have had a hand in the "spiritless chronicle play" of 'King John' referred to by Mr. Slater, but in the drama of that name by Shakspeare. The subject has been discussed *ad nauseam*. There seems no reason to believe that Marlowe had any hand in 'The Taming of a Shrew,' but it is certain that the play does contain numerous plagiarisms from his works, the author of 'The Taming' only following the too frequent custom of the period in stealing from his contemporaries.

There is no ground for ascribing 'Edward III.' to Marlowe; and to speak of Shakspeare "being sometimes credited with one of the scenes" does not evince much acquaintance with the conjectural history of that drama. 'Edward III.' is the work of an experienced poetical playwright, but neither Shakspeare nor Marlowe is likely to have been the author. Were he known he would probably be assigned a place anear the two.

The present opportunity may be allowed me of stating that since the publication of my recent work much additional bibliography of Marlowe, of works published outside Great Britain, has been generously placed at my disposal by Mr. J. Le Gay Brereton, of Sydney University. Mr. Le Gay Brereton has published several contributions of his own to Marlowe literature.

JOHN H. INGRAM.

Dramatic Gossip.

IN consequence of the demise of Sir Henry Irving, the first performance at the Waldorf of the English adaptation of 'Zapfenstreich,' in which Mr. H. B. Irving was to play the hero, has been postponed.

'THE VOYSEY INHERITANCE' is to be given at the Court on November 7th, and Mr. Shaw's 'Major Barbara' on the 28th.

WHEN Mr. Oscar Asche and Miss Lily Brayton reappear at the Adelphi it will be in 'A Midsummer Night's Dream,' and not, as was originally announced, in 'As You Like It.' Miss Brayton will play Helena; Mr. Asche, Bottom; and Miss Beatrice Ferrar, Puck.

'MRS. GRUNDY' is the title of the new play by Mrs. Madeleine Lucette Ryley, the author of 'Mice and Men,' which will replace at the Scala 'For the Crown' so soon as its run is over. It is, as its title suggests, a play of modern life, the heroine of which will be played by Miss Gertrude Elliott. Mr. Forbes Robertson will enact a clergyman.

'CAPT. DREW ON LEAVE' is, as we mentioned a fortnight ago, the title of the new play of Mr. Hubert H. Davies to be produced by Sir Charles Wyndham on the 24th inst. at the New Theatre. The characters will be interpreted by Sir Charles himself, Miss Mary Moore, Miss Marion Terry, Mr. Vane Tempest, Mr. Louis Calvert, and Mr. Eille Norwood.

A NEW comedy by Mr. Henry Arthur Jones, the heroine of which is to be played by Miss Gertrude Kingston, will serve for the re-opening by Mr. Welch of Terry's Theatre. We shall look with some anxiety for the title of the novelty, which in the case of Mr. Jones's plays is apt to be significant, and even prophetic of the fate of the piece.

A RENDERING of Mr. Hewlett's 'Pan and the Young Shepherd' is in preparation for Messrs. Vedrenne and Barker at the Court Theatre.

JANUARY 4TH is fixed for the opening by Madame Réjane of the Royalty as a French theatre in London. 'La Source,' by M. Pailleron, will be the first piece. Her company includes M. and Madame Silvain, M. Feraudy, and other members of the Comédie Française.

IBSEN'S 'Enemy of the People' will be produced on Nov. 2nd at His Majesty's as the first of the "special matinées," delayed by the compulsory closing of the theatre. The cast will include Miss Rosina Filippi, Miss Margaret Halstan, Mr. John Beauchamp, Mr. George Shelton, Mr. Nigel Playfair, and other well-known artists.

THE Elizabethan Stage Trust has been formed for utilizing the property of the Elizabethan Stage Society, which includes the acting version of 'Everyman.'

'STEIN UNTER STEINEN,' a four-act play by Sudermann, produced at the Lessing Theater, Berlin, is more noteworthy for characterization than plot, and hardly ranks with its author's best work. An attempt—fortunately a failure—to deal with the hero after the fashion in which Cyrano de Bergerac and the hero of 'L'Assommoir' are treated is one of the principal effects. Herr Bassermann as the hero had a great reception.

'LE MASQUE D'AMOUR' of Madame Daniel Lesueur, a play in five acts and nine tableaux, produced at the Théâtre Sarah Bernhardt, is taken from her novel 'Le Marquis de Valcor,' which itself is founded on the Tichborne case. Attempts are being made to secure it for a leading West-End theatre.

'VERS L'AMOUR,' a five-act comedy by M. Léon Gandillot, produced at the Théâtre Antoine, is a more sentimental piece than that author often supplies. It is serious, and even gloomy, for a comedy, since it ends in the presumable suicide of the hero.

GESTA ROMANORUM; or, Entertaining Moral Stories invented by the Monks. Translated from the Latin, with Preliminary Observations and Copious Notes by the Rev. CHARLES SWAN, late of Catharine Hall, Cambridge. Revised Edition by WYNNARD HOOPER, M.A., Clare College, Cambridge.
